**Pacific Great Eastern Ry.**—The Minister of Railways for British Columbia has approved a map showing the general location of a proposed line from Davie Lake to Azzuzetta Lake, Pine Pass, Caribou district, B.C. (April, pg. 137.)

**Pacific, Peace River and Athabaska Ry.**—

The Dominion Parliament has authorized a change in the location of the Pacific coast terminus, from the mouth of the Naas River, to the Kitimat arm, and thence to the Naas River. An extension of time for construction was also granted.

The Minister of Railways for British Columbia has granted an extension of time to the Naas and Skeena River Ry., the charter of which has been acquired by the P., P. R. and A. Ry., for the building of its projected railway from Nasoga Gulf to the Skeena River, under the provisions of sec. 79, chap. 19.4, Revised Statutes of B. C.

We are officially advised that the tramway which it is proposed to build at Vermillion Falls, on the Peace River, by the company's subsidiary, the Peace River Tramway and Navigation Co., will be standard gauge, and five miles long. It will be operated by steam at first, but when the power plant at the Vermillion Falls has been developed, electricity will be used. The oil field which it is proposed to prove and develop at this point is believed to represent the anticlinal fold. It is proposed to build a steamboat at Peace River Crossing during this year, which it is hoped to have ready for the traffic which will be brought to that point on the opening of the Edmonton, Dunvegan and British Columbia Ry. The company also proposes to build another tramway, about 15 miles long, between Smith's Landing and Fort Smith, to overcome the Drowned, Pelican, Mountain (3), and Cossette rapids, six in all, on that stretch of the Slave River. (April, pg. 137.)

**Prince Edward Island Ry.**—The House of Commons has voted the following sums: To strengthen bridges, \$10,000; original construction, \$800; power plants, \$125; surveys and inspection, \$10,400; to increase accommodation and facilities along the line, \$17,600; to provide car ferry, construct terminals and necessary connections, \$1,900,000.

In the House of Commons recently the Minister of Railways stated that the car ferry was completed, but the piers on the island and on the mainland were not ready. Owing to this, and the fact that there was a difference of \$5,000 between summer and winter insurance, the builders were holding the ferry until spring. Considerable difficulty had been met with in building the piers, particularly at Carleton Point, P.E.I. There was no doubt that the piers would be sufficiently completed by September to enable them to be used, although they might not be fully completed. It was intended to operate the car ferry during the winter, the contract calling for ability to make half a mile an hour in the worst ice conditions. (Dec., 1914, pg. 544.)

**Simcoe, Grey and Bruce Ry.**—The Dominion Parliament has granted an extension of time for the building of this projected railway from Southampton to Collingwood, Ont., via Owen Sound and Meaford, and from Southampton to Kincardine, via Port Elgin and Tiverton. (Mar., pg. 95.)

**Smoky Valley and Peace River Ry.**—The Alberta Legislature has incorporated a company with this title to build a railway from the junction of Solomon Creek with the Athabasca River, on the Canadian Northern Alberta Ry.'s line northerly and westerly to the junction of Sheep Creek and Smoky River, and then on to Dunvegan. (April, pg. 137.)

**Southern Central Pacific Ry.**—The Dominion Parliament has granted an extension of time for the building of the line authorized to be built from Vancouver via Kootenay Pass and the Old Man River to Hudson Bay, at least 100 miles north of

Fort Churchill, with a branch from Blindman River, Sask., via Dunvegan, to Gardiner's Canal, B.C., and another branch from the Elk River, B.C., to the International Boundary at Milk River.

**Timiskaming and Northern Ontario Ry.**—The Minister of Public Works informed the Ontario Legislature, Mar. 25, that there would be certain capital expenditure made

on the T. and N. O. R. during this fiscal year, but the amount had not been decided upon. (Sept., 1914, pg. 419.)

**Western Dominion Ry.**—The Dominion Parliament has extended the time for the building of the projected railway from Calgary, via the Old Man River valley, Pincher Creek and Cardston, Alberta, to the International Boundary. (April, pg. 137.)

## Traffic Orders by the Board of Railway Commissioners.

### Release Re Carriage of Household Goods.

General Order 136. Mar. 25. Re application of Canadian Freight Association, under section 340 of the Railway Act, for an order approving a new form of release in connection with carriage of household goods, it is ordered:

1. That the said form of release, being a form of special contract limiting the liability of the carrier in respect of the carriage of the undermentioned traffic, be approved as amended by the Board; the said form being in the terms following, viz:

#### "SPECIAL CONTRACT.

.....Railway Company.  
"Limitation of responsibility in connection with the carriage of household goods, furniture and settlers' effects (all second hand).  
Consignee and

Destination	Description of Articles
"In consideration of the.....Railway Co. and its connecting carriers receiving the above mentioned property for carriage from.....station, consigned to.....at.....station, at a lower rate than the said company and its connecting carriers might otherwise lawfully charge and be liable for injury to or loss of the said goods and property, or any of it, the said lower and the higher rates being as provided for in the Canadian Freight Classification, or current special tariffs, I do hereby undertake that no claim in respect of injury to, or loss of, the said property, or any of it, will be made against the said Company and its connections, or any of them, exceeding the amount of \$10 for any one of the packages and its contents, or any one article not enclosed in a package, whether such injury or loss is occasioned by the negligence of the said company, its connections, or any of them, or its or their servants or agents, or any of them, or otherwise howsoever.	

.....Shipper."

2. That all railway companies under the jurisdiction of the Board be directed to discontinue the use of their present forms of release limiting their liability with respect to the carriage of the property referred to in sec. 1 of this Order, and to substitute therefor the form herein prescribed until otherwise ordered by the Board.

3. That the Canadian Freight Classification, also, if necessary, any special tariffs affected by these provisions, be amended so as to conform to this Order.

### Express Classification Storage Batteries Charged With Acid.

General Order 137. Mar. 26. Re application of Express Traffic Association of Canada for approval of a proposed amendment to Express Classification for Canada no. 3, providing a rating for storage batteries charged with acid, and conditions of carriage thereof, the acceptance by the express companies of such batteries being prohibited by the present classification; and on the application of Death & Watson, Ltd., of Toronto, it is ordered that the proposed amendment to the said classification be approved as follows:

"Batteries, storage, to be charged at merchandise rates. If empty, the batteries must be boxed or crated. If charged with acid, the batteries must be placed in a strong wooden box and surrounded and covered by excelsior or other porous material that will not be attacked chemically by the liquid, and in quantity sufficient to absorb and hold all of the liquid contained therein. Batteries must be packed with filling holes up. The outside box should be so constructed, with projecting sides and ends with gable top, that it cannot be placed in any other than an upright position, and cannot be stood on side, end or top. On the outside container must be placed a white label, reading:

"NOTICE: Handle carefully. ACID. Do not load with inflammables protected by yellow labels.....Shipper's name."

### Express Classification Re Moving Picture Films.

General Order 138. Mar. 25. Re application of Express Traffic Association of Canada, for approval of a proposed amendment to Express Classification for Canada no. 3, containing provisions for the proper packing of moving picture films, with the object of safeguarding the travelling public and the companies' employees, it is ordered that the proposed amendment be approved as follows, viz:

"Moving picture films must be packed in tightly closed metal cases enclosed in a strong spark-proof wooden box; or in spark-proof cases made of sheet iron not less than 0.02 in. thick and lined throughout with fibre board at least ¼ in. thick, or some other equivalent insulating material. The cover of these cases must fit tightly, and must lap over the body at least ½ in. on the sides, forming a tight joint. On the outside must be placed a red label, reading: 'MOVING PICTURE FILMS. Must not be loaded or stored near a radiator, stove, or other source of heat.'"

### C. P. R. Freight Tariffs Suspended.

General order 139. April 1. Re application of Canadian Freight Association on behalf of railway companies operating in Eastern Canada, for permission to increase their freight rates on various classes of general merchandise and commodities. Upon a further hearing of the application in Toronto, Mar. 31, in the presence of counsel for and representatives of the Grand Trunk Canadian Pacific, and Canadian Northern Railway Companies, the Dominion Government, the Montreal Board of Trade, the Toronto Board of Trade, the Brotherhood of Locomotive Engineers, the Brotherhood of Firemen and Trainmen, the Dominion and other Cannery Associations, the Montreal Corn Exchange, the Atlantic Sugar Refinery, of St. John, N.B., and the Dominion Millers' Association, it is ordered that the proposed advances in commodity rates shown on pages 4, 5, 6, and the upper part of page 7 of Supplement 26 to C.P.R. Tariff, C.R.C. no. E-2480, be suspended pending a decision by the Board in the said application for a general increase.

### Express Receipts and Labelling of Shipments.

General order 142. April 17. Re complaints made by shippers against section 5, subsection (c) of form of Express Merchandise Receipt; and re labelling "prepaid" and "collect" packages.

It is ordered that sub-section (c) of section 5 of the "Terms and Conditions" endorsed on the Express Merchandise Receipt, be struck out; and that, in lieu thereof, the following new sub-section be inserted:

"For any loss or damage caused by delay, or by injury to, or loss or destruction of the shipment, or any part thereof, from conditions beyond the control of the company, unless such loss or damage is caused by the negligence of the railway company upon whose trains or property the shipment was at the time such loss or damage occurred."

And it is further ordered that express companies shall firmly affix a printed label to every shipment of goods received for carriage, which label shall indicate in conspicuous type whether the charges thereon have been prepaid, or are payable by the

consignee. One such label affixed to any one package or article in a shipment composed of two or more packages or articles may suffice, provided that the label indicates the total number of packages or articles in the shipment. For prepaid shipments the label shall be printed in black on yellow paper. For collect shipments the label shall be printed in black on white paper. Permission of the consignee shall be obtained before the removal of any tag, wrapper, or portion of wrapper from any package or article.

### Green Rough Lumber for Dressing and Reshipment.

23468. April 3. Re C.P.R. Supplement 1 cancelling C.R.C. no. W-1936, applying rates on green rough lumber for dressing and re-shipment. Upon the complaint of the East Kootenay Lumber Co. it is ordered that the said supplement be suspended, pending a hearing by the Board.

## The Death of William Stitt.

William Stitt, General Passenger Agent, Eastern Lines, C.P.R., died suddenly in the office of Capt. J. Walsh, Marine Superintendent, C.P.R., at the Windsor St. general offices, Montreal, Apr. 1. The funeral took place Apr. 3, from his home at Westmount, whence the body was taken by special train to Windsor St. Station, and thence to Mount Royal Cemetery. A large number of C.P.R. and other railway officials attended from various parts of Eastern Canada and the United States, and the ticket offices of the chief railways in the city were closed at 1 o'clock as a mark of respect.

At a meeting of the Eastern Canadian Passenger Association, Apr. 6, the following resolution was passed: "Our esteemed friend and colleague was suddenly taken from us while actively engaged in his daily tasks. His keen perception and discriminating judgment gave him a high place in the deliberations of this body, the sageness of his counsels being enriched with his wealth of kindly humor, therefore be it resolved, that the members of this association, bound by ties of a common and irreparable loss, record their sense of deprivation, and express to his sorrowing family heartfelt condolence and sincerest sympathy. Wise and kindly, frank, but charitable, his life was gentle, and the elements so mixed in him that nature might stand up and say to all the world, this was a man."

He was born in Kirkcudbrightshire, Scotland, Aug. 3, 1855, and entered railway service with the Caledonian Ry. there, and was subsequently with the Glasgow and West of Ireland Steam Packet Co. He came to Canada in 1888, and entered C.P.R. service in the Passenger Department, Winnipeg, becoming chief clerk, and in 1891, Assistant General Passenger Agent there. In 1901 he went to Australia to represent the C.P.R. in connection with the Canadian-Australian Steamship Line, of which he was General Passenger Agent, with office at Sydney, N.S.W. He was appointed General Passenger Agent, Eastern Lines, C.P.R., in 1907.

**Buffalo Freight Service.**—The International Ry. of Buffalo, N.Y., has inaugurated a new freight service in order to meet the requirements of shippers. The company places a freight car at the Erie Rd. station each day which receives the package freight for all points along its lines. A clerk is in charge of the car from 7.30 a.m. to 4.40 p.m., after which the car is moved to the uptown freight station. Here the freight is then placed on the first car bound for that particular point to which the freight is consigned.

## Mainly About Railway People.

**H. B. Walkem**, Resident Engineer, C.P.R., Nelson, B.C., has been given three months leave of absence to visit California.

**M. L. Duffy**, E. W. Jones, H. Prynne and D. B. Watson, of the C.P.R. London, Eng., staff, have received commissions in the British Army.

**Sir Thomas Shaughnessy**, President, C.P.R., has been elected an honorary member of the Institute of Civil Engineers, London, Eng.

**J. L. Englehart**, Chairman, Timiskaming and Northern Ontario Ry. Commission, has had his remuneration increased by the Ontario Legislature, from \$5,000 to \$7,500 a year.

**Sir Thomas Shaughnessy**, President, C.P.R., left Montreal, April 8, with Lady and Miss Shaughnessy, for San Francisco and other California points, intending to return via Victoria and Vancouver early in May.

**J. E. Dalrymple**, Vice President, G.T.R., and G.T. Pacific Ry., has been appointed an honorary colonel in the transportation branch of the Militia, succeeding the late Wm. Wainwright.

**G. W. Lee**, one of the commissioners operating the Timiskaming and Northern Ontario Ry. on behalf of the Ontario Government, has been authorized to act and draw salary as General Agent, T. & N.O.R., in addition to acting as a commissioner.

**Sir George Gibb**, one of the most prominent railway men in Great Britain, has been appointed by the British Government, to deal with all matters pertaining to the purchase of materials for war purposes, with a view to minimizing the possibility of graft.

**C. L. Conacher**, who visited Canada last summer and came in contact with a number of transportation officials, has been serving as a railway transport officer on the War Office staff in London since October, with the rank of captain.

**George W. Yates**, Minister's Secretary, Railways & Canals Department, Ottawa, the death of whose father was announced in our April issue as having occurred at London, Ont., Mar. 7, suffered a second bereavement by the death of his mother, Mar. 28.

**Thos. Jackson**, who died at Clinton, Ont., April 8, aged 84, was the father of Wm. Jackson, town ticket agent, C.P.R., there, and formerly President, Canadian Ticket Agents' Association, of which he has been one of the most active members for many years.

**H. W. Nanton**, a partner in Osler, Hammond & Nanton, Winnipeg, who died there April 18, was a brother of A. M. Nanton, director, C.P.R. He started his career in banking service and was afterwards on the staff of the old Ontario & Quebec Railway before going to the west.

**D. Henion**, Locomotive Foreman, Canadian Northern Ry., Atikokan, Ont., was reported to have been arrested, Mar. 26, on a charge, not specified, but presumed to be some breach of war regulations. He was born in the United States, but has lived in Canada for about 12 years.

**Timothy Mullins**, who has been appointed City Passenger Agent, C.P.R., Ottawa, Ont., was born in 1878, and entered C.P.R. service, Mar. 16, 1904, and has been from 1907 to 1913, city solicitor for passenger business; 1913 to Feb. 28, 1915, City Passenger Agent, all in Toronto.

**W. P. Hutchinson** and **B. A. Bourgeois** having received the highest number of votes, have been declared by F. P. Gutelius, Chairman of the Intercolonial and Prince Edward Island Railway Employees' Provi-

dent Fund, as the two members elected by the employes for the year ending Mar. 31, 1916.

**A. L. Sauve**, who has been appointed City Ticket Agent, C.P.R., Ottawa, Ont., was born in 1889, and entered C.P.R. service in 1906, since when he has occupied positions in Ottawa, Montreal, Quebec, and latterly as City Ticket Agent at Detroit, Mich. He was also, for one year, ticket agent on board the C.P.R. s.s. Empress of Britain.

**W. J. McDonald**, who died at St. Petersburg, Florida, Apr. 5, was for many years a prominent railway contractor in Canada, having built portions of the National Transcontinental Ry. in Quebec and New Brunswick, and near Sudbury, Ont., as well as carrying out a contract on the Quebec and Saguenay Ry.

**Alex. Mackenzie**, elder brother of Sir Wm. Mackenzie, and Mrs. Mackenzie celebrated the 50th anniversary of their wedding, Mar. 28, in Toronto. Among the sons present

**H. H. Vaughan**, M. Can. Soc. C.E.  
Consulting Engineer, Canadian Pacific Railway.

were **J. S. Mackenzie**, Purchasing Agent, Winnipeg Electric Ry., and **W. E. Mackenzie**, Locomotive Foreman, Canadian Northern Ry., Vermillion, Alta.

**J. E. Muhlfeld**, who was a master mechanic on the G.T.R. from Feb. 1899 to Sept. 1901, and Superintendent of Machinery and Rolling Stock, Canadian Government Railways, Moncton, N.B., from Sept. 1901 to Oct. 1902, is President of the Locomotive Pulverized Fuel Co. which has been organized recently in New York.

**F. D. Underwood**, President, Erie Rd., underwent a minor operation at the New York Hospital, New York, April 1, which was very successful and we were advised April 15 that he expected to be back at his office a few days thereafter. The press report that he was operated upon for appendicitis was incorrect.

**V. F. Aiken**, referred to as a former passenger and telegraph agent of the C.P.R. at Rogers Pass, was arrested at Vancouver, B.C., Apr. 5, as the last of eight men who have been wanted since Nov. 1913, on charges of conspiracy to defraud the C.P.R.

by means of padded pay rolls. The amount stated to have been embezzled is \$11,000.

**Albert Craig**, who has been appointed City Passenger Agent, C.P.R., Hamilton, Ont., was born there, June 5, 1884, and entered railway service, Sept. 1900, since when he has been, to Dec. 1904, ticket clerk, C.P.R. and Toronto, Hamilton and Buffalo Ry., Hamilton, Ont.; Dec. 1904 to May 1, 1915, Ticket Agent, same road, Hamilton.

**John Bryden**, who died at Victoria, B.C., Mar. 25, was for a number of years Manager of the Dunsmuir Colliery interests at Wellington, Vancouver Island. He married Miss E. H. Dunsmuir (sister of James Dunsmuir, director C.P.R.), who died in 1891. He was a relative of the only survivor of the massacre of the British troops in the Khyber Pass, Afghanistan, in about 1849.

**A. C. Fraser**, whose appointment as Superintendent of Telegraphs, Eastern Division, C. P. R., Montreal, was announced in our last issue, was born at McLellan's Brook, N.S., Feb. 11, 1870, and entered telegraph service in 1886, with the Western Union Telegraph Co., at Moncton, N.B. Since he entered C.P.R. telegraph service he has been operator, traffic chief, wire chief, agent, and inspector.

**W. McIntosh**, a former Superintendent of Motive Power, Central Rd. of New Jersey, Jersey City, N.J., who died at Plainfield, N.J., recently, was born at Franklin, Que., Aug. 20, 1849, and spent his railway career entirely in the U. S. He was a prominent member of the American Railway Master Mechanics' Association, and in 1908 served as President. He was also a member of the American Society of Mechanical Engineers.

**James Markey**, Master Mechanic, Ontario Lines, G.T.R., Toronto, died at his home there, Apr. 22, aged 54, after several weeks illness. He had been in G.T.R. service for about 25 years, rising from the position of locomotive driver. He was born in Ireland, and went to New York at an early age, coming to Canada later, and entering G.T.R. service at Stratford, Ont., subsequently serving at Belleville, Brockville and Allandale.

**H. T. Morgan**, who died at Bournemouth, Eng., recently, aged 51, was a son of the late F. Grundy, Vice President of the Quebec Central Ry., Sherbrooke, Que., and brother of G. G. Grundy, General Manager, Temiscouata Ry., Riviere du Loup, Que., and of E. O. Grundy, General Passenger Agent, Quebec Central Ry., Sherbrooke, Que. He had been engaged in railway service under the Egyptian Government, and changed his name by deed poll at the time of his marriage several years ago.

**H. J. Lillie**, whose appointment as Superintendent of Telegraphs, Ontario Division, C.P.R., Toronto, was mentioned in our last issue, was born there, Nov. 16, 1867, and entered telegraph service in July 1881, as messenger, Great North Western Telegraph Co., at Toronto, and remained with that company as an operator until Nov. 1886, when he transferred to the C.P.R. telegraph service at Toronto, occupying successively the positions of assistant traffic chief, wire chief, and latterly chief operator there.

**George Duncan**, City Passenger Agent, C. P. R., Ottawa, Ont., died suddenly, Apr. 6, while in the Government immigration offices. He was born in Montreal, Nov. 23, 1860, and had been in C.P.R. service for about 35 years, prior to which he had been with the G.T.R. Among the positions he occupied with the C.P.R., were those of chief clerk to the General Manager, Traveling Passenger Agent, City Passenger Agent, Sherbrooke, Que., and at Quebec, Que., and since 1900, City Passenger and Ticket Agent, Ottawa, Ont.

**F. W. Taylor**, who is well known as the originator of modern scientific management, which has been adopted in the chief railway shops on this continent, died suddenly in Philadelphia, from pneumonia, recently. He received a personal gold medal at the Paris Exposition of 1900 for an improved process of treating modern high speed steel, and also the Elliott Cresson medal of the Franklin Institute. He was a member of the American Society of Mechanical Engineers, of which he was President in 1905-06. He was also author of several books and articles dealing with shop management.

**Frederick R. Perry**, who has been appointed General Agent, Passenger Department, C.P.R., New York, was born at Hopkinton, Mass., Aug. 15, 1876, and entered railway service July 1, 1895, since when he has been, to Apr. 30, 1896, stenographer, G.T.R., Boston, Mass.; May 1, 1896 to Mar. 31, 1900, stenographer and ticket clerk, C.P.R., Boston, Mass.; Apr. 1, 1900 to Dec. 1, 1904, City Passenger and Ticket Agent, C.P.R., Boston, Mass.; Dec. 1, 1904 to May 31, 1906, District Passenger Agent, C.P.R., St. John, N.B.; June 1, 1906 to Mar. 31, 1915, General Agent, Passenger Department, C. P. R., Boston, Mass.

**Charles Frederick Black**, who has been appointed Attorney, Central Vermont Ry., was born at Burlington, Vt., Mar. 5, 1884, and educated there, graduating from the High School in June, 1902. He attended the University of Vermont and graduated in June, 1906, with the degree of Ph.B., and obtained the degree of LL.B., at the George Washington University, Washington, D.C., in June, 1910. He was admitted to practice in the District of Columbia in Oct., 1910, and in Vermont in Oct., 1912. He was City Prosecuting Officer, Burlington, Vt., 1913 to 1915, and a member of the Vermont General Assembly for 1915.

**William Fulton**, who has been appointed Assistant District Passenger Agent, C.P.R., Toronto, was born at Ballinderry, near Belfast, Ireland, Nov. 13, 1870, and entered C. P.R. service, Jan. 1891, since when he has been, to Jan. 1895, clerk in different positions, Toronto; Jan. 1895 to June 1900, City Agent, C.P.R., Dominion Express Co., and C.P.R. Telegraphs, Galt, Ont.; June 1900 to Feb. 28, 1915, City Passenger and Ticket Agent, London, Ont. He was entertained to dinner by a number of business men in London, Ont., Apr. 23, when he was presented with a cabinet of silver.

**James Kent**, whose retirement from the position of Manager, C.P.R. Telegraphs, was announced in our last issue, was born at Montreal, Jan. 15, 1854, and commenced his telegraph service as messenger, Montreal Telegraph Co. He occupied various positions, and in 1886, when he was chief operator, Great North Western Telegraph Co., he transferred to the then recently inaugurated C.P.R. telegraph system, as chief operator at Montreal. In 1890 he was appointed Superintendent of Telegraphs, Eastern Division from Louisburg, N.S., to Fort William, Ont., and in 1899 succeeded C. R. Hosmer, as Manager of Telegraphs.

**R. J. Collins**, who was recently appointed Chief Dispatcher, District 4, Alberta Division, C.P.R., Edmonton, was born at Winnipeg, Apr. 30, 1883, and entered C.P.R. service, Oct. 4, 1898, since when he has been, to Apr. 1901, messenger, assistant agent and stationary fireman, Broadview, Sask.; Apr. 8, 1901 to Feb. 6, 1902, assistant agent, Broadview, Sask.; Feb. 6, 1902 to Mar. 23, 1902, agent, Caron, Sask.; Mar. 23, 1902 to Dec. 1904, night operator, day operator and agent, Broadview, Sask.; Dec. 1904 to May 1905, operator, Moose Jaw, Sask.; May 1905 to June 1912, dispatcher, Moose Jaw, Sask., Cranbrook, B.C., and Calgary, Alta.; June 1912 to Apr. 1915, Chief Dispatcher, Re-

gina, Sask.; Saskatoon, Sask.; Assiniboia, Sask., and Edmonton, Alta.

**E. F. L. Sturdee**, who has been appointed General Agent, Passenger Department, C. P.R., Boston, Mass., was born at St. John, N.B., Mar. 29, 1876, and entered C.P.R. service Dec. 1893, since when he has been, to July 1894, office boy, Moncton, N.B.; July 1894 to Aug. 1897, clerk and stenographer,

P. 414 The Late Lacey R. Johnson.

P. 415. F. W. Cooper, A.M. Can. Soc. C.E., Acting Superintendent, District 1, Eastern Division, Canadian Pacific Railway.

Assistant General Passenger Agent's office, St. John, N.B.; Aug. 1897 to June 1902, stenographer, rate and excursion clerk, Ontario Division, Assistant General Passenger Agent's office, Toronto; June 1902 to Dec. 1910, excursion clerk, General Passenger Department, Eastern Lines, Montreal; Dec. 1910 to Dec. 1, 1913, chief clerk to General Passenger Agent, Eastern Lines, Montreal;

Dec. 1, 1913 to Apr. 1915, Assistant District Passenger Agent, Toronto.

**W. Marshall**, whose appointment as Assistant Manager of Telegraphs, Western Lines, C.P.R., Winnipeg, was announced in our last issue, was born at Garden Island, Ont., May 18, 1859, and entered telegraph service in 1876, in the stores department, Dominion Telegraph Co., Toronto, and was subsequently an operator and line man at St. Catharines, Ont. From 1878 to 1880, he was foreman of line construction, Canadian Mutual Telegraph Co.; 1880 to 1886, with the Western Union Telegraph Co., Buffalo, N. Y. He entered C.P.R. telegraph service in 1886, since when he was, to 1906, Inspector, Toronto; 1906 to Aug. 1909, Superintendent of Telegraph Construction, Toronto; Aug. 1909 to March 1915, Superintendent of Telegraphs, Toronto.

**Andrew James Taylor**, who died at Ocean Park, California, Apr. 19, where he had been for some months on account of ill health, was born at Ottawa, Ont., June 24, 1857, and entered Chicago, Milwaukee and St. Paul Ry. service in 1879, since when he has been, to 1881, clerk in General Canadian Agent's office, Toronto; 1881 to 1883, Traveling Passenger and Freight Agent; 1883 to 1885, Travelling Freight Agent; 1885 to 1897, Canadian Passenger Agent; and from 1897, Canadian Freight and Passenger Agent, at Toronto. He was well known throughout Ontario, and was connected with many of the athletic organizations in Toronto and neighborhood. The funeral took place at Bowmanville, Ont., Apr. 24. His brother, J. G. Taylor, is General Superintendent, Saskatchewan Division, C.P.R., Moose Jaw.

**Frank W. Cooper, A.M. Can. Soc. C.E.**, who has been appointed acting Superintendent, District 1, Eastern Division, Farnham, Que., was born at London, Ont., Feb. 16, 1880, and entered railway service in 1901, since when he has been, to 1903, draughtsman, Maintenance of Ways Department, leveller on preliminary location and construction, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont.; June 1903 to Nov. 1905, transit man and Assistant Engineer, C.P.R., London and Toronto; Nov. 1905 to Nov. 1911, Resident Engineer, C.P.R., London and Toronto; Nov. 1911 to Apr. 1912, Resident Engineer, C.P.R., Montreal; Apr. to Nov. 1912, Assistant Engineer, Chief Engineer's Office, C.P.R., Montreal; Nov. 1912 to Feb. 1915, Division Engineer Eastern Division, C. P.R., Montreal.

**William Bristow McNiece**, whose appointment as Car Foreman, G.T. Pacific Ry., McBride, B.C., was announced in a recent issue, was born in County Antrim, Ireland, Sept. 13, 1880, and entered railway service Sept. 1900, since when he has been, to Jan. 1901, shunter, Caledonian Ry., Airdrie, Scotland; Jan. 1901 to May 1903, brakeman, same road, Greenock; May 1903 to Mar. 1907, brakeman, same road, Glasgow; Apr. to Sept. 1907, car repairer, G.T. Pacific Ry., Portage la Prairie, Man.; Sept. 1907 to Apr. 1908, brakeman, Chicago and Northwestern Ry., Janesville, Wisconsin; May to Aug. 1908, car repairer, G.T. Pacific Ry., Portage la Prairie, Man.; Aug. 1908 to Nov. 1912, Car Foreman, same road, Fort William, Ont.; Nov. 1912 to Aug. 1914, Car Foreman, same road, Jasper, Alta.

**C. W. Van Buren**, who has been appointed General Master Car Builder, C.P.R., Montreal, entered railway service in March 1889, since when he has been, to Nov. 1891, carpenter, New York Central shops, West Albany, N.Y.; Nov. 1891 to Sept. 1, 1893, assistant foreman; Sept. 1, 1893 to Sept. 1, 1896, in charge of Car Department work, Adirondack Division, same road, Herkimer, N.Y.; Sept. 1, 1896 to July 16, 1905, Car Foreman, Adirondack Division, and Mohawk Division, New York Central and West

Shore Rds.; July 16, 1905 to July 1, 1906, General Car Inspector, Eastern Lines, C.P.R., Montreal; July 1, 1906 to July 1, 1909, Divisional Car Foreman, Eastern Division, C.P.R., Montreal; July 1, 1909 to 1911, Master Car Builder, Eastern Lines, C.P.R., Montreal, when he resigned from C.P.R. service.

**D. T. Main**, who has been appointed Superintendent of Motive Power and Car Department, C.P.R., Montreal, was born at Kirkintilloch, Scotland, in 1878, and came to Canada in 1903, when he entered Mackenzie, Mann and Co.'s service as draughtsman, transferring to C.P.R. service in 1904, since when he has been, to 1907, draughtsman; 1907 to Mar. 1908, Locomotive Foreman, Minnedosa, Man.; Mar. 1908 to Mar. 1910, Locomotive Foreman, Cranbrook, B. C.; Mar. 1910 to Jan. 1912, District Master Mechanic, District 1, British Columbia Division, Nelson; Jan. 1912 to June 30, 1913, Master Mechanic, Saskatchewan Division, Moose Jaw; June 30, 1913 to Apr. 15, 1915, Master Mechanic, British Columbia Division, Vancouver; Apr. 15 to Apr. 20, 1915, Master Mechanic, Ontario Division, Toronto.

**J. McMillan**, whose appointment as Manager of Telegraphs, C.P.R., Montreal, was announced in our last issue, was born at Liverpool, Eng., Nov. 2, 1866. He came to Canada, June 1883 and was for some time working on C.P.R. construction. In 1885 he served as foreman of telegraph construction and of the Government military telegraph lines, and subsequently returned to railway construction. In 1888 he was general foreman of construction, C.P.R., at Winnipeg. He became a telegraph operator in 1895 with the C.P.R. at Winnipeg, and in 1896 was transferred to the Mountain Division as circuit manager, repeater chief and telegraph agent. From 1902 to 1906 he was Inspector of Telegraphs, Central Division, C.P.R., Winnipeg; 1906 to Apr. 1907, Assistant Superintendent of Telegraphs, C.P.R., and Apr. 1907 to Jan. 1912, Superintendent of Telegraphs, at Calgary, Alta.; Jan. 1912 to July 1, 1913, Superintendent of Telegraphs, C.P.R., Winnipeg, and July 1, 1913 to Mar. 1915, General Superintendent of Telegraphs, C.P.R., Winnipeg.

**Henry Hague Vaughan**, who has retired from the position of Assistant to the Vice President, C.P.R., and has been appointed Consulting Engineer, was born at Forest Hill, Essex, Eng., Dec. 26, 1868, and educated at King's College, London, Eng. He served an apprenticeship with Nasmith, Wilson and Co., Patricroft, Manchester, Eng., going to the U.S. in 1891. He was engaged with various companies as machinist, draughtsman and assistant engineer of tests, and mechanical engineer, including the Great Northern Ry., Philadelphia and Reading Ry., and the Queen and Crescent Route, and after a period of service with a supply house, was appointed Assistant Superintendent of Motive Power, Lake Shore and Michigan Southern Ry., Mar., 1902, remaining until Feb., 1904, when he was appointed Superintendent of Motive Power, C.P.R., which position he held until his appointment as Assistant to the Vice President, C.P.R., Dec., 1906. He is President of the Engineers' Club of Montreal, and has been a member of the Canadian Society of Civil Engineers since 1906, a member of the council since 1910, and was elected a Vice President in 1912.

**Lacey R. Johnson**, M.Can.Soc.C.E., whose appointment as General Welfare Agent, C.P.R., Montreal, was announced in our last issue, died Apr. 17, from peritonitis, after a short illness. He was born at Abingdon, Berks, England, June 22, 1855. He entered railway service as an apprentice at the

Great Western Ry. works at Swindon, Wilts., June 1, 1870, and was a mechanic and Foreman of Mechanics at Woolwich Arsenal, Jan. to Aug., 1876, and fitter and erector, Sept., 1876, to Nov., 1878; Manager, Davis and Sons' engineering works,

**W. Marshall**,  
Assistant Manager of Telegraphs, Western  
Lines, Canadian Pacific Railway.

**J. F. Richardson**,  
Superintendent of Telegraphs, Saskatchewan  
Division, Canadian Pacific Railway.

London and Abingdon, Nov., 1878, to Aug., 1879. In Sept., 1879, he went to India as draughtsman on the Scinde, Punjab and Delhi Ry., and was subsequently foreman of machine and erecting shops there. He left India on account of health in Mar. 1882,

and entered G.T.R. service at Montreal as draughtsman, June, 1882, and joined the C.P.R. in Nov., 1882, after which he was, to Nov., 1885, General Foreman, Carleton Jct., Ont.; Nov., 1885, to May, 1886, Assistant Master Mechanic, Eastern Division, Chapleau, Ont.; May, 1886, to Apr., 1901, Master Mechanic, Pacific Division, Vancouver, B.C.; and from the commencement of the Transpacific service his jurisdiction was extended over the engineering department of the vessels, during which time he spent three winters in Hong Kong, China, superintending alterations and repairs to the company's vessels; Apr. to Sept., 1901, on the purchase of the Canadian Pacific Navigation Co. by the C.P.R., he was Superintending Engineer of the combined fleets, which position was severed from the locomotive and car department; Sept. 1, 1901, to July 1, 1912, Assistant Superintendent of Motive Power, C.P.R., Montreal; July 1, 1912, to Mar., 1915, General Superintendent, Angus Shops District, C.P.R., Montreal. He was Lieutenant-Colonel, Commanding the Montreal Heavy Brigade of Artillery and was given a military funeral.

**John Franklin Richardson**, whose appointment as Superintendent of Telegraphs, Saskatchewan Division, C.P.R., Moose Jaw, was announced in our last issue, was born at Granby, Que., Aug. 23, 1860, and was educated in Wisconsin, and Waterloo, Que. He entered railway and telegraph service in 1876, since when he has been, to 1879, assistant agent and telegraph operator, Central Vermont Ry., Waterloo, Que.; 1879 to 1881, assistant in offices of Montreal Telegraph Co., and of Canadian, National, and United States Express Cos., St. John's, Que.; 1881 to 1883, telegraph operator, Great North Western Telegraph Co., Montreal; he entered C.P.R. telegraph service in 1883, since when he has been telegraph operator, Inspector and Assistant Electrician, Montreal; Superintendent of Construction, St. John, N.B.; Superintendent at Montreal, and from Jan. 1912, at Vancouver, B.C. During the time he was Superintendent of Telegraph Construction at St. John, N.B., he built all the C.P.R. telegraph lines in the Maritime Provinces, including the laying of the submarine cables to Cape Breton Island. In 1897 he made repairs to the submarine cable between Vancouver and Victoria, B.C., and in the same year, he was lent to the Dominion Government to explore different routes to the Yukon and to give an estimate for the building of a telegraph line to Dawson. His choice of route and estimate were accepted, and his services were utilized to build the line from Bennett, B.C., to Dawson, Yukon. This line was completed Sept. 28, 1899, five weeks earlier than the time agreed upon, and during the process of construction, the remarkable average of five miles of completed line a day was made. In 1901 he represented the Telegraph Department on the train conveying the present King and Queen, then Duke and Duchess of Cornwall and York, across the Dominion, and acted in a similar capacity in 1906 from Winnipeg east, on the train conveying Prince Arthur of Connaught home from Japan. He has invented several electrical devices, some of which have been adopted by the C.P.R. and other railway and telegraph companies in Canada and the U.S. One of the most important of these in general use is the device to permit the operating of an emergency telephone from trains, in cases of breakdown. He is a member of the Old Time Telegraphers and Historical Association, and of the Association of Railway Telegraph Superintendents.

**The C.P.R. Mountain Hotels** will open as follows: Banff Springs, May 1; Lake Louise, June 1; Balfour, June 1; Field, June 15.

## Canadian Pacific Railway Construction. Betterments, Etc.

**Legislation.** The Dominion Parliament has passed a number of acts granting the C.P.R. and several of its subsidiary companies extensions of time for the building of lines. These include lines in the west covering about a score of branches in Manitoba, Saskatchewan and Alberta, upon most of which part of the lines are built and in operation; the Manitoba and North Western Ry. extensions in Manitoba and Saskatchewan; the British Columbia Southern Ry. extension from Michel to Kananaskis, B.C.; and the South Ontario Pacific Ry. from Hamilton to Niagara Falls, Ont. The general C.P.R. act also covers a proposed line from Bolton Jct. or Palgrave, on the Toronto-Sudbury line to Campbellville on the Toronto-Windsor line.

**Eastern Division.**—The new electrically operated bridge across the Lachine canal, Montreal, was officially opened for traffic, April 17. It is a double track bridge and is the last link in the second track work in the vicinity of Montreal. Work was started on the substructure Dec. 1, 1914, and completed Feb. 1, and the steel work was at once completed. Traffic was not delayed during the construction of the bridge.

**Western Lines Second Track Construction.**—D. C. Coleman, Assistant General Manager, Western Lines, is reported to have said in a recent interview that no further second track construction is to be undertaken on the Western Lines at present.

**Alberta Division.**—A press report states that arrangements are being made for the extension of the Alberta Central Ry., at present built from Red Deer to Rocky Mountain House, 60 miles, in the direction of the Brazeau River coal fields, but D. C. Coleman, Assistant General Manager, Western Lines, is reported to have said in a recent interview that nothing definite had been arranged about the matter. The Dominion Parliament has granted an extension of time for the building of this line.

The Board of Railway Commissioners has approved location plans for the completion of the Weyburn-Lethbridge line, covering the mileage from the present end of steel, at the Saskatchewan-Alberta boundary, to the end of the 25 miles of grading completed easterly from Foremost, the present easterly end of the steel. This gap between the westerly and the easterly track ends is less than 70 miles, on which about 45 miles of grading has yet to be done. Local press reports state that grading will be done this year, even if steel is not laid.

**Rogers Pass Tunnel Construction.**—A press report dated April 9 states that practically three miles of the pioneer tunnel had been driven, of which well on to two miles was from the eastern portal, and something over a mile from the western portal. The main tunnel had been driven for 4,580 ft. from the eastern portal, and for 4,439 ft. from the western portal, and about 3,090 ft. of tunnel had been lined and completed. The contract calls for the completion of the tunnel by the end of 1916, but such rapid progress has been made that it is expected to have it ready about six months ahead of the time limit. We have been officially advised that nothing has yet been decided as to the system of ventilation to be adopted for the tunnel.

**British Columbia Division.**—D. C. Coleman, Assistant General Manager C.P.R. Western Lines, is reported to have said in a recent interview that arrangements were being completed for operating the Kettle Valley Lines from Midway to Merritt, B.C., as part of the C.P.R. system, the connec-

tion with the main transcontinental line being made by Spence's Bridge, over the C.P. R. Nicola branch from Merritt. When the K.V. Line is completed through to Hope, an additional connection with the transcontinental line will be provided. (April, pg. 135.)

## Railway Finance, Meetings, Etc.

**Boston and Maine Rd.**—An act providing for the reorganization of the B. and M. R., was signed by the Governor of Maine, April 2, to become effective on the passing of similar legislation in the other States in which the company operates. The reorganization bill was defeated in the Vermont House of Representatives by a large majority, April 2.

**Canadian Northern Ry.**—The Dominion Parliament at its recent session passed legislation providing that the issue of Dominion notes, and the advances made in pursuance of various orders-in-Council, and all things done under the provisions of such orders be ratified. The advances made to the C.N.R. under the orders-in-Council amount to \$10,000,000 against a pledge made by the company of the guaranteed securities issued under the provisions of the C.N.R. Guarantee Act, 1914. The sums advanced have been placed to the credit of the Minister of Finance to be paid out according to the terms of the trust deed.

An agreement made Mar. 19, between the C.N.R. and the Guaranty Trust Co., New York, qualifying the agreement of Aug. 1, 1910, between the same parties, has been filed with the Secretary of State at Ottawa.

A trust mortgage deed dated July 30, 1914, made by the Mount Royal Tunnel and Terminal Co. (the C.N.R., terminal company in Montreal) to the British Empire Trust Co., securing first mortgage debenture stock and bonds has been filed with the Secretary of State at Ottawa.

**Grand Trunk Pacific Ry.**—The Dominion Parliament, in its recent session, enacted legislation providing that the issue of Dominion notes, and the advances made in pursuance of various orders-in-Council, and all things done under the provisions of such orders be ratified. The advances made to the G.T.P.R. amount to \$6,000,000, against a pledge of the guaranteed securities of the company. The sums advanced have been placed to the credit of the Minister of Finance to be paid out according to the terms of the trust deed.

**Grand Trunk Ry.**—The Dominion Parliament has authorized the company to assist financially any company the stock of which it holds or controls, out of the proceeds of any class of stock heretofore or hereafter issued. The approval of the shareholders must be first obtained to the use of the funds in this way.

**Intercolonial Ry.**—Senator Loughheed informed the Senate, Mar. 30, that the receipts of the I.R.C. for the 10 months ended Jan. 31, were \$9,677,547.77 and disbursements, \$9,760,638.11. In the House of Commons the Minister of Railways gave the additional information that within the same period the revenue had increased by over \$1,500,000, while the operating expenses had decreased by over \$200,000.

The House of Commons has voted \$13,000,000 on account of working expenses for the current financial year.

On account of the following branch lines there have been provided in the main and supplementary estimates on account of construction during the current financial year as follows: International Ry. of New Brunswick, \$85,000 and \$100,000; New Brunswick and Prince Edward Island Ry., \$65,000 and \$50,000; St. John and Quebec Ry., \$60,000 and \$15,000.

**National Transcontinental Ry.**—The House of Commons voted \$200,000 on account of the working expenses of the section of the line from Moncton to Levis, in the main estimates, and an additional \$30,000 in the supplementary estimates.

**Pere Marquette Rd.**—A petition asking for an order for the sale of the company's railway and other property is under consideration of the Federal Court at Detroit, Mich. The petition states that \$1,503,490 of interest on underlying bonds is due, and that there is no prospect of it being paid. The company owns the Lake Erie and Detroit River Ry. in Canada, which, however, is apparently not affected by the proceedings.

**Prince Edward Island Ry.**—In the main estimates at the recent parliamentary session \$650,000 was provided, and in the supplementary estimates \$50,000 was provided for working expenses for the current financial year.

**Shuswap and Okanagan Ry.**—A meeting of shareholders has been called to be held at Montreal, May 3, to consider whether it is expedient to cancel the present lease to the C.P.R. and to enter into a new lease of the company's railway to that company, and if so to approve of the terms, conditions and forms of the new lease. H. C. Oswald is Secretary.

**Temiscouata Ry.**—Net earnings for January, \$2,969 against \$4,026 for Jan., 1914.

**Toronto, Hamilton and Buffalo Ry.**—The Dominion Parliament has confirmed the agreement for the amalgamation of the Erie and Ontario Ry. with the T. H. and B. Ry., and fixing the bonding powers of the amalgamated company at \$15,000,000.

**White Pass and Yukon Route.**—Gross earnings from Jan. 1 to Feb. 21, \$12,263, against \$24,400 for same period 1914.

## Grand Trunk Railway Betterments, Construction, Etc.

**Boston Terminals.**—G.T.R. officials in Montreal state that the company is not definitely interested in the application recently made to the Massachusetts Legislature by J. W. Ayres, Somerville, Mass., for dock facilities at Boston, Mass. The petition to the Legislature is reported to have stated that the movement was being made in the interests of the Southern New England Ry., a subsidiary of the Central Vermont Ry., which itself is controlled by the G.T.R., and a press report stated that the solicitors acting in the matter are associated with G.T.R. interests in the State. The site mentioned at the water front adjoins the New York New Haven and Hartford Rd. freight yards.

**Peterborough, Ont.**—G.T.R. engineers met Peterborough City Council's public utilities committee, Mar. 30, and discussed projected improvements at that place. (April, pg. 134.)

## Canadian Freight Association Committees.

At a meeting in Montreal April 15 the following committees were elected:

**ADVISORY.**—G. H. Shaw, C. E. Dewey, W. M. Kirkpatrick and J. H. Meglemery.

**EXECUTIVE.**—W. M. Kirkpatrick, F. F. Backus, G. Tombs and H. C. Martin.

**CLASSIFICATION.**—W. M. Kirkpatrick, G. Tombs, F. J. Watson, E. N. Todd, L. Macdonald, H. E. Macdonnell, G. T. Pettigrew, M. H. Brown, R. E. Perry, J. Edward.

**FREIGHT INSPECTION.**—R. W. Long, F. A. Shaw, M. H. Brown, R. W. Youngs, R. J. S. Weatherston, J. Edward, G. H. Clark, W. B. Bamford, W. S. Elliot, G. C. Martin.

## Transportation Appointments Throughout Canada.

**Algoma Central & Hudson Bay Ry.**—T. J. KENNEDY, President, having returned from Europe, has qualified as a co-receiver with Vivian Harcourt, who acted as sole receiver beginning Feb. 20.

R. BARBER has been appointed Treasurer, vice Jas. Hawson. Office, Sault Ste. Marie, Ont.

**Canada Steamship Lines, Ltd.**—M. P. CONNOLLY, General Agent, Quebec, Que., will in future deal with passenger matters only.

H. M. DUBOIS, heretofore Travelling Freight Agent, has been appointed District Freight Agent, Quebec, Que.

W. F. CLONEY, heretofore General Agent, Buffalo, N.Y., has been appointed General Agent, Rochester, N.Y.

J. V. FOY, heretofore General Agent, Chicago, Ill., has been appointed General Agent, Buffalo, N.Y., vice W. F. Cloney, transferred.

H. W. CRAWFORD, heretofore General Agent, Rochester, N.Y., has been appointed General Agent, Chicago, Ill., vice J. V. Foy, transferred.

**Canadian Northern Ry.**—T. S. LOWE, heretofore Master Mechanic, Limoilou, Que., has been appointed General Foreman there, in addition to performing the duties of Road Foreman of Locomotives, Lake St. John Division.

W. HOPE, heretofore Erecting Shop Foreman, Joliette, Que., has been appointed Foreman, Limoilou, Que.

T. LATTE, heretofore Locomotive Foreman, Limoilou, Que., has resigned.

**Canadian Pacific Ry.**—H. H. VAUGHAN, Assistant to Vice President, Montreal, has, at his own request, been released from the immediate supervision of the construction and maintenance of locomotives and cars, in order that he may devote his attention to important contract engagements that he has become interested in, (viz., the manufacture of shells, cartridge cases, etc., for the British Government, by the Montreal Ammunition Co., Ltd., of which he is President). He is being retained by the C.P.R. as Consulting Engineer. It is not the intention to fill the position of Assistant to the Vice President, at present.

W. E. WOODHOUSE, heretofore Superintendent Motive Power and Car Department, Montreal, has been appointed Chief Mechanical Engineer. Office, Montreal.

D. T. MAIN, heretofore Master Mechanic, British Columbia Division, Vancouver, who, on Apr. 15, was appointed Master Mechanic, Ontario Division, Toronto, vice J. H. Mills, transferred, was, on Apr. 20, appointed Superintendent of Motive Power and Car Department, vice W. E. Woodhouse, promoted. Office, Montreal.

C. W. VAN BUREN, at one time Master Car Builder, Eastern Lines, has been appointed General Master Car Builder, vice R. W. Burnett, resigned. Office, Montreal.

F. B. ZERCHER, heretofore Superintendent of Car Shops, Montreal, has been appointed Master Car Builder, Eastern Lines. Office, Montreal.

F. McMAHON, heretofore Manager, Chateau Frontenac, Quebec, Que., has been appointed Assistant Manager in Chief of Hotels. Office, Montreal.

W. H. SNELL, heretofore General Agent, Passenger Department, New York, N.Y., has been appointed General Passenger Agent, Eastern Lines, vice Wm. Stitt, deceased. Office, Montreal.

J. E. BEATTY, heretofore Division Engineer, Construction Department, Montreal, has been appointed Division Engineer, Atlantic Division, vice G. L. Wetmore. Office, St. John, N.B.

J. B. WINDROSS, heretofore chief rooming clerk, Chateau Frontenac, Quebec, Que., has been appointed acting Manager, vice F. McMahon, promoted.

F. W. COOPER, heretofore Division Engineer, Eastern Division, Montreal, has been appointed acting Superintendent, District 1, Eastern Division, vice R. W. McCormick, on sick leave, and who died, Apr. 23. Office, Farnham, Que.

The Angus Shops District, Montreal, which has hitherto been operated as a separate unit, is now being operated as part of the Eastern Lines.

H. OSBORNE, heretofore Mechanical Superintendent, Angus Shops, has been appointed Works Manager, Angus Shops, Montreal.

J. A. SHAW, heretofore Electrical Engineer, Angus Shops, Montreal, has been appointed Electrical Engineer of the company. Office, Montreal.

J. W. HUGHES has been appointed Electrical Engineer, Eastern Lines. Office, Montreal.

R. McKILLOP, heretofore in Assistant Chief Engineer's Office, Montreal, has been appointed Division Engineer, Eastern Division, vice F. W. Cooper, promoted. Office, Montreal.

R. JOHNSTON, heretofore Night Foreman, Sortin Yard, Montreal, has been appointed Assistant Foreman, Hochelaga, Que., vice J. Cave, who is employed at Outremont as a fitter. The position of Night Foreman at Sortin Yard has been abolished.

G. A. C. PHILLIPS, heretofore agent Telegraphs, Calgary, Alta., has been appointed agent Telegraphs, Montreal, vice A. Walsh, retired.

On account of the death of G. Duncan, heretofore City Passenger and Ticket Agent, Ottawa, Ont., the work has been divided, and T. MULLINS, heretofore City Passenger Agent, Toronto, has been appointed City Passenger Agent, and A. L. SAUVE, heretofore City Ticket Agent, Detroit, Mich., has been appointed City Ticket Agent, there.

W. J. PICKRELL, heretofore Superintendent, District 2, Atlantic Division, Aroostook Jct., N.B., has been appointed Master Mechanic, Ontario Division, vice D. T. Main, promoted. Office, Toronto.

W. FULTON, heretofore City Passenger Agent, London, Ont., has been appointed Assistant District Passenger Agent, Rail Lines, Toronto, vice E. F. L. Sturdee, promoted.

WILLIAM McILROY, heretofore City Passenger Agent, Hamilton, Ont., has been appointed City Passenger Agent, Toronto, vice T. Mullins, transferred to Ottawa, Ont.

H. J. McCALLUM, heretofore chief clerk, City Ticket Office, Toronto, has been appointed Station Ticket Agent, Union Station, Toronto, vice J. H. Radcliffe, promoted.

A. CRAIG, heretofore ticket clerk, C.P.R. station, Hamilton, Ont., has been appointed City Passenger Agent, Hamilton, Ont., vice W. McIlroy, transferred to Toronto.

J. H. RADCLIFFE, heretofore Station Ticket Agent, Union Station, Toronto, has been appointed City Passenger Agent, London, Ont., vice W. Fulton, transferred.

J. S. BYROM, heretofore port steward, British Columbia Coast Service, C.P.R., Vancouver, has been appointed Superintendent of Great Lakes Steamers, vice S. Buchanan, retired. Office, Port McNicoll, Ont.

J. H. MILLS, heretofore Master Mechanic, Ontario Division, West Toronto, has been appointed Master Mechanic, Lake Superior Division, vice H. G. Reid, transferred. Office, North Bay, Ont.

F. J. MAHON, heretofore Superintendent of Telegraphs, Eastern Division, Montreal, has been appointed Inspector of Telegraphs, Saskatchewan Division. Office, Saskatoon.

M. J. SCOTT, Master Mechanic, Saskatchewan Division, Moose Jaw, is reported to have been appointed Master Mechanic, Alberta Division, Calgary, vice A. Sturrock, transferred.

A. STURROCK, Master Mechanic, Alberta Division, Calgary, is reported to have been appointed Master Mechanic, British Columbia Division, Vancouver, vice D. T. Main, promoted.

E. F. L. STURDEE, heretofore Assistant District Passenger Agent, Toronto, has been appointed General Agent, Passenger Department, Boston, Mass., vice F. R. Perry, promoted.

F. R. PERRY, heretofore General Agent, Passenger Department, Boston, Mass., has been appointed General Agent, Passenger Department, New York, N.Y., vice W. H. Snell, promoted.

W. C. ELMER, heretofore chief clerk, C. P.R., Union Station, Toronto, has been appointed City Passenger Agent, Detroit, Mich., vice A. L. Sauve, transferred.

**Central Vermont Ry.**—C. F. BLACK has been appointed Attorney, vice C. W. Witters, deceased. Office, St. Albans, Vt.

**Champlain Transportation Co., Lake George Steamboat Co.**—E. H. DOW has been appointed General Baggage Agent, vice C. E. Durkee, resigned.

**Grand Trunk Pacific Ry.**—G. BRADSHAW, Safety Engineer, G.T.R. and G.T. Pacific Ry., who had offices at Montreal and Winnipeg, has moved to Union Station, Toronto.

The following station agents have been appointed,—Pope, Man., A. Gatherwood; Uno, Man., W. Downes; Dugald, Man., E. Jones; Asquith, Sask., F. H. Keefe; Othson, Sask., W. C. Ross; Chauvin, Alta., O. Hawthorn.

**Grand Trunk Ry.**—G. BRADSHAW, Safety Engineer, G.T.R. and G.T. Pacific Ry., who had offices at Montreal and Winnipeg, has moved to Union Station, Toronto.

GEO. A. BUTLER has been appointed acting Assistant Engineer, Belleville Division, vice C. S. Ogilvie, who has enlisted for active service. Office, Belleville, Ont.

The following station agents have been appointed,—Aubrey, Que., C. Arnold; Milton, Ont., J. E. Bell; Copetown, Ont., C. S. Kerton; Burgessville, Ont., J. E. Proctor; Rose Point, Ont., E. Swinden.

**Lake Erie & Northern Ry.**—MARTIN N. TODD, President, Galt, Preston & Hespeler St. Ry., has also been appointed General Manager of the L.E. & N.R., vice W. P. Kellett, resigned. This line is under construction between Galt and Port Dover, via Paris, Brantford and Waterford, 51 miles, and has been leased to the C.P.R.

**New York Central Rd.**—E. R. BISSELL, heretofore Assistant Superintendent, Michigan Division, Toledo, Ohio, has been appointed Superintendent, Detroit Division, vice W. F. Schaff, transferred. Office, Detroit, Mich.

E. D. MOON, heretofore Assistant Superintendent, Ashtabula, Ohio, has been appointed Assistant Superintendent, Michigan Division, vice E. R. Bissell, promoted. Office, Toledo, Ohio.

**Niagara Gorge Rd.**—G. H. STAGG has been appointed Travelling Passenger Agent, Buffalo, N.Y.

**Pere Marquette Rd.**—L. C. WHITE has been appointed General Car Foreman, St. Thomas, Ont., vice A. White.

**Railways Department.**—E. V. JOHNSON, formerly Inspecting Engineer, has been transferred to the Department's inside service at Ottawa. ALEX. FERGUSON,

formerly on National Transcontinental Ry. construction, is now making inspections of railways for the Department for subsidy purposes and will probably be appointed Inspecting Engineer.

**Roberval-Saguenay Ry.**—J. A. FRIGON, heretofore Supervisor of Track, Lake St. John Division, Canadian Northern Ry., has been appointed Superintendent, R.S. Ry., in charge of transportation and maintenance of way departments, maintenance of locomotive equipment, shops, for the safe and

economical movement of trains and the endorsement of all rules and regulations for the proper management of station service and discipline of men. Office, West Chicoutimi, Que.

**Wabash Rd.**—E. F. KEARNEY, one of the Receivers, has been elected President. Office, St. Louis, Mo.

**White Pass and Yukon Route.**—J. W. PROBERT has been appointed Treasurer, vice F. J. Cushing. Office, Chicago, Ill.

## The Late T. C. Keefer and the Plans for the Victoria Bridge.

In an obituary note of the late T. C. Keefer, a contemporary states that he prepared plans for the Victoria bridge. Those who recall that famous old structure across the St. Lawrence at Montreal would doubtless construe the above statement as meaning that he was responsible for its design. It may be well, therefore, to review a chapter of engineering history known to few engineers of the present day.

In 1851 Mr. Keefer was employed by the Montreal & Kingston Rd. Co. (predecessor of the G.T.R.), to study the problem of bridging the St. Lawrence at Montreal. Although then only 30 years of age, he had already become one of the foremost of Canadian engineers. From previous work for the Canadian Government he was thoroughly familiar with the St. Lawrence River and the difficulties with ice conditions, etc., to be met in connection with its crossing. He prepared plans for a bridge with 300-ft. wooden truss spans, except the central span, for which a 400-ft. iron-truss structure was proposed. The bridge was to be carried on masonry piers, which were to be built inside timber-crib coffer-dams of special design. After the piers were completed, these timber cribs were to be left in place and on the upstream end of each crib was to be built an inclined plane to form an ice-breaker. The estimated cost of the entire structure was \$1,600,000.

Admittedly, Mr. Keefer's spans were bold for the engineering facilities and knowledge of that day. The directors of the railway company hesitated to trust the design of so important a structure to home talent, and they rejected his plans. The way in which Robert Stephenson's design for a tubular bridge came to be adopted in its stead is related as follows in Smiles' "Life of Robert Stephenson":

"In 1852 A. M. Ross, who had superintended under Robert Stephenson the construction of the tubular bridge over the Conway in Wales, visited Canada and inspected the site of the proposed bridge at Montreal, when he readily arrived at the conclusion that a like structure was suitable for the crossing of the St. Lawrence. He returned to England to confer with Robert Stephenson on the subject, and the result was the plan of the Victoria Bridge, of which Robert Stephenson was the designer and A. M. Ross the joint and resident engineer."

For the benefit of some of the younger members of the profession, it may be well to state that the Victoria bridge, like Stephenson's earlier notable structures, the Britannia bridge and the Conway bridge, was simply a rectangular box through which the trains ran. The top and bottom of the box formed the upper and lower chords and the sides the webs of what was practically a girder structure. It must be remembered that when Stephenson invented this peculiar type of bridge, the engineering world as a whole was ignorant of anything but the rudiments of the stresses in girders and trusses. The railway itself was in its infancy and nothing was known as to the corrosive effect of the gases from locomotives upon exposed metal work. In the early '50's, Stephenson was at the pinnacle of his fame. His tubular bridges in England had been heralded to the public as a triumph of

engineering skill, although there were even at that day in the engineering profession a few wise enough to criticize the design. It was not at all strange, however, that the directors of the Montreal & Kingston Rd., believing the task of bridging the St. Lawrence was one of unprecedented difficulty, decided to entrust the building of the bridge to an engineer of world-wide fame.

Mr. Stephenson visited Canada while the designs for the huge bridge were being completed, and it is stated that he rejected all the suggestions made by Mr. Keefer and other Canadian engineers. The piers of his structure were of massive masonry and were long held up to the profession as most remarkable examples of high-class stone work. While the bridge superstructure was 16 ft. in width, the piers were made 21 ft. wide at the bridge seat. Whether this was to secure a more stable structure against ice thrust or in foresight of the day when a new and heavier structure might replace the original, is uncertain.

The total cost of Stephenson's Victoria bridge was \$7,500,000, a sum which in view of the low prices of labor and of all materials other than iron then prevailing would correspond to probably \$12,000,000 at the present day. The heavy financial burden involved in the construction of this bridge nearly bankrupted the railway company.

Notwithstanding its enormous cost, and perhaps because of it, the Victoria bridge was hailed by the public and by a large proportion of the engineering profession as the eighth wonder of the world. But there were not wanting engineers, even at that day, who believed in that definition of an engineer (which had not then been formulated) as "a man who makes a dollar earn the most interest," and who understood that a truss bridge could have been built across the St. Lawrence in place of Stephenson's gigantic iron box for a small fraction of the cost.

By the time work on the Victoria bridge was actually under way, the Warren truss and Bollman truss had come into use, the Fink truss had been invented, the lattice girder had been applied to long spans and the Howe truss was in extensive use on American railways in spans up to 250 ft. The disadvantages of the tubular bridge were not long in making themselves manifest. Passage through it had all the objectionable features of gas, smoke and darkness attendant upon traffic through a tunnel. The steam and sulphur gases confined inside the structure rapidly attacked the metal and corrosion went on apace. Perhaps the most serious feature of all was that those responsible for the safety of the bridge found it well nigh impossible to determine what was its margin of strength. Inspection of its interior was exceedingly difficult. As engineers became more familiar with the theory of stresses in girder structures, the defects in the design of the old tubular bridge became more evident.

Year by year the condition of the old structure was a matter of great anxiety to the G.T.R. officials. It was necessary to

keep a riveting gang constantly at work on the bridge the year round replacing rivets whose heads had popped off. Wrought iron rivets had been used, of course, in the original construction, but their failure indicated the over-stressed condition of the structure.

There came a time when the G.T.R. officers desired to fortify their judgment with the advice of some eminent consulting engineer. They called in the late T. C. Clarke, who was then far advanced in years, but who held a leading position among American bridge engineers. He went into the bridge with a party of the G.T.R. engineers and saw the terrific corrosion which its plates had suffered. Just then a freight train came through the bridge and he ran as fast as he could from the centre of the span to one of the piers and remained over it until the train had passed. His report, it is needless to say, was to the effect that the company ought to replace the old bridge with a modern structure at the earliest possible moment. Such replacement was soon started.

It has seemed well to set down these facts, not only to record an interesting and almost forgotten chapter of American engineering history, but in order that the professional record of the eminent Canadian engineer T. C. Keefer, might be free from the charge that he was in any degree responsible for the design of the old tubular bridge at Montreal.—Engineering News, New York.

**Canadian Government Railways Employees' Complaints.**—The representative of the Canadian Brotherhood of Railway Employees has placed a list of grievances before the General Manager, alleging the failure of the management to live up to the agreement of Mar. 21, 1913, to make promotions based on seniority alone, refusal to make agreement covering pier employees at Halifax and St. John, and refusal to approve of the absorption into the brotherhood of the maintenance of way employees. F. P. Gutelius, General Manager, is reported to have stated that promotion is based on merit and for the best interests of the service, but that other things being equal, seniority is recognized.

**Suit re Grain Insurance.**—A new trial has been granted on the application of the C.P.R. from the judgment of Mr. Justice Britton, awarding James Richardson & Son, of Kingston, Ont., judgment for \$23,068.40. Richardson & Son shipped 90,000 bush of oats from Fort William to Owen Sound by the s.s. Keewatin. Before they were notified of its arrival, it had been transferred into the C.P.R. elevator, which was destroyed by fire. The consignors claimed that they would have increased the \$200,000 insurance they had on the grain already in the elevator, if they had known of the arrival of the shipment. As it was, their loss was \$228,098.45, much exceeding the insurance.

**Canadian Railway Club.**—At the monthly meeting in Montreal, April 13, J. R. Britton, Schedule Inspector, C.P.R., read a paper on systematic valve settings on locomotives, and Lt. Col. Lacey R. Johnson, General Welfare Agent, C.P.R., was to have read one on modern heavy guns as used in the present war, but was prevented by illness, which proved fatal.

J. A. Culverwell, of Port Hope, Ont., a hydraulic engineer who was interested in water power development in the Trent Valley district of Ontario, died in Toronto, April 21, aged 49.

The members of the Canadian Overseas Railway Construction Corps, now being mobilized at St. John, N.B., are being provided with a pipe, 5 lbs. of tobacco, and 6 packets of cigarettes, from a fund started by Sir Thos. Shaughnessy, President C.P.R.

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, Telegraph, and Railway and  
Canal Contractors' Interests.  
Official Organ of the various Canadian  
Transportation Associations.  
Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,  
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A. Can. Soc. C. E.,  
Managing Director and Editor-in-Chief.  
AUBREY ACTON BURROWS - Secretary and  
Business Manager.

Associate Editor - DONALD F. KEIR  
Mechanical Editor - FREDERICK H. MOODY, B.A.Sc.

Canadian Business Representative - W. H. HEWITT  
70 Bond Street, Toronto

United States Business Representative, A. FENTON WALKER  
143 Liberty Street, New York, N.Y.

European Business Representative - J. MEREDITH MCKIM  
16 Regent St., London, S.W., Eng.

Authorized by the Postmaster General for  
Canada, for transmission as second class mat-  
ter.

Entered as second class matter, July 25, 1913,  
at the Postoffice at Buffalo, N.Y., under the  
Act of Congress of March 3, 1879.

SUBSCRIPTION PRICE, including postage  
anywhere, \$2 a year.

SINGLE COPIES, 20 cents each, including  
postage.

The best and safest way to remit is by express  
money order. Where one cannot be obtained, a  
post office money order, or bank draft, payable  
at par in Toronto, may be sent. Cheques or  
drafts not payable at par in Toronto cannot be  
accepted. Remittances should be made payable  
to Canadian Railway and Marine World.

## The Retirement of Hayter Reed from Canadian Pacific Railway Service.

Canadian Railway and Marine World for March contained a notice of the retirement, from Apr. 1, of Hayter Reed, Manager in Chief of Hotels, C.P.R., Montreal, and the appointment of a successor. The President, Sir Thomas Shaughnessy, has since made the following announcement: "Having reached the age limit under the company's regulations, Hayter Reed, Manager in Chief of the Hotel System, is retiring, after 15 years of active service, during which he has seen the hotel system grow to its present very large proportions. The characteristic tone and atmosphere of the hotels, that have given them a world wide reputation, may be attributed almost entirely to Mr. Reed's native sense of refinement and his unlimited effort to maintain a high standard of excellence. His successor, F. L. Hutchinson, received nearly all his hotel training during the years that he was in that branch of the company's service."

Mr. Reed was born, of English parentage, at L'Orignal, Ont., May 26, 1849, and educated at the Model Grammar School and Upper Canada College, Toronto. He passed the Royal Military School in 1865, and was appointed Lieutenant, 14th Regiment, in 1866, and later Adjutant, Captain in 1868, and retired as Major in 1881. He served in Manitoba in 1871 with the Battalion of Rifles, and remained on service until the battalion was disbanded. He became a barrister in 1872, and entered the civil service in the Department of the Interior in 1881. He was a member of the Northwest Council in 1882, Assistant Indian Commissioner for Manitoba and the Northwest Territories and acted as Administrator of the Northwest Territories and Commissioner of Indian Affairs in 1884, and Deputy Superintendent General of Indian Affairs at Ottawa, 1893 to 1897, when he retired on a pension. He was elected a chief by the Six Nation Indians at Brantford, Ont., in March, 1894. After leaving the Government service he became Secretary of the St. James Club, Montreal, and entered the C.P.R. service in 1900 as Manager of the Chateau Frontenac, Quebec. On Apr. 3 he was presented with a set of George I. silverware by the C.P.R. hotel managers throughout the Dominion and managers of other hotels in Montreal.

## Great Northern Railway Lines in Canada.

**Projected Lines in Alberta.**—Lethbridge, Alberta, press reports state that G.N. Ry. representatives are active in certain districts on the southern boundary of the province, and in the contiguous territory in Montana, U.S., through which the company has laid out a route for a line of railway. This line starts out from the main line west of Shelby, Mont., along the western boundary of Glacier Park, crossing into Alberta near The Gap, close to Cardston, then on to the group of collieries near Pincher Creek, owned by the Hill interests, and extending to Calgary.

**Vancouver, Victoria and Eastern Ry.**—The Dominion Parliament has granted the company an extension of time within which it may complete the building of its line, now under construction from Grand Forks to Vancouver, B.C. (See Kettle Valley Lines.)

A press report states that an early start will be made by the G.N.R. upon the building of a line from Oroville, Wash., to Penticton, B.C.

**Vancouver Terminals.**—The G.N.R. is applying to the Vancouver City Council for an extension of two years for the laying out of terminals, and the erection of a station building on the area being reclaimed at

False Creek. The company has done considerable work under the agreement, but under present financial and trade conditions wants an extension of time. The city council, on the other hand, wants to have as much work going on in the city as possible in order to give employment. (April, pg. 135.)

## Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,594,300	\$1,163,800	\$430,500	x \$83,500
Aug.	1,367,700	1,123,000	244,700	x 162,300
Sept.	2,109,900	1,519,000	590,900	65,500
Oct.	1,895,300	1,332,100	563,200	x440,300
Nov.	1,670,200	1,123,100	547,100	x417,700
Dec.	1,329,100	908,000	421,100	200,000
Jan.	950,800	773,000	177,800	x175,100
Feb.	1,105,100	825,700	281,400	42,800
Mar.	1,379,000	950,000	429,000	62,000
	\$13,401,400	\$8,719,900	\$3,681,500	x\$1,311,100
Decr.	\$4,392,400	\$3,981,300	\$1,311,100	

x Decrease.  
Approximate earnings for three weeks ended Apr. 21, 1914, against \$1,104,600 for same period 1914.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$10,481,971.72	\$6,703,525.89	\$3,778,445.83	\$338,347.35
Aug.	8,917,764.34	6,554,606.68	2,363,157.70	597,081.54
Sept.	10,754,139.67	6,387,091.28	4,367,048.39	45,530.30
Oct.	9,282,028.49	5,361,600.13	3,920,428.36	2,281,629.43
Nov.	8,057,358.89	5,413,386.72	2,644,072.17	2,244,173.89
Dec.	7,443,962.43	5,244,438.62	2,199,523.81	2,027,297.90
Jan.	6,100,026.94	4,968,793.64	1,131,233.30	1,100,024.24
Feb.	6,735,678.49	4,756,663.87	1,979,014.62	507,438.16
	\$68,782,831.01	\$45,990,005.83	\$22,792,824.18	x\$6,890,363.01

Dec. \$22,013,720.00 \$16,123,356.99 \$5,890,363.01  
xDecrease.

Approximate earnings for March, \$7,700,000 against \$9,238,000 for Mar., 1914, and for 3 weeks ended Apr. 21, \$5,930,000 against \$6,571,000 for same period 1914.

## Grand Trunk Railway Earnings, Etc.

The following figures show the earnings for the G.T.R. (including the Canada Atlantic Ry.) the G.T.W.R. and the D.G.H. & M.R. for February:

Grand Trunk Railway.			
Earnings .....		\$2,624,400	
Expenses .....		2,210,100	
Net earnings .....		\$ 414,300	
Grand Trunk Western Railway.			
Earnings .....		\$ 521,000	
Expenses .....		554,400	
Deficit .....		\$ 37,500	
Detroit, Grand Haven and Milwaukee Ry.			
Earnings .....		\$ 178,600	
Expenses .....		212,800	
Deficit .....		\$ 34,200	

Approximate earnings for March, \$4,014,204, against \$4,423,671 for Mar., 1914; and for 2 weeks ended Apr. 14, \$1,872,978, against \$2,066,875 for same period, 1914.

## Traffic Receipts of the System.

Aggregate from Jan. 1 to Feb. 28:—			
	1915	1914	Incr. Decr.
G.T.R. ....	\$8,381,397	\$9,338,659	\$1,000,662
G.T.W.R. ....	1,665,394	1,654,884	\$10,510
D.G.H. & M.R. ....	560,021	549,088	10,933
Totals .....	\$10,606,812	\$11,542,631	\$935,819

Approximate earnings for February, \$3,325,036; against \$3,544,016 for Feb., 1914; and for two weeks ended Mar. 14, \$1,709,298, against \$1,916,794 for same period, 1914.

## Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section and Lake Superior Branch, 1,104 miles, for March, were \$361,197, against \$361,998 for Mar., 1914; and for 3 months ended Mar. 31, \$830,231, against \$1,143,807 for same period 1914.

## Canadian Northern Railway Construction, Betterments, Etc.

Sir Donald Mann, Vice President, is reported as stating that the transcontinental line will be completed from Montreal to Vancouver this year, the greater part of it in June. The two sections which are not likely to be put in operation in June are the section between Ottawa and North Bay, Ont., and the part of the C. N. Pacific Ry. between the Alberta-British Columbia boundary and Kamloops.

**Canadian Northern Quebec Ry.**—The Dominion Parliament has extended the time within which the projected line from Rawdon northerly to the National Transcontinental Ry. with a branch from St. Jerome to St. Eustache, Que., may be built.

**James Bay and Eastern Ry.**—An extension of time has been granted by the Dominion Parliament for the building of the projected line from Lake Abitibi, easterly and southerly south of Lake St. John to the mouth of the Saguenay River.

**Montreal Tunnel and Terminal Co.**—A steam shovel is at work taking out the last half mile of material in the double track tunnel under Mount Royal, Montreal. The tunnel is completed to its full size from Maplewood, about a mile citywards. The tunnel is completed at the western end, and it is expected that the entire work will be finally completed by August.

**Canadian Northern Ontario Ry.**—An extension of time has been granted by the Dominion Parliament for the building of the following lines: From Washago to Kincardine; from Arnprior to Gananogue; from Pembroke to Cobourg or Port Hope; from Frenchman's Bay to Owen Sound; from Niagara River to Goderich; from Hawkesbury to or near Lanark; from Berlin through Guelph, Acton and Brampton to Toronto; from Berlin to St. Marys and Woodstock; from Sarnia to Chatham and from Orillia to Goderich, with a branch to Owen Sound, all in Ontario.

**Canadian Northern Ry.**—The Dominion Parliament has granted an extension of time for the building of a number of branch lines in Manitoba, Saskatchewan and Alberta, details of which were given in our Feb. issue, pg. 60.

The Premier of Manitoba stated in the Legislature, Mar. 28, that the company had applied for an additional guarantee of bonds so as to make the provincial guarantee on the entire bond issue \$18,000 a mile. There are 1,407 miles of C.N.R. track in the Province upon which the provincial guarantee is \$10,000 a mile, and 692 miles upon which the guarantee is \$13,000 a mile.

The bill asking for the confirmation of an agreement between the C.N.R. and the Grand Trunk Pacific Ry., respecting terminals at Edmonton, Alberta, referred to in our last issue, was withdrawn from consideration by the Dominion Parliament.

Among the questions raised in the Alberta Legislature during the recent session was the amount of construction done on the Blackfields-Calgary line. The Provincial Engineer in giving evidence before the public accounts committee stated that the line would have a total length of 101 miles, but on the 5½ miles already graded there had been shifted 614,000 cubic yards of material, representing about one-third of the material to be moved on the whole line. The company had been paid \$208,000 from the proceeds of the guaranteed bonds, in respect of this construction, the actual value of the work done being \$323,000. On the remaining 95 miles the average quantity of material to be shifted would average about 14,000 cubic yards a mile.

The Alberta Legislature has passed, after

a lengthy and somewhat acrimonious debate, the necessary provisions for increasing the guarantee of bonds to the C.N. Western Ry., from \$13,000 to \$18,000 a mile in respect of the construction of a line from Oliver to St. Paul de Metis, 100 miles. The estimated cost of the line is \$22,000 a mile.

**Canadian Northern Pacific Ry.**—T. H. White, Chief Engineer, Vancouver, visited the head offices in Toronto at the end of March to consult with the chief executive officers in regard to the completion of the line, etc. It is expected that the ballasting of the main line in British Columbia will be completed by the end of July. The building of stations at the most important points, and the erection of buildings and other facilities at the divisional points, is being gone on with in preparation of the opening of the line for traffic. (April, pg. 134.)

## Railway Rolling Stock Notes.

The Canadian Northern Ry. has received two baggage cars from the Crossen Car Co., completing an order.

The C.P.R. has received 1 steel mail car, 7 flat cars and 2 class D4 locomotives, from its Angus shops, Montreal.

The Intercolonial Ry. is converting 7 first class cars into suburban cars at its Moncton shops by removing the smoking compartment.

The two combined passenger and baggage gasoline motor cars, which the Alberta and Great Waterways Ry. purchased recently, as mentioned in our last issue, are to be operated between Edmonton and Lac la Biche.

The Intercolonial Ry. is converting at its Moncton shops 7 first class cars with smoking rooms to first class suburban cars without smoking rooms. These cars were built by the Wagner Co., are gas lighted, and fitted with vestibules, and when the conversion is completed each car will seat 84 persons.

The Caraquet and Gulf Shore Ry. Bathurst, N.B., has bought Intercolonial Ry. locomotive 1082, which has been thoroughly overhauled. Following are the principal particulars: Builder, Hinkley; date built, 1888; boiler pressure, 130 lbs.; cylinders, 18 x 24 ins.; driving wheels, 4; outside diameter of driving wheels, 63 ins.; weight on drivers, 68,500 lbs.; weight of engine, 81,000 lbs.; weight of engine and tender, 142,000 lbs.; tank capacity, 1,800 gals.; service, freight.

The Toronto, Hamilton and Buffalo Ry. has ordered 10 steel underframe and steel superstructure stock cars from National Steel Car Co. Following are the chief details,—

Centre to centre of trucks.....	26 ft. 10 ins.
Length inside .....	36 ft.
Width inside .....	8 ft. 6½ ins.
Height inside, top of floor to underside of carline .....	8 ft. 0¾ ins.
Wheel base of truck .....	5 ft. 2 ins.
Door opening .....	6 ft.
Draft gear .....	Twin spring type
Drawbars .....	Cast steel
Air brake .....	Westinghouse KC8-12
Side bearings .....	Roller type
Bolsters .....	N.S.C.Co's bathtub type

The House of Commons, at the end of March, voted \$2,250,000 for rolling stock for the Intercolonial Ry., covering the application of superheating apparatus to 12 locomotives; also to purchase 10 Pacific locomotives; 6 consolidation locomotives; 4 switching locomotives; ballasting equipment and rail loaders; 200 steel flat cars; 250 steel gondola cars; 4 light wrecking cranes; and a re-vote for 8 sleeping cars, 4 steel sleeping cars, 4 baggage cars, 2 postal cars, 1 scale testing car and 1 motor inspection car. Most of this rolling

stock has been ordered, and some of it has been delivered, as mentioned from time to time during the past few months in Canadian Railway and Marine World. The only new items appearing in the list are the ballasting equipment and rail loaders, wrecking cranes, scale testing cars and motor inspection car. In addition to the foregoing, \$24,000 was voted for safety appliances for equipment, as ordered by the Board of Railway Commissioners for railways under its jurisdiction.

## A Brakeman's Bravery Rewarded.

J. J. Carter, freight brakeman, C.P.R., was presented by the Governor General in Montreal recently with an Albert medal of the 2nd class for saving a little girl's life at Tweed, Ont., in May, 1914. Carter was on the fireman's side of the locomotive of a train running 18 miles an hour when he saw that the child had got on the track by crawling through a fence. Calling to the locomotive man to stop, he went through the front window on to the running board and so on to the pilot. The locomotive man applied brakes, but could not stop in time, so that the train was running 8 or 10 miles an hour when it got near the child. Just as it came to the spot Carter jumped ahead of the locomotive, and by catching the child with his right hand pulled her along with himself into a ditch clear of the track. The eighth car had reached the spot before the train had come to standstill. In his report, the locomotive man said: "I consider Carter took a desperate chance in doing as he did, as a misstep would have cost him his life." The locomotive man had himself reached the pilot by the other foot board, and thus witnessed the rescue, while the fireman had jumped off between the locomotive and tender trying to run ahead, but was too late to do anything.

Among the officials at the presentation were: W. R. Baker, Secretary; A. D. MacTier, General Manager, Eastern Lines; L. G. Rogers, Assistant Superintendent, District 1, Ontario Division; also the locomotive man, fireman and conductor of the train, together with representatives of the conductors and trainmen from District 1, Ontario Division, in which Tweed is located.

**A Railway's Liability on a Special Contract.**—The Imperial Privy Council has reversed the decision of the Supreme Court of Canada in a case brought against the G.T.R. for damages for personal injuries, by a man taking a horse from Milverton to South River, Ont., on a special contract, relieving the railway company from claims in respect of injuries to persons travelling with cattle. The contract was made with the owner of the animal, and handed to the man, who did not read it, but it was held that the railway company was not liable, and the appeal was allowed, appellants to pay costs as between solicitor and client. This case had been before several of the Canadian courts, and varying decisions had been given.

**Reduced Fares for Soldiers.**—Railway companies in the Eastern Canadian Passenger Association have arranged that upon surrender of certificate, properly filled in and signed by commanding or transport officer, showing name and destination, members of Canadian expeditionary forces in uniform travelling to and from their homes and the various mobilization points will be granted round trip tickets at a fare and one third for the round trip. Tickets are valid for 15 days from date of sale. A similar reduction is made for militia men on leave from certain points who are on duty guarding bridges, canals, etc., and are allowed two days leave of absence each fortnight.

## Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the orders were drawn.

General order 135. Mar. 22.—Re rates on newspaper for west of Fort William, Ont. This was published in full in April issue, pg. 138.

General order 136. Mar. 25.—Approving form of release re carriage of household goods.

General order 137. Mar. 26.—Approving amendment to Express Classification for Canada, No. 3, re storage batteries.

General order 138. Mar. 25.—Approving amendment to Express Classification for Canada, No. 3, re moving picture films.

General order 139. Apr. 1.—Suspending proposed advances in commodity rates shown on pgs. 4, 5, 6, and upper part of pg. 7 of Supplement 26 to C.P.R. tariff, C.R.C. no. E-2480, pending decision by Board re application for general increase. Order given in full on another page.

For general orders 136 to 139 see under Traffic Orders by Board of Railway Commissioners, further on in this issue.

23434. Mar. 22.—Authorizing C. P. R. to use bridge 55 over Naiscootyong River, near Naiscott, Ont.

23435. Mar. 20.—Amending order 23386, March 4, re C. P. R. extensions to sidings in Caledon Tp., Ont.

23436. Mar. 20.—Authorizing G. T. Pacific Ry. to build Y at mileage 840 west of Winnipeg, in North Alberta District.

23437. Mar. 22.—Amending order 23363, Feb. 27, re Edmonton, Dunvegan and British Columbia Ry. revised location at mileage 29.

23438 to 23442. Mar. 23.—Authorizing G. T. R. to operate bridges 69, near Harrisburg; 22, Brantford; 28, near Paris; 26, near Brantford, and 27, near Paris, Ont.

23443. Mar. 23.—Dismissing C. P. R. application for approval of revisions in its line west and east of Eugenia St.; of two connections with C. N. O. R. spur; of location of proposed revisions on Ontario St.; and for authority to operate same, in Trenton, Ont.

23444. Mar. 23.—Approving agreement of Bell Telephone Co. and Ayr Rural Telephone Co., March 9.

23445. Mar. 22.—Dismissing application of Ashworth Women's Institute for undercrossing of G. T. R. between Aspsdin and Huntsville, on Town Line between Stisted and Stephenson Tps., Ont., and ordering G. T. R. to build approaches to crossing to grade of 5%, and to build crossing in accordance with Board's standard regulations.

23446. Mar. 23.—Dismissing application of City of Windsor, Ont., for level crossing at Wyandotte St.; and reserving leave to municipality to cross Michigan Central Rd. there overhead as provided by order 10237, Apr. 19, 1910.

23447. Mar. 12.—Approving Hull Electric Co.'s Standard Maximum Tariff, C. R. C. 1, of 2½c. a mile; provided no toll now charged for passengers be increased unless Board's permission be obtained.

23448. Mar. 22.—Dismissing complaint of Canadian China Clay Co. against joint rates charged on china clay, in carloads, from Huberdeau, Que.

23449. Mar. 22.—Authorizing Dominion Department of the Interior to build highway over G. T. Pacific Ry. in s.e. ¼, Sec. 16-45-1, w. 6 m. Jasper Park District, Alta.

23450. Mar. 25.—Ordering that all switching movements be flagged over crossing of Union St., Simcoe, Ont., by G. T. R. trainmen.

23451. Mar. 27.—Authorizing C. N. Alberta Ry. to open for traffic portion of its railway from St. Albert to Peace River Jct., 25½ miles; trains limited to speed of 25 miles an hour.

23452. Mar. 25.—Authorizing G. T. R. to take, for building of highway crossing as required by order 22344, Aug. 5, 1914, certain lands in Tay Tp., Ont.

23453. Mar. 25.—Amending order 19976 re G. T. Pacific Ry. crossing in rural municipality 97, Cedoux, Sask.

23454. Mar. 25.—Authorizing Ontario Public Works Department to build highway over C. P. R. Toronto-Sudbury Branch, in Lot 10, Con. 3, Burwash Tp.

23455. Mar. 24.—Approving agreement between Bell Telephone Co. and East Grey Telephone Co., March 8.

23456. Mar. 26.—Amending order 23426, March 20, re C. N. Ontario Ry. service, Trenton to Maynooth.

23457. Mar. 27.—Approving, temporarily, Edmonton, Dunvegan and British Columbia Ry.

Standard Freight Tariff, C. R. C. 1, and Standard Passenger Tariff, C.R.C. 1.

23458. Mar. 27.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to open for traffic its line from Edmonton to mileage 277, Alta, speed of trains between Edmonton and mileage 170 limited to 20 miles an hour; and from mileage 170 to 277 to 15 miles an hour.

23459. Mar. 29.—Approving Edmonton, Dunvegan and British Columbia Ry. bylaw 5, authorizing A. Campbell, Traffic Manager, to issue all tariffs of tolls.

23460. Mar. 30.—Amending order 23219, Jan. 27, re Hamilton Radial Ry. tracks at Sherman Inlet, Hamilton, Ont.

23461. Mar. 34.—Approving agreement between Bell Telephone Co., and Wakefield and Masham Telephone Co., Feb. 19.

23462. Mar. 27.—Authorizing C.P.R. to build industrial spur for Canmore Coal Co., Canmore, Alta.

23463. Mar. 29.—Authorizing C.P.R. to build bridge 107.2 over Shaw's Creek, near Severn Falls, Ont.

23464. Mar. 30.—Authorizing Interior Department Parks Branch to build highway crossings over C.P.R. between Field and Hector in Yoho Park, B.C.

23465. Mar. 29.—Authorizing C.P.R. to build spur for W. R. Hull, Calgary, Alta.

23466. Apr. 1.—Dismissing Essex Terminal Ry. application for authority to build branch from Lot 59 to Huron St., Sandwich Tp., Ont.

23467. Apr. 1.—Authorizing C.N. Ontario Ry. to build spur from Don Esplanade, Toronto, for Laidlaw Lumber Co.

23468. Apr. 3.—Suspending Supplement 1, cancelling C.P.R. Tariff, C.R.C. no. W. 1936, pending a hearing by Board.

23469. Apr. 1.—Amending order 23398, Mar. 8, re highway diversion by C.P.R. near Balcarres, Sask.

23470. Apr. 3.—Amending order 23415, Mar. 12, re farm crossing over C.P.R. Stobie Branch, McKim Tp., Ont.

23471. Apr. 1.—Amending order 22853, Nov. 9, re building of crossing over G.T.R. at Ashland Ave., by city of London, Ont.

23472. Apr. 3.—Authorizing C.P.R. to use bridge 2.9 over Three Tree Creek, near Fredericton Jct., N.B.

23473. Mar. 29.—Authorizing G.T.R., Pere Marquette Rd. and Michigan Central Rd. to use bridge at crossing of Thompson Road, Bertie Tp., Ont.

23474. Apr. 1.—Approving location and details of G.T.R. new station at Tillsonburg, Ont.

23475. Apr. 3.—Approving agreement between Bell Telephone Co. and Erie Telephone Co., Mar. 22.

23476. Apr. 1.—Dismissing C.P.R. application to remove regular agent at Vienna station, Ont.

23477. Mar. 31.—Authorizing Canadian Northern Ry. to build across and divert road between Secs. 19 and 30-50-8, w. 4 m., Alta.

23478. Apr. 7.—Authorizing C.P.R. to divert highway in n.w. ¼ Sec. 8-32-13, w. 2 m., Sask.; and build highway across its tracks at mileage 97.44, Wynward Subdivision, Sask.

23479. Apr. 6.—Approving American Express Co.'s bylaw, passed March 22, re tariff of tolls, and rescinding order 2645, Mar. 11, 1907.

23480. Apr. 7.—Authorizing Hamilton St. Ry., pending installation of half interlocking plant, to operate cars over crossing of Oliver Chilled Plow Works of Canada's spur on Gilkinson St., Hamilton, Ont., cars to be flagged across; plant to be completed by May 15.

23481. Apr. 7.—Amending orders 23438 to 23442, Mar. 23, re G.T.R. bridges at five points in Ontario.

23482. Apr. 6.—Ordering Canadian Northern Ry. to attach passenger car to trains 93 and 94, between Hawkesbury and Ottawa, to and from Ottawa, for passengers to and from Ottawa only; time to be as at present; all stations may be treated as flag stations; such service be put into effect for 3 months from date.

23483. Apr. 6.—Limiting speed of C.P.R. trains over crossing of Portage Ave., St. James, Winnipeg, Man., to ten miles an hour.

23484. Apr. 6.—Authorizing C.P.R. to build spur for Imperial Oil Co., at Medicine Hat, Alta.

23485. Apr. 3.—Authorizing Hydro Electric Power Commission of Ont. to erect transmission line across G.T.R. in Simcoe, Ont.

23486. Mar. 26.—Authorizing Town of St. Lambert, Que., to build highway crossing over Quebec, Montreal and Southern Ry. at St. James St., and rescinding order 10496, Apr. 28, 1910.

23487. Apr. 7.—Relieving G.T.R. from providing further protection at highway near milepost 17, north of Vankleek Hill, Ont.

23488. Apr. 8.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to open for traffic portion of its line from mileage 277 to 287, trains limited to 15 miles an hour.

23489. Apr. 8.—Relieving G.T. Pacific Branch Lines Co. from erecting and maintaining fences, gates and cattleguards on its Moose Jaw Northwest Branch at Archydal, Sask.

23490. Apr. 9.—Authorizing Dominion Atlantic Ry. to carry freight over its North Mountain Branch from Somerset to Weston, N.S., mileage 12.09 to 14.78; speed of trains limited to 12 miles an hour.

23491. Apr. 7.—Relieving C.P.R. from maintaining night watchman at crossing of First St., Souris, Man.

23492. Apr. 8.—Authorizing village of Port Colborne, Ont., to open Mitchell St., across G.T.R.

23493. Apr. 7.—Authorizing Winnipeg and Northern Ry. and C.P.R. to operate trains over crossing in Lot 101, St. Paul's Parish, Man., without first stopping.

23494. Apr. 6.—Dismissing C.P.R. application for authority to remove regular agent at Clarendon station, Ont.

23495. Apr. 9.—Authorizing Esquimalt and Nanaimo Ry. to build siding for Curtis and Sears Lumber Co., at mileage 100.6, Nanose District, Vancouver Island, B.C.

23496. Apr. 9.—Approving clearances of elevated stone bin over C.P.R. siding at mileage 68.4, Port McNicoll Subdivision, Ont.

23497. Apr. 8.—Ordering Bell Telephone Co. to file tariffs, applying same tolls to territory recently annexed to City of Toronto, formerly known as North Toronto, to be effective Jan. 1, 1916.

23498. Apr. 3.—Extending to Aug. 31 time within which C.P.R. shall complete fencing certain portions of its right of way through Indian Reserves in British Columbia.

23499. Apr. 3.—Approving National Express Co.'s bylaw, Mar. 22, re tariff of C.P.R.

23500. Apr. 3.—Dismissing complaint Christie, Henderson & Co., Toronto, against refusal of G.T.R. to allow for 296 doors furnished for cars of lime shipped from Galt, Ont.

23501. Apr. 6.—Authorizing C.P.R., pending further order, to remove regular agent at Snow Road station, Ont., caretaker to be appointed for accommodation of passengers and care for l.c.l. freight and express matter.

23502. Apr. 6.—Dismissing application of Village of St. Joseph de Sorel, Que., for order directing Quebec, Montreal and Southern Ry. to build station there; and ordering Q.M. & S. Ry. to show St. Joseph de Sorel on its timetable as a flag station.

23503. Apr. 8.—Ordering J. H. Jones, Toronto, to pay G.T.R. rent for siding for last 3½ years, less expense he may have been put to for cartage by refusal of G.T.R. to continue delivering cars over siding; G.T.R. to resume such service forthwith.

23504. Apr. 10.—Dismissing application of G. T. Clarkson, Toronto, trustee for creditors of Lloyd & Sons, Trenton, Ont., to restrict right of expropriation; and ordering that arbitration pending herein, to determine compensation in respect petitioners' land and for damages, be continued.

23505. Apr. 8.—Authorizing the City of Toronto to build subway under G.T.R. at extension of Wilton Ave., to connect with Dickens Ave., Toronto, Ont.; 20¢, not exceeding \$5,000, of cost to be paid out of the railway grade crossing fund; \$10,000 by G.T.R.; and balance by the city.

23506. Apr. 3.—Dismissing complaint of Capt. E. Elliott, owner of Lot 3, Block 12E, Lindsay, Ont., against closing, by Georgian Bay and Seaboard Ry. (C.P.R.) of north end of Caroline St.

23507. Apr. 10.—Reducing rate of 3½¢ per 100 lbs. on manure from Toronto to St. Catharines, Ont., for Canadian Northern Ry. track delivery, down to item 226 of G.T.R. Tariff C.R.C. no. E-2035, the rate of 2½¢ per 100 lbs. previously in effect to be restored, subject to minimum carload weight of 60,000 lbs. and to provision of seasonal inter-switching order, 1888, July 8, 1908, clause to be effective by Apr. 21.

23508. Apr. 8.—Dismissing C.P.R. application for order amending order 22691, Oct. 9, 1914, regarding consideration of grade crossing, Yonge St., North Toronto, Ont., so as to provide that the approach to subway on southerly side shall have grade of 50¢ instead of 25¢.

23509. Apr. 8.—Ordering City of Toronto to pay C.P.R. its proportion of expense incurred to date on 2-track viaduct, North Toronto grade separation, as required by order 22825, upon receipt of monthly certified progress estimates showing amount expended thereon until completed, any dispute to be settled by Chief Engineer of Board.

23510. Apr. 9.—Relieving C.P.R. and G.T.R. from maintaining night signalman at crossing 2¼ miles north of Glencoe, Ont.

23511. Apr. 12.—Ordering Michigan Central Rd. by June 1 to install improved type of automatic bell at crossing of parish highway immediately west of Stevensville station, Ont. 20¢ of cost to be paid out of railway fund.

23512. Apr. 12.—Authorizing Canadian North-

ern Ry. to build across, close and divert two miles west of No. 1. See 19-10-21, w. 2 m., Sask. 23513. Apr. 12.—Amending order 23180, Jan. 10, to crossing of C.N. Pacific Ry. by Kettle Lake, at H. P. R. C.

23514 to 23520, Apr. 12.—Authorizing C.N. Alberta Ry. to build across roads at 7 points.

23521. Apr. 7.—Dismissing application E. W. Lester, Montreal, for special winter rate on lumber and green pulpwood which shall equal that applied on dry, peeled wood by applying weight per cord of dry wood to the green wood.

23522 to 23530. Apr. 12.—Authorizing C.N. Alberta Ry. to build across roads at nine points.

23531. Apr. 12.—Approving revised location Canadian Northern Ry. through Tps. 11 and 12, R. 5 and 6, w. 3 m., Sask., mileage 79.89 to 83.12 and 87.54 to 92.22.

23532. Apr. 12.—Authorizing C.P.R. to build on St. Lawrence River Pulp and Paper Mills, Ltd., Sturgeon Falls, Ont.

23533. Apr. 12.—Approving, temporarily, Toronto, Hamilton and Buffalo Ry. new form of 14-point Special Contract (Form 11).

23534. Apr. 13.—Rescinding orders 23027 and 23028, Dec. 1, 1914, and authorizing C.N. Ontario Ry. and C.P.R. to operate over crossing in Lot 4, Con. 5, McKim Tp., Ont.

23535. Apr. 13.—Authorizing C.P.R. to divert public highway west of Worthington station, Ont., so as to cross tracks east of station; and to divert traffic from and close present trespass crossing, about 700 ft. east of station.

23536. Apr. 10.—Dismissing application of Sudbury Brewing and Malting Co., Sudbury, Ont., for order directing C.P.R. to apply milling-in-transit privilege to malt grain ex Fort William, which as "dried grain," or feed, is reshipped from applicant's brewery.

23537. Apr. 13.—Dismissing G.T. Pacific Ry. application for authority to remove regular agent at Elie, Man.

23538. Apr. 14.—Authorizing Town of Walkerville, Ont., to build easterly extension of Seminole St. from Walker Road across Lake Erie and Detroit River Ry. (P.M.R.) to easterly limits of municipality, at rail level, as shown on plan.

23539. Apr. 13.—Approving location C.N. Alberta Ry. combined station and section house at Heda.

23540. Apr. 12.—Relieving G.T.R. from providing further protection at crossing of first public highway west of Lansdowne station, Ont.

23541. Apr. 14.—Relieving C.N. Quebec and N.T.R. from maintaining night signalman at crossing near Tawachiche station, Que.

23542. Apr. 14.—Relieving C.N. Ontario Ry. and G.T.R. from maintaining night signalman at crossing near Mount Albert, Ont.

23543. Apr. 14.—Authorizing City of Montreal to extend Boyce St. across C.N. Ontario Ry. at level as shown on plan; and reserving leave to C.N.O.R. to lay tracks across highway created within limits of its property, and as approved by Board's Chief Engineer.

23544. Apr. 14.—Ordering C.P.R. to build farm crossing for Lewis Springer, Drumbo, Ont., at mileage 75.7, London Subdivision; to be completed by May 15.

**Russian Order for Canada.**—A London cablegram of April 18, announced the arrival there from Petrograd, of W. W. Butler, Vice President, Canadian Car & Foundry Co., Montreal, and that he had secured an order from the Russian Government for 2,500,000 each of shrapnel and explosive shells, the order aggregating about \$70,000,000. The cablegram added that Mr. Butler would leave in a few days thereafter for Paris.

**The International Railway Fuel Association's** annual convention will be held at Chicago, Ill., May 17 to 20. The matters which will be reported on include mining and preparation of coal; influence of the operating officials of railways on fuel economy; the locomotive including practices in relation to the handling of locomotives; fire boxes; and accounting.

**Western Canada Railway Club.**—J. G. Sullivan, Chief Engineer, C.P.R., Western Lines, addressed the club recently on economics of railway location. He did not read a paper on the construction of the Rogers Pass tunnel as stated in a number of publications.

**Wabash Rd. to be sold.**—A St. Louis, Mo., press despatch says a federal judge has ordered a sale of the Wabash Rd. by the receivers.

## Handling of Stores on Intercolonial Railway.

The changes which were made in the handling of stores on the I.R.C. some months ago are said to have proved very satisfactory. The stores outside of Moncton, N.B., which formerly were under the mechanical department and in charge of the mechanical foremen, now come directly under the stores department.

A card system has been adopted in connection with the stock book at the various points at which there are stores. The stock book is sent to Moncton once a month, and all stocks on hand are recapitulated so as to show at a glance the quantities of each kind of supplies at every stores point. In this way, if it is found that there is too much stock at one place it can be transferred to another, and supplies that become obsolete can be taken into Moncton and examined.

Each store outside of Moncton is supposed to carry only 30 days stock. Requisitions are sent in on the first of each month. Stores supplies are loaded in one car and shipped direct to the store point, and a schedule of shipments is made, so that the cars go out to the different stores at stated dates, thus giving time for shop material that is being repaired or made to be put into the car, and to enable the storekeeper to know exactly what day the car will be shipped.

In connection with the change in system a number of changes have been made in the officials in charge.

W. G. Harris, appointed storekeeper at Halifax, N.S., volunteered for overseas service, and G. E. Hennessy has been appointed acting storekeeper in his stead.

E. R. McPherson, formerly storekeeper at

Sydney, N.S., has been transferred to Halifax, N.S.

H. L. Johnson, formerly storekeeper at Gibson, N.B., has been appointed storekeeper at St. John, N.B., vice G. R. McCafferty.

F. R. Dunbar, formerly mechanical clerk at Gibson, N.B., has been appointed storekeeper there, succeeding H. L. Johnson, transferred.

F. C. Lutz has been appointed storekeeper at Campbellton, N.B.

J. H. Brown has been appointed storekeeper at Riviere du Loup, Que., vice J. Bouchard.

C. E. Belanger has been appointed storekeeper at Chaudiere Junction, Que., vice T. Jenkins, transferred to Riviere du Loup as clerk.

Frank Bourgeois has been placed in charge of a substore, which has been established in the Moncton locomotive house in connection with the main stores.

**Locomotive Men's Complaints.**—The Board of Railway Commissioners dealt with complaints of locomotive men, through the Brotherhood of Locomotive Engineers and Locomotive Firemen, at Ottawa, Apr. 6, when it was alleged that the C.P.R. violated the uniform flagging rules, and that the company had failed to equip its locomotives with dump ash pans. On behalf of the company, A. Price, Assistant General Manager, Eastern Lines, stated that no complaints had been received, and the Chief Commissioner arranged that the company and the men get together with a view to an arrangement being made.

Sir Richard McBride, Premier of British Columbia, left for England early in April in connection, it is said, with the sale of Pacific Great Eastern Ry. bonds.

## Grain in Store at Terminal Elevators, Interior Terminal Elevators and at Public Elevators in the East.

## Intercolonial Railway Construction, Betterments, Etc.

The estimates for betterments and new construction on the I.R.C. were before the House of Commons, Mar. 25, and subsequent days, in committee of supply, and were later on passed. Following are the general items:

Anti-creepers and tie plates .....	\$ 50,000
Bridges—to strengthen .....	700,000
General protection of highways .....	16,000
Installation of block system .....	14,000
Installation of telephone system .....	100,000
Original construction .....	600
Permanent wiring of locomotive houses .....	13,000
Permanent farm crossings and culverts .....	10,000
Power plants at divisional points .....	23,000
Surveys and inspections .....	87,000
Tile drainage in wet cuts .....	4,000
To increase facilities on the line .....	102,000
Water supply—to increase .....	27,000
Amherst—additional facilities .....	16,000
Bathurst—spur line .....	62,400
Chatham—diversion of line and branch .....	2,500
Chaudiere Jct.—St. Romuald second track .....	30,000
Division of line, Nelson—Derby Jct. .....	6,000
Division of line, N. Sydney—Leitch Creek .....	60,000
Fredericton—to increase accommodation .....	5,000
Halifax—docks and wharves .....	30,000
" " docks and wharves .....	300,000
" " new terminal facilities .....	3,000,000
" " to increase accommodation .....	3,500
" " Willow Park sewer .....	14,900
Hampton—subway, etc. .....	39,750
Levis—improvements at .....	200,000
" " new coaling plant .....	75,000
Moncton—locomotive and car shops .....	110,000
" " elimination of crossings .....	125,000
" " installation of roofing .....	22,500
Mulgrave—car ferry and dock .....	354,000
Pugwash spur line .....	5,900
Raising route near Sackville .....	3,500
Mount Jolie (St. Flavie) facilities .....	16,500
St. John—spur to Courtenay Bay .....	112,000
Sussex—improvements .....	1,000
Sydney Mines diversion .....	10,000
Trenton—increased facilities .....	20,000

Referring to the vote of \$3,000,000 on account of the new ocean terminals at Halifax, the Minister of Railways explained that probably only half of the amount voted will be expended this year. The unit at present being laid out, is expected to take care of the traffic in sight, and other units will be gone on with as necessity arises. The completed plans will give ample room for some years to come. Arrangements will be made so that all railways entering Halifax will utilize the terminals.

The above apply to general works of betterments at various points on the line, or to large works already in hand, descriptions of which have already appeared in Canadian Railway and Marine World. The items regarding new construction are detailed as follows:

Five hundred and ten dollars towards building a railway from near Dartmouth via Musquodoboit Harbour and Musquodoboit River valley to Dean's Settlement, N.S. The Minister of Railways explained that it is expected that this vote will complete the line. Grading is 75% completed; the sub-structures for the bridges are in; track has been laid for a considerable distance, and the steel work for the bridges is being delivered. It is expected that the line will be completed this year. The branch projected to Country Harbour will not be built at present.

One million dollars on account of building a line from Sunny Brae to Mulgrave, N.S. Sunny Brae is the terminus of the Nova Scotia Steel & Coal co.'s old line which was acquired by the Government two or three years ago, and the proposed line will traverse a fertile and prosperous part of Guysboro County, passing through Country Harbor and Guysboro, to a junction with the present line at Mulgrave, whence there is ferry connection with Cape Breton Island. In the general estimates referred to above provision is made for the purchase of an additional car ferry, and the building of docks at this point. The car ferry is

being built in England. In 1914, a reconnaissance survey was made over the projected route of this branch. We are officially advised that the \$1,000,000 voted is to start construction on the branch. The maximum gradient will be 0.6, both east bound and west bound, and the maximum degree of curvature 6 degrees, with possibly one or two exceptions. The object of the new line is to give transportation facilities to the central portion of Guysboro County and the port of Guysboro and to build a line with such gradients as will make it the economical route for through heavy traffic to and from Cape Breton. It is the intention to start construction this year and tenders will be called for at an early date.

In regard to the vote of \$62,400 for Bathurst spur line we are officially advised that it will run from the main line near Bathurst into the town and will serve a number of mills, principally the Bathurst Lumber Co.'s new pulp mill. It is proposed to go on with construction this year and tenders will be invited as early as possible. (April, page 136.)

## National Transcontinental Railway Construction.

The Dominion Government has obtained power from the Dominion Parliament to operate the National Transcontinental Ry., from Moncton, N.B., to Winnipeg, pending the completion of negotiations with the Grand Trunk Pacific Ry., for the taking over of the line under the terms of the agreement of 1903, and its operation with the G.T.P. Ry. as a complete unit from Moncton, to Prince Rupert, B.C. This agreement provided for the taking over of the Moncton-Winnipeg line at a rental of 3% upon its actual cost. The negotiations in progress have to do with the ascertaining of the actual cost upon which the rental of 3% is to be paid, and the interpretation of other sections of the agreement. From time to time something is said in the daily press as to the stage which these negotiations have reached but there is no official statement on either side, consequently no importance can be attached to the press despatches. It is, however, admitted by the Minister of Railways, which admission is concurred in by Hon. G. P. Graham, ex-Minister of Railways, that the line is not completed in all its details as contemplated in the agreement, so that the G.T.P. Ry. is justified in not taking it over. Until these negotiations are completed the Railways Department has the power to operate the entire line, either as a complete unit, or in sections, for the benefit of the Dominion.

Parliament has also granted the Department authority to acquire from the G.T.P.R., the branch line from Lake Superior Jct. to Fort William, Ont., 190 miles, with the terminals, facilities and accommodation works, by purchase, lease or otherwise, of the G.T.P.R. or any other company, and of including the same in the N.T.R., so that in the event of the G.T.P.R. failing to agree with the Government, the entire line east of Winnipeg may be operated in connection with existing Government lines. This is being operated by the G.T.P.R. in connection with the section of the N.T.R. between Lake Superior Jct. and Winnipeg, 258 miles, as its Lake Superior Division, with a total mileage of 448. The 258 mile section of the N.T.R. is operated under a special agreement, independently of the general agreement for the whole line contemplated by the act of 1903.

In the House of Commons, April 1, the Minister of Railways said work was commenced upon the building of the station on the site of the Champlain Market, Quebec, June 18, 1914, and was suspended Dec. 20, 1914, because it was considered inadvisable

to carry on masonry and brick work during the severe winter weather. A press report, April 15, stated that work has been resumed.

The House of Commons has voted \$3,500,000 on account of construction of the Quebec Bridge during this financial year. The Minister of Railways stated in the House of Commons, April 1, that there was expended, on account of the bridge, to Oct. 10, 1911, \$8,344,928.09; and since that date to Feb. 28, of the present year, \$7,359,675.45. A later press report states that M. P. and J. T. Davis, the contractors for the sub-structure, have finally completed their work, and have a few men employed removing the balance of their plant, and cleaning up the yards which they had utilized. The St. Lawrence Bridge Co., which has the contract for the steel work, has some 6,000,000 of prepared steel on the spot ready for erection, other steel is going forward, and preparations are being completed for the active pushing of the erection of the main part of the super-structure during the summer. (April, pg. 138.)

## Dominion Government Railway to Hudson Bay.

The Minister of Railways stated in the House of Commons recently that the total length of the line, if completed according to present location, would be 424 miles. The first 250 miles are nearly completed; the next 50 miles are well advanced, and track has been laid on 214 miles. The total estimated cost of the completed line is \$16,000,000, and the amount expended \$7,647,197.41. The estimated cost of the proposed harbor improvements at Port Nelson, on Hudson Bay, is \$10,000,000, less credits for steamships, plant, etc., about \$1,000,000, and there has been expended on plant, steamships, wireless telegraph stations, etc., \$3,480,277.08.

J. D. McArthur, the general contractor for the line, is reported to have said, on a recent visit to Ottawa, that the grading into Port Nelson will be completed next autumn, if labor or other difficulties do not intervene. The construction camps are fully supplied, the plant on the job is ample, and track and other materials are going forward promptly. It will not, he said, be possible to get the track laid into Port Nelson this year on account of the two large steel bridges which have to be built across the Nelson River, the first at the Manitou Rapids. This bridge, upon which work has been started, is at mileage 241.5 from Pas, Man. It will consist of a single track symmetrical cantilever span, with one deck plate girder approach span, resting on three concrete piers and abutments, having a total length of 612.2 ft. from face to face of ballast wall. The foundations of piers and abutments are in solid rock, the piers themselves being 30½ ft. high above foundations. The piers are spaced from the west end ballast wall. 111 ft., 304½ ft., 110½ ft., and 85½ ft. each centre to centre. The concrete work is being done by the general contractor, J. D. McArthur, and the steel work has been let to Canadian Bridge Co., Walkerville, Ont.

The grading subcontract is being carried out by McMillan Bros., and the track laying, ballasting, and telegraph subcontract by the Hudson Bay Construction Co., of which J. D. McArthur is President.

The engineering and construction parties began, starting out from Winnipeg for the season's work, Mar. 28.

The House of Commons has voted \$5,500,000 on account of construction of the railway, terminals and elevators, in the main estimates, and \$350,000 in the supplementary estimates this year.

# Electric Railway Department

## Electric Railway Statistics for Year Ended June 30, 1914

The following abbreviations are used in the names of railways:—E, electric; E.R., electric railway; E.S.R., electric street railway; S.R., street railway. The minus mark (—) in the column for net income or deficit, shows that there was a deficit in the operation of the line to the extent of the figures given. The numbers following the names of the railways, refer to the notes following the table on this page.

	First Main Track Mileage	Gross earnings from Operation	Miscellaneous Earnings	Operating Expenses	Taxes, Funded Debt, etc.	Net Income or Deficit	Total Car Mileage	Fare Passengers Carried

### Notes to Electric Railway Statistics.

In the introduction to the statistical report on electric railway operations for the year ended June 30, 1914, the Comptroller of Statistics says: "Four operating lines—the Montreal Tramways Co., the St. John

Ry., the Yarmouth St. Ry., and the Pictou County Electric Co.—did not report. The failure of these companies to comply with the requirements of the law is a serious matter. In order to save the basis of comparison it is necessary to insert figures relating to preceding years, which is most

unsatisfactory. Notwithstanding the delinquency of the companies to which allusion has been made, the reports received disclose a year of substantial progress by the electric railway interests of Canada."

The companies referred to, as we understand it, do not agree with the Comptroller's

statement as to the requirements of the law. They are operating under provincial charters, and, we believe, contend that they are not required to report to any Dominion department.

It will be seen that the total of the column showing total operating expenses, and that showing miscellaneous income, \$23,863,872, deducted from the totals of the column giving gross earnings from operation, and that giving miscellaneous income, \$33,194,111, gives an amount of \$9,330,239, which does not correspond with the total of the column showing net income or deficit, \$6,566,833. This is to be accounted for by the fact that while old figures showing earnings and operating expenses of the Montreal Tramways Co., and the St. John Ry. are given, no items respecting their expenditures on taxes, interest on funded debt, etc., are shown, while they are shown in the case of the Pictou County Electric Co., and the Yarmouth St. Ry., old returns of which are also used.

(1) The Berlin, Waterloo, Wellesley and Lake Huron Ry., formerly Galt, Preston and Hespeler St. Ry., is operated in connection with the C.P.R., which also owns the Hull Electric Co.

(2) The Brantford and Hamilton Ry.; Hamilton and Dundas Ry.; Hamilton, Grimsby and Beamsville E.R.; Hamilton Radial Ry.; and Hamilton S.R., are owned by the Dominion Power and Transmission Co.

(3) The Edmonton Interurban Ry. only started operation at the beginning of June, 1914.

(4) Fort William E.R.—The gross earnings are for six months during which the line has been operated separately from the Port Arthur E.R.

(5) The International Transit Co. is owned by the Lake Superior Corporation, which also owns the Trans-St. Mary's Traction Co.'s line in Sault Ste. Marie, Mich., with a connecting ferry.

(6) The Montreal and Southern Counties Ry. is controlled by the G.T.R.

(7) The Nelson S.R. recommenced operations, Feb. 1, 1914, under municipal management, and the figures given cover the operations from that date to June 30.

(8) The Niagara Falls Park and River Ry. is owned by the International Ry., Buffalo, N.Y.

(9) The Niagara, St. Catharines and Toronto Ry., and the Toronto Suburban Ry. are owned by interests allied with Mackenzie, Mann and Co. (Limited).

(10) The Nipissing Central Ry. is owned by the Province of Ontario through the Timiskaming and Northern Ontario Ry. Commission.

(11) The figures given cover the operations of the Port Arthur E.R., after the separation from the Fort William E.R., in Dec., 1913.

(12) The Quebec Ry., Light and Power Co. also operates by steam over part of its lines, the financial results of which operation are given in the statistics of steam railway operation on an earlier page of this issue.

(13) The Sandwich, Windsor and Amherstburg Ry. is owned by the Detroit United Rys.

(14) The Suburban Rapid Transit Co., and the Winnipeg, Selkirk and Lake Winnipeg Ry. are owned by the Winnipeg E.R.

(15) The Toronto and York Radial Ry. is owned by the Toronto Ry.

The C.P.R., according to a press report, has arranged to take 1,000 tons of coal a day from collieries on its Crowsnest Pass branch in British Columbia, in addition to what is taken from the Alberta coal fields, for use on its Manitoba division.

## Ontario Asked to Subsidize Hydro-Electric Railways.

Several hundred municipal representatives from various portions of the Province waited on the Premier and other members of the Ontario Government in Toronto, Mar. 26, to ask that subsidies at the rate of \$3,500 a mile be given for electric railways to be built by municipalities under the Hydro Electric Power Commission of Ontario's auspices. The deputation was introduced by the Mayor of Toronto.

T. J. Hannigan, Secretary of the Hydro-Electric Railway Association of Ontario, read a memorial signed by the President, J. W. Lyon, of Guelph, and himself, from which the following are extracts:

A large portion of Western Ontario, and various other parts of the Province, have enjoyed for the last four years, cheap power and light for manufacturing and domestic purposes, supplied by the Hydro-Electric Power Commission, and generated from Niagara Falls and other water powers. The achievement of the commission in distributing power at high tension at long distances, and at low cost, is considered one of the greatest works of modern times. The commission deserves the highest commendation and support in its work of distributing power to parts of the province which could not hope for any such advantages if the power was owned and controlled by private interests.

Many portions of the province are not now adequately served by railways, either steam or electric; a very small number of electric lines are now being operated, and these only in the most congested parts. The absence of such electric roads has been the principal contributing factor in the depletion of the rural population of Ontario in the last 10 years to the extent of 96,000, while the urban population has increased 500,000 in the same time. Farmers in great numbers have left their land and taken up their residence in large cities, thereby becoming consumers instead of producers, in order that they and their families might enjoy a larger measure of social intercourse, and that their children might have the privileges of secondary and higher education now largely denied the farming community through lack of adequate transportation.

The present system of transmitting power under high tension renders it useless for commercial purposes without the construction of expensive transformer stations which are only possible in centres of population, but electric railway lines with their lesser voltage would make possible the use of such power to smaller communities and farmers through comparatively inexpensive step-down stations, same being taken direct from the transmission line of the railway along its full length, and distributed to a distance of from 10 to 15 miles on either side. Without the electric railways, the commission states that it is impossible to successfully supply hydro-electric power to that part of Ontario east of Toronto, or to most of the rural parts of the province, whereby it will be made to appear that a large part of Ontario is being discriminated against in the use of hydro-electric power. In view of the wonderful development of electricity and of hydro-electric power in Ontario and its adaptability to the needs of the farming community, the building of electric railways would in consequence furnish an easy and inexpensive means of bringing to the farmer an adequate supply of electric power at minimum cost.

In encouraging the farmers and villagers, by affording them frequent, rapid, and convenient transportation, together with the opportunity for cheap electric power sup-

plied from the railway transmission lines, it is hoped to check the depletion of the rural population. At present, the wealth of this country is not being augmented as it should be in many rural districts, because the producer is so far removed from the market as not to be able, on account of the cost of haulage, to make practically any use of it. Electric roads would bring the market to the door of the producer and conserve to the community a large amount of energy now largely wasted, thus reducing the cost of living to the community at large. Electric roads bear the same relation to steam roads that rural telephones bear to long distance lines.

Your memorialists, realizing the widespread need and benefit of electric railways, especially in portions not now served by steam roads, have by virtue of the Hydro-Electric Act through the several municipal councils to the number of over 200, requested the Hydro-Electric Power Commission to investigate conditions in such portions, in order to report on the advisability of the construction of electric lines in these districts by the commission. The commission has already reported to many of the municipalities that hydro-electric roads could be built and successfully operated, provided they were given a subsidy such as has been already given to some privately owned roads. No subsidy given will be for private gain or profit, but will be expended by a public commission, every dollar going into the physical construction of the road, the undertaking and property never ceasing to be publicly owned and controlled.

The Ontario Government by its policy regarding good roads has shown that it is aware of the importance of cheap and better transportation, and if for vehicle traffic good roads are worthy of the expenditure proposed, how much more so is the system of proposed hydro-electric railways which will be a large revenue bearing utility, because, while good roads are, and must always be a necessity in any community, it will be generally admitted that they are of much less benefit to the farmers of the country than electric railways, as the former will be continually a growing expense, and the latter progressively revenue bearing. The building of these electric roads would virtually mean the rediscovery and resettlement of Ontario, gradually increasing the wealth and population and tax paying power; and as the money will only be wanted very gradually the increased revenue resulting from development should almost, if not quite, equal the money as paid out for subsidy, so that in fact the province would be simply loaning its credit for its own development.

The proposed roads will be most modern in construction and equipment, and on account of their superiority of service can and will do more to regulate the conduct of privately owned railways than any other means which can be devised. If construction of these roads is commenced immediately, it would aid very materially in solving the unemployed problem which has been the cause of great concern to the municipalities during the past year. Such subsidy would not be required for some time, and any subsidy granted would be spread over a term of years as the roads are built.

The deputation is composed of representatives from almost every county from the St. Clair River and Lake Huron to the Ottawa River and the lower St. Lawrence; one of the largest and most representative deputations that has ever visited Toronto; it represents the wishes of the Hydro-

Electric Railway Association of Ontario, made up of over 500 municipalities of which a great many are represented here today by their entire municipal councils. Your memorialists ask that the Ontario Government will grant a subsidy of \$3,500.00 a mile to such hydro-electric railways as shall be recommended by the Hydro-Electric Power Commission of Ontario, and built by virtue of the Hydro-Electric Railway Act.

An address prepared by J. W. Lyon, President of the Hydro Electric Association of Ontario, was to have been read in his absence by ex-Mayor Graham, of London, who, however, said that it would be given to the press instead. After dealing with the result of the Hydro Electric Power Commission of Ontario's work in distributing electric power it claimed that the construction of hydro electric railways would largely reduce the price of power in rural municipalities, increase the value of farm land, create intense and profitable farming, give better facilities to the producer to reach the consumer, reduce the cost of living to the urban population and greatly increase the convenience and benefits of the suburban population. The power lines of the hydro electric railways, which would be of low voltage, would make it practical to serve the rural population with power up to 10 or 15 miles on each side of the lines. It claimed that the construction of hydro electric railways would confer more benefits than the building of good roads.

A number of delegates having spoken, Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario, supported the application.

Premier Hearst, in replying, assured the deputation that no one had more sympathy with the advancement of radial transportation than the members of the Government. The aim of the municipalities was one that appealed to everyone. He reviewed the measures opening the way for radial construction and referred to the difference in the request from the provision originally made by which the Government would be issuing its bonds secured by municipal debentures. The payment of a subsidy of \$3,500 a mile was a matter that would require a great deal of consideration. "We would have to have an idea of what liability we were committing the Province to," he said, "because the more successful these systems were the more the Province would have to pay." Even at the present time the finances of the Province give concern and thought to the Government of the day. Before anything could be done it would be necessary first to see what other sources of revenue could be secured. It was not only a case of considering the propriety of granting such a request." He assured the deputation that the day of subsidies to private interests was gone by and that Sir James Whitney's policy would be lived up to. In closing, Mr. Hearst promised that there would be no delay in taking up the matter.

A few days later the leader of the Opposition, N. W. Rowell, asked in the Legislature if the Premier intended to make any statement of policy in regard to bonusing hydro electric railways before the Legislature adjourned, and was answered in the negative.

**The Jitneys an Aggravation.**—The Calgary Albertan, published in a city which owns and operates an electric street railway, says: "The jitneys skim the cream off the street railway traffic and fatten upon the short haul in the crowded districts. The jitney is a fair weather bird, and keeps under cover in the bad weather. The jitney is not a solution of the traffic question. It is an aggravation."

## Port Arthur and Fort William Municipal Railway Conditions.

Port Arthur, Ont., City Council gave consideration, Mar. 30, to a report upon the electric railway system, prepared at the request of Fort William City Council. The report states that although the gross earnings of the combined lines in Port Arthur and Fort William in 1914 exceeded those of 1913 by \$1,598, the passenger traffic dropped by 381,582 fares, equal to \$15,200. The gain in the earnings of the system was caused by the increased price of tickets, revenue from hauling rock and gravel, and increased contracts for advertising in the cars. The causes of the losses during the year were due to the increase of capital account, the increased cost of operation due to the separation of the old system into two; the expenses of belt lines; the construction of extensions without adequate returns, and the decrease in traffic due to general depression, and abnormal conditions created by the war. The increases for the year to Aug. 31, were \$20,320 over the same period of 1913, but from Sept. 1. to Dec. 31, the decreases were \$18,444. It was estimated that if war conditions had not arisen, the increases for the year would have been about \$30,000. The total car mileage was 649,655, and the total passenger earnings were \$119,811.

The report recommends that no additional lines be built unless it is apparent that they will be self sustaining; that lines which do not now earn the cost of operation be discontinued; that the cost of all lines not built for passenger traffic be not charged to railway capital account, and that debentures be not sold for construction purposes until the work is done, and the cost definitely ascertained.

One man operation on the main line is not possible owing to the fact that it crosses steam railways. At the present time there are only 14 cars operating in both cities, against 32 in the spring of 1913.

## Toronto Suburban Railway Sunday Operation.

At the Ontario Legislature's recent session a bill was introduced in the Toronto Suburban Ry. Co.'s interest the single clause in which provided that notwithstanding anything contained in The Ontario Railway Act, or any other act applicable to the company, the company may operate its railway on Sunday, subject to regulations to be imposed by the Ontario Railway and Municipal Board. In its passage through the House the clause was amended to read as follows:

"(1) Notwithstanding anything contained in the Ontario Railway Act or in any other general or special Act applicable to the company, the company may operate cars and trains upon any part of its railway already constructed or now under construction on the Lord's Day for the carrying of passengers, and the company may run such cars or trains before the hour of 10 o'clock in the forenoon and after the hour of 5 o'clock in the afternoon, on the Lord's Day, as may be necessary for the transportation of milk exclusively, but no freight of any other kind shall be carried, nor shall it be lawful for the company to collect any fare or toll for the transportation of freight on the Lord's Day except for the transportation of milk as aforesaid, but nothing in this section shall be construed to prevent the running of empty cars or trains either from a car shed or any point on the line of a railway for the purpose of receiving the milk for transportation as aforesaid or back

to the car sheds after the delivery of the same.

(2) The exercising of the rights conferred by this section shall be subject to such regulations as the Ontario Railway and Municipal Board may impose."

On April 4 the company started operation on its lines in Toronto and on its suburban lines to Lambton, Weston and Woodbridge. When the line now under construction between Lambton and Guelph is put in operation a Sunday service will also be given on it.

## Regina Municipal Railway Matters.

A protest has been made to the City Council by certain residents against the use which is being made of the cars on the Municipal Ry. for advertising purposes. Some of the cars, it is stated, are literally covered with "sensational" posters.

The value of property of the City of Regina is shown in the annual financial statement under headings: remunerative and realizable; unremunerative and realizable; unremunerative and unrealizable. The Municipal Ry. appears under the first heading as follows: Completed, \$821,879.75; uncompleted but provided for, \$916,002.29; and under the second: Office and sundry buildings and equipment, \$1,552.44, a total of \$1,739,434.48.

The City Council, on April 7, postponed for further consideration a new car schedule prepared by the utilities committee. The new schedule proposes to give a better service in the central districts and a slower service in the annex districts. The committee states that Sunday operation resulted in a loss of \$7,111 in 1914, the loss during the present year to date averaging \$104 each Sunday. The question of submitting a question to the vote of the people as to the further reduction or the dropping of the Sunday car service is under consideration.

The estimates for the Municipal Ry., submitted to the City Council, show a revenue of \$191,940, with an expenditure of \$184,589, or an estimated surplus of \$7,351. The interest and sinking fund charges for the year will amount to \$109,650, leaving an estimated net deficit of \$102,299. The actual loss in operation in 1914, was, \$8,096.67, which added to \$89,365.58, the interest and sinking fund charges for the year, made a total of \$97,462.19, which had to be provided for out of general taxes. The Commissioners state that the present rolling stock is of sufficient capacity to carry three times the present number of passengers; the interest charges covered the cost of large quantities of materials which had been purchased, but which still remained in stock, and for the pavement between the tracks. The annex districts served by the lines had had their assessments considerably added to, so that the system was not losing so much as the figures apparently showed.

The City Council on April 15 adopted the estimates for the current financial year. The utilities committee provided for \$97,462.19 deficit on the municipal railway for 1914, and \$102,299.80 as the estimated deficit for this year. The Council decided to meet these amounts by appropriating the profits from other utilities, and by the sale of debentures already authorized under certain bylaws.

**Hot milling the top and bottom surfaces** of the rail bar when 75% rolled is a new process introduced in the U.S. to eliminate longitudinal cracks and seams from the elongation of the small surface blemishes in the rail ingot.

## Additional Equipment for Toronto Civic Railway.

Tenders were received recently by Toronto City Council for 4 double end single truck, p.a.y.e. cars for Lansdowne Ave. extension, Toronto Civic Ry., of the general design shown in the accompanying illustration. They are to have the single arch roof, with platforms arranged so as to separate entering and leaving passengers. The interior of the car body is to be constructed so as to avoid as far as possible, all ledges and projections or obscure corners where dust and dirt may lodge. Following are some of the principal particulars:

Gauge of track .....	4 ft. 10 $\frac{1}{8}$ ins.
Radius of shortest curve .....	35 ft.
Wheel base .....	8 ft.
Diameter and tread of wheel .....	33 ins.; 2 $\frac{3}{4}$ in.
Length of body .....	21 ft.
Length of vestibule .....	6 ft. 4 $\frac{1}{4}$ ins.
Length overall .....	34 ft. 8 $\frac{1}{2}$ ins.
Width over sheathing .....	8 ft. 5 $\frac{1}{2}$ ins.
Height to top of roof .....	10 ft. 9 $\frac{1}{2}$ ins.
Height to top of vestibule step .....	13 ins. or less.
Height from step to vestibule .....	12 ins. or less.
Height from vestibule to car floor .....	11 ins. or less.
Weight of car body, not over .....	13,500 lbs.
Seating capacity .....	32

The vestibules will be circular in form below the belt rail, and octagonal above. Each vestibule is to have a two leaf folding door on the right, to be operated by the motorman, and two similar two leaf folding doors on the opposite side, to be operated by the conductor. A pipe railing on each platform will separate entering and leaving passengers, and facilitate fare collection.

The roof will be of the single arch or turtle back type, supported on seven steel carlines, one over each side post, and carried through from end to end of the car, with no bulkheads in the ends of the car body. There will be 8 windows on each side of the car, at 30 $\frac{1}{4}$  in. centres, the lower sash dropping into a wall pocket, and the upper stationary. There will be three 5 $\frac{1}{4}$  x 7 $\frac{1}{4}$  in. ventilators on each side of the roof.

Both longitudinal and cross seats are to be finished in rattan. There will be 16 hand straps, 24 ins. long, with enamelled grips. Each side post will have a push button, connecting with a buzzer in each vestibule. The interior of the car is to be varnished quartered oak throughout. They

The cab is to be of the straight vestibuled type, 6 $\frac{1}{2}$  ft. high, sheathed inside and out, and floored with two layers of  $\frac{3}{4}$  in. pine, and with two hinged end doors, centre doors with baggage door hangers, side windows, and regulation three windows in each end, and mounted on a steel under-frame.

The brooms will be of rattan, 32 ins. diam., extending 15 ins. outside of the tracks. These brooms are to be built in segments of four each, making eight at each end of the car. They will be raised and lowered in malleable iron pedestals by hand wheels in each end of the cab, and will be driven through a shaft from a GE80 form A motor. The ploughs will be of  $\frac{3}{8}$  in. steel plate, 24 ins. high and 6 ft. long, operated by raising and lowering mechanism in the cab. The ploughs will clear 4 ft. outside the rail in the open position.

The trucks will be of the heavy pedestal type, on 33 in. chilled iron wheels, 2 $\frac{3}{4}$  in. tread. Each axle will carry a GE80 motor, from stock. To replace these two motors and the broom motors, which are also from stock, four Westinghouse no. 533 commutating pole ventilated motors were included in this tender. The electrical equipment will include in addition two K10 controllers, a R28 controller, set of resistance for car motors, set of resistance for broom motor, lightning arrester, and two circuit breakers.

## Running Boards on Toronto Railway Open Cars.

The Ontario Railway and Municipal Board, on Apr. 7, considered the question of the safety of the running boards on the Toronto Ry. cars, on the application of the Toronto Ry. employees' union. On the company offering to equip some of its cars experimentally with a wider running board and new grab handles as desired by the men, the Board postponed the hearing until May 15, in order that they might observe the value of the desired changes.

On the double truck car, the change in the running board consists in widening the top board by 4 ins. to 12 $\frac{1}{2}$  ins., and on the single truck cars to 11 ins., the lower board in both cases being left the same width as before, 9 ins. New grab handles of 1 in. pipe, are also being applied experimentally. These handles are midway in the seat depth, running from the seat end frames vertically to the top rail of the car. Their midway position permits the conductor to pass his arm around them, increasing his freedom of action and safety.

This subject was first up for consideration before the Board on June 9, 1914, as mentioned in Canadian Railway and Marine World for July, 1914. That application was that running boards be abolished, and centre aisle cars be used both summer and winter. As a result, centre aisle cars have been tried on the Toronto Ry., as described in Canadian Railway and Marine World for April. Certain of the cars were equipped with the new grab handle late last autumn, and were said to have proved satisfactory. The grab handles and wider running board are advocated as a substitute for the centre aisle cross seated car.

**Hull Electric Co.'s Fares.**—The Board of Railway Commissioners passed order 23447, Mar. 12, approving the Hull Electric Co.'s Standard Maximum Passenger Tariff, C.R.C. no. 1, to apply on its line on the uniform basis of 2 $\frac{1}{2}$  cts. a mile, provided that no toll now being charged by the company for the carriage of passengers be increased unless the Board's permission has first been obtained.

Single Truck Double End Operation Cars for Toronto Civic Railway.

The underframing is to be entirely of steel, with side members of steel plate with bottom angles, with the end sills also built up of plates and bottom angles. The cross members will be channels, with gusset plate connections to the side plates. The platform knees will be steel plates, with top and bottom angles, and there will be channel centre platform members, with the flanges turned up, which will act both as sustaining members for the platform and buffing members, to which the draw bar chains will be riveted. The bumpers will be 6 in. channels, extending continuously from knee to knee, conforming to the shape of the vestibule, with an anti-climber section, 3 $\frac{1}{2}$  ft. long, on the face of each bumper.

The platform flooring will be single of  $\frac{3}{4}$  in. oak, while that in the body of the car will be double, with an intervening waterproof felt, the lower layer of Georgia pine, and the upper maple, each 13-16 in. thick. The framing above the steelwork will be white ash and Georgia pine, with the corner posts of the vestibule and body covered with steel pressings.

will be equipped with pantasote curtains, polished bronze trimmings, Crouse-Hinds headlights, handbrakes, life guard fenders, 4 sanders, coal burning forced ventilation heater, fare box holders, sign boxes, and side window guards.

The trucks will each carry two GE80 form A motors, which will be supplied out of stock. To replenish stock, 8 Westinghouse interpole ventilated motors, no. 533, are being ordered. Each car will have two K10 controllers, two 200 to 600 amp. circuit breakers, a lightning arrester, choke coil and set of resistance.

Tenders were also received for a sweeper body and equipment for the St. Clair Ave. line. It will be of the single truck type, with steel underframe, and equipped with steel side ploughs and two brooms for double end operation. Following are general particulars:

Length overall .....	28 ft.
Length of cab .....	24 ft.
Width of cab .....	7 ft.
Height to top of cab .....	10 ft. 8 ins.
Wheel base .....	6 ft. 6 ins.
Wheel diameter .....	33 in.
Track gauge .....	4 ft. 10 $\frac{1}{8}$ in.
Devil strip .....	5 ft. 4 ins.

## The Jitney Situation in Canada.

Within a little over three months the jitney automobile has been introduced into six out of the nine Provinces in Canada, and while at present only nine cities are affected, others are taking steps to make regulations which will control the traffic effectively from the start. The difficulties with which many of the cities, not only in Canada, but in the United States, have to contend in connection with the traffic is due to the fact that when jitneys did start there was no real power to control them, and the traffic became to some extent established before the necessity of regulation became apparent. General authority to regulate the traffic has been conferred on municipalities by the British Columbia Legislature, and the Saskatchewan Legislature has been asked to give its cities regulatory power over motor vehicles. Some Ontario cities, Edmonton, Alberta, and Winnipeg, are acting, or preparing to act under the general powers of these charters to make regulations for this traffic.

The amendments made in the Municipal Act, by the British Columbia Legislature, include a new subsection to sec. 54, giving power to municipalities to make regulations for licensing and regulating motor vehicles carrying passengers; by limiting the number of passengers to be carried; by defining the routes upon which the vehicles may run; for limiting the hours within which they may be operated; to compel the owner or driver to furnish bonds, and for the licensing and regulating of chauffeurs. The terms of the legislation secured by the city of Vancouver were given in last issue on pg. 150. Under the terms of this power a committee of the City Council drafted a series of regulations. At a meeting of the City Council to discuss the proposed regulations, it was stated that 140 men had been laid off by the British Columbia Electric Ry., and that there were more than 300 jitney drivers in the city. The draft regulations were amended in a number of details. A jitney inspector is to be appointed by the city. Another organization, the Jitney Association of Vancouver, was formed Mar. 30, with A. E. Goodman as chairman, and a large membership. For the interurban service between Vancouver and New Westminster, the Kingsway Motor line has been started. The company, the manager of which is J. Insley Jr., New Westminster, proposes to give a 15 minute service between 8 a.m. and 8.30 p.m., and a 30 minute service after the latter hour.

The first regular jitney started business in Edmonton, Alberta, Mar. 15, as stated in Canadian Railway and Marine World for April, and Superintendent Larmonth, of the Edmonton Radial Ry., in replying to the Commissioners, April 6, said: "We are having a good deal of competition from the jitney busses on the south side, although they have practically gone out of business on Jasper Ave. West." The south side routes go across the high level bridge, and on April 10 four jitney drivers were fined for exceeding the speed limits. The Edmonton City Council, on April 6, gave the first reading to a bylaw to regulate jitney traffic. The provisions include licensing of cars and drivers, car licenses at from \$60 for a five passenger car to \$150 for one carrying more than 10 passengers, with \$2 for driver's license. There is to be a license inspector who is to have general supervision over the traffic. The license is to specify the route upon which the car is to be run, the fares to be charged, etc., and the other regulations provide for the character of the car and its equipment; the operation of the car, etc. The penalty for violating any of the regulations may be

\$100, and if the magistrate so orders the cancellation of the license. Owners and drivers must put up a bond for \$10,000 each, as a guarantee against accident claims.

Up to April 25 no jitneys were in operation in Calgary, Alberta.

Representatives of Saskatchewan cities met at Regina, April 8, to discuss civic problems, one of which was the coming of the jitney. Commissioners Pool, Regina, and Yoarth, Saskatoon, were responsible for the passing of a resolution asking the Legislature at the next session, which opens in May, to grant all municipalities power to regulate the traffic, routes and hours of any automobiles or other vehicles used for the transportation of passengers, where a fare of 10 cts. or less is charged. It was explained that it is desired that any one desiring to operate such a service should apply to the civic authorities, when routes could be arranged and schedules of fares and lines drawn up.

A service, controlled by A. W. Beise, is being given between Pleasant Hill and Mayfort, Saskatoon, Sask., and arrangements are being made for putting cars on other routes. A seven minute service is being given in competition with a section of the municipal railway.

The Mayor of Winnipeg is reported to have said, April 8, that the City Council must take immediate action respecting the jitney traffic in the city, and that jitney owners, or drivers, or both, must be made responsible for accidents by means of a bond guarantee. This statement was evidently made in consequence of the recommendation of the jury at the inquest upon the body of Mrs. Friedereich, who died as the result of being struck by a motor car, April 5, to the effect "that all drivers of jitneys, whether owners or chauffeurs be required to pass an examination before being given a license. Another reason for the special regulation of the jitney traffic is the increase of breaches of the traffic bylaw. For example, on Mar. 31, there were 48 such offences dealt with in the police court, the majority of which originated at the intersection of Main Street and Portage Ave., the principal starting point used by the jitneys for their trips. One press report states that there are over 200 jitneys being run in Winnipeg, and that the number is increasing daily. This has resulted, according to a report of April 8, in the taking of 22 cars from several routes by the Winnipeg Electric Ry. It was reported, April 10, that over \$50,000 had been paid to the Municipal Commissioner in the previous nine days for auto licenses, many of which were being used for jitneys. A motor-cycle jitney has been running in the city since April 1, having a capacity for six passengers and being operated by an eight horse power engine. The Winnipeg Jitney Association has been established, and is arranging with an insurance company to carry a general policy to cover accidents.

The Winnipeg Electric Ry. applied to the Manitoba Public Utilities Commission, April 16, for permission to cut down its service in the city by taking off 20 cars. Counsel for the company stated that the number of passengers carried during March was 4,419,031, against 4,992,593 in Mar., 1914, and 4,884,609 in Mar., 1913, while in the first 12 days of April there had been a drop of nearly 400,000 in the number of passengers carried, as against the first 10 days of April, 1914. The company had been promised the sole franchise for carrying passengers along the city streets, and the city is now encouraging the jitney business, which simply angles after business during the fine weather, dropping out altogether when rain and

the cold weather comes. Counsel for the city stated that all possible information regarding the jitney business is being collected, with a view of preparing a bylaw approving regulations for its control in the city. The city does not object to the present reduction of cars, provided a precedent is not established. The Commissioner's decision was reserved.

The Mayor of Port Arthur, Ont., called the attention of the City Council, Mar. 30, to the probability that a jitney service would be inaugurated there, and it was mentioned that there was already a "jitney" freight service in operation between Port Arthur and Fort William.

The Stratford, Ont., city authorities have been approached with the view of a license being obtained for the operation of a jitney service in that city.

At a meeting of the Hamilton, Ont., Board of Control, April 2, the Mayor said a bylaw was being prepared for consideration giving the police the necessary authority to regulate the jitney business. One of the Controllers complained of the overcrowding and high speed of the cars in the service. There are two concerns operating jitneys in the city: The Hamilton Jitney Co., with a capital of \$40,000, with which, C. V. Langa, A. Carey, F. W. Reinke, L. H. Alley and G. S. Carey are associated, and the Hamilton Jitney Service Association, of which A. A. Decker and C. M. Wilson are the principal members, with C. W. Bell as Secretary.

Representatives of the Hamilton Jitney Association had an interview with the Mayor, April 20, in the course of which he explained what the Association was doing in the way of controlling and regulating the new traffic so as to ensure the safety of the public. There are, he stated, 40 jitneys being operated in the city, the majority of the owners of which are members of the association. The association drafts routes, arranges schedules, supplies tickets, fare boxes, looks after receipts, looks after the drivers, maintains a supply store for the sale of gasoline, etc., charging for its services \$2.50 a week per car. An arrangement is being negotiated for insurance against accidents, as a protection to the public. The Mayor stated that the matter would be taken up with the Council committees, and such regulations would be made as might be found necessary.

A meeting of business men in Brampton, Ont., April 15, discussed a project for starting a jitney service from Brampton to Weston, to connect with the Toronto Suburban Ry. there, as a means of securing more frequent connection with Toronto than is provided by the G.T.R. and the C.P.R., and as a feature in the campaign which has been going on for the past seven years to induce these companies to grant commutation fares between Brampton and Toronto. The project also contemplates the putting on of a jitney to run to Meadowvale, as soon as the Toronto Suburban Ry.'s extension from Lambton to Georgetown is put in operation.

The first "jitney" made its appearance in Ottawa, April 5, the car being labelled "Jitney Passenger Service, Bank and Rideau Streets, fare 5 cents." C. Levesque, who owns the car, is reported to have said he can make 30 round trips in the day, and can carry seven passengers at any one time. Other motors are now reported to be running on other routes, but up to the time of writing the city police authorities have not been asked to issue any licenses. At the meeting of the Brotherhood of Teamsters, Chauffeurs, etc., held in Ottawa, April 10, the General President stated that the jitney drivers were being organized wherever there was any number of them, and associations of jitney drivers had already been formed at Victoria and Winnipeg.

A jitney bus service was started in Mont-

real, April 12, and according to a statement made by R. Spaulding, Vice President of the Jitney Association of Montreal, the following day there were seven cars in operation and arrangements were being made for an increasing number, it being expected to have at least 100 in operation by May 1. The principle on which the service is operated is that a fee of \$2.50 a week per car is paid to the Association; the balance being divided 40 per cent to the operator, and 60 per cent. to the owner of the car. The Association has a set of rules governing the service, the time schedule at present being 7 a. m. to 7 p. m., day service, and 7 p. m. to 11.30 p. m., night service. The officers of the Association are: President, E. P. Gordon; Vice President, R. Spaulding, Secretary-Treasurer, L. L. Gordon; General Traffic Manager, G. H. Pearsall. The City Council has drafted a bylaw which proposes to regulate motor traffic in such a way that all such vehicles plying for hire will have to go on stands.

The jitney service in Montreal is being rapidly extended, not only in the city, but also in the suburban districts. Motor owners possessing touring cars, which they ran as taxicabs, are joining the Jitney Association, and are being assigned routes. The number of routes is being increased, while special services are being organized for Sundays, as for instance, April 18, six cars were put on a route round Mount Royal, each making six trips. Another development is a special car service in the residential districts for shopping and visiting, for women only. For this service there are already applications by women for positions as drivers.

In Halifax, N.S., a person has applied to the City Board of Control for permission to run a jitney service and it was referred to the city solicitor for report as to whether or not such a service would interfere with the Halifax Electric Tramway Co.'s rights.

The jitney situation in Toronto is dealt with in a separate article.

### Calgary Municipal Railway Matters.

The results of operation for the calendar year 1914 were as follows:

Revenue.	
Car earnings .....	\$680,197.71
Miscellaneous earnings .....	10,811.12
Bank interest .....	11,521.43
	\$702,530.26
Expenditure.	
Maintenance way and structures ....	\$ 14,671.52
Maintenance of equipment .....	60,772.19
Transportation .....	398,337.05
General expenses .....	41,298.10
Taxation .....	3,373.41
Rental land and conduits .....	1,010.91
Debt interest .....	106,359.48
Debt sinking fund .....	41,478.77
Depreciation .....	29,399.33
Bad debt .....	1,997.30
Surplus to old revenue account .....	3,831.60
	\$702,530.26

#### Miscellaneous Statistics for 1914.

Passengers carried .....	16,213,731
Car miles operated .....	3,112,407
Car hours operated .....	347,801
Car earnings per car mile .....	21.854 cts.
Miscellaneous earnings per car mile ..	0.347 cts.
Gross earnings per car mile .....	22.201 cts.
Car earnings per car hour .....	\$1.95
Miscellaneous earnings per car hour ..	0.03 cts.
Gross earnings per car hour .....	\$1.98
Operating expenses per car mile .....	16.549 cts.
Operating expenses per car hour .....	\$1.48
Proportion operating expenses to operating revenue .....	74.5%
Average fare .....	4.195 cts.

Following are the expenses and revenue for March, 1914 and 1915. The deficit is made up of debt interest, sinking fund, depreciation, taxes, etc.

	March, 1915.	March, 1914.
Operating expenses .....	\$32,195.54	\$47,480.43
Overhead and fixed charges .....	16,635.28	15,121.76
	\$48,830.82	\$62,602.19

Operating revenue .....	46,157.22	56,606.70
Deficit .....	\$2,673.60	\$5,995.49

Following are the operating results for the first three months of 1914 and 1915, Jan. 1 to Mar. 31, both inclusive, which notwithstanding largely decreased earnings, show a great reduction in the deficit:

	1915.	1914.
Operating Expenses ....	\$ 93,495.61	\$145,117.88
Overhead and fixed charges .....	49,855.77	45,365.26
	\$143,351.38	\$190,483.14
Operating revenue .....	135,965.98	166,310.85
Deficit .....	\$7,385.40	\$24,172.29

The contingent and accident accounts (2% of gross earnings) have only been provided for 1915, had the same provision been made in 1914 the deficit for the three months would have been \$27,498.50.

The Calgary City Commissioners have refused to consider a proposition to lay a street railway track connection between the C.P.R. and the G.T. Pacific Ry. on North Ave. E., for car switching purposes, the switching to be done by the Calgary Municipal Ry.

The Calgary City Council is being asked by its legislative committee to abolish transfers on the municipal railway and to charge a straight five cent fare.

### Ontario Ends the Building of Interurban Railways by Private Capital.

The position of a number of electric railways in Ontario was considered during the recent session of the Ontario Legislature, and as the result of the discussions, the extensions sought by the Toronto and York Radial Ry. of time to complete already authorized lines, and power to build a new double track line from its southerly terminus to the northern bounds of Toronto, was refused; while the applications of the Forest Hill Electric Ry., the Ottawa and St. Lawrence Ry., and the Eastern Ontario Electric Ry., which were in the organization and pre-construction stage, were rejected, thus terminating their existence. The Forest Hill Electric Ry., proposed to build a line in North Toronto, between the Yonge St. and Bathurst St. districts, the Ottawa and St. Lawrence Electric Ry. had already graded some miles in Russell tp., of its 300 miles of projected lines to connect Ottawa, Morrisburg, and other points, in the north-eastern triangle of Ontario, bounded by the Ottawa and St. Lawrence rivers, and the Eastern Ontario Electric Ry., was originally authorized to build lines from Cornwall to Toronto and from Ottawa to Brockville, with branches.

The opposition to the extension of all these charters came from the Hydro Electric Power Commission of Ontario, through its chairman, Sir Adam Beck, M.L.A. for London, who appeared before the railway committee of the Legislature and explained the policy of the Commission in reference to electric railway construction. The commission has power under the act of 1914 in co-operation with the various municipalities to build electric railways anywhere in the Province, wherever the power lines of the Commission exist or may hereafter be carried. In the section east of Toronto, a number of municipalities have voted to raise funds by debentures for such construction, and municipalities in many other parts of the Province are investigating the matter. The Commission desires to have a free hand in dealing with the whole question, and it is claimed that its action would be considerably hampered if the charters above mentioned intervened. As a result of Sir Adam's representation the Legislative Committee refused to recom-

mend the passing of the bills, and they were thrown out.

The general position taken by the Commission was outlined by Sir Adam, at a meeting of the Hydro Electric Railway Association of Ontario, held at Toronto, a report of which appeared in Canadian Railway and Marine World for April. It was further stated in a meeting at Ottawa, April 6, at which representatives of municipalities lying between the Ottawa and St. Lawrence rivers were present, covering a great deal of the area proposed to be served by the Ottawa and St. Lawrence Electric Ry., and the Eastern Ontario Electric Ry. At that meeting Sir Adam said: "If the people in any part of Ontario want a radial railway then they can have it." He added all that it would be necessary to do would be that the representatives of the municipalities should get together and pass resolutions asking the Commission to investigate, and give an estimate of the cost. Then the matter would be voted upon, and if the vote was favorable, municipal debentures would be issued, and the Commission would build the lines. The debentures would be guaranteed by provincial bonds, which would be liquidated by the revenues of the lines and by a tax on the municipalities if the revenues were not sufficient. The Provincial Government should subsidize the lines to the extent of \$3,500 a mile, and the Dominion Government had been asked for subsidies of \$6,400 a mile, but even if these subsidies were not forthcoming, the lines would be built if the municipalities were willing to assume the full liability.

### Edmonton Radial Railway Matters.

The Edmonton, Alberta, Property Owners' Association discussed the electric railway situation in the city at a general meeting on April 7. J. McBride moved that if the city failed to relieve the taxpayers of the monthly recurring deficits on the line within 60 days, the Association should take steps to restrain the city from operating the system. The motion did not meet with much encouragement. J. Chalmers, a former city commissioner, explained many details of operation and administration and expressed the belief that the appointment of an independent commission to operate the railway for a long term was the only real solution of public ownership ills. The general sense of the meeting was in favor of public ownership of all utilities, and that, in regard to the electric railway, a special commission should be appointed to thoroughly investigate the distribution of capital expenditure, the basis upon which depreciation charges are fixed, the present routing of cars, the possibility of the further reduction of charges for power, and the advisability of a revision of fares to secure increased traffic.

The City Council, on April 6, passed a resolution giving Superintendent Larmonth a free hand in the management of the Edmonton Radial Ry. until Aug. 1. This resolution was passed on the following recommendation of the street railway operation committee: "Your committee are of opinion that, under the conditions under which the street railway has been operated, Mr. Larmonth has not had an opportunity to make a good showing. We therefore recommend that he be given an entirely free hand until Aug. 1, and that at that time the matter be again brought to the attention of the council. Your committee also are of opinion that the Superintendent would be well advised to use the street cars in preference to the department's automobile."

A new schedule for the operation of cars was put in operation, April 5, which gives a faster service on a number of routes.

## Electric Railway Projects, Construction, Betterments, Etc.

**Brandon Municipal Ry.**—A press report states that the Brandon, Man., City Council has decided to connect the two dead ends of the Municipal Ry. with 22nd St., at a cost of \$16,500. (Jan., pg. 28.)

**Brantford and Hamilton Electric Ry.**—The Dominion Parliament has granted an extension of time for building the projected line from Langford, on the present line, to Galt, Ont. (Mar., pg. 108.)

**Brantford Municipal Ry.**—The commission is rebuilding the track in Brantford, Ont., to the south of the canal and extending it so as to take in the Cockshutt, Verity and Adams factories and in addition complete a loop to enable one-way cars to be run. It is expected to have the work completed by the end of May.

Ties for the betterment of the Grand Valley Ry. have been delivered at Blue Lake, and their laying will be started at once. (April, pg. 147.)

**British Columbia Electric Ry.**—The General Manager wrote the Vancouver City Council, April 7, that the proposed construction of tracks on Cambie and Main streets with the Harris-Georgia St. viaduct must remain in abeyance for the present. (Mar., pg. 108.)

**Edmonton, Stoney Lake and Wabamun Ry.**—The Alberta Legislature has granted an extension of time for building this projected electric railway from Edmonton to Stoney Lake and then on to Wabamun. (Sept., 1913, pg. 443.)

**Elbow River Suburban Ry.**—The Alberta Legislature has granted an extension of time for building this projected railway from the junction of Canyon Creek and Elbow River, skirting the Sarcee Reserve, and into Calgary. (April, 1913, pg. 185.)

**Hamilton Mountain Electric Ry.**—The Ontario Legislature has granted an extension of time for the building of this projected electric railway from the Hamilton Mountain Road, Ancaster Tp., to Ryckman's Corners, at the Hamilton and Caledonia Road, three miles. (March, pg. 108.)

**Humber Valley Electric Ry.**—An extension of time has been granted by the Ontario Legislature for building this projected railway, along the Humber River from Bloor St., to Lake Shore Road, Toronto. (Feb., pg. 70.)

**London and Port Stanley Ry.**—It is expected that this line will be completely electrified, so as to permit of its opening as an electric railway on July 12.

**Montreal and Southern Counties Ry.**—The Dominion Parliament has granted an extension of time for the completion of the various lines authorized. The line from St. Cesaire to Granby, about 16 miles, is approaching completion. It was put under contract in May, 1914, and grading was completed in Oct., 1914. It is expected that the line will be completed and put in operation during the summer. (Mar., pg. 108.)

**Montreal Tramways Co.**—The agreement which may be entered into with the town of Mount Royal, provides that a 20 years franchise be granted for a street railway service within the limits of the town, under and on the surface of the streets. The terms and conditions of the franchise to be fixed by agreement, or in default, by the Quebec Public Utilities Commission. The period within which the agreement may be made is extended for five years from Mar. 5. The agreement, which may be made between the town and the Montreal Public Service Corporation, is for the supply of light and power within the town.

Controller Duncan McDonald submitted to the Montreal Board of Control, Mar. 28, a proposition for a new agreement with the M. T. Co., making four propositions now under consideration. The Board decided to take up the consideration of all the proposals, and has been doing so at its various meetings since, but does not appear to be making very much progress. (April, pg. 148.)

**Niagara, Welland and Lake Erie Ry.**—The Ontario Legislature has confirmed the agreement made between the company and the town of Welland, a summary of which was given in our last issue. (April, pg. 147.)

**Ontario Hydro Electric Railways.**—The Ontario Legislature during the recent session directed that a return be prepared as to requests made by the Lieut.-Governor-in-Council to the Hydro Electric Power Commission, under the provisions of sec. 3 of the act of 1914 to enquire and report upon the proposed electric railways in Ontario; what enquiries had been held; what reports had been presented as a result, and whether approval had been given for the building of any electric railways. (April, pg. 143, and Mar. pg. 108.)

**The Sandwich, Windsor & Amherstburg Ry.** is reported to have offered to build a belt line via Lincoln Road and Ottawa St., to be in operation by Oct. 1, if the Windsor, Ont., City Council will extend the franchise for 12 years.

**Three Rivers Traction Co.**—Press reports state that construction is to be started at an early date on this projected six mile line, centring in Three Rivers, Que. (Mar., pg. 108.)

**Toronto, Barrie and Orillia Ry.**—The Ontario Legislature has granted an extension of time for the building of this projected railway in Barrie, northerly to Orillia, and southerly to Toronto. The only portion of the line outside Barrie upon which surveys have been made is as far as a junction with the C. P. R. Toronto-Sudbury line at or between Udney and Baxter. (Mar., pg. 108.)

**Toronto Eastern Ry.**—The Dominion Parliament has granted an extension of time for the building of the line from Toronto to Cobourg, Ont., with its projected branches to Peterborough, Markham, Stouffville or Uxbridge, Lindsay, and to the Lake front near Oshawa. (Feb., pg. 71.)

**Toronto Suburban Ry.**—Ties are being laid on the extension of the line to Georgetown, and Guelph, Ont., easterly from Islington towards Lambton. The first stop will be at the steel bridge across the Mimico Creek, and when this single span has been put in track will be laid to the Humber, at which point the piers for the steel bridge are about one-third complete. At other parts of the line to Georgetown, ballasting, and overhead construction work is going on, while beyond Georgetown, the grading is being completed. The Georgetown section is expected to be ready for operation by August. (April, pg. 147.)

**Transcona.**—A proposition for the building of an electric railway in Transcona, Man., has been submitted to the Council by H. W. Adcock, Winnipeg. Another proposition from W. J. Christie & Co., Winnipeg, to build a line from the corner of Oxford and Regent Sts. to the western limits of Transcona, and to connect with the Winnipeg Electric Ry. on Talbot Ave., Elmwood, was laid before the council, April 15, and it was stated that the line could be completed within three months after a franchise was granted.

In regard to the franchise which was

granted a year or so ago to J. H. Kern for building a line in Transcona, we are advised that the necessary legislation has been passed and awaits final action to rescind the contract and throw the matter open for competition. (April, pg. 147.)

## Brantford Municipal Railway Operating Results

The commissioners, C. H. Hartman, W. R. Turnbull and A. K. Burwell, have presented a report on the operation of the lines from Aug. 5, 1914, when possession was obtained from the receiver, to Dec. 31, from which the following are extracts:

Operating revenue .....	\$33,411.91
Operating expense .....	25,506.85
	<hr/> \$7,905.06
Sufficient to pay—	
Interest on bonded debt .....	2,692.75
Interest on advances by city .....	2,666.32
Taxes, including city, except instalment of principal due in 1914 on pavement debt .....	2,545.99
	<hr/> \$7,905.06

This instalment on pavement debt has been charged to capital, but the commissioners hope to meet future instalments out of earnings.

### ASSETS.

Property taken over from receiver, less old material sold .....	\$294,899.91
Improvements and betterments by commission .....	64,233.57
Cash, stores, etc. ....	8,996.42
	<hr/>
Valued on the basis of cost .....	\$368,129.90

### LIABILITIES.

Advances by city .....	\$135,000.00
Ordinary accounts, etc. ....	40,558.16
Mortgages .....	2,400.00
City current account for taxes, etc., due by old company plus sundry other items .....	28,548.28
Bonds, due July 1, 1932 .....	125,000.00
Pavement instalments to mature ...	36,623.46
	<hr/>
	\$368,129.90

The first two items of liabilities, aggregating \$206,506.64, will be paid out of the proceeds of bonds for \$270,000 authorized to be issued by the city, leaving a balance of \$63,493.36 for extensions and improvements. Out of this the following appropriations have been made: Paris station, \$1,500; Paris hydro station, \$4,500; improvements to Grand Valley cars, \$14,000. The balance, some \$40,000, is to be used for remodelling old power house for terminal station; rebuilding Eagle Place line and extending same to provide for loop; new cars for Eagle Place, and Holmedale section; improvements to Grand Valley track; terminal at Galt. Payment for these will exhaust the money available, and before further extensions and improvements can be undertaken more funds will require to be provided.

**Union Station for St. Paul.**—The reconstruction and rearrangement of the union passenger station at St. Paul, Minn., has been under consideration for several years. The adoption of definite plans has been delayed by the difficulty of effecting agreement between the nine railway companies and the municipal and other interests involved. The burning of the old station building on Oct. 3, 1913, gave an unexpected impetus to the work. In Jan., 1915, plans for a new station and terminal were submitted to the city authorities by the St. Paul Union Depot Co., which owns the terminal property and in which the several railways are represented. These plans have been approved by the city council. The total cost of the project is estimated at \$15,000,000.

G. H. Stagg has been appointed Travelling Passenger Agent, Niagara Gorge Rd., with office at Buffalo, N.Y.

## Mainly About Electric Railway People.

**Garrett Pettingill**, Superintendent, Winnipeg, Selkirk & Lake Winnipeg Ry., Selkirk, Man., is convalescing after an attack of smallpox.

**E. P. Coleman**, General Manager, Dominion Power & Transmission Co., has been elected President of an architects and engineers' club which has been established in Hamilton, Ont.

**Col. H. H. McLean, K.C., M.P.**, President, St. John Ry., St. John, N.B., will probably be in command of one of the divisions now training for service with the Canadian Overseas Forces.

**J. S. Mackenzie**, Purchasing Agent, Winnipeg Electric Ry., visited Toronto recently to attend the celebration of his parents' 50th wedding anniversary. He also visited his old home at Kirkfield, Ont.

**Sir Adam Beck, M. L. A.**, Chairman of the Hydro Electric Power Commission of Ontario, left London, Ont., April 20, for France in connection with the supply of horses for the Canadian Overseas Expeditionary Forces.

**S. L. Prenter**, who for the past six years has been connected with the British Columbia Electric Ry.'s transportation department, at Vancouver, was presented with a suite of library furniture by the head office staff, April 3, on leaving the service.

**Edward Garrett**, Superintendent, Park & River Division, International Ry., Niagara Falls, Ont., who was born at Cataragui, Ont., May 24, 1868, is one of six sons of the late Albert Garrett, who was in charge of laying the first steel on the G.T.R. out of Montreal, about 1850.

**Martin N. Todd**, President, Galt, Preston & Hespeler St. Ry., has also been appointed General Manager, Lake Erie & Northern Ry., vice W. P. Kellett, resigned. This line, which is under construction between Galt and Port Dover, Ont., via Paris, Brantford and Waterford, and which will be 51 miles long, has been leased to the C.P.R. It is being built as a steam road, but will probably be electrified.

**C. Balmer Jr.**, Chief Electrician, Chatham, Wallaceburg and Lake Erie Ry., was killed, Apr. 2, by electrical shock, while making some repairs at one of the Chatham, Ont., theatres. At the inquest the evidence showed that he received a 240 volt current, which, it was stated, was not considered dangerous for a normal man. The verdict was to the effect that death was caused by his being electrocuted by accidentally coming in contact with the blades of an electric switch.

**Herbert John Somerset**, who died in Toronto, April 11, from pneumonia and pleurisy, after three weeks illness, was a son of the late J. B. Somerset, at one time Superintendent of Education for Manitoba, and was born in St. Catharines, Ont., in 1870. He graduated from the Worcester Polytechnic Institute in 1891, receiving the degree of B.Sc., in mechanical engineering. In the following year he took an expert course with the Canadian General Electric Co., at Peterborough, Ont. In 1894 he received an appointment from the Winnipeg Electric St. Ry., and was Manager up till 1899, when he went to Australia. For the next 13 years he was Manager, Engineer, and Local Director of the Perth Electric Tramways, Ltd. He was also consulting Engineer for the Kalgoorlie Tramways Co., the Kalgoorlie Power & Lighting Co., and the North Melbourne Tramway & Lighting Co., Ltd. After successfully negotiating the sale of the Perth Tramways to the West Australian Government for the London directors, he spent a few months in England, returning to Canada in 1913.

## Saskatoon Municipal Railway Matters.

A statement submitted to the City Council by the Commissioners of Public Utilities, shows that the deficit on the Municipal Ry. for the two months ended Feb. 28, was \$7,900.84.

**R. B. Hamilton**, of Winnipeg, who was appointed Superintendent, Saskatoon Municipal Ry., recently, informed the City Council that he could not accept the position at the salary offered—\$150 a month, but suggested that he be appointed for one year, at \$150 a month for six months and \$175 a month thereafter. The Council decided to adhere to its original offer, which he definitely declined, April 6.

The City Council is considering a proposition for the operation of the spur lines on the Municipal Ry. by one man, instead of two as required by statute, which the Legislature is to be asked to amend. It was stated that all cars in Brandon, Man., and cars running on spur lines in Edmonton and Lethbridge, Alberta, were operated by one man.

## Electric Railway Notes.

The Winnipeg Electric Ry., in the calendar year 1914 issued 20,277,197 transfers, an increase of 5,238,181 over 1913. We are advised that this was on account of a rerouting of cars.

The Moose Jaw, Sask., Electric Ry. has made a further cut of 5 per cent. in wages, laid off 11 more men, and reduced the car service on the east and west routes. This makes a total cut of 15 per cent. in wages, and the reduction of the staff by 17 men.

At a meeting of representatives of Saskatchewan cities held in Regina, April 8, a resolution was adopted asking the Legislature to amend the City Act, in such a way that electric cars on all lines, on Sundays, and cars on the less important lines on week days, may be operated by one instead of two men as at present.

The City of Toronto is being sued by John Mackay and Co., auditors and accountants, Toronto, for \$42,546.50, for services rendered and disbursements, in connection with a report on the proposal to purchase the Toronto Ry. and Toronto Electric Light Co., which eventually fell through. The City Council has disputed the amount on the ground that the firm was not properly engaged to make the report, and that the Mayor was not authorized by the Council to make such an arrangement as is claimed to have been made.

**Detroit's Transportation Problems.**—Barclay Parsons & Klapp, New York, retained as consulting engineers by the Board of Street Railway Commissioners of Detroit, Mich., to study street railway traffic conditions and the possible necessity for a subway, have made an elaborate report. The larger part deals with the street railway traffic congestion caused by the convergence of car lines to a central interchange district. To relieve the congestion they recommend rerouting of the main radial lines in such a way as to loop through the interchange district without mutual interference, two-car rush hour trains and station stops on the heaviest line, and many minor changes. For the future it is to be anticipated that the city's growth "will in time make demands beyond the possible limits of surface street car transportation." As first relief a short street car loop subway is recommended. For a still later period, a long subway with independent train service is suggested.

## Electric Railway Finance, Meetings, Etc.

## British Columbia Electric Ry.

	Jan. 1915	Jan. 1914	July 1, 1914 to Jan. 31, 1915	July 1, 1913 to Jan. 31, 1914
Gross earnings	\$640,495	\$777,102	\$4,639,394	\$5,330,828
Expenses	497,170	561,146	3,671,738	3,983,467
Net earnings	143,325	215,956	1,067,656	1,437,361

The percentage paid to the City of Vancouver for the first quarter of this year was \$5,398.51, against \$10,870.58 for the same period 1914. The amount paid for March was \$2,167.83, against \$4,674.08 for March, 1914. The number of passengers carried over the city and suburban lines in March was 1,912,510, against 3,273,774 for March, 1914.

## Cape Breton Electric Co.

	Feb. 1915	Feb. 1914	Two months 1914	Two months 1915
Gross earnings	\$23,439.01	\$25,284.98	\$52,493.07	\$55,083.0
Expenses	15,059.10	15,697.72	32,841.48	34,260.97
Net earnings	8,379.91	9,587.26	19,651.59	20,822.32

## London St. Ry.

	Feb. 1915	Feb. 1914	2 months 1915	2 months 1914
Gross	\$29,231.28	\$25,896.07	\$50,847.33	\$54,250.22
Expenses	20,794.78	18,907.66	42,313.40	38,761.30
Net	8,436.50	6,988.41	17,533.93	15,488.98

## Lethbridge Municipal Ry.

	Feb.	March.
Receipts	\$ 3,438.65	\$ 3,494.36
Passengers carried	70,167	70,817

**Moncton Tramways, Electricity and Gas Co.**—The directors for the current year, as re-elected at the annual meeting recently, are as follows.—**R. Law**, President; **E. B. Reeser**, Vice President and General Manager; **E. O. Bartlett**, Secretary; **H. C. Stewart**, Treasurer, all of Pittsburg, Pa. **A. B. Coryell**, Moncton, N.B., is Superintendent of Tramways and Electricity and Purchasing Agent.

**Toronto Ry., Toronto and York Radial Ry. and allied companies.**

	Jan., 1915.	Jan., 1914.
Gross earnings	\$843,351	\$847,945
Expenses	440,500	440,337
Net earnings	402,851	407,608

Gross receipts for the Toronto Ry. for March, \$488,468, against \$510,751 for March, 1914. The city percentage was \$93,141, a decrease of about \$9,000. Total receipts for three months ended March 31, \$1,400,008, a decrease of about \$73,000 from the same period 1914.

## Winnipeg Electric Ry.

	Jan., 1915.	Jan., 1914.
Gross earnings	\$350,681	\$382,670
Expenses	214,205	226,177
Net earnings	136,476	156,493

## Proposal to Buy Municipal Railways.

Practically simultaneous offers were made at the end of March, through Caldwell, Mills & Co., Solicitors, Moose Jaw, Sask., to purchase the municipally owned electric railways in Regina, Sask.; Calgary and Edmonton, Alberta. The letters stated that they desired to know on behalf of clients if the cities would be willing to consider selling out their electric railway systems, and granting a franchise to the clients on whose behalf they were acting. Edmonton City Council, Mar. 23, directed a reply to be sent in the negative, an example which was followed by Regina and Edmonton.

**Detroit United Ry.**—It was announced, April 2, that the stockholders had authorized the directors to accept the offer of the Detroit, Mich., City Council of \$24,900,000 for the company's lines within the city. This amount represents the mortgage debt on the lines, which indebtedness the city will assume. There are a number of minor details to be settled before the transfer can be made. The D.U.R. retains its suburban lines in Michigan, and its ownership of the Sandwich, Windsor and Amherstburg Ry., with its subsidiary, the Windsor and Tecumseh Electric Ry. in Canada.

## The Jitney Situation in Toronto.

The operation of jitneys in Toronto is experiencing a sudden boom, each day seeing an increased number of cars in service. It appears that the first jitney car operated in Toronto was owned by W. D. Gregory, of Gregory and Gooderham, barristers. As an alternative to laying up his car and dismissing the chauffeur, it was suggested to him by his son, G. Gregory, a law student, that the car be placed in jitney service in the Rosedale residential district. This was done Feb. 22, and as a result four of the largest automobile dealers, Hyslop Bros., McLaughlin Carriage Co., Russell Motor Car Co., and Ontario Motor Car Co., approached G. Gregory, who was looking after the operation of the original car, with the result that each of the four dealers provided three large cars to form the nucleus of an operating association, which was named the Toronto Jitney Association, with offices at 102 Church St. This association comprises G. Gregory, who is Manager; A. T. Crowther, Manager of Commercial Electrics, Ltd.; B. M. Tate, of the Tate Electrics, Ltd., and J. W. Bicknell.

The association commenced operations on Mar. 17, with cars operating on Yonge St. from Front St. to the city terminal of the Metropolitan division of the Toronto and York Radial Ry., about 2 miles, the fare charged being 5 cts., with tickets at 6 for 25 cts. The service has since been extended, so that at the middle of April the association had over 60 cars in operation. The principal run is the Yonge St. line as mentioned above. From the northern terminus of this latter run, other cars of the Association run as far north as Bedford Park, on the Toronto and York Radial Ry., charging a 10 ct. fare, with a 5 ct. fare to Glen Grove, about half way. Occasional cars make the trip from the lower portion of the city to Glen Grove. The original Rosedale line operated by Mr. Gregory is still operating with additional cars. There are also two cars operating under the association from the corner of King and Yonge Sts. to the Kingston road on King and Queen Sts. east. These lines are all that are normally operated by the association through the day, but after 9 p.m., a number of the cars operating on the other lines are placed on a King st. West service to Sunnyside, through the South Parkdale residential district. Other lines are in contemplation.

The Toronto Jitney Association is merely an operating organization, composed of the four men mentioned. The cars operated are owned by individuals, who place the car in the Association to be operated, the duties of the latter consisting of arranging the routes and superintending the operation. The full responsibility for the operation rests on the owners, however, the chauffeur being in all cases employed directly by the owner, and in cases where the owner requires a chauffeur for a car he desires to operate in this way, the association merely acts as a clearing house to place the owner and chauffeur in touch with each other. The association purposes arranging for the co-operative purchase of supplies, such as gasoline and oil, and possibly for tires and other requisites.

The fare collections are handled directly by the association, each chauffeur being supplied with a small fare box and tickets. The fare boxes are taken in daily, and the receipts counted in the association's office. The use of tickets was discontinued towards the end of April. Some of the chauffeurs operate the cars on a straight wage from the owner, but the majority receive as their compensation 40% of the net operating receipts, after deducting for

gasoline and oil, but not for tires, repairs or depreciation, which falls entirely on the owner. The association maintains a motor cycle inspector, who looks after the proper working of the schedules, etc. For the privilege of operating under the name of the association, the car owners pay \$2.50 a week, but this amount is to be materially reduced in the near future. The association is applying to the Ontario Government for a \$40,000 charter, with power to own and operate motor busses.

The Toronto Jitney Association has been the largest jitney operating organization in Toronto to date. At different points throughout the city, individual owners have gone into the business independently, but after a short period, the majority have become converts to the association idea, and have joined the Toronto Jitney Association.

The Canadian Jitney Association, with offices in the Mail Building, is organized along almost identical lines with the Toronto Jitney Association, and commenced operation on April 15 with 4 cars, which were placed on the Yonge St. line in competition with Toronto Jitney Association's cars. It is said that other lines are to be opened shortly, the West Toronto field being under consideration for exploitation. A. G. Blain is Manager and I. J. Ardagh is Secretary-Treasurer of the Canadian Jitney Association, which is applying to the Dominion Government for a charter. The general manner of operation is to be similar to that of the Toronto Jitney Association.

Some independently operated cars have been in operation in West Toronto, but the West Toronto Jitney Association is being formed, in which J. A. Duffin, clothier and furnisher, 1676 Dundas St., is interested. It proposes operating jitney cars from the corner of Dundas and Keele Sts., the West Toronto terminus of the Toronto Ry. cars, to Weston and Lambton, alongside the Toronto Suburban Ry. If successful, other lines in the West Toronto district will be developed.

Enquiry at the Toronto Police Department elicited the information that no official recognition is being made of the jitneys as such and that it is the intention to let them operate long enough to observe their characteristics before passing any regulating municipal bylaws. For the present, all jitney operation is considered as coming under the Cab and Livery Bylaws, nos. 69 and 70, which it is claimed have wide enough powers to cover the jitney situation for the present at least.

On April 20 the City Controllers authorized the City Solicitor to draft a bylaw to regulate jitney operation.

### St. John Railway Co's. Annual Report.

Following are extracts from the report for the calendar year, 1914, presented at the annual meeting at St. John, N.B., recently:—

The earnings, after providing for interest on the bonds and all other charges, were \$73,908.88, out of which there were paid four quarterly dividends of 1½% each, amounting to \$59,822.78, leaving a balance of \$14,086.10, which has been transferred to profit and loss account. The war has affected, to some extent, the company's business, and the railway earnings were materially reduced in consequence of the interruption to traffic during the summer months by the city repaving Main St. and Paradise Row.

The property has been maintained in a high state of efficiency, and considerable has been spent in upkeep of tracks, rolling

stock, power plant, gas works and buildings. The following works were carried out:—Extending the railway from Kane's Corner to Crouchville, and from the One Mile House past Rural Cemetery to Coldbrook and Glen Falls, in all 3¼ miles. No net return can be expected from the operation of these extensions for several years, but they were built in pursuance of the company's progressive policy to furnish the best service possible. A fireproof car barn, 58 x 213 ft., was built on Wentworth St. Twelve new semi convertible cars were bought.

A strike of street railway employees belonging to the union commenced on July 22 and ended July 24. Since the incorporation of the company (20 years ago), the relations with the employees have been most satisfactory. Questions arising have been amicably and quickly settled. In June last, the Manager, by order of the directors, dismissed a conductor named Ramsay, for cause. The board of conciliation was applied for by the union employees, and the Minister of Labor appointed R. T. Hayes, Judge Forbes, and J. L. Sugrue. After hearing the evidence submitted, the board reported:—"That the action taken by the directors in dismissing Ramsay was properly taken to support the authority of the Manager, and to preserve discipline, and for the best interest of the public, and with a due regard to public safety." The union, however, declared a strike, and in consequence of no police protection being afforded, a gang of rioters on the evenings of July 23 and 24 did serious damage to the plant, equipment, power house, street lights and cars. The amount of the direct damage was \$15,560. The consequential damages by reason of the tying up of the road and business was from \$10,000 to \$15,000. We put in a claim to the city to be reimbursed for the actual damages suffered, but the city refused to recognize any liability. In view of the fact that the police did not afford any protection in the running of our cars, or attempt to control or stop the rioters from damaging our property, your directors are of the opinion that the city should have reimbursed us for the loss the company has suffered. The police force has been reorganized and increased, and a new chief appointed, and we hope that full protection will in the future be given to the city and citizens, and property fully protected.

The directors expected to dispose of treasury bonds to meet payments on capital expenditure, but owing to war conditions and consequent financial depression only \$21,800.00 were sold.

The directors, who were re-elected, are:—H. H. McLean, K.C., M.P., President; F. R. Taylor, Vice President; R. B. Emerson, J. Manchester, Hon. W. H. Thorne and J. K. L. Ross. H. M. Hopper is General Manager and Secretary.

**Toronto Suburban Railway's City Extensions.**—The Ontario Railway and Municipal Board had the application of the City of Toronto to compel the Toronto Suburban Ry. to lay certain tracks in West Toronto, before it, Apr. 16. The application covers the laying of tracks on Pacific Ave., and Annette and Keele Sts., and on the order of the Board, the company was given until Apr. 30 to announce its policy. Counsel for the company stated that the proposed new lines would cost between \$65,000 and \$80,000, and owing to the state of the market at present, the company could not raise the money. It is suggested that if the company is opposed to building the lines mentioned, that it surrender its franchise so far as these streets are concerned, and leave the city open to lay tracks there.

# Marine Department

## Dominion Canal Statistics for 1914.

The following abstract has been prepared by J. L. Payne, Comptroller of Statistics, Railways and Canals Department:

The total volume of traffic through the canals of Canada for the calendar year 1914 was 37,023,237 tons, a decrease of 15,030,676 from 1913. The increases and decreases were distributed among the various canals as follows:

	Tons.	Tons. Increase	Tons. Decrease
Sault Ste. Marie . . . . .	27,549,184	.....	15,100,140
Welland . . . . .	3,869,969	290,255	.....
St. Lawrence . . . . .	4,391,493	89,066	.....
Chambly . . . . .	436,905	.....	118,697
St. Peters . . . . .	54,180	.....	17,334
Murray . . . . .	83,907	.....	96,669
Ottawa . . . . .	335,132	.....	30,306
Rideau . . . . .	151,739	.....	19,484
Trent . . . . .	67,715	11,915	.....
St. Andrews . . . . .	42,013	.....	39,282
Total . . . . .	37,023,237	391,236	15,421,912

Of the total decrease of 15,030,676 tons, 1,748,669 was in Canadian, and 13,282,007, in U. S. waterborne traffic. The falling off was almost wholly at Sault Ste. Marie, and applied chiefly to iron ore belonging to the U. S. As compared with 1913, Canadian traffic decreased by 15.7%, and U. S. traffic by 32.6%.

The movement of waterborne traffic in 1913 and 1914 was distributed, by months, as follows:

	1913, Tons	1914, Tons
January . . . . .	397	494
April . . . . .	875,226	554,111
May . . . . .	7,260,227	5,307,123
June . . . . .	7,647,189	6,136,657
July . . . . .	8,137,169	6,339,831
August . . . . .	7,625,782	6,261,380
September . . . . .	7,531,379	6,069,946
October . . . . .	7,350,914	4,660,448
November . . . . .	4,891,143	1,470,471
December . . . . .	734,487	222,740
Total . . . . .	52,063,913	37,023,237

By classes of commodities, the movement of freight in 1913 and 1914 was as follows:

	1913, Tons	1914, Tons
Products of agriculture . . . . .	8,552,327	7,963,868
Animal products . . . . .	19,301	18,681
Products of the forest . . . . .	1,678,925	1,621,967
Products of the mine . . . . .	39,951,661	26,204,196
Manufactures . . . . .	1,881,699	1,218,525
Total . . . . .	37,023,237	52,063,913

The tonnage of Canadian and U. S. traffic in 1913 and 1914 was:

	1913, Tons	1914, Tons
Canadian . . . . .	11,130,875	9,382,206
United States . . . . .	40,923,038	27,641,031

In 1913 U. S. traffic made up 78.7% of the whole, and in 1914 it was 74.7%. It should also be pointed out that 1,068,812 tons of Canadian traffic passed through the U. S. Canal at Sault Ste. Marie. Of the aggregate volume of traffic through all the canals of Canada, 74.4% passed through the canal at Sault Ste. Marie. Of the total traffic at that gateway 86.9% was United States. Joining the traffic which passed through both the Canadian and U. S. canals at Sault Ste. Marie in 1914, it was found that out of a total of 50,692,092 tons belonging to the U. S. 47.3% passed through the Canadian canal, while out of a total Canadian traffic of 4,678,559 tons only 22.8% sought the U. S. channel. Put in another way, while 86.9% of the total traffic through the Canadian canal was U. S., only 3.9% of the aggregate freight tonnage through the U. S. canal was Canadian.

At the Welland canal 47.6% of the total traffic was U. S., through the St. Lawrence canals it was 37.7%, and through the Chambly canal 29.5%.

Another fact of importance in relation to the traffic through the Canadian canal at Sault Ste. Marie in 1914 is that 86.2% of the

eastbound U. S. freight tonnage consisted of iron ore. When iron ore is eliminated, Canadian eastbound business at that point amounted to 2,785,114 tons, as against 919,725 tons of U. S. eastbound commerce.

**Wheat Traffic.**—The volume of Canadian wheat moved down from the west by water in 1914 amounted to 95,032,066 bush., against 141,726,899 in 1913. In the form of flour, 14,739,872 additional bush. of Canadian wheat were moved, bringing the total up to 109,771,938. The falling off in shipments of wheat including flour, totalled 42,867,059 bush. for the year. The distribution of Canadian wheat from the head of Lake Superior in 1913 and 1914 was as follows:

	1913 Bushels	%	1914 Bushels	%
From Port Arthur, Fort William and Duluth . . . . .	15,186,632	10.7	10,283,166	10.8
To Montreal . . . . .	26,054,001	18.4	24,864,466	26.2
To Georgian Bay ports . . . . .	28,973,333	20.5	34,350,700	36.2
To other Canadian ports . . . . .	71,522,933	50.4	25,533,734	26.8
To Buffalo . . . . .	141,726,899		95,032,066	

The diversion to Buffalo in 1914 was 26.8% of the whole, compared with 50.4% in 1913. The distribution by months showed marked changes for the autumn period, due, no doubt, in large measure to the influences of a short harvest and the war.

The freight rates on practically all cargoes of wheat shipped from Port Arthur and Fort William were ascertained, and when worked out they yielded the following averages for the seasons of navigation 1913 and 1914:

	1913	1914
To Montreal . . . . .	Per ton per mile . . . . . 1.142 cent	1.124 cent
Per bushel . . . . .	5.35 cent	4.58 cent
Per ton . . . . .	\$1.78	\$1.52
To Georgian Bay ports: . . . . .		
Per ton per mile . . . . .	.148 cent	.095 cent
Per bushel . . . . .	2.28 cent	1.46 cent
Per ton . . . . .	76.00 cent	48.61 cent
To other Canadian ports: . . . . .		
Per ton per mile . . . . .	.104 cent	.065 cent
Per bushel . . . . .	2.44 cent	1.48 cent
Per ton . . . . .	81.21 cent	49.29 cent
To Buffalo: . . . . .		
Per ton per mile . . . . .	.103 cent	.061 cent
Per bushel . . . . .	2.43 cent	1.63 cent
Per ton . . . . .	81.00 cent	53.72 cent
To Kingston: . . . . .		
Per ton per mile . . . . .	.096 cent	
Per bushel . . . . .	3.08 cent	
Per ton . . . . .	\$1.00	

The freight rates were also tabulated by months to fit the foregoing routes of distribution: but they would take up too much space in an abstract of this nature. Charges paid by vessel owners out of freight rates ranged from 0.38c. per bush. to 0.59c., according to the destination of the cargo.

The volume of Canadian oats shipped down from the west by water in 1914 was 26,240,701 bush., compared with 43,423,367 in 1913.

At Port Colborne, 35,760,979 bush. of grain, chiefly wheat, were passed through the Government elevator during the year.

The capital cost of the canals of Canada up to Mar. 31, 1914, was \$107,486,316, and the cost of maintenance for the year was \$1,753,898.

The Montreal and St. Lambert Terminal Development Co., a Quebec corporation, has reduced its capital from 3,500 shares of \$100 each, to \$315,000 by returning to the stock holders \$10 a share, and declaring the shares to be of the value of \$90 each.

## Toronto Harbor Improvements.

During this year the Toronto Harbor Commission will expend about \$2,000,000 on the extension of the harbor scheme developed by it about two years ago. Half the amount will be supplied by the Commission and the other half by the Dominion Government. No changes will be made in the previously accepted plans.

On the western water front, from the Humber River easterly, about 3,900 ft. of crib substructure for the sea wall has been completed, and this year the concrete topping will be placed and that section of the sea wall completed. In addition, there will be added to the east about 5,000 ft. of crib substructure, which will also be filled ready for the concrete topping next spring.

On the ship channel at the east end of the improvement work, about 7,500 ft. of substructure has been completed, and a portion will be topped with concrete this year. Some 9,900 ft. of substructure will be placed this year, and a portion of it topped with concrete. This section includes the turning basin at the east end of the ship channel. The central 2,800 ft. of the north slip, which extends from the Don river to the harbor, was completed last year, and the balance will be completed this year. The bulkhead pier at the contemplated docks on the east side of the harbor has been completed. Across the east slip, a 120 ft. span, 86 ft. wide bascule bridge is being built at a cost of \$105,000, which is apart from the \$2,000,000 appropriation for this year.

It is the intention to pump about 3,500,000 cu. yds. of sand from the lake into the Ashbridge's Bay industrial area. There will also be some sand pumped behind the western sea wall, and on certain low sections at the island. We are indebted to A. C. Lewis, Secretary of the Commission, for the foregoing information.

## Great Lakes Vessels Insurance.

A dispatch from Cleveland, Ohio, states that the underwriters in hulls have reached an agreement regarding rates of insurance and forms of policy for this season. Some changes are announced, all of which are in favor of vessel owners. The dispatch says that all steel boats will get the preferred rate, which will be a little lower than in 1914, and in addition the season has been extended. The regular season will be from midnight Apr. 15 to midnight Nov. 30, but owners will be permitted to make sailings up to midnight Dec. 12. The extra charge for extensions in insurance will be 1/2% up to Dec. 5, 3/4% up to Dec. 8, and 1% up to Dec. 12. In 1914 the preferred rate for the sailing season was 3 3/8%. Under the new policy the same rate will be charged for the year, which insurance agents figure is a reduction of 1/4%. The new arrangement for extension gives owners of insured vessels a chance to operate late in case profitable rates are paid, and they can line up business ahead, which could not be done under the old plan. Most of the big lines have been placed, and considerable business was lined up last January at 3 3/8%, with the understanding that if a lower rate was made the boats would get the benefit of the cut. Including the 25% that will be carried by the Great Lakes Protective Association, the bulk of the business will be placed with U. S. companies, but the London underwriters will get some of lake business.

## Coast, Lake and River Officers for 1915.

The following appointments, made by navigation companies, engaged in Canadian navigation, for their various steam vessels and tugs, for this year, have been reported to CANADIAN RAILWAY AND MARINE WORLD by the managements since those published in the April issue. The first column shows the names of the vessels, the second those of the captains, and the third those of the chief engineers.

## Marine Votes for 1915-16.

Amounts voted by the Dominion Parliament for the fiscal year ending Mar. 31, 1916, include the following items:

## TO BE CHARGED TO CAPITAL ACCOUNT.

		Revotes
Welland Ship Canal	\$5,500,000	\$500,000
Canals—		
Lachine	\$ 181,000	
Rideau	40,000	\$40,000
Soulanges	34,500	20,000
Trent	1,516,000	
Welland	50,000	50,000
	\$1,821,500	\$110,000
Harbors and rivers—		
Esquimalt dry dock	\$ 250,000	\$250,000
French River waterway	450,000	450,000
Halifax dry dock	250,000	250,000
Port Arthur and Fort William	1,200,000	
Quebec Harbor		
Launon dry dock	700,000	700,000
Levis wharf	34,200	34,200
Improvements	500,000	500,000
St. Charles River	500,000	500,000
St. John harbor	1,500,000	
Toronto harbor	1,000,000	
Vancouver harbor	1,000,000	
Victoria harbor	1,400,000	
	\$8,784,200	\$2,684,200

## TO BE CHARGED TO INCOME ACCOUNT.

		Revotes
Canals—		
Chamby	\$ 13,500	\$ 6,500
Cornwall	19,500	7,500
Quebec	41,000	26,000
Rideau	45,000	12,000
St. Peters	299,000	23,000
Soulanges	11,200	10,000
Trent	40,000	
Welland	36,000	5,000
	\$505,200	\$90,000
Harbors and rivers—		
Nova Scotia	\$ 691,950	\$573,050
Prince Edward Island	158,100	112,000
New Brunswick	546,900	295,600
Quebec	819,650	483,900
Ontario	1,413,580	712,600
Manitoba	167,900	112,000
Saskatchewan and Alberta	91,000	59,000

British Columbia	484,900	291,100
Yukon	5,000	
General	40,000	
	\$4,418,980	\$2,639,250
Dredging, general	\$2,307,000	\$679,000
Mail subsidies—Atlantic Ocean		\$1,844,167
“ “ Pacific Ocean		487,142
“ “ Local		310,125
		\$2,641,234
Naval service		2,355,400
Ocean and river service		1,256,900
Marine Department, capital account		2,458,000
Lighthouse and coast service		2,429,540
Hospitals and distressed seamen		78,000
Steamboat inspection		83,265

Included in the foregoing are appropriations for the provision of a number of steamships for service at various points. A revote of \$500,000 was made for an ice-breaker for use in the St. Lawrence River. This vessel was ordered from Canadian Vickers, Ltd., Montreal, last year, and but for the war, would have been delivered early this year. The new vessel will be an icebreaker alone, and will be of much greater power than any other of the Government vessels.

A steamship for testing and sweeping the St. Lawrence Ship Channel is approaching completion at the Government shipyard at Sorel, Que., and it is expected that she will be launched during May. A lighthouse and buoy steamer, named Grenville, has been built at Polson Iron Works, Toronto, it was expected that she would be put through her trials at the end of April. This vessel is to replace the Scout in the lighthouse buoy service. The vessel to replace the s.s. Maisonneuve, will be built at the Government shipyard at Sorel, Que.

In addition to the amounts voted as mentioned above, \$354,000 was re-voted for the provision of an additional car ferry steamboat for the Intercolonial Ry. service on the Strait of Canso, and for a dock for same at Mulgrave, N.S. This vessel was launched recently at Newcastle, Eng., as mentioned elsewhere in this issue. For a fisheries patrol steamboat for Lake Winnipeg, a further \$100,000 was voted for the current year, and for which, \$184,400 was voted last year. A description of this vessel was given in Canadian Railway and Marine World for July, 1913, and she is now nearing completion at Selkirk, Man. It is expected that she will be placed in service during June.

The Dominion Coal Co. announces the discontinuance of the passenger and general cargo service, which it has, for many years, operated in connection with the Black Diamond Line between Montreal, Prince Edward Island, Sydney and St. John's, Nfld. The service has become unprofitable during the last few years and the company has lost while engaged in this service, the steamships Cacouna and City of Sydney, the latter having been specially purchased for this service. The present market rates make it impossible to build or purchase suitable steamers to replace these lost and the company has, therefore, decided to discontinue the freight and passenger service at least until conditions justify its resumption.

Drawback on Vessel Construction Materials.—An order in council has been passed providing that in the payment of drawback on materials used in the construction of vessels built and registered in Canada, or built and exported under Governor's pass, for sale and registry in any other country, the certificates of Lloyd's Register, British Corporation, Bureau Veritas and Norwegian Veritas may be accepted in determining the class of vessel. The certificate of a Dominion hull inspector may also be accepted, when setting forth that the vessel has been so built as to fill the requirements of any one of the foregoing societies.

## Another Car Ferry for the Ontario Car Ferry Company.

An all steel car ferry, Ontario No. 2, a sister ship to Ontario No. 1, which is being operated between Cobourg, Ont., and Charlotte, N.Y., by the Ontario Car Ferry Co., was launched by the Polson Iron Works, Toronto, Apr. 3, the christening ceremony being performed by Mrs. Hugh Calderwood, Barrie, Ont., wife of the designer. The Ontario Car Ferry Co. is a combination of the G.T.R. and Buffalo, Rochester and Pittsburgh Ry. interests, formed some years ago to handle the coal traffic originating on the latter company's lines, destined to points in Eastern Ontario on G.T.R. lines, the object being to eliminate the long haul around the west end of Lake Ontario. The business handled by the company has increased to such a degree that the addition of another vessel became necessary. The new one is almost identical with the one at present in service, which was described in Canadian Railway and Marine World, May, 1907. Descriptions of the new ferry appeared in Canadian Railway and Marine World, Apr. 1914, and Jan. 1915, with plans, etc.

It is of the shelter deck type, with four tracks for cars on the main deck, and will be propelled by twin screws. The main deck is of steel throughout, without wood covering; the shelter deck is of steel laid flush, with a deck house running through-

working speed of 13 miles an hour, with reserve power to make 15 miles an hour under emergency conditions. Following are the principal general dimensions:

Length overall .....	318 ft.
Length between perpendiculars.....	307½ ft.
Beam moulded .....	54 ft.
Beam on main deck .....	56 ft.
Depth at centre, main deck to promenade deck .....	17 ft.
Depth at side, main deck to promenade deck .....	17 ft.
Draught of water full loaded .....	16¼ ft.
Camber of main and promenade decks.....	9 ins.
Depth to promenade deck .....	20½ ft.
Rise of floor .....	2 ft.

The vessel is built on the transfer system, with solid plate floors and bulb angle frames, with the steel plate extra heavy for working in ice, and not reduced forward. It is built to pass the inspection of the Great Lakes Register, and to receive its highest rating.

The propelling machinery consists of two triple expansion, 20½ x 33 x 54 x 36 in. jet condensing engines, operating normally at about 110 r.p.m., both engines turning outwards. The boilers will be fitted with forced draught, and will operate at 180 lbs. pressure.

Among those witnessing the launching were the following: H. G. Kelley, President, Ontario Car Ferry Co. and Vice President,

Car Ferry Ontario No. 2, on the Ways before Launching.

out its greatest length, and containing accommodation for passengers, officers and crew. It has a wooden pilot house and bridge on top of the deck house forward, and a pilot house at the rear end of the deck house. It is divided into six transverse watertight bulkheads, extending from the keel to the main deck, with a longitudinal bulkhead along the centre line in three watertight ballast tanks 13 ft. deep. Two of these ballast tanks are immediately forward of the boiler room, and the third immediately aft of the engine room. The steel lower deck, laid throughout the forward and aft holds and both peaks, forms the top of the deep water ballast tanks. There are two shaft alleys, leading back from the engine room, one on each side, extending into the stuffing box bulkhead. The boiler room contains four single ended Scotch marine boilers placed amidships, with one firehold athwartships and one wing coal bunker on each side of the boiler room. The hull is bossed out on each side to enclose the propeller shafts. There are two steel pole spars without masts or sails.

The vessel has a capacity for 30 standard coal cars of 70 tons gross weight each, and 200 tons of coal in the bunkers. There will also be accommodation for 800 first class, and 200 second class passengers. Her tonnage is 5,430 gross, and her launching tonnage was 2,400 deadweight. The draught will be about 16¼ ft. when fully loaded, and the vessel will have a normal

G.T.R.; W. H. Smith, Manager, Ontario Car Ferry Co.; G. A. Bowman, Asst. Gen. Freight Agent, Buffalo, Rochester and Pittsburgh Ry.; W. D. Robb, Superintendent of Motive Power, G.T.R.; J. B. Miller, Pres. and Gen. Man., A. H. Jeffry, Secretary and Manager, H. H. Miller, Vice President, and W. H. Newman, Works Manager, Polson Iron Works; T. B. F. Benson, representing Lloyds; Capt. Foote, representing the underwriters; Capt. Forrest and A. Nichol, captain and chief engineer of Ontario No. 1, who will hold similar positions on Ontario No. 2.

## Canadian Pacific Ocean Services, Limited.

Canadian Pacific Ocean Services, Ltd., has been registered in London, Eng., with a capital of £2,000,000 in shares of £10 each, to design, lay out, build, purchase, charter, sub-charter, lease, hire, take in exchange or otherwise acquire, hold, own, improve, maintain, operate, let out on hire by charter or otherwise, sell or dispose of ships, tugs, barges, scows, vessels, tenders, lighters and craft of every description, whether propelled by sail or by steam or other power; to employ the company's vessels in the conveyance of passengers, mails, troops, munitions of war, freight, live and dead stock, coal, minerals, treasure, produce, and goods and merchandise of every kind; to acquire any postal or other subsidies; to enter into mail and

other contracts; to carry on the business of ship and loading brokers, managers of shipping property, ship chandlers, tourist, forwarding and general agents, etc.

The signatories to the articles of association are,—H. Maitland Kersey, Manager in Chief of Ocean Services, C.P.R.; G. McL. Brown, European Manager, C.P.R.; G. A. Crawley; A. J. Campbell; W. W. Paine; Sir Thomas Skinner, Director, C.P.R., and T. H. Skinner, all of London, Eng. The first directors are: I. G. Ogden, Vice President, C.P.R.; G. M. Bosworth, Vice President, C.P.R.; E. W. Beatty, Vice President and General Counsel, C.P.R.; D. McNicoll, Director, C.P.R., and F. E. Meredith, K.C., all of Montreal, and H. Maitland Kersey and Sir Thomas Skinner, London, Eng. The directors' qualification is 100 shares, and any remuneration will be fixed by the company.

## Lake Vessels Chartered for Gulf and Ocean Service.

Canadian Railway and Marine World for April contained considerable information as to a number of lake vessels chartered for service in the St. Lawrence River and Gulf, and for coasting and ocean service as far as the West Indies. Among the vessels mentioned, we have been advised that the Turret Cape, Turret Crown, Canadian, Acadian and D. A. Gordon, have been chartered by the Nova Scotia Steel and Coal Co., New Glasgow, N.S., and that they will be used in the coal trade between North Sydney and St. Lawrence points. We have also since been advised that the Dominion Iron and Steel Co., Sydney, N.S., has chartered the Canadian Lake and Ocean Navigation Co.'s s.s. Scottish Hero, for three years. She was ordered recently to proceed from Goderich to Ashtabula, Ohio, where she is being cut in two, to enable her to pass through the Welland Canal locks. She is the largest of the turret type of vessels which have been operating in the upper lake service, and was built at Sunderland, Eng., in 1895, her dimensions being, length 297 ft., breadth 40 ft., depth 24.1 ft.; tonnage, 2,201 gross, 1,386 register. She is equipped with quadruple expansion engines with cylinders 19½, 27½, 39 and 54 by 42 ins. supplied with steam by three Scotch boilers, each 11 by 10½ ft., at 110 lbs. pressure.

Reference was made in our April issue to the statement in the press that certain vessels owned by Canada Steamship Lines, Ltd., had been operating in the ocean service during the winter, implying that these were lake vessels, and it was then stated that none of that company's vessels had been operated in ocean service during the winter, except the regular ocean vessels which had been running full. These vessels are Parima, Korona and Guiana, running between New York, Windward Islands and Demerara, the Bermudian, running between New York and Bermuda, and the Trinidad, running between New York and European ports.

A press dispatch from Ottawa, Apr. 19, stated that to increase ocean tonnage, arrangements are being made which will bring a considerable number of larger lake vessels into trans-Atlantic service until the end of the war. Canadian steamship lines doing business on the Great Lakes will supply 15 vessels, while other vessels will be secured. Officers of these vessels are being examined for new certificates which will be required to enable them to sail on the Atlantic. Several additional vessels will also be assigned to the Canadian trade. These will include a large new vessel which has just been completed.

## Canada Steamship Lines Annual Report and Meeting.

Following are extracts from the report presented at the first annual meeting in Montreal, Mar. 25, for the period from Dec. 15, 1913, to Dec. 31, 1914:

The year 1914, which began with reasonable prospects, will long be remembered as having witnessed the greatest political, commercial and financial upheaval in the world's history. That Canadian undertakings have had to bear an unprecedented strain is well known; but so far, Canada is passing through the crisis in a way that is commendable. That the worst is over seems manifest, and the country is working out a readjustment of conditions which are daily becoming more normal. Your company was, perhaps, to a greater degree than most others, affected by the war, a large part of its great fleet being tied up for over a month in the heart of the season owing to the practical suspension of ocean traffic at the commencement of the war. The partial failure of the northwest crops and the consequent very low freight rates obtained in the fall made a further serious impression on your company's earnings. The shortage in the wheat and oat crops alone was over 100,000,000 bush. The outbreak of war practically suspended passenger travel, and although a more normal condition in this respect soon became apparent it was too late to benefit the year 1914. The business done by your company preceding the war was fully up to expectations, and consequently your directors declared and paid quarterly dividends on the preference shares on March 1 and June 1. The balance of the 7% dividend on these shares (which is cumulative), was, however, owing to the effects of the war, deferred. In this connection your directors have decided that dividends in the future should only be paid after the year's business has been closed and accounts audited.

The fixed assets have been increased by over \$1,000,000, representing new vessels; and depreciation to the extent of nearly \$500,000 has been written off. The fleet now consists of 103 vessels.

During the year the company suffered a severe loss in the death of its senior Vice President, the late Wm. Wainwright, who for nearly 30 years had been Vice President of the Richelieu & Ontario Navigation Co., and whose long experience and world-wide connection with transportation as Vice-President of the G.T.R. was of great value and assistance in building up Canada's mercantile marine. On June 11, 1914, J. E. Dalrymple and Geo. H. Smithers were elected directors to fill vacancies on the board.

### OPERATING ACCOUNT FOR YEAR ENDED DEC. 31, 1914.

Operating Revenue	
Vessels .....	\$ 6,272,232.86
Docks and wharves .....	193,388.62

	65,244.36
	<hr/>
	\$35,635,033.35

The directors were all re-elected and at a subsequent meeting of directors J. W. Norcross, formerly Managing Director, was elected Vice President and Managing Direct-

or, and the two vice presidencies held previously by M. J. Haney and J. P. Steedman, were abolished. The Board for the current year is: Sir Trevor Dawson, Honorary President; Jas. Carruthers, President; J. W. Norcross, Vice President and Managing Director; Sir H. Montagu Allan, M. J. Haney, J. P. Steedman, C. A. Barnard, H. B. Smith, Hon. J. P. B. Casgrain, J. R. Binning, D. B. Hanna, Edmund Bristol, J. E. Dalrymple, J. C. Newman, Aemilius Jarvis, G. H. Smithers.

### Car Ferry Scotia No. 2, for Intercolonial Railway Strait of Canso Service.

The car ferry Scotia No. 2 was launched at Newcastle-upon-Tyne, England, Apr. 15, the christening being performed by Lady Drummond, of Montreal. About the time of the launching the neighborhood of the yards where the vessel was built was visited by German aircraft, and a few bombs were dropped without, however, doing any material damage.

The Scotia No. 2, is similar to the Scotia, now employed in the I. R. C. service between the main land of Nova Scotia and Cape Breton Island, across the Strait of Canso, except that she is of somewhat larger dimensions. Her principal dimensions are, length overall 300 ft., length between perpendiculars 276 ft., breadth over fenders 48 ft., breadth moulded to deck 46 ft., breadth at load water line 43½ ft., depth moulded 19 ft., draught when laden with 1,400 tons of car load and 150 tons of coal, water and stores 14 ft., and she is equipped with engines of 3,000 i.h.p. The engines are of the triple expansion, inverted, direct acting, surface condensing type, working on three cranks, each set being a duplicate of the other, and they are so arranged that one engine can be made to work both propellers. There is a complete electrical installation, with a searchlight of the 15,000 c.p. pilot house type. Accommodation is provided for the officers and engineers in four rooms, with mess room, pantry and provision room. The crew will be placed in an open compartment below the main deck, and the whole accommodation is steam heated. A complete description of the vessel was given in Canadian Railway and Marine World for Nov. 1913, pg. 546.

### Atlantic and Pacific Ocean Marine.

It was stated in the House of Commons, Apr. 4, that French financial interests will organize a company shortly to establish a steamship service between the Canadian Pacific coast and Vladivostock, Russia.

The C.P.R. s.s. Metagama sailed from Liverpool, Eng., Mar. 27, on her maiden voyage to Canada, arriving at St. John, N.B., Apr. 5. She is of the single class cabin type, with accommodation for 500 cabin passengers and 1,200 third class.

The British s.s. Delmira, which was reported to have been sunk by a German submarine, in the English Channel, towards the end of March, was bound from Havre, France, for St. John, N.B. She was on her third trip to Canada for war supplies.

The Great Northern Steamship Co.'s s. s. Minnesota was wrecked near Iwajima, Japan, Apr. 11. She sailed from Nagasaki on the morning of that day for Kobe, Yokohama and Seattle. It is stated that a hole 120 ft. long was cut in the fore part, by striking a rock. All the passengers and crew were saved.

The s.s. Epsom, which was stranded at Carrera Point in the Magellan Straits, Aug.

9, 1914, and afterwards refloated and repaired at Punta Arenas, while en route from Nova Scotia to Port Mann, B.C., with rails for the Canadian Northern Ry., was drydocked at Esquimalt during April for a general overhaul. She was expected to go to Portland later to load grain for Europe.

The Neptune Association of Masters and Mates has submitted a request to steamship companies operating out of New York, that consideration be given to increases of pay for officers, and suggesting that masters receive \$200 a month, chief officers \$125, second officers \$100, third officers and all other deck officers \$90, representing increases of approximately \$70, \$35, \$30 and \$30 respectively.

Furness Withy and Co. have announced that their weekly sailings between Montreal and Manchester, Eng., by way of the Manchester Ship Canal, will be continued this season as heretofore, the first vessel sailing from Montreal about May 6. In addition to this service there will be a fortnightly one to Hull, Eng., the first vessel sailing from Montreal early in May. These are in addition to a number of tramp vessels.

The Australian Government is making use of a number of the German merchant vessels, which it has captured since the outbreak of war, by chartering them to local shipping firms for use in trade with Great Britain. They are chiefly engaged in carrying wool and general supplies to London. The German names of the vessels have been obliterated and numerals are used in their place, all preceded by the letter C.

A marine insurance company at Liverpool, Eng., has recovered £289 11s. 7d., from the British and Chilian Steamship Co., representing the amount paid in excess against claim for the loss of the s.s. Helvetia, which collided with the C.P.R. s.s. Empress of Britain in 1912. In the enquiry into the causes of the disaster, it was held that the Helvetia was seven-twelfths, and the Empress of Britain five-twelfths to blame.

The Canadian Salvage Co., which had in hand the salvage work on the C.P.R. s.s. Empress of Ireland, has obtained judgment from several insurance companies for \$22,685 for salving a quantity of silver from the wreck. It was on board when the vessel sank, and for this, the companies paid claims, and eventually engaged the services of the salvage company, for which \$36,172 was paid as expenses, but nothing for the silver brought up. Other amounts received by the salvage company for work in connection with the wreck were \$10,000 for the mails, and \$35,000 from the C.P.R. for the purser's strong box.

The Minister of Trade and Commerce, in dealing with ocean services in the House of Commons, recently, stated that owing to Admiralty requirements, the C.P.R. fleet had been reduced to three cargo and one passenger vessel, and the best of the Allan and Canadian Northern vessels had also been taken. He continued that efforts were being made to obtain the release of some of the larger freighters, and he hoped that an arrangement would be made by May 1. In the meantime the companies were unable to carry out their mail contracts with the Dominion Government, and in consequence no subsidies were being paid. The arrangement made with the Admiralty for a French service of 18 vessels, provided that such service would be limited to Government supplies.

### Maritime Provinces and Newfoundland.

The steamships Ocamo and Oruru, owned by Pickford and Black, which have been laid up at Dartmouth, N.S., for some time, have been sold for West Indies service.

It is reported from Nova Scotia ports that about 16 sailing vessels owned in the Province will engage in the trans-Atlantic trade this season, carrying deals to Great Britain. Several have already sailed and others are loading at various ports.

The Department of Marine has announced that the channel of the Elliott, or West River, from the West River bridge to Bonshaw bridge, P.E.I., for four miles has been marked by 20 hardwood bushes on the starboard side and by 20 spruce bushes on the port side.

The Department of Marine announces that before May 31 the characteristic of the light shown from the Little Hope gas and whistling buoy, on the south coast of Nova Scotia, about 1¼ miles from the lighthouse on Little Hope islet, will be changed from occulting white to occulting red.

The Public Works Department's s.s. Tyrian is undergoing considerable overhaul and repairs at Halifax, N.S. The work is covered by three contracts, one for repairs and renewals to machinery for \$16,750, for new boilers \$9,200, and for removal of old boilers, alterations to boiler room and installation of new boilers \$9,841.

The s.s. Senlac, owned by H. McC. Harb, Halifax, N.S., which has been laid up at Dartmouth, N.S., for some time, is reported to have been sold to R. P. Bell, of Halifax. She was built at St. John, N.B., in 1904, and is equipped with engine of 66 n.h.p., driving a screw. Her dimensions are, length 182.4 ft., breadth 33 ft., depth 16.1 ft.; tonnage, 1011 gross, 615 register. She was formerly operated between St. John and Halifax.

The winding up of the May Queen Steamship Co., Ltd., was before the courts at St. John, N. B., Apr. 6, when the question of the handing over to the curator of the estate, of \$4,000 which had been paid to certain creditors, was dealt with. It was ordered that \$500 retained by Capt. F. H. Colwell, for a personal claim, be handed over, and if authority for payment of the other amounts cannot be shown, they must also be handed over.

A Montreal press report states that the Black Diamond Steamship Co., controlled by the Dominion Coal Co., and which has operated a freight and passenger service between Montreal, Prince Edward Island, Sydney and St. John's, Nfld., for several years, will discontinue such service this season. It is stated that the service has been unprofitable during the last few years. Two of the vessels, the steamships Cacouna and City of Sydney, the latter having been purchased especially for this service, have been lost, and the present market rates make it impossible to build or purchase suitable vessels to replace them.

The Minister of Marine, replying to questions in the House of Commons, Apr. 8, regarding the s.s. Noreen, chartered by the Marine Department, stated that she was formerly owned by the Dominion Government, and was sold to A. B. Crosby, Halifax, N.S., Jan. 31, 1912, for \$900, and was formerly known as Lily. She was subsequently rebuilt by her owner, and the name changed. She is now engaged in transporting Marine Department employes between Halifax and Dartmouth, at \$20 a day, the owner providing the crew of three, the Government providing a man to handle moorings, gangways, etc. The Government also supplies coal and water, the owner providing oil and supplies. She has been under charter since Sept. 18, 1914, and \$2,800 had been paid under the charter, up to Feb. 28, and \$506 for coal, etc. She was originally built at Dartmouth, N.S., in 1878, and is screw driven by engine of 17 n.h.p. Her dimensions are, length 65.6 ft., breadth 16.5 ft., depth 6.6 ft.; tonnage, 46 gross, 31 register.

### Province of Quebec Marine.

The Lachine Canal was emptied Apr. 1, for the annual cleaning.

The first steamship to leave Quebec this season was the Savoy, Apr. 5, for north shore and Anticosti Island points.

At a meeting of the Montreal City Council Apr. 12, a report of the Board of Control recommending the appropriation of \$900 for the purchase of a vessel for operation to St. Helen's Island was withdrawn, the Mayor announcing that he would purchase a vessel to be used for such service.

The Dominion Government has entered action against the owners of the s.s. Langan, claiming \$400,000 as damages for the loss of the s.s. Montmagny, which was sunk in collision in the St. Lawrence River, Sept. 18, 1914, when 14 lives were lost. The case is entered for hearing on May 18.

The Department of Marine has established a black wooden spar buoy at the south edge of the channel between Montreal and Longueuil, at the 3 ft. spot midway between Montreal and the Longueuil ferry wharf, 3,250 ft. from Ile Ronde lighthouse, near the alignment of the Ile Ronde range lights.

When interviewed on his resignation as Chairman of the Quebec Harbor Commissioners, Sir William Price stated that of the programme of harbor improvements, all that remained to be done, was the completion of the Louise embankment in the St. Charles River, which was interfered with to some extent last season. The erection of the grain conveyors for the new elevator would probably not be undertaken until 1916.

The Levis Ferry Ltd., which has the exclusive right to operate a ferry service between Quebec and Levis, is applying to the authorities at both points, for approval of an increased tariff of rates and a decreased schedule. The contract with the company dates from May 1, 1910, for 15 years, the sum payable by the company for such rights being \$5,250 a year, and the tariff and schedule were embodied in the bylaws confirming the contract, which can only be changed by a majority vote of the councils concerned. The proposals are meeting with considerable opposition.

The Quebec Corporation of Pilots has asked the Marine Department to have the wrecked s.s. Montmagny removed from the channel at Crane Island, as it is a menace to navigation. The Minister of Marine replying to a question in the House of Commons, Apr. 1, stated that the wreck lies 600 ft. distant from the axis of the channel marked by the Hospital Rock range lights, and therefore forms no obstruction to navigation. The Department will consider the question of removal, when the wreck has been examined after the opening of navigation.

### Ontario and the Great Lakes.

The Welland Canal was re-opened for navigation, Apr. 15.

The Cornwall Canal was opened for navigation, Apr. 15, the earliest for 12 years.

The Dominion Public Works Department will receive tenders to May 20, for building a freight shed, baggage, and waiting rooms, on the wharf at Belleville, Ont.

The light shown on the west end of Depot Island, near Parry Sound on the east side of Georgian Bay, has been changed from occulting red to occulting white.

It is announced that Canadian fishing tugs on Lake Erie are being numbered, and the names of the fishing firms are being placed on buoys marking the territory of

each to facilitate supervision by Government patrol boats.

The Imperial Oil Co.'s s.s. *Imperial*, operating on the Great Lakes, is reported to have had certain alterations made at Sarnia, to fit her for ocean service between Vancouver and Peru, but we are officially advised that there is no intention of sending any of the lake vessels to the Pacific.

A concrete pier and lighthouse are under construction in the Detroit River at the head of the Livingstone channel, at the junction of Ballard reef and Livingstone channels. Vessels are warned to go slow when passing the work so that the contractor's operations shall not be interfered with nor the plant and work endangered.

The icebreaking steam tug J. T. Horne, which has been operating on the Great Lakes, chiefly in Thunder Bay, for the past two years, and which was announced to have been sold to the Russian Government recently, sailed from Sydney, N.S., early in April, for Archangel, where she will be used in keeping the harbor free from ice.

The lighthouse on the breakwater at the entrance to Lionhead harbor on the west side of Georgian Bay, which was destroyed in the storm of Nov. 1913, has been repaired, and fixed on the extremity of the undamaged portion of the breakwater. A red painted spar buoy has been moored at the extremity of the damaged portion of the breakwater.

The collision of Canada Steamship Lines s.s. J. H. Plummer and Port Colborne and St. Lawrence Navigation Co.'s s.s. *Algonquin*, May 7, 1914, was argued before an arbitration board at Toronto, Apr. 13, when evidence on both sides was gone over, and decision reserved. It appeared that the accident occurred in a heavy fog, and that the signals were not properly understood.

The Niagara, St. Catharines and Toronto Navigation Co.'s s.s. *Dalhousie City* arrived at Toronto, Apr. 1, being the first vessel to enter Toronto harbor for this season. This is the fourth successive year this vessel has opened navigation into Toronto. Capt. Maddocks received the silk hat awarded by the harbor master to the captain of the first vessel to enter the harbor from an outside point.

The Algoma Central Steamship Line s.s. J. Frater Taylor, which was the first vessel from an outside point to enter Fort William harbor this season, for which the captain was awarded the harbor master's silk hat, was reported to be aground, while down bound with grain, at Blake's Point, off Isle Royale, Apr. 21. She was subsequently released and taken to Port Arthur for examination.

The United States Lake Survey reports the levels of the Great Lakes in feet above tidewater, for March, as follows,—Superior 601.50; Michigan and Huron 579.57; Erie 571.37; Ontario 245.27. Compared with the average March levels for the past ten years Superior was 0.13 ft. lower; Michigan and Huron 0.56 ft. lower; Erie 0.38 ft. lower, and Ontario 0.63 ft. lower. It was anticipated that during April, Superior would remain stationary; Michigan and Huron would be 0.3 ft. higher; Erie 0.7 ft. higher and Ontario 0.6 ft. higher.

The proposal of the Canadian Drydock and Shipbuilding Co. to build a dry dock at Owen Sound, is again to the fore. In a recent interview, F. F. Wood, of Niagara Falls, who is interested in the scheme, is reported to have stated that the necessary financial arrangements had been made, and some time had been spent with the Public Works Department at Ottawa in relation to the plans, and he hoped to be able to obtain a Government subsidy for a dock of the first class type, instead of the second class, as at first proposed.

The Great Lakes Engineering Works is proceeding against A. B. Mackay, of Hamilton, Ont., in the Admiralty Court at Detroit, Mich., for \$21,000 for shortening and repairing the s.s. E. M. Peck, purchased by him after damage done to the vessel by boiler explosion in 1913. After the purchase, it was found advisable to reduce the length of the vessel to Welland canal size, and it is now considered that the charges are too high. The name of the vessel was recently changed to Malton, and she is now owned by A. E. Mathews, Toronto.

The Minister of Public Works, replying to questions in the House of Commons, Apr. 3, stated that since Jan. 1, 1913, the work done on the French River improvements consisted of the construction of the Little Chaudiere dam, in connection with which the rock excavation, camp equipment and surveys had cost \$101,067.34. The contractors are Jennings and Ross, and \$3,460 has been paid them for work on the substructure of the Big Chaudiere dam, the contract for the superstructure of which has not been let.

The Reid Wrecking Co., Sarnia, is reported to have sold the s.s. *Matoa* to Boston, Mass., parties, for the coast trade. It is said that a condition of the sale is that the vessel be cut in two for passage through the canals, and that this is being done at the Sarnia dry dock. The *Matoa* was built at Cleveland, Ohio, in 1890, and was formerly owned by the Pittsburg Steamship Co., Cleveland. She was wrecked during the storm of Nov. 1913, at Point aux Barques, abandoned by the owners, and subsequently salvaged by the Reid Wrecking Co., by whom she was repaired.

Lake Commerce, Ltd., Toronto, has acquired the s.s. *Arabian*, formerly owned by Canadian Lake Transportation Co., and latterly operated under J. W. Norcross' management. She was built at Hamilton, Ont., in 1892, and is a steel vessel with double bottom for water ballast, with wooden sheathing on the steel bottom. She is equipped with fore and aft compound engines with cylinders 20 and 40½ by 34 ins., 400 i.h.p. at 80 r.p.m., supplied with steam from one Scotch boiler 11¼ by 10¼ ft. at 107 lbs. pressure. Her dimensions are, length 178½ ft., breadth 31 ft., depth 13½ ft.; tonnage, 1,073 gross, 770 register.

The Owen Sound Board of Trade has not succeeded in its effort to get the C.P.R. to increase its vessel service at that port. George Bury, Vice President, C.P.R., was in Owen Sound recently and received a deputation on the subject. He has since communicated with the Chairman of the Board of Trade, stating that the company could not send another vessel there without interfering with the through passenger traffic. The Board of Trade has since invited Jas. Playfair, President and General Manager, Great Lakes Transportation Co., to visit the port and look over the situation, with the view of that company's vessels making calls there. Mr. Playfair is reported to have stated that if the company were guaranteed 250 tons of freight a week, a vessel would call there each week during the season.

### Manitoba, Saskatchewan and Alberta.

J. D. McArthur Co., contractors for the construction of the Alberta and Great Waterways Ry., will, it is said, build a large number of scows at Athabasca Landing this season, to convey supplies eastward for railway construction, by way of the Athabasca River.

The Peace River Tramway and Navigation Co. proposes to build a steamboat at Peace River Crossing, Alta., during the summer, to

run to Vermillion Rapids, where a tramway is to be built. The dimensions of the vessel will be, length 165 ft., breadth 35 ft., and she will be equipped with engine of 800 n.h.p. Accommodation will be provided for 110 cabin passengers and about 300 tons of freight.

The s.s. *Qu'Appelle*, which was formerly operated on Last Mountain Lake, Sask., by Wm. Pearson Co., Ltd., Winnipeg, but which has not been in service since 1913, will not be in service this year, unless the ending of the war and the consequent improvement in local business make it advisable. The increased railway service in the neighborhood formerly served by this vessel has made the venture less profitable than before.

### British Columbia and Pacific Coast.

The Dominion Government hydrographic steamship *Lillooet* has been overhauled and repaired at Esquimalt in readiness for her summer work along the coast.

The construction of the Grand Trunk Pacific dry dock at Prince Rupert is progressing rapidly, and it is reported that the work will be sufficiently advanced to take care of vessels early in June, and that it will be completed by the end of the year.

B. C. Mills Tug and Barge Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$150,000 capital, and office at Vancouver, to own and operate steam and other vessels, and to carry on a general shipping and shipbuilding business.

A Dawson, Yukon, telegram of April 19 said the ice in the Yukon River was breaking up, the earliest date recorded, and that the river was open from Whitehorse, the head of navigation, to Lake Labarge, 16 days earlier than in 1914.

The Grand Trunk Pacific Coast Steamship Co. has recently renewed the insurance on its vessels, paying rates, for the steamships *Prince Rupert* and *Prince George*, 5½% against 5% last year; for the s.s. *Prince John*, 11½% against 8½%, and for the s.s. *Prince Albert*, 12% against 9% last year.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. *Prince Rupert*, which had been moored at Seattle, Wash., since the outbreak of war, was taken to Esquimalt towards the end of March to be drydocked for overhaul and general repairs, prior to re-entering service to northern ports.

In response to questions in the Senate, Apr. 3, it was stated that the Government had equipped 3 tugs, 4 dredges and 1 rock breaker, on the Pacific Coast, with apparatus for burning fuel oil, at a cost of \$34,244. The approximate saving by this change is \$35,000, and there is an additional saving in operation which it was stated is difficult to estimate.

Despite the early breaking up of the ice in the Yukon River, White Pass and Yukon Ry. officials are reported to have stated in Seattle, April 20, that navigation on that stream will not open up until June 1, the low stage of the water along the 50 mile stretch between Whitehorse and Lake Labarge make it inadvisable to start the boats ahead of the usual time.

The Grand Trunk Pacific Coast Steamship Co. has announced the withdrawal of the s.s. *Prince John*, and the discontinuance of the service from Vancouver to the Islands generally and Stewart. A fortnightly service to Massett and the Naas River is however being maintained, providing a weekly service between Vancouver and Prince Rupert in addition to that previously performed by the s.s. *Prince George*.

A motion to consider the expediency of authorizing the Vancouver Harbor Commis-

sioners to make bylaws for the imposition of tolls, rates, etc., other than those already authorized, and that such additional tolls and fees be retained by the commissioners and for part of their general revenue, came up for discussion in the House of Commons, Mar. 29, and Apr. 1, when the matter was dropped, the Minister of Marine not being prepared to proceed.

### Mainly About Marine People.

**Capt. M. McLeod**, a former harbor master at Vancouver, B.C., died there, Apr. 6.

**Sir William Price**, Chairman, Quebec Harbor Commissioners, has resigned, owing to pressure of private business.

**Capt. Allen McNabb**, who died at Vancouver, B.C., Apr. 6, was, for many years in C.P.R. service on its trans-Atlantic vessels.

**Alex. Elder**, founder of Elder, Dempster and Co., who died Jan. 25, left an estate of the gross value of £309,068 19s. 11d.

**James Ronan**, purser, Northern Navigation Co., died at Sarnia, Ont., Apr. 19. He had been in the company's service over 20 years.

**James Currie**, who died at Toronto, Mar. 31, aged 63, was one of the founders of the works there, now owned by Polson Iron Works, Ltd.

**A. A. Booth**, Chairman, Cunard Line, has been appointed chief organizer of the British Government's scheme to increase the output of war material.

**William Burrill**, who died at Yarmouth, N.S., Mar. 26, aged 74, was engaged in ship-building in the early days of sailing vessels, and latterly was in the ship outfitting business.

**W. F. Cloney**, heretofore General Agent, Canada Steamship Lines, Buffalo, N.Y., has been appointed General Agent at Rochester, N.Y., and has been succeeded at Buffalo, by **J. V. Foy**, heretofore General Agent at Chicago, Ill.

**J. W. Norcross**, Vice President and General Manager, Canada Steamship Lines, Ltd., placed the s.s. Macassa at the disposal of the Hamilton contingent of the 19th Battalion in training at Exhibition Park, Toronto, when they visited Hamilton, Apr. 10.

**B. R. Hepburn**, M.P. for Prince Edward, Ont., and formerly President of the Ontario & Quebec Navigation Co., prior to its absorption by the Canada Steamship Lines, has been renominated as the Conservative candidate to contest the riding at the next Dominion elections.

**J. S. Byrom**, who has been appointed Superintendent of Great Lakes Steamers, C.P.R., Port McNicoll, Ont., vice S. Buchanan retired, has been with the Canadian Pacific Steamships and allied lines for 26 years, for the last 14 of which he was port steward of the British Columbia Coast Service at Vancouver.

**W. Newman**, Works Manager, Polson Iron Works, Toronto, who superintended the construction of the Ontario Car Ferry Co.'s car ferry, Ontario No. 2, which was launched Apr. 3, was presented with a diamond ring by the officials and employees of the Polson Iron Works, the evening before the launching.

**G. M. Booth**, a director of the Booth Steamship Line, and other shipowning companies, Liverpool, Eng., has been appointed by the Secretary of State for War to take charge of the recently inaugurated committee which is to take the necessary steps to provide additional labor to ensure that the supply of munitions of war shall be sufficient to meet all requirements.

**Capt. Robt. McKay**, who died at Kingston, Ont., Apr. 17, aged 91, sailed on the Great

Lakes for several years, and subsequently lived at Fulton, N.Y., moving to Kingston a few years ago. His grandfather was a ship carpenter in the British Navy and came to Canada many years ago, working in the old ship yard at Point Frederick, where he helped to build warships for the war of 1812.

**Sam Buchanan**, who retires from C.P.R. service, May 1, after 34 years with that company, was born at St. Catharines, Ont., March 1853, and entered transportation service, Nov. 4, 1871, since when he has been to Mar. 17, 1881, brakeman and conductor, G.T.R., Point Edward, Ont.; June 10, 1881 to Apr. 15, 1885, conductor, C.P.R., Winnipeg and Brandon, Man.; June 17, 1885 to Mar. 31, 1890, General Foreman, Freight Department, C.P.R., Owen Sound, Ont.; Apr. 1, 1890 to Jan. 22, 1905, agent, C.P.R., Windsor, Ont.; Jan. 23, 1905 to June 16, 1908, Superintendent Terminals and Ferries, C.P.R., Windsor, Ont.; June 17, 1908 to Apr. 30, 1915, Superintendent, Upper Lake Steamship Service and Ferries, for the first four years at Owen Sound, and later at Port McNicoll, Ont. Mr. Buchanan will reside at Port McNicoll for a few months after which he will remove to Detroit, Mich.

### Regulations Respecting Examinations of Masters and Mates.

New regulations have been issued by the Government relating to the examinations of masters and mates of inland and coasting vessels, providing that a candidate must not be less than 19 years old, and must have served two years at sea, or must have served one year as mate of a passenger or freight steamship on the Great Lakes, while holding a certificate of competency as mate of a passenger steamship on inland waters. For master's certificate, a candidate must not be less than 21 years old and must have served three years at sea, one year of which he must have served as mate while holding a mate's certificate, or he must have served one year as master of a passenger or freight steamship on the Great Lakes, while holding a certificate of competency as master of a passenger steamship on inland waters. In addition to the qualification for mate, a candidate will be required to know how to act in case of stranding, to answer any questions respecting currents and aids to navigation, which the examiner may think proper to ask, to answer any other questions the examiner may think necessary to ask him concerning the duties of a master of the particular class of sailing vessel or steamship for which he desires a certificate. Service on the inland waters will not be accepted as qualifying for examination for coasting certificates, except under conditions specified in pars. 21 (b) and 24 (b) of the old rules and regulations.

### Suggested Deepening of the St. Lawrence River.

The report of the commission, consisting of E. E. Haskell, Dean of the College of Civil Engineering, Cornell University; V. W. Forneret, Superintending Engineer, St. Lawrence Ship Channel, and W. J. Stewart, Dominion Government Hydrographer, presented to Parliament recently, states that it would cost about \$487,361 to raise the level of the St. Lawrence River by a system of retaining dykes, and the damming of subsidiary channels. The level which has suffered most is that in Montreal harbor, due to various depletions, but mostly to dredging at St. Mary's Rapids. It is suggested that the water be backed up into Montreal harbor, and the level raised 2 ft. 7 ins., by the

obstruction of the river's outflow at suitable points. It is calculated that by raising the water 2 ft. at Lake St. Peter, it would be raised 19 ins. at Sorel, 11 ins. at Longue Pointe and 11 ins. in Montreal harbor. An additional rise in Montreal harbor and at Longue Pointe could be provided for by damming between the islands at the head of the lake. Another dam is suggested at Ile a Bague and Ile Bellegarde. The suggested dams with their estimated cost are as follows:

Rock filled dam, no. 3, Chenal du Castor (between Ile Castor and Ile du Pads), \$25,322.

Rock filled dam, no. 4, Chenal du Pads (between Isle du Pads and Ile St. Ignace), \$16,135.

Rock filled dam, no. 5, Chenal aux Ours (between Ile Madame and Ile aux Ours), \$13,107.

Rock filled dam, no. 7, Chenal Corbeaux (between Ile de Grace and Stone Island), \$23,222.

Rock filled dam, No. 9, Chenal des Barques (between Ile aux Barques and Ile au Moins), \$63,870.

Rock filled dam, at Pointe du Lac, at foot of Lake St. Peter, \$141,960.

Rock filled dam, at Repentigny, between Ile a Bague and Ile Bellegarde, \$203,745. Total, \$487,361.

The stretch between Lake St. Peter and Quebec offers considerable difficulties due to tides, etc., and further examination and tests will be made on portions of the route. There has been a lowering of the level at Lake St. Louis of 3.4 ins. due to diversion of water to the Chicago Drainage Canal, which also contributes to the lowering of the water at Montreal.

### Grain Overages and Shortages.

At various meetings held in the earlier part of the year, the matter of grain overages and shortages was dealt with by vessel owners on the Great Lakes generally, and certain clauses were approved, which were to be added to the bill of lading in shipping cargoes of grain. It was generally agreed that some change was necessary in the Canada Grain Act, to give effect to the various recommendations, and this has now been made. The amendments made provide that the inspector's certificate of grade, as well as the weigh master's certificate as to weight, shall be prima facie evidence of the facts contained therein; that no grain shall leave a terminal elevator without being officially weighed, and the official certificate shall be final, subject to re-investigation as provided for in sec. 120 of the Canada Grain Act. In explanation of the latter amendment, it was announced by the Solicitor-General, in the House of Commons, Apr. 5, that the effect would be to make the official weight certificate conclusive evidence as to weight, but that it would only apply where weigh masters were appointed and under the control of the Grain Commissioners, so that the eastern terminal elevators were not affected. Another amendment provides that certain portions of the act shall apply to all water carriers other than ocean carriers, making it clear that it applies to carriers between the western and eastern elevators, in so far as they carry western grain only.

The act was further amended by adding after sec. 120, the following:

"120a. The board shall also receive and investigate all complaints in writing, signed by any of any shortage in grain upon the delivery of same from an elevator to a vessel or from a vessel to an elevator, and shall have power to assess or apportion the loss arising from such shortage amongst the elevator operators, water carriers, and shippers, but not the receiver."

The said board, and the finding of the board and such assessment or apportionment certified on the part of a majority of the board shall be binding on and sent to all persons concerned in such finding, assessment or apportionment, and shall be final and shall be enforceable in any court of competent jurisdiction.

"120b. The board may make regulations governing the responsibility for and the disposition of shortages and overages of grain upon delivery of same from an elevator to a vessel, or from a vessel to an elevator, and may assess in such manner and in such amount as it may deem just and proper, contributions from elevator operators, water carriers and shippers, or from any of them, in favor of the board or otherwise, for the purpose of providing against shortages."

"Provided that nothing contained in this section shall limit the powers of the board under the preceding section."

In pointing out the importance of this amendment, the Solicitor-General gave a slight history of the case, stating that a conflict had arisen between the lake carriers and the western shippers, the elevators and lake carriers endeavoring to put into effect a form of bill of lading which would have turned back upon the shippers the entire responsibility for any shortages that might occur during transit from western to eastern elevators. Some of the companies have found themselves at the end of the year loaded with considerable loss by reason of shortages, arising from lesser weight being given to the carrier when he went to deliver this grain to the eastern elevator for transhipment to barges and thence to ocean vessels, than the weight given him by Government certificate out of the western elevator. Similarly other carriers had overages by the reverse process, the eastern weight being greater than the western weight. There has been a conflict of interests and efforts to bring the parties together have not met with final success. The intention of the amendment is to provide against two classes of case, the only ones that can arise, the first being where it is possible for the board to fix the responsibility for the shortage to, say, the western elevator operator, or the lake carrier; and the second, where no evidence is available to enable the board to fix the responsibility, which is a frequent occurrence. The amendment provides that the board must investigate complaints of shortage or overage, and gives power to determine who shall stand the loss of the shortage, or get the benefit of the overage. It may also assess loss against all the parties concerned, the scale of contribution being fixed consistent with the responsibility for the loss.

**Great Lakes Register**,—8¼ by 12 ins., leather covered. Great Lakes Register, Rockefeller Building, Cleveland, Ohio, \$25 a year including supplements, by subscription. The 1915 edition of this register has been issued to subscribers. It is published under the control of the lake underwriters, and is adopted by them as their official classification register, on which to base all rates of insurance for both hulls and cargoes. The rules for the classification and construction of steel, iron and wood vessels navigating the Great Lakes also have the approval of Bureau Veritas, and by arrangement the Great Lakes Register Committee can issue certificates of classification for overseas navigation to lake built vessels, the construction and equipment of which are suitable for such navigation. There is a complete list of all Canadian and U. S. vessels operating on the Great Lakes, with very full details of their construction and equipment, and varied information regarding shipbuilders and tonnage turned out of their yards, dry docks with their capacity and location, etc. The whole of the matter is arranged in very convenient form for quick and easy reference, which makes it indispensable to those whose business is concerned with the navigation of the Great Lakes.

## Telegraph, Telephone and Cable Matters.

Telegraph connection, over Dominion Government lines, was made with Fort McMurray, Alta., Mar. 25.

Preparations for the Association of Railway Telegraph Superintendents' annual convention, at Rochester, N.Y., June 22 to 24, are about completed.

G. D. Perry, General Manager, Great North Western Telegraph Co., returned to Toronto recently after a trip of inspection of the company's western offices, as far as Saskatoon, Sask.

The Great North Western Telegraph Co. has opened offices at Glenora, Langruth, Narcisse, Poplarfield, Wakopa, Man.; Rocky Inlet, Ont., and Mossbank, Sask., and has closed its offices at Lavoy, Alta.; Beaver, Berton, Brunkild, Enterprise, Methven, Junc., Man.; Richmond, Que., and St. Gregor, Sask.

The Pacific Cable Board has reduced the charge per word from 58 to 50 cents on ordinary messages to New Zealand, Fiji and Norfolk Islands, and from 29 to 25 cents a word on deferred cables. For week end lettergrams, the charge has been reduced from \$2.90 to \$2.50 for 20 words, and from 15 to 13 cents a word for extra words.

Baron de Reuter, the head of Reuter's Telegram Co., the great news gathering organization, committed suicide, Apr. 19, at Reigate, Surrey, Eng., owing to despondency caused by his wife's death. The headquarters of the company, which were in France, were transferred to London, Eng., on the completion of the cable between England and France in 1851.

The Western Union Telegraph Co.'s gross revenue for 1914 was \$46,264,776, and net income \$5,371,394, after paying interest on funded indebtedness. Dividends paid amounted to \$3,988,886, the surplus being \$13,531,921 at Dec. 31. The assets are valued at \$135,586,383. The net revenue for the year was \$2,136,400 greater than in 1913, and it is stated that \$1,475,000 of this was due to the war.

## Among the Express Companies.

The Canadian Northern Ex. Co. has opened an office at Mossbank, Sask.

R. Stewart, Vice President and General Manager, Great Northern Ex. Co., was in Vancouver, B.C., at the end of March, inspecting the company's offices.

H. Coneybeare, a Canadian Ex. Co.'s driver, who, it was reported, decamped from Lindsay, Ont., a short while ago with a package of Home Bank bills, valued at \$3,000, was arrested in Edmonton, Alta., Apr. 2, with \$2,500 of the bills in his possession. He was taken back to Lindsay.

The Canadian Express Co.'s annual meeting was held at Montreal, April 19. The directors who were elected for the current year are: E. J. Chamberlin, Chairman of the Board; J. Pullen, President; F. Scott, Secretary-Treasurer; J. E. Dalrymple, H. G. Kelley, Hugh Paton.

The Canadian Ex. Co.'s returns for Nov., 1914, show charges for transportation \$252,264; express privileges \$124,940; operation other than transportation \$4,287; total operating revenues \$132,151; operating expenses \$128,240; net operating revenue \$3,910; express taxes \$4,000; operating income \$89; against \$254,305 charges for transportation; \$123,873 express privileges; \$7,242 operation other than transportation; \$137,673 total operating revenues; \$143,257 operating expenses; \$5,584 net operating revenue; \$2,850 express taxes; \$8,434 operating income for Nov., 1913.

## Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

**Ohio Brass Co.**, Mansfield, Ohio, has issued a bulletin "Electric Railways, Mine Haulage and Power Transmission."

**Canadian Car & Foundry Co., Ltd.**, G. T. Merwin, heretofore with the W. W. Butler Co., Ltd., Montreal, has been appointed to the Canadian Car & Foundry Co.'s sales staff.

**The Fairmont Machine Co.**, Fairmont, Minn., announces a change of name to one more in keeping with its product, and also an increase of the authorized capital stock to \$1,000,000 to meet a demand of increasing business. The name will hereafter be Fairmont Gas Engine and Railway Motor Car Co.

**The Ohio Brass Co.**, Mansfield, Ohio, has issued a folder, O-B Catenary Materials, giving illustrations of a number of installations, including Montreal & Southern Counties Ry. It is stated that the Chicago, Milwaukee & St. Paul Ry. has ordered approximately 100,000 O-B hangers for the second section of its new electrification and that it will use about 67,000 O-B type X strain insulators on both sections.

**Mussens', Limited** (in liquidation), Montreal, have issued a circular over the signature of W. H. C. Mussen, President, from which the following are extracts: "J. J. Robson, chartered accountant, of Montreal, who was recently appointed provisional liquidator, has, by order of the court, been appointed permanent liquidator to this company. The court has also granted our application to be allowed to continue the business for a period of six months. We feel able to demonstrate to our creditors that we will succeed in the efforts which will be put forward to reduce our stock, collect our open accounts and materially reduce overhead charges, with a view to getting into a position to reorganize and continue in business. While we are in liquidation, we are carrying on an active campaign for business, and we trust that we may continue to receive your support. We have a good connection throughout the country and all purchases made by us from now on will be paid for by the liquidator. We know that it will take some time to achieve the result at which we are aiming, but if we continue to receive the support of our principals as in the past, we are satisfied we can show good results and ultimately re-establish this business on its old footing. Since the liquidation proceedings were put into effect, we have been flooded with letters from the manufacturers, as well as from our customers, extending their hearty support and assuring us of their continued patronage. We, therefore, take this opportunity of thanking our friends for this evidence of confidence in us and in our ability to win out. We also desire to impress upon our customers the fact that we are carrying on business as usual, and that, although we were always pleased to receive their orders, we are now more anxious than ever to be favored with same. We ask our principals to continue the support which has been so freely given us in the past, and we ask our customers to give us an opportunity of supplying them with any material which they may require. All inquiries will be promptly attended to and orders will be filled without delay."

### Transportation Conventions in 1915.

718 TRANSPORTATION BUILDING, MONTREAL

## Why stop your trains at junction and passing track switches?

You can operate and maintain a *G R S Low Voltage Model 5 Switch Machine Installation* for less than \$150 per year.

This includes interest and depreciation.

Ask yourself these questions :

How many train stops per day will equal this annual cost ?

How many additional train stops per day will be avoided and what will be the saving in dollars and cents ?

G R S Model 5  
Electric Switch Machine

When you can effect a large yearly saving by installing *Model 5 Switch Machines* at your busy outlying switches and at the same time reduce train delays, improve your schedules, secure signal protection—when you can do all this at a considerable annual saving—then why stop your trains ?

Is this not a convincing reason why you should install *Model 5 Switch Machines* at your junction and passing track switches ?

They can be safely operated from any telegraph office if desired.

### Features of the Model 5 Switch Machine

- 1 Low voltage machine will operate an average working switch on 12 volts with a current consumption of  $2\frac{1}{2}$  amperes in 25 seconds.
- 2 The machine is so shallow that only a small amount need be cut from the ties to put the mechanism below top of rail.
- 3 Weighs approximately 40 percent less than other switch operating mechanisms.
- 4 It may be easily converted to operate on energy of different voltages and characteristics by using a suitable motor.
- 5 Main cover is substantial, light and easily handled. Pole changer and gears are protected by inner covers.
- 6 With cover in place there are no openings through which dust, dirt, cinders or snow can enter the mechanism case.

## BRAKE SHOE SCRAP REDUCED TO THE ABSOLUTE MINIMUM

The Steel Back Brake Shoes here pictured were all worn down practically to the steel back.

The average weight of 100 shoes taken at random from this pile was about 5 1/2 lbs.

The roads using these shoes received about twice as much brake shoe service as could have been gotten from ordinary unreinforced shoes. It paid them and it will pay your road to use Steel Back Brake Shoes.

Manufactured in Canada.

## A Clear Track To Promotion

How to get off the side-track—how to break the couplings that hold them near the bottom of the pay roll—is the one big problem that troubles most railroaders.

There's a clear track to promotion—without grade or curve—open to the man that has the backbone and grit to take it. Before you can travel this track to promotion and bigger pay you must "coal up" with knowledge—you must be specially trained.

The Railway Instruction Department of the International Correspondence Schools is able and ready to give you the training you *must* have. You can get it right at home without losing an hour's time from your present job.

It will not cost anything to find out how the I.C.S. can train *you* for a better job. Put an "X" near the class of work you would like to follow, in the attached coupon, and mail it to the I.C.S. This won't obligate you in the least. It will simply bring full information by return mail.

**Mark the Coupon NOW**

All lessons for Canadian students are corrected at the Canadian Instruction Department in Toronto by instructors who are thoroughly familiar with conditions in Canada.

## Your Summer Holiday!

### This Year The Maritime Provinces

#### LA BAIE DE CHALEUR

An arm of the Gulf of St. Lawrence. The estuary of the Restigouche, is one of the most fascinating and superb panoramic views in America. Smooth, sandy beaches tempt the bather. Many coves and harbors where boating is alluring and shorn of its risks.

#### CAPE BRETON

An island wherein are other isles innumerable. Bras d'Or Lakes, an inland sea dividing the island in twain, provides a spacious waterway through the interior. Nature has made Cape Breton an ideal land for a summer holiday.

#### ABEGWEIT

(Cradled on the Waves)

#### Prince Edward Island

Sweet pastoral scenery, fragrant groves, almost tropical foliage, health-giving breezes, atmosphere marvellously clear. Sky as blue as sunny Italy.

#### Summer Excursion Fares

gives in comprehensive form summer fares from important centres to the numerous resorts reached by Canadian Government Railways, circular tours, list of hotels and summer homes and their rates.

Write for free copies of illustrated descriptive folders and any other information to

H. H. MELANSON,

## Another Step Toward Efficiency

The Detroit Automatic Flange Lubricator is just another step toward efficiency expressed in dollars and cents. Its use means a direct saving in increased wear for your tires. Its installation means no extra work for the man in the cab. The

### Detroit Automatic Flange Lubricator

gives efficient flange lubrication just when it is needed; the feed is governed entirely by the requirements of the service.

The New Detroit Flange Lubricator consists of an oil reservoir and a feed nozzle on the flange; between these is the lubricator body with a ball valve controlling the feed of oil from the tanks to

the flange. The lateral thrust of the engine moves the ball "B," against the plunger "P," this opens valve. This allows oil to reach the flange.

Its use means another step toward efficiency. For the inside facts, write for Catalogue FO-81. A request letter will bring a copy.

## Schmidt Fire Tube Superheater for Marine Boilers

Saves from 10% to 25% of fuel per unit of power developed.  
Reduces coal bunker requirement, making possible increased revenue cargo with the same draft.

Increases power output of a given marine power plant from 10% to 25%.

Is adaptable to either new or existing boilers of the fire tube type, with no change in their design or construction.

The most economical and profitable method of handling rush-hour and holiday crowds is train-service. To operate trains efficiently and safely automatic air brakes are necessary.

## Westinghouse AMM Automatic Air Brakes

are specially designed for train service of not to exceed five cars.

One motorman on the front car controls the train as easily as a single car.

Cars equipped with AMM Brakes are always instantly ready for train service; simply couple the cars together and connect the air hose.

A straight-air feature can be provided for single-car operation, giving the same flexibility of service as with straight-air, the safety features of the AMM equipment remaining always present.

# Meeting One Financial Obstacle to Adequate Signal Protection

There is little doubt that there would be a tremendously greater amount of mileage protected by automatic block if first cost were the only difficulty to be encountered. The great difficulty, however, in the universal use of fixed automatic block signals is found in the continuous cost of maintenance.

The advantage in this respect of

## Simmen Automatic Block Cab Signals

is shown by the fact that none of the four roads which are operating the Simmen System have found it necessary to provide any special organization or additional labor for inspection purposes.

The reason for this is that the track and overhead installation of the Simmen System is so simple (involving no apparatus along the track except standard telephone overhead construction and simple signal rails) that the regular track and line maintenance labor is ample to care for these elements.

All operating electrical apparatus is either in the cab or in the dispatcher's office.

The cab apparatus is easily inspected when the car is in for regular inspection.

The apparatus in the dispatcher's office is readily inspected and cared for by the dispatcher, with the occasional assistance of a lineman.

This enormous comparative saving in maintenance costs is proved by the experience of the four roads on which the **Simmen System** is now, and has for some time been, standardized.

The importance of this fact in any signal installation is obvious.

When you are depending upon a locomotive crane for handling your coal you realize that it must be a **good** crane. You cannot have the crane continually breaking down, as it means a big loss in time.

## BROWNHOIST Locomotive Cranes

are being used to-day by railroad men because they realize that these cranes will do their work as it should be done. One road uses thirty of them. These cranes are built for hard, continuous service. And records prove that they will stand up under the severe working conditions. Ask the owners—they will tell you what Brownhoist cranes will do.

Write for our Catalog K, which shows how and where the Brownhoist Locomotive Crane is used.

# 450 Railroad Shops in the United States and Canada Use Thermit

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

*Let us send you this pamphlet.*

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No 2144, which contains full information on Thermit in Railroad Shops.

Assistant Passenger Traffic Manager,  
Montreal, Que.

## The Science of Water Treatment

The Dearborn Company was organized because of the conviction on part of its founders that a scientific handling of the water treatment question was the only solution for the steam user of the troubles constantly arising as a result of scale formation, foaming, corrosion and pitting of boiler tubes, with all the attendant injury to the boilers, loss of heating efficiency, and waste of fuel.

Periodical removal of scale is unsatisfactory since there is a constantly increasing ratio of heat loss and fuel waste—as the scale gradually forms—aside from the injury to the boilers.

The Practical Method is **Prevention** and this can be effectively done only by attacking the mineral ingredients in the water with the proper reagents, changing their nature and character and eliminating their harmful qualities.

The application of scientific knowledge is most important in the choosing of reagents. Provision must be made for the various minerals present in the water, determined by analysis, as well as for the by-products that will be formed as a result of reactions brought about. Failure to give this phase due consideration may result in more serious trouble than the first condition of the water produced.

Unscientific "dope" compounds, ineffective and often harmful, have caused steam users endless annoyance and trouble.

We'd like an opportunity to demonstrate results by our methods. Gallon samples of the water supplies for analysis constitute the first step. May we have them?

**Dearborn Chemical Company of Canada, Limited**

Office and Works,  
1220-1230 Dundas Street, TORONTO, ONT.

## The "National" Truck for Interurban Service

WITH MOTORS.

WITHOUT MOTORS.

When we can say that we have never had a dissatisfied customer it means that the "NATIONAL" Truck has unusual merit. It solves the problem of minimum weight with maximum efficiency and smooth riding qualities.

# ANNOUNCEMENT

TO THE CANADIAN STREET RAILWAY COMPANIES

Wish to advise, we have opened a Canadian Plant for the manufacture of the

**KNUTSON Trolley Retriever**  
**IDEAL Catcher**  
**Pressed Steel Headlight**  
**SIMPLEX Trolley Base**

and other specialties and by February 25th, will be in a position to make shipment of our products from our Canadian Plant. Feel certain that this move will be appreciated by the Canadian Street Railway Companies and await the continuance of the valued patronage given us by the numerous lines in Canada.

**THE TROLLEY SUPPLY CO., Canton, Ohio**

Consolidated Type Locomotive Built for Freight Service on the Grand Trunk Pacific Railway.

## LOCOMOTIVES

Long experience, new equipment, efficient management and expert workmen, are guarantees that our Locomotives will give record service. Over 1,200 Locomotives have been built at our Works since the erection of the plant. We are builders of Simple and Compound Locomotives adapted to every variety of service, for Railway Contractors, for Industrial Purposes, Mines, all classes of Railway Work, etc.

We are also builders of stationary boilers, suitable for contractors and industrial plants. Grey iron castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped. We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

**CANADIAN LOCOMOTIVE CO., Limited, Kingston, Ontario**

## Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders,  $23\frac{1}{2}$  x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

June, 1915.

## Coaling Plants on the Canadian Northern Railway.

A 100-ton mechanical coaling plant, as illustrated herewith, has been built recently for the C.N.R. at Trenton, Ont., the central divisional point on the Toronto-Ottawa line, which was opened early last summer. It is the intention to erect similar plants this year at the several divisional and turning points on the section of the new transcontinental line north of Lake Superior, viz., Capreol, Foley, Fitzbach and Hector. All these plants will be identical in structural details and method of operation, the only difference that will be necessary will possibly be in the mechanical power, depending on what is available. Wherever possible, as in Trenton, electric drive will be used, but alternative steam and gasoline engine drive have been developed, to be used as conditions warrant. These plants

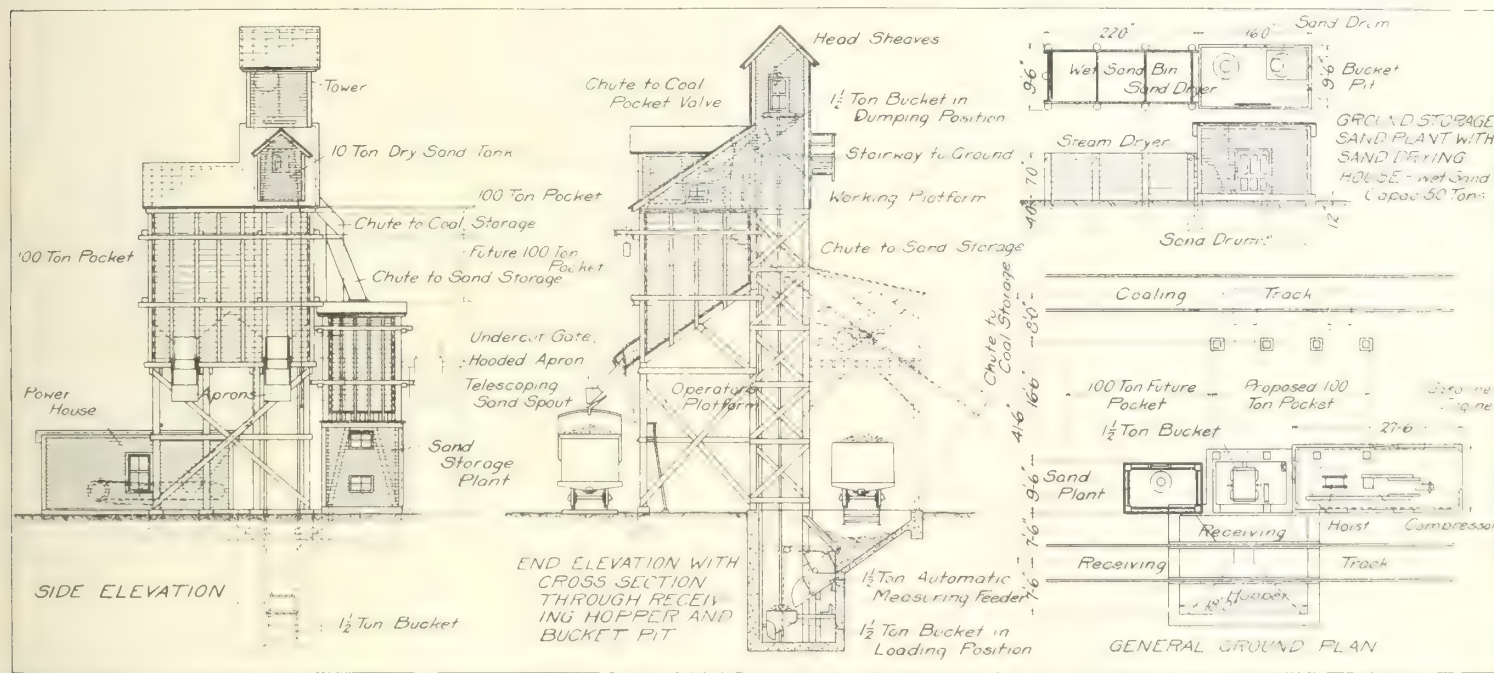

tween, these columns, is composed of heavy planking.

To the rear of the coal pocket, at one end, there is an elevator shaft, consisting of four wooden columns, two of which are those of the coal pocket supports, the other two being carried on the concrete side walls of the receiving coal hopper. The elevator shaft extends into a pit, 18 ft. deep.

Back of this elevator shaft pit, and forming a part thereof, is a receiving hopper, underneath the delivery track, which spans the pit on two tracks, supported by I beams. The receiving hopper and elevator pit, consists of a concrete lined chamber, the receiving hopper having sloping sides towards the elevator shaft, the slope corresponding to that of the bottom of the coal pocket above. The coal for the plant will

top of the elevator travel, the apron roller guide bends forward, so that in the final position, the apron has swung open, the sloping bottom of the car discharging the coal through the apron to a chute, which delivers the coal into the coal pocket. As the bucket commences to descend, the apron is closed. On approaching the bottom of the pit, the feeding mechanism is automatically operated, so that the feeder revolves, dumping the contained  $1\frac{1}{2}$  ton into the bucket.

The sand storage plant is a small frame building adjoining the hoistway, the base of which is at an elevation of about 14 ft. It is of similar construction to the coal pocket, only lighter. A chute, leading into it from the top, is fed in exactly the same manner as the coal pocket, a valve in the coal

100 Ton Mechanical Coaling Plant, Canadian Northern Ry., Trenton, Ontario.

are to be of the same type as those installed on the National Transcontinental Ry., which were fully described in Canadian Railway and Marine World, Aug. 1914. While of the same type, they will only have half the capacity, with provision in the design for doubling the initial capacity when necessary, so that the ultimate capacity of the N.T.R. and C.N.R. plants will be the same. Another important difference between the plants is that the N.T.R. plants are of reinforced concrete throughout, while the C.N.R. are of wooden construction. Other minor points of difference will be apparent by referring to the description of the N.T.R. The coal is carried in an elevated coal pocket, 14 by 22 ft., and will have a depth varying from about 10 to 20 ft., the bottom of the coal pocket having a slope with regard to the horizontal of about 30 degrees. This pocket is carried on 8 heavy squared timbers, resting on concrete piers, the pedestals being heavily cross braced. The coal pocket, supported by, and contained be-

lie delivered on cars, which will be run over the top of the receiving hopper and dumped. The area of the receiving hopper is 11 by 14 ft., and as it slopes in three directions towards the front, the coal will all tend in that direction to a central point in the front edge of the bottom of the hopper. At this central point, there is a feeding mechanism, which consists of a gate, chute and feeder, the latter delivering the coal automatically in  $1\frac{1}{2}$  ton lots.

The elevating bucket is of the same capacity as the automatic feeder,  $1\frac{1}{2}$  ton, and is 4 ft. square, the bottom sloping the same as the receiving hopper and coal pocket. Hinged to this low edge of the elevator, along the front face, there is an apron or folding chute, kept closed in its upward travel by a roller on its front face bearing against a guide. The elevator ways are 30 lb. rails. The movement of the bucket from the bottom of the pit, automatically causes the feeder to revolve, filling up with the measured  $1\frac{1}{2}$  ton. At the

pocket chute diverting the sand as elevated from the receiving hopper into the sand pocket chute. Beneath the sand pocket there is a sand drying room, fed by gravity from the supply above. The dried sand is delivered by compressed air to a 10 ton dry sand tank, situated directly over top of the coal pocket. There is also a 50 ton ground storage plant for wet sand.

The coaling plant at Trenton, Ont., will be electrically operated, with the power located in a small building adjoining the hoistway, on the ground, and will be automatically operated, so that the operator will be free during the unloading period to attend to other work around the plant. With the plants that will be either steam or gasoline engine driven, the same automatic operation will be provided.

Considerable storage areas are being provided at all the division points along the C.N.R., those on the transcontinental line having capacities of from 9,500 to 14,000 tons. In order to use this plant for unloading to

these storage areas, there will be a special chute from the main chute which will lead from the top of the hoist, running back over the unloading track, through which the coal can be chuted to the storage pile in rear of the plant.

Special features of the Trenton installation are the facilities for handling the coal to and from the storage yard to the rear. At this point, the storage yard will have a capacity of 5,000 tons. Around the edge of this area, there will be a series of posts, to which a cable from the coaling plant may be attached. This cable will act as a drag line, to which will be attached a scoop with a capacity of about three-quarters of a ton, to be operated from the mechanism on the platform over top of the receiving hopper, where the operator who will manipulate the drag line will be situated. The coal, after being chuted out the back of the plant, will be picked up by the scoop, and dragged to whatever part of the pile it is desired, by attaching the cable to the most convenient post. When it is necessary to use the coal from the storage pile, the operation will be reversed, the coal being

As mentioned, the plant is designed so as to be capable of extension to double its initial capacity by the addition of a further bin of similar size to the original one, on

the elevator side of the plant. We are indebted to L. C. Fritch, Assistant to the President, C.N.R., for the information on which this article is based.

## Birthdays of Transportation Men in June.

Many happy returns of the day to:

Jas. Anderson, Manager, Sandwich, Windsor and Amherstburg Ry., Windsor, Ont., born at Ayr, Ont., June 20, 1851.

W. C. Bowles, General Freight Agent, Western Lines, C. P. R., Winnipeg, born at Montreal, June 3, 1875.

J. H. Boyle, Superintendent, District 3, Lake Superior Division, C. P. R., Schreiber, Ont., born at Waterloo, Que., June 26, 1869.

F. P. Brady, General Superintendent, National Transcontinental Ry., Quebec to Winnipeg, and Lake Superior Branch, G. T. Pacific Ry., Cochrane, Ont., born at Haverhill, N. H., June 22, 1853.

A. H. N. Bruce, M. Can. Soc. C.E., Ottawa, born at Ballyscullion, Ireland, June 18, 1854.

H. W. Brodie, General Passenger Agent,

A. Craig, City Passenger Agent, C. P. R., Hamilton, Ont., born there, June 5, 1884.

A. E. Doucet, M. Can. Soc. C.E., ex-District Engineer, National Transcontinental Ry., Quebec, born at Montreal, June 9, 1860.

E. W. DuVal, Superintendent, District 3, Saskatchewan Division, C. P. R., Saskatoon, born at Toledo, Ohio, June 5, 1885.

Knowlson Elliott, City Freight Agent, C. P. R., Calgary, Alta., born at Gorrie, Ont., June 26, 1884.

J. M. R. Fairbairn, M. Can. Soc. C. E., Assistant Chief Engineer, Eastern Lines, C. P. R., Montreal, born at Peterboro, Ont., June 30, 1873.

W. E. Foster, Solicitor for Ontario, G. T. R., Montreal, born at Belleville, Ont., June 27, 1866.

A. A. Goodchild, General Storekeeper, Eastern Lines, C. P. R., Montreal, born at Peckham, London, Eng., June 3, 1866.

H. W. Harding, Local Secretary, Canadian Northern Ry., London, Eng., born there June 6, 1869.

Hon. J. D. Hazen, M.P., Minister of Marine, Ottawa, born at Oromocto, N. B., June 6, 1860.

L. K. Jones, I. S. O., Assistant Deputy Minister Department of Railways and Canals, Ottawa, born at Port Hope, Ont., June 9, 1849.

A. C. Lytle, Assistant Superintendent of Construction, Montreal Tramways Co., Montreal, born at Hemmingford, Que., June 6, 1854.

R. S. McCormick, M. Am. Soc. C.E., Chief Engineer, Algoma Central and Hudson Bay Ry. and Algoma Eastern Ry., Sault Ste. Marie, Ont., born at Quaker City, Ohio, June 22, 1873.

Duncan McDonald, ex-General Manager, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., June 17, 1859.

S. J. McLean, Dominion Railway Commissioner, Ottawa, born at Quebec, June 14, 1871.

J. V. McNab, Resident Engineer, C. P. R., Moose Jaw, Sask., born at Ayr, Ont., June 11, 1884.

C. E. McPherson, Assistant Passenger Traffic Manager, Western Lines, C. P. R., Winnipeg, born at Chatham, Ont., June 7, 1861.

W. R. MacInnes, Freight Traffic Manager, C. P. R., Montreal, born at Hamilton, Ont., June 7, 1867.

H. J. Maguire, District Baggage Agent, British Columbia Division and B. C. and Pacific Coast Service, C. P. R., Vancouver, B. C., born at Toronto, June 16, 1881.

G. Manson, Assistant to the Vice President C. P. R., Montreal, born at Thurso, Scotland, June 8, 1863.

H. N. Merriam, ex-Division Engineer, Pacific Great Eastern Ry., Vancouver, B. C., born at Waupun, Wis., June 19, 1874.

J. D. Morton, Assistant Comptroller, Canadian Northern Ry., Toronto, born at London, Ont., June 15, 1857.

L. Mulkern, District Freight Agent, C. P. R., Toronto, born at London, Ont., June 18, 1871.

J. E. Pinault, General Superintendent, Canada and Gulf Terminal Ry., Mont Joli, Que., born at Rimouski, Que., June 24, 1884.

F. R. Porter, Assistant General Freight Agent, Grand Trunk Pacific Ry., Winnipeg, born at Stratford, Ont., June 13, 1875.

100 Ton Coaling Plant for Canadian Northern Railway Divisional Points.

dragged over to the coaling plant, being run into the receiving hopper, and then elevated into the pocket in the manner before described. This installation is in the nature of an experiment, and if successful, will possibly be applied to the other plants.

Lines West of Revelstoke, C. P. R., Vancouver, B. C., born at Fredericton, N. B., June 8, 1874.

G. W. Coburn, Resident Engineer, C. P. R., Brandon, Man., born at Upper Melbourne, Que., June 24, 1877.

F. Price, Superintendent of Car Service, G. T. R., Montreal, born there, June 11, 1864.  
 Allan Purvis, Superintendent District 2, Ontario Division C. P. R., London, Ont., born at Batavia, Java, June 29, 1878.  
 L. G. Rogers, Assistant Superintendent, Division 1, Ontario Division, C. P. R., Trenton, Ont., born at Richford, Vt., June 18, 1874.  
 N. Van Wyck, Freight Claims Agent, Can-

ada Steamship Lines Ltd., Montreal, born at Hamilton, Ont., June 29, 1883.

V. G. R. Vickers, Manager, Foreign Department, and Superintendent, Atlantic Division, Dominion Express Co., Montreal, born at Toronto, June 1, 1866.

Walter White, Trainmaster, G. T. R., Palmerston, Ont., born at Toronto, June 4, 1866.

## Reconstruction of Canadian Pacific Railway Bridge Over Lachine Canal.

The accompanying illustrations show the reconstructed C.P.R. bridge over the Lachine canal near Montreal. It is unique in many respects, and the swing span is moved with ease, although a weight of 758 tons swings upon the central pivot. From the time that the railway traffic is closed till the moment when the waterway is open for steamship traffic is only 70 seconds. The danger signals on the approaches are automatically adjusted before any movement can be made.

The object in reconstructing the bridge was to complete the second track between Montreal and Brigham Junction, 49.5 miles from Montreal on the Montreal-St. John, N.B., line, this being the only single track structure left between the two points, and occasioning slight delays owing to the converging tracks at both approaches to the bridges. P. B. Motley, Engineer of Bridges, C.P.R., found it possible to design a double track swing-bridge in such a manner as to utilize the old pivot pier without decreasing the waterway for traffic on the canal, using a type of bridge consisting of four deck plate girders instead of the original lattice truss construction.

This plate girder swing span is said to be the longest plate girder span of its kind ever built, being 239 ft. 7 ins. long and 13 ft. 6½ ins. deep in the centre, reduced to 8 ft. ½ in. at the ends measured from back to back of flange angles. The 4 girders were each shipped in three pieces from the Dominion Bridge Co.'s shops, which are near the bridge site, and were lowered into place by heavy derricks. When all the parts were assembled, they were rivetted up into their completed lengths, after which the operating machinery was installed. The use of 4 girders was dictated by the necessity of maintaining traffic while the

There is also a 90 ft. span at the south end of the bridge to accommodate the existing roadway and admit of the running of a railway track along the south canal bank in the future. This span weighs about 143 tons, making a total of 758 tons for the whole bridge. The total cost was \$233,000.

The electric operating power is carried by submarine cables under the canal to the centre pier, and there supplied to duplex 30 h.p. motors, which are controlled from the operator's house on the north bank of

tions, and considering the nature of the work and the tonnage erected, the speed of the work is certainly remarkable.

The bridge is protected by the most modern interlocking machinery, so as to make it impossible for a train to approach the bridge before it is properly closed and safely locked, and, in addition, it is impossible for the operator to open the bridge for canal traffic until all railway traffic is stopped at a safe distance from the bridge—all of these operations being carried out from the signal tower, which commands a view up and down the canal even when trains are passing over the bridge. The structure is also provided with a system of lights for the protection of shipping on the canal, and gives a much clearer view along the track than formerly, as there is no overhead lattice work projecting above the rail level.

### Order re Hand Rails and Steps for Reaching Locomotive Headlights.

The Board of Railway Commissioners passed general order 140, April 13, as fol-

C.P.R. Bridge Over Lachine Canal with Swing Span Open.

the canal, and, in addition, a spare 30 h.p. motor is kept on hand in the house in case of emergency. The house is entirely of fireproof construction.

Not only is the design of the structure interesting, but the rapidity of construction is also noteworthy. Work was started on the substructure on Dec. 1, 1914, which involved the demolition of the old south single-track abutment, and the building of a new double track abutment behind it, likewise the removing of a certain amount of earth embankment and the widening of the old one to accommodate the new double track. It also included the extension of the

lows:—Re complaint of W. L. Best on behalf of Brotherhood of Locomotive Firemen and Enginemen against the failure of railway companies properly to equip their locomotives with safe and adequate facilities for reaching headlamp when necessary for employees to light and give other necessary attention to this part of the locomotive; and re general order 102, Feb. 17, 1913, prescribing rules and regulations respecting safety appliances on trains. Upon hearing what was alleged by the representatives of the Wabash, Canadian Pacific, Quebec, Montreal & Southern, Canadian Northern Ontario, Canadian Northern Quebec, Canadian Northern, Ottawa & New York, Grand Trunk, Grand Trunk Pacific, Central Vermont, Michigan Central, New York Central & Hudson River, and Rutland Railways, the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, at a conference had with the Board's operating officers, at Ottawa, April 8, the railway companies unanimously consenting to the proposed amendment: It is ordered that general order 102 be amended by adding to the clause with the heading, "Handrails and Steps for Headlights," in the second last paragraph of the regulations, the words, "and headlight equipment," so as to make the said clause read as follows:

"Handrails and Steps for Headlights: Locomotives having headlights which can not be safely and conveniently reached from pilot beam or steam-chests shall be equipped with secure handrails and steps suitable for the use of men in getting to and from such headlights and headlight equipment."

To curve rails for curves down to 3 degrees is the tendency on the better maintained roads, the object being to obtain a better riding track and one that may be maintained to line more easily.

C.P.R. Bridge Over Lachine Canal, with Swing Span Closed.

demolition of the old structure and building of the new was being carried on. By this plan it was possible to erect two girders on the upstream side of the old bridge, after which traffic was diverted into them, while the downstream side was altered and the other two girders erected, after which the four girders were connected by their lateral and other bracing. This operation saved the building of a special temporary wooden bridge alongside the old structure, as would otherwise have been necessary.

The weight of each of these girders is 112 tons and of the whole swing span 615 tons.

two piers on the upstream side towards the Lachine locks, one of which (the pivot pier), required considerable subaqueous work and bonding into the old stonework. The north abutment was extended in the same direction to accommodate the double track, and also to act as the lower storey for the operator's house. This substructure work was carried out during the winter, working 24-hour shifts most of the time, until the bridge seats were ready to receive the steel girders on Feb. 8.

During the progress of the work, no trains were delayed by any of the opera-

## Steam Railway Statistics for Year Ended June 30, 1914.

The table given in our last issue showed the financial results of the operations of steam railways for the year ended June 30, 1913. The following table gives the percentages and the principal statistical information compiled by the companies. The table published last issue and the one given below contain all the information given prior to 1910 in our compilation of these statistics, but the columns have been rearranged so as to combine in the first table the financial and in the second the statistical information:—

Name of Railway	Proportion of total Passenger service to train revenue to total earnings	Proportion of freight revenue plus switching revenue, &c., to total earnings	Revenue Train Mileage	Mileage of Non Revenue Trains	Earnings per Train Mile	Passengers Carried	Passengers Carried One Mile	Passenger Earnings per Train Mile	Tons of Freight Carried	Tons of Freight Carried One Mile	Freight Earnings per Train Mile

## The Bridging of the St. John River between St. Leonard, N.B., and Van Buren, Me.

An article on the bridge which has been built recently across the St. John River to connect the Bangor and Aroostook Rd. with the Intercolonial Ry. and the National Transcontinental Ry., and which was published in Canadian Railway and Marine

As stated in our May issue, the connecting line which has been built is 1.36 miles long, of which 1.19 miles is the property of the VanBuren Bridge Co., extending from the United States bank of the St. John River to a connection with and crossing of the

a signal tower at the N. T. R.

The river, which measures from bank to bank 970 ft., is crossed by a bridge consisting of 5 single track steel riveted lattice through spans of 160 ft. each (skew 77°), supported on two concrete abutments and four concrete piers, with approach embankments thoroughly protected by riprap.

The railway shown on the larger of the two accompanying plans as extending from St. Leonard to Campbellton, N. B., was built

The connection between New Brunswick and Northern Maine by the VanBuren Bridge.

World for May was received such a short time before publication date that it was impossible to have illustrations made to accompany it. We therefore give herewith plans showing the location of the bridge and the connecting railways.

National Transcontinental Ry., thence to a crossing of a C. P. R. branch line, and thence to a junction with the International Branch of the Intercolonial Ry.; the two grade railway crossings being protected by electric power interlocking signals controlled from

Line between St. Leonard and VanBuren, showing Connections and Crossings.

as the International Ry. of New Brunswick, by Thos. Malcolm, of Campbellton. It was acquired last year by the Canadian Government Railways, and is being operated as an Intercolonial branch line.

# Railway Mechanical Methods and Devices.

## Assembling Tender Trucks at Stratford Shops, Grand Trunk Railway.

A most valuable method of assembling tender trucks is in use in the G. T. R. shops at Stratford, Ont., and is shown in the accompanying illustration. In placing the truck spring between the spring plank and

the blocking, compressing the leaf springs below the bolster, allowing the introduction of the bolts, which are then secured in place by nuts.

This arrangement has proved very rapid in operation, and requires but a very short time for the whole operation, as compared to the slow process in the former method, outlined earlier in this article.

ing excellent satisfaction. The parts are few, and were reclaimed from the scrap pile, i. e., one four wheel truck equalizer, one 14 in. brake cylinder and an auxiliary reservoir, in fact it would not be necessary to use the reservoir were it not for the machine being a long distance from the main storage tank. The part we had to have manufactured was the knife block, which

Assembling Tender Trucks under Special Hydraulic Arrangement.

truck bolster, it is necessary to apply pressure to the spring in order that the nuts on the truck column bolts may be applied, as the spring after assembling is compressed about 3 ins. The usual practice is to build up a framework encompassing the spring plank and bolster, with a portable hydraulic jack between the bolster and the upper cross beam of the frame to compress the spring. This was the process used in these shops up to recently, but as the application of this framework and the introduction of the hydraulic jack was a very laborious task, taking a long time, it has been abandoned for the method shown in the illustration.

This new method employs a special framework with suspended hydraulic jacks, the whole arranged in such a manner as to require a minimum of manual labor. Four cut down bridge columns arranged in pairs, form an overhead crane runway about 8 ft. above the floor level. A light weight rail between the columns supports a travelling crane also made of light rails. Two hydraulic cylinders, each with a 10 in. piston, are suspended by light trolleys to the travelling crane. From front and rear of the cover casting of each cylinder, there are two part suspending eye bolts, 2 ins. diameter, between the lower ends of which there is a forged bar for a crosshead. Hydraulic power is received from an accumulator about 100 yards down the shop, and is transmitted through two regulating valves, one for each cylinder and mounted on a frame work on the far side of the machine, through an armoured hose to the cylinders.

The truck parts are mounted on a two rail stand beneath the cylinders. The spring plank rests on the lower crosshead when the latter is swung up into place. The hydraulic cylinder rams are blocked up over the bolster, so that when power is let into the cylinders, the plungers force down on

## Air Operated Shearing Machine on Canadian Northern Quebec Railway.

By H. J. White, General Foreman, Car Department, Joliette, Que

A blacksmith's shop is a place where the absence of a good shearing machine is badly felt. This discrepancy was very prominent in our passenger car blacksmith shop at

Drills for Rod Oil Cup Holes.

weighs 285 lbs. The base is of oak, with I beam reinforcement (the beams were reclaimed from old bridge material). The guide at the cylinder end of shears is made from 3 x 3/4 mild steel, with two liners of 3 in. angle iron. The cylinder is operated by a pedal arrangement, thus leaving the operator with both hands free.

The machine easily shears 1 1/4 round or

Air Operated Shearing Machine, Canadian Northern Quebec. Ry.

Tool for Driving Staybolts Without Square Heads.

Quebec, and railway conditions being anything but prosperous, I did not care to approach the management with a request to purchase such a machine. On going into the matter with the Passenger Shop Foreman, J. S. Jackson, we decided to construct one ourselves and the accompanying illustration shows the result of our labor.

These shears are working daily and giv-

1 x 2 inch bar with 85 lbs. pressure of air. We find it excellent when reclaiming bolts. The laborer collecting used bolts in the shop culls all bolts at the machine and passes them on direct to the threading machine. A good point of the machine is that it is fool proof. If the operator puts in a piece of material for shearing which is beyond the capacity of the machine, it simply refuses to

cut, whereas with a belt driven machine, such a case would result in broken gear, etc., and the machine would consequently be out of service for several days.

The cost of construction was \$40. Scrap material which is now reclaimed, made possible by the use of this machine, amounts to about \$25 a month, and as a labor saving device it is worth \$45 a month to the car department alone.

### Drills for Rod Oil Cup Holes, at Stratford Shops, Grand Trunk Railway.

A type of fluted reamer drill of the form shown in the accompanying illustration is used in drilling out the oil cup holes in the G. T. R. shops at Stratford, Ont. The holes are first drilled the size of the opening from the oil pocket into the bearing, and with this as a guide for the tip of the reamer drill, the latter is sunk into the work.

The drills are made of high speed steel, and are fitted on soft steel shanks, as the two outer drills show, the centre two showing the high speed steel section. The cutting end is given a guiding tip, and the body is fluted with either straight or spiral fluting.

### Staybolt Driver at Pere Marquette Railroad Shops.

The accompanying illustration shows a staybolt driving tool as used in the Pere Marquette Rd. Shops, St. Thomas, Ont., which has the advantage of not requiring the staybolts to be squared in the head, as usually practised. The tool consists of a soft steel body, with a taper shank, bored out at the opposite end slightly larger than the staybolt diameter. In one side of the body there is a slot,  $\frac{3}{8}$  in. wide, in which is pinned a high speed steel block,  $\frac{3}{8}$  in. thick and 1 in. square, the periphery of which is milled with teeth. The turning of the tool with a staybolt inside, causes this square block to make a partial turn, gripping the round head of the staybolt.

### Rubber Tensile Testing Machine on Intercolonial Railway.

By G. E. Davidson, Assistant Test Engineer, Moncton, N. B.

The quality of water and air hose depends largely on the quality of the rubber used in its manufacture and those whose business it is to purchase such hose generally judge of its value by cutting a small piece from the rubber lining to feel its elasticity by stretching it. The better the rubber the better the hose. Good rubber stretches like a rubber paper band while the rubber used in inferior hose has so little elasticity that it can scarcely be noticed. The M. C. B. specification for air brake hose embraces this fact and it calls for a definite amount of elasticity and strength.

The accompanying illustration shows a machine for testing the elasticity and strength of rubber used in the formation of air brake, air signal and steam hose, in accordance with the requirements of M. C. B. A. recommended specification. It was designed by the writer at the test laboratory at Moncton shops.

The frame, of  $\frac{5}{8}$  in. bar brass, is 35 ins. high, fitted with brass sockets with base of walnut. At A is shown the piece of rubber to be tested. These sections are cut out of the inner and outer tubes of the hose, and shaped by a specially designed die. They are first made in strips 1 in. wide, and 5 ins. long, and then cut down to  $\frac{1}{2}$  in. wide for a distance of  $2\frac{1}{2}$  ins. at centre. The test

pieces are held at each end by wooden grips, B.

The elasticity of the rubber is determined by the distance (marks placed 2 inches apart), it will stretch before breaking. The required elongation for test pieces taken from air and signal hose is 10 inches, but for steam hose, other qualities than elasticity are essential to withstand the severe effect of the steam on the rubber, and a stretch of 6 ins. is considered good for steam hose. The strength of the test piece is indicated on the spring C (capacity 50 lbs.) and should show a strength of from 800 to

outer face of the cone b, there is a four part ring, e, held together by a spring in an annular groove around the outer face. Several sizes of these rings are employed, to accommodate varying inside diameters of bushings; one of the rings is shown at f. The bushing to be slotted g, is slipped over the ring, and held in place by a clamp on the outer end of the pin d. The cone b is indexed with holes corresponding to the number of slots to be milled, the index pin being in the back face of the face plate. With this indexing as a guide, the first hole is set up, the bushing centred, and the mil-

Rubber Tensile Testing Machine.

1,200 lbs. a square inch. Bevelled gear in box, D, with crank regulates the travel of the spindle, E, the maximum travel being 12 inches.—Can. Gov. Ry.'s Employees' Magazine.

### Milling Slots in Piston Valve Bushings, at Michigan Central Railroad Shops.

The customary practice in machining the steam passage slots in piston valve bushings, appears to be the use of the end mill, with the bushing mounted on a table in front of the mill. This was the practice in the Michigan Central Rd. Shops at St. Thomas, Ont., until recently. The bushings used on the company's locomotives have either 7 or 9 slots. Milling these out with the end mill in the usual manner, the cost was 40 cts. per slot; with the method now employed the cost has been reduced to 40 cts. for the whole set of holes, a reduction of from 80% to 90%.

The jig and tools employed in this new method are shown in the accompanying illustration. The jig consists of a special face plate a, pivoted on the front of which is a tapered cone b, the larger end of which is away from the face plate, towards which it may be forced by the hand wheel c, on the inner end of the pivotal pin d. Around the

Jig and Tools for Milling Piston Valve Bushing Slots.

ling arbor h, sunk into the slot the required depth. The operation is performed on a horizontal miller.

**Railway Construction Balances in Alberta.**—The proceeds of the securities of the various railways building lines under a provincial guarantee of bonds are held in the banks at Edmonton and paid out by the Provincial Treasurer, on receipt of authenticated construction certificates. The Premier informed the Legislature recently that the following balances were on hand to meet certificates as they were presented: Alberta and Great Waterways Ry., \$5,309,874.25; Canadian Northern Ry., \$1,118,969.85; Canadian Northern Western Ry., \$2,759,652.39; Grand Trunk Pacific Branch Lines, \$1.00; Edmonton, Dunvegan and British Columbia Ry., \$1,639,081.39; Lacombe and Blindman Valley Ry., \$140,186.91; Total, \$10,997,755.79. There had been paid to the several railways as interest on the proceeds of the bonds held awaiting expenditure: Alberta and Great Waterways Ry., \$1,302,276.47; Canadian Northern Ry., \$223,992.95; Canadian Northern Western Ry., \$88,149.29; Grand Trunk Pacific Branch Lines, \$107,676.34; Edmonton, Dunvegan and British Columbia Ry., \$270,105.15; Lacombe and Blindman Valley Ry., \$2,619.10; Total, \$1,995,119.30.

## Orders by Board of Railway Commissioners for Canada.

1. With June, 1914, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers have at all times a paper having a continuous record of the Board's proceedings. No other publication has this feature.

The dates given of orders, immediately following the numbers, are those on which the orders were drawn.

General order 102, Feb. 17, 1913, re handrails and overhead headlight. This order is given in full in another page.

General order 141, Apr. 15.—Dismissing application for removal of application dealing with Sec. 8, which is reserved for further consideration.

General order 142, Apr. 17.—Amending the terms and conditions endorsed on Express Merchandise Receipts.

General order 143, Apr. 29.—Ordering railway companies to make refunds on unused tickets within specified times. This order is given on another page.

23545, Apr. 13.—Authorizing C.P.R. to remove regular agent at St. Constant Station, Que.

23546, Apr. 16.—Relieving C.P.R. from speed limitation of 25 miles an hour on its Weyburn-Stirling Branch, mileage 0 to 49.2 east of Stirling Ave.

23547, Apr. 14.—Approving clearances between G.T.R. and poles carrying G.N.W. Telegraph Co. and railway wires between Guy St. and St. Henri Station, Montreal, Que.

23548, Apr. 16.—Dismissing complaint G. E. Earl and others of Winchester, Ont., against proposed withdrawal by Bell Telephone Co. of its service there.

23549, Apr. 13.—Ordering C.P.R. and Canadian Northern Ry. to flag all switching movements over Victoria St., Tweed, Ont.; speed over crossing limited to 10 miles an hour.

23550, Apr. 14.—Approving Salisbury and Albert Ry. Standard Freight Tariff, C.R.C., 3, effective Apr. 1.

23551, 23552, Apr. 19.—Approving Western Dominion Ry. location from main line, as located, in Sec. 26-6-30, w. 4 m., to south fork of Old Man River, near McDonald coal mines in Kootenay Pass, Alta., 30.78 miles, and from Pincher Creek station to international boundary in Sec. 2-1-23, w. 4 m., mileage 1 to 68.36, Alta.

23553, Apr. 16.—Approving agreement between Bell Telephone Co. and North Easthope Tp., Ont., March 27.

23554, Apr. 15.—Authorizing Kettle Valley Ry. to connect with Vancouver, Victoria and Eastern Ry. at Princeton, B.C.

23555, Apr. 17.—Authorizing G.T.R. to build extension of siding for Beaver Board Co., on Lot 48, Con. 1, Thorold Tp., Ont.

23556, Apr. 19.—Authorizing C.P.R. to use bridge 65.4, Havelock Subdivision, near Addington station, Ont.

23557, Apr. 15.—Authorizing C.P.R. to divert original road allowance along north boundary of Sec. 12-8-17, w. 2 m., at mileage 15.08, Weyburn-Stirling Branch.

23558, Apr. 19.—Extending to May 31 time within which C.P.R. was required to complete certain branch lines in York Tp., Ont., for Canadian Kodak Co.

23559 to 23561, Apr. 19.—Authorizing C.P.R. to use bridges 67.8, Havelock Subdivision; 5.7, Toronto Subdivision, and 75.6, Havelock Subdivision, Ont.

23562, Apr. 19.—Approving C.P.R. clearances of entrances to locomotive repair shop at Schreiber, Ont.

23563, Apr. 19.—Amending order 23454, March 25, re highway over C.P.R. in Burwash Tp., Ont.

23564, Apr. 19.—Approving C.P.R. clearances at door openings into car repair shops at Schreiber, Ont.

23565 to 23568, Apr. 19.—Authorizing C.P.R. to operate bridges 24.1, Toronto Subdivision; 56.5, Havelock Subdivision; 10.7 and 5.75, Toronto Subdivision, Ont.

23569, Apr. 16.—Approving C.P.R. clearances on siding of Masson Milling and Trading Co., at mileage 100.10, Ottawa Subdivision, Ont.

23570, Apr. 16.—Approving proposed Supplement 7 to Express Classification for Canada, '3.

23571, Apr. 19.—Approving agreement between Bell Telephone Co. and Sutton and North Gwillimbury Telephone Co., Apr. 1.

23572, Apr. 21.—Ordering C.P.R. forthwith to reduce its rate on alfalfa meal, in carloads, from Enderby to Duncan, B.C., to 30c. per 100 lbs.

23573, Apr. 21.—Approving change in location of G.T.R. siding for Breithaupt Leather Co., Berlin, Ont.

23574, Apr. 21.—Authorizing Drury, Denison and Graham united municipalities, Ont., to build highway crossing over Algoma Eastern

Ry. between Lots 6 and 7, Con. 2, Drury Tp., Ont.

23575, Apr. 20.—Ordering G.T. Pacific Ry. to build highway crossing over its tracks opposite Kyle Ave., Vanderhoof, B.C.

23576 to 23578, Apr. 20.—Relieving C.P.R. from providing further protection at highway crossings near Drummondville Jct., Que; Thorah Tp., Ont., and Leonard station, Ont.

23579, Apr. 20.—Approving C.P.R. siding and two branches for Alberta Portland Cement Co., Sandstone, Alta.

23580, Apr. 21.—Authorizing G.T.R. to move south gate at crossing of Niagara St., St. Catharines, Ont.; Niagara, St. Catharines and Toronto Ry. to pay cost of moving and altering gates, and thereafter to pay G.T.R. half maintenance and half wages of watchman.

23581, Apr. 20.—Approving agreement between Bell Telephone Co. and Ivy Thornton Telephone Co., July 17, 1912.

23582, Apr. 21.—Authorizing Canadian Northern Ry. and C.P.R. to operate over crossing in Sec. 31-29-9, w. 3 m., Sask., without first stopping.

23583, Apr. 21.—Relieving C.P.R. from speed limitation on trains on its Swift Current to Brooks Branch, mileage 0 to 33, Sask.

23584, Apr. 21.—Approving agreement between Bell Telephone Co. and Aberdeen-Plummer Centre Line Telephone Association, Mar. 9.

23585, 23586, Apr. 22.—Relieving C.P.R. from speed limitation of 30 miles an hour, mileage 0 to 28.2, and of 15 miles an hour, mileage 28.2 to 84.2, on its Kipp-Aldersyde Branch, Alta.

23587, Apr. 21.—Approving location of C.P.R. station shelter at Lot 31, Con. 1, Darlington Tp., Ont.

23588, Apr. 21.—Authorizing G.T.R. to build siding at Bridgeburg, Ont., for Tuttle & Bailey Mfg. Co.

23589, Apr. 22.—Ordering Canadian Northern Ry. to rebuild fence on each side of track between mileage 40 and 41, Rapid City Subdivision, Man., work to be completed by May 31.

23590, Apr. 22.—Ordering Canadian Northern Ry. to put 12 in. corrugated iron pipe under embankment at mileage 40.7, on C. A. Biccum's property, Cardlaw, Man.

23591, Apr. 22.—Amending order 23550, Apr. 14, re Salisbury and Albert Ry. Tariffs, by substituting Albert for Harvey when it occurs in the name of the railway.

23592, Apr. 26.—Approving revised location of C.P.R. Swift Current Northwesterly Branch from mileage 111.95 to 122.58, Alta., and rescinding order 22825, Nov. 5, 1914.

23593, Apr. 26.—Extending to June 1 time within which C.P.R. shall install gates at crossing of Park Ave., Montreal.

23594, Apr. 24.—Approving C.P.R. clearances at Thomas Organ Co.'s siding, mileage 87.64, London Subdivision, Ont.

23595, Apr. 24.—Authorizing C.P.R. to build tunnel at mileage 40.4, Boundary Subdivision, B.C.

23596, Apr. 22.—Amending order 22691, Oct. 9, 1914, re C.P.R. grade separation at North Toronto, Ont., to provide that approach to subway at Yonge St., on southerly side, shall have grade of 5%, instead of 2½% as shown on plan referred to in par. 1 of order.

23597, Apr. 27.—Relieving C.P.R. from speed limitation of 15 miles an hour on its Lacombe Easterly Branch, between Castor and Coronation, Alta.

23598, Apr. 22.—Authorizing Esquimalt and Nanaimo Ry. to build highway crossing between Secs. 4 and 11, Bright District, B.C.; cost to be paid by B.C. Public Works Department, E. & N. Ry. to close Brenton's Crossing at that point.

23599, Apr. 22.—Ordering C.P.R. to stop trains 21 on flag at Kempton, Ont., and 22 when desired by passengers for Kempton.

23600, Apr. 27.—Authorizing C.P.R. to use bridge 53.2 near Arnprior, Ont.

23601, Apr. 27.—Approving plan and specifications of drainage works to be built under G.T. Pacific Branch Lines Co. and Canadian Northern Ry. near Canora station, Sask.

23602, Apr. 24.—Authorizing G.T.R. to build siding for Sarnia Metal Products Co., Sarnia, Ont.

23603, Apr. 27.—Approving C.N. Quebec Ry. revised location at Shawinigan River, mileage 86.69 from Quebec.

23604, Apr. 27.—Authorizing Town of Montreal East, Que., to build Marien Ave. across C.N. Quebec Ry.

23605, 23606, Apr. 28.—Relieving C.P.R. from speed limitation of 15 miles an hour on extension of its Lacombe Branch from Stettler to Castor, mileage 49.6 to 85; and of 20 miles an hour on its Coronation Subdivision, Kerrobert to Monitor, mileage 0 to 74.6, Alta.

23607, Apr. 27.—Authorizing Lake Erie and Northern Ry. to build across Graham Ave., Brantford Tp., Ont.

23608, Apr. 29.—Authorizing Van Buren Bridge Co. to open for traffic its line from con-

nection with Intercolonial Ry. International Branch, near St. Leonard, N.B., to International boundary, about 1.42 miles.

23609, Apr. 29.—Authorizing Canadian Northern Ry. to build across road between Secs. 28-29, Tp. 19, R. 22, w. 2 m., Sask.

23610, Apr. 28.—Authorizing Algoma Central and Hudson Bay Ry. to remove regular agent at Frater station, Ont.

23611, Apr. 28.—Approving Toronto, Hamilton and Buffalo Ry. plans showing automatic block signals to be installed between Hamilton and Brantford, Ont.

23612, Apr. 28.—Relieving Central Vermont Ry. from providing further protection at crossing of public highway, ¼ mile north of Stanbridge East station, Que.

23613 to 23617, Apr. 27, 28.—Ordering Bell Telephone Co. to raise its wires at five points on the London and Port Stanley Ry., at expense of the London Railway Commission, London, Ont.

23618 to 23623, Apr. 27, 28.—Ordering Bell Telephone Co. to raise its wires at 6 points on the London and Port Stanley Ry., at expense of the London Railway Commission, London, Ont.

23624, Apr. 29.—Authorizing Van Buren Bridge Co., National Transcontinental Ry. and C.P.R. to operate over crossings in St. Leonard Parish, N.B., without first stopping; and relieving them from maintaining night signalman to operate interlocking plants there.

23625, Apr. 29.—Authorizing C.P.R. to open for traffic its Arbog Subdivision, mileage 46.5 to mileage 47.7, Man.

23626, Apr. 28.—Dismissing G.T.R. application for order amending order 22317, July 24, 1914, to provide that Standard Crushed Stone Co. shall convey necessary right of way to applicant.

23627 to 23630, Apr. 29.—Authorizing Canadian Northern Ry. to build across public roads at 4 points in Saskatchewan.

23631, Apr. 28.—Approving agreement between Bell Telephone Co. and Rose Mutual Telephone Association, June 15, 1914, as transferred to Rose Telephone Co. of Algoma, Ltd.

23632, Apr. 28.—Rescinding order 10019, Mar. 30, 1910, and approving agreement between Bell Telephone Co. and Woodbridge and Vaughan Telephone Co., Apr. 20.

23633, Apr. 30.—Approving C.P.R. plan showing signals controlling crossing switches between Kingston and Havelock Subdivisions at Sharbot Lake, Ont.

23634, Apr. 30.—Authorizing G.T. Pacific Ry. to remove diamond at crossing of Edmonton Interurban Ry. at 27th St., Edmonton, Alta.

23635, Apr. 30.—Approving location of C.N. Alberta Ry. combined station and section house at Villeneuve.

23636, May 1.—Extending to May 17 time for commencing service between Quebec Oriental Ry. eastbound train and the I.R.C. Ocean Limited, as provided in order 23106, service thereafter to be from May 1.

23637, Apr. 27.—Ordering Great North Western Telegraph Co. to raise its wires at crossing of London and Port Stanley Ry., near Elm St., St. Thomas, Ont.

23638, Apr. 28.—Dismissing American Coal and Coke Co.'s application for re-hearing of complaint that Michigan Central Rd. has been holding cars for orders at Windsor, Ont., and has refused to take coal to Detroit, Mich., until such orders were received.

23639, Apr. 30.—Authorizing Berlin and Northern Ry. to operate over G.T.R. on Wellington St., Berlin, Ont., without first stopping; speed limited to 15 miles an hour; and amending order 21778, May 7, 1914.

23640, Apr. 30.—Prohibiting G.T.R. from allowing cars to stand on side track west of main track at crossing of Grey St., Brantford, Ont., closer than 150 ft. from street line.

23641, Apr. 13.—Amending order 23406, Mar. 12, re highway crossing of C.P.R. in Sec. 21-12-28, w. 3 m., Sask.

23642, May 1.—Ordering C.P.R. to build farm crossing, with gates, near Station 2450, about mileage 46.4, for R. G. Shackleford, Keyes, Man.

23643, May 3.—Authorizing C.P.R. to remove regular agent at Pointe au Chene, Que., and caretaker to be appointed.

23644, May 3.—Authorizing G.T. Pacific Ry. to remove regular agent at Uno station, Man., caretaker to be appointed.

23645, May 3.—Authorizing C.P.R. to build spurs for F. Gobeille and Daoust, Lalonde & Co., Montreal.

23646, May 3.—Ordering Canadian Northern Ry. to commence fencing its line between mileage 39 and 55.7, Jackfish Branch, and complete same with all dispatch.

23647, Apr. 30.—Authorizing C.P.R. to operate over bridge across Pitt River, mileage 109.7, Cascade Subdivision, B.C.

23648, May 3.—Authorizing Lake Erie and Northern Ry. to build across Mount Pleasant Road, Brantford Tp., Ont.

23649, May 3.—Relieving G.T. Pacific Branch Lines Co. from erecting fences, gates, and cattle guards on its Regina-Boundary Branch, at mileage 147.57 and 147.59.

### Railway Finance, Meetings, Etc.

**Canadian Northern Ry.**—The following notice was issued towards the end of April: "The directors regret that the net earnings for the half year ended Dec. 31, 1914, are insufficient to enable them to declare any dividend to be payable on the 5% income charge convertible debenture stock on May 2, and they think it proper to point out to the holders of that stock that the earnings of the railway for the first nine months of the current financial year have been so reduced by conditions arising from the war that it is unlikely that any interest on the stock will be payable in Nov. next. The directors hope that a large crop will so improve business conditions throughout the Dominion that the payment of interest may be resumed in 1916. It has been represented to the directors that an effect of the war has been to postpone the rapid development of business on the railway and consequently to postpone the value of the option to holders of the 5% income charge convertible debenture stock to convert their holdings into ordinary shares, which option expires on Jan. 1, 1919. The directors have therefore resolved to extend the period of the option for three years, and on each 1st of January and 1st of July until Jan. 1, 1922, the holders of the stock will have the option on 60 days previous notice of converting their stock into fully paid shares of the company at the fixed rate of \$100, or £20 11s. 5d., of this stock for each \$100 of shares."

**Grand Trunk Ry.**—The certificate of the chairman of a general meeting of shareholders held in London, Eng., April 15, states that a resolution had been passed assenting to the provisions of the G. T. Act of 1915. The act authorizes the G. T. R. to assist financially, either by the purchase of shares or otherwise, any subsidiary company. The reason for obtaining this act, it was stated to the Dominion Parliament, was that G. T. R. securities are more readily marketable than those of the subsidiary companies.

**Lake Erie and Detroit River Ry.**—The annual meeting was held at Detroit, Mich., May 4. The board for the current year is as follows: P. H. King, President; A. Leslie, Vice President; F. H. Alfred, H. L. McDowell and J. A. McDougall.

**Maritime Coal, Ry. and Power Co.**—The report for the year ended Feb. 28, shows gross profits of \$122,473, an increase of \$5,512, and net profits of \$111,211, an increase of \$20,076. With the balance of \$90,757 brought forward from the previous year there was a total of \$201,968 available for distribution, \$35,000 was transferred to general reserve and \$3,000 to depreciation and renewal reserve; bond interest amounted to \$93,601; \$3,842 was transferred to sinking fund reserve, \$7,869 written off securities and \$5,000 off coal stocks to provide for possible depreciation in value; leaving a balance of \$53,654 to be carried forward. The balance sheet shows total assets of \$3,825,365, of which \$3,416,950 represents property, plant, etc. Investments amount to \$56,500, cash \$26,828, accounts receivable \$132,074, and other liquid assets, including inventory, \$197,576. Current liabilities are \$56,440. With the additions for the year reserve funds total \$103,761. Following are the officers and directors: President, W. Hanson; Vice President, A. E. Dymont; Hon. N. Curry, G. R. Hulme, A. MacLaurin, Wm. L. Madgen, Hon. W. Mitchell, W. H. Tottier.

**New York Central Lines.**—It has been reported in New York by J. P. Morgan and Co., bankers, that substantially all of the \$100,000,000 of 20-year 6% convertible bonds recently offered to the company's shareholders have been subscribed for. The proceeds of the bonds will be used to fund

an equal amount of the company's present unfunded debt, and in the acquisition of property.

**The Pere Marquette Rd.** is to be sold on or before Oct. 1, under an order of the U.S. District Court, at Detroit, Mich.

**Toronto, Hamilton & Buffalo Ry.**—The Michigan Central Rd. report for the past fiscal year says: "This company advanced to the Toronto, Hamilton & Buffalo Ry. Co. during the year, on its promissory notes, bearing interest at 6% per annum, \$100,000,000, as its one-sixth proportion of the estimated cost of construction of The Erie & Ontario Ry., a new railway incorporated May 27, 1914, and extending from a connection with the T. H. & B. Ry. at Smithville to Port Maitland, Ont., on Lake Erie, about 18 miles. Agreement for amalgamation of this road with the T. H. & B. R. was approved by the Governor in Council Dec. 15, 1914 and was made effective on filing at Ottawa, Jan. 30, 1915. The road was completed and placed in operation Dec. 22, 1914, between Smithville and Dunnville, on the Grand River, 14.9 miles. It is expected, owing to the great natural facilities afforded at Dunnville and along the Grand River to Port Maitland, that the road will attract many industries to the territory which it serves."

### Inverness Railway and Coal Company to Default on Bond Interest.

A meeting of 5 per cent first mortgage bond holders will be held in Toronto, June 30, to consider resolutions to the following effect: That the payment of interest on bonds and payments of sinking fund be postponed until such time after the termination of the war as may be determined at the meeting; that the company may create prior lien securities; that defaults under the trust deed and bonds be waived and that the company retain possession of and operate the property as if no default had occurred.

The Inverness Ry. & Coal Co.'s railway extends from Point Tupper to Inverness, N.S., 61 miles, with a total track of 65.5 miles, laid with 56 lb. rails. It was chartered as the Inverness & Richmond Ry. Co., in 1887, the road being opened for traffic, June 15, 1901. In 1902 it was reorganized under the present corporate title and absorbed the Inverness-Richmond Collieries & Ry. Co. of Canada, Ltd. In addition to operating the railway it also operates a colliery at Inverness the output of which for the year ended June 30, 1913, the latest figures available, was 278,197 tons.

The company's general officers are: Sir Wm. Mackenzie, President; Sir Donald Mann, Vice President; L. W. Mitchell, Secretary and Treasurer, Toronto; J. McGilivray, General Manager, Inverness, N.S.

The funded debt consists of first mortgage 5 per cent. 20 year \$500 gold coupon bonds, due May 1, 1922, interest payable May 1 and No. 1. The total issue is \$3,000,000, of which at June 30, 1913, \$869,000 was held in the treasury as security for outstanding loans.

**The International Railway Fuel Association's** seventh annual convention was held at Chicago, Ill., May 17 to 20, when papers were read and discussed, treating with powdered coal, its preparation and use in locomotive and stationary boilers; fuel conditions in South America; analysis and dependent sequence as a guide to fuel economies; smoke prevention; standardization of coal preparation; fuel stations; relation of mechanical stokers to the fuel problem; fuel oil for locomotive use; waste of fuel in railway stationary plants, and storage coal.

23650. May 3.—Authorizing Lake Erie & Northern Ry. to build across Scarie St, Brantford Tp., Ont.

23651. May 3.—Approving Lake Erie & Northern Ry. revised location between Lorne Bridge and Harold Ave., mileage 21.1 to 21.9, Brantford, Ont.

23652. May 3.—Authorizing C.N. Ontario Ry. to build branch for Dominion Match Co., Deseronto, Ont.

23653. May 4.—Approving Kettle Valley Ry. revised location between mileage 69 and 70.14 west of Penticton, B.C.

23654. May 3.—Extending to June 15, time within which Great Northern Ry. shall install bell at Front St., near intersection of Columbia St., New Westminster, B.C.

23655. May 4.—Authorizing Canadian Northern Ry. to remove station agent at Mikado, Sask., caretaker to be appointed.

23656. May 4.—Ordering Edmonton, Dunvegan & British Columbia Ry. to build farm crossing for W. J. Hunt, Eunice, Alta.; fencing between mileage 60 and Athabasca Crossing, mileage 131, to be commenced at once and completed with all dispatch.

23657. May 4.—Ordering Ottawa & New York Ry. on and after May 30, to schedule its northbound morning train to arrive at Finch at 9.43 and leave at 9.48; and southbound and northbound evening trains at 5.50; and that C.P.R., on and after May 30, schedule its westbound morning local to arrive at Finch at 9.45, its eastbound morning local at 9.47, and its eastbound evening local at 5.50; both railways to hold trains, when necessary, for connection, up to 20 minutes after schedule time to leave Finch; and rescinding order 21751, Apr. 29, 1914.

23658. May 4.—Approving C.N. Ontario Ry. plan 33362 of subway to be built at St. Laurent Road, mileage 47.26 from Hawkesbury, at Cartierville, Que.

23659, 23660. May 5.—Authorizing C.P.R. to operate over bridge at Harrison Mills, B.C., without first stopping, and over bridge 16.6 over Eagle River, Shuswap, B.C.,

23661. May 6.—Authorizing Hydro-Electric Power Commission of Ontario to erect wires across C.P.R., at King St., Chatham, Ont.

23662. May 7.—Rescinding order 23541, Apr. 14, re night signalman at C. N. Quebec Ry. and National Transcontinental Ry. crossing at Tawachiche, Que.

23663. May 4.—Ordering Great Northern Ry. to provide daily (except Sunday) mixed train service on its Oroville-Princeton Subdivision, in each direction, commencing July 1, to remain in effect during fruit and vegetable shipping season.

23664. May 5.—Authorizing C.P.R. to build McMillan St., across its line at Elfrs, Sask.

23665. May 8.—Rescinding order 21522, Mar. 19, re stopping C.P.R. train 22 at St. Clet, Que.

23666. May 5.—Amending order 21959, June 9, 1914, to provide that Goyette, Lemoyne, Que., pay \$93 of cost of crossing 400 ft. east of west switch of passing siding, C.P.R. to pay \$50, being difference between cost of 36 in. and 18 in. pipe culvert.

23667. May 8.—Ordering that 20% (not exceeding \$5,000) of cost of building subway across Westminster Road (13th St.) Lethbridge, Alta., be paid out of railway grade crossing fund; balance apportioned between railway and city proportionately.

23668. May 10.—Authorizing Lake Erie and Northern Ry. to operate for construction purposes only, over crossing of G.T.R. at Simcoe, Ont.; watchman at crossing to be appointed and paid by L. E. & N. R.

23669. May 11.—Authorizing C.P.R. to use bridge 67.9 on its Georgian Bay and Seaboard Subdivision, Ont.

23670. May 10.—Authorizing C.P.R. to build bridge 107.2 over Shaw's Creek, near Severn Falls, Ont., and rescinding order 23463, Mar. 29.

23671. May 8.—Rescinding order 23599, Apr. 22, and ordering C.P.R. to stop its westbound through passenger train, leaving Montreal at 10 p.m. daily, at Kempton, for passengers for Toronto, or points west thereof; and to stop its eastbound Montreal express leaving North Toronto at 10 p.m. daily, at Kempton, for passengers from Toronto, or points west thereof.

23672. May 11.—Authorizing C.P.R. to use bridge at Cornelia St., Smith's Falls, Ont.

23673. May 11.—Approving plan and specifications of Saskatchewan Board of Highway Commissioners, showing drainage works to be built under Canadian Northern Ry. in n. w. 1/4, Sec. 35-30-4, w. 2 m.; work to be done under supervision of C.N.R. engineer, and any dispute to be settled by the Board's engineer.

23674. May 10.—Authorizing, until Sept. 30, Canadian Northern Ry. to carry traffic over its Oakland Branch, Man., from mileage 42 to end of track, 12 miles; speed of trains limited to 12 miles an hour.

23675. May 10.—Approving Edmonton, Dunvegan & British Columbia Ry. revised location, mileage 305.60 to 331.77, Alberta.

23676. May 10.—Authorizing Michigan Central Rd. from providing further protection at crossing of Ontario Road, Welland, Ont.

23677. May 8.—Extending, for three months from date, time within which G.T.R. shall build siding connecting with Michigan Central Rd. branch in Crowland Tp., Ont.

# The Dominion Government Operates the National Transcontinental Railway.

The Canadian Government Railways having taken over, on May 1, the operation of the National Transcontinental Ry. from Moncton, N.B., to Winnipeg, and the Grand Trunk Pacific Ry.'s Lake Superior Branch from Fort William to Superior Jct., Ont., the jurisdiction of the heads of departments of the C.G.R. at Moncton, has been extended over these lines.

F. P. BRADY, heretofore General Superintendent, Canadian Government Rys., Moncton, has been appointed General Superintendent, National Transcontinental Ry. between Quebec and Winnipeg, and the Grand Trunk Pacific Ry.'s Lake Superior Branch between Fort William and Superior Jct. Office, Cochrane, Ont.

J. K. McNEILLIE, heretofore Superintendent, District 3, Eastern Division, C.P.R., who has been appointed to succeed F. P. Brady as General Superintendent at Moncton, N.B., will have jurisdiction over the N.T.R. east of Quebec as well as the I.C.R. and P.E.I.R.

A. J. GORRIE, at one time General Superintendent, Canadian Northern Quebec Ry., and subsequently receiver Quebec & Lake St. John Ry., has been appointed Superintendent, District 1, N.T.R., Quebec to O'Brien, Ont. Office, Quebec, Que.

J. J. McMANUS has been appointed Assistant Superintendent, District 1, Quebec to O'Brien, Ont. Office, Quebec, Que.

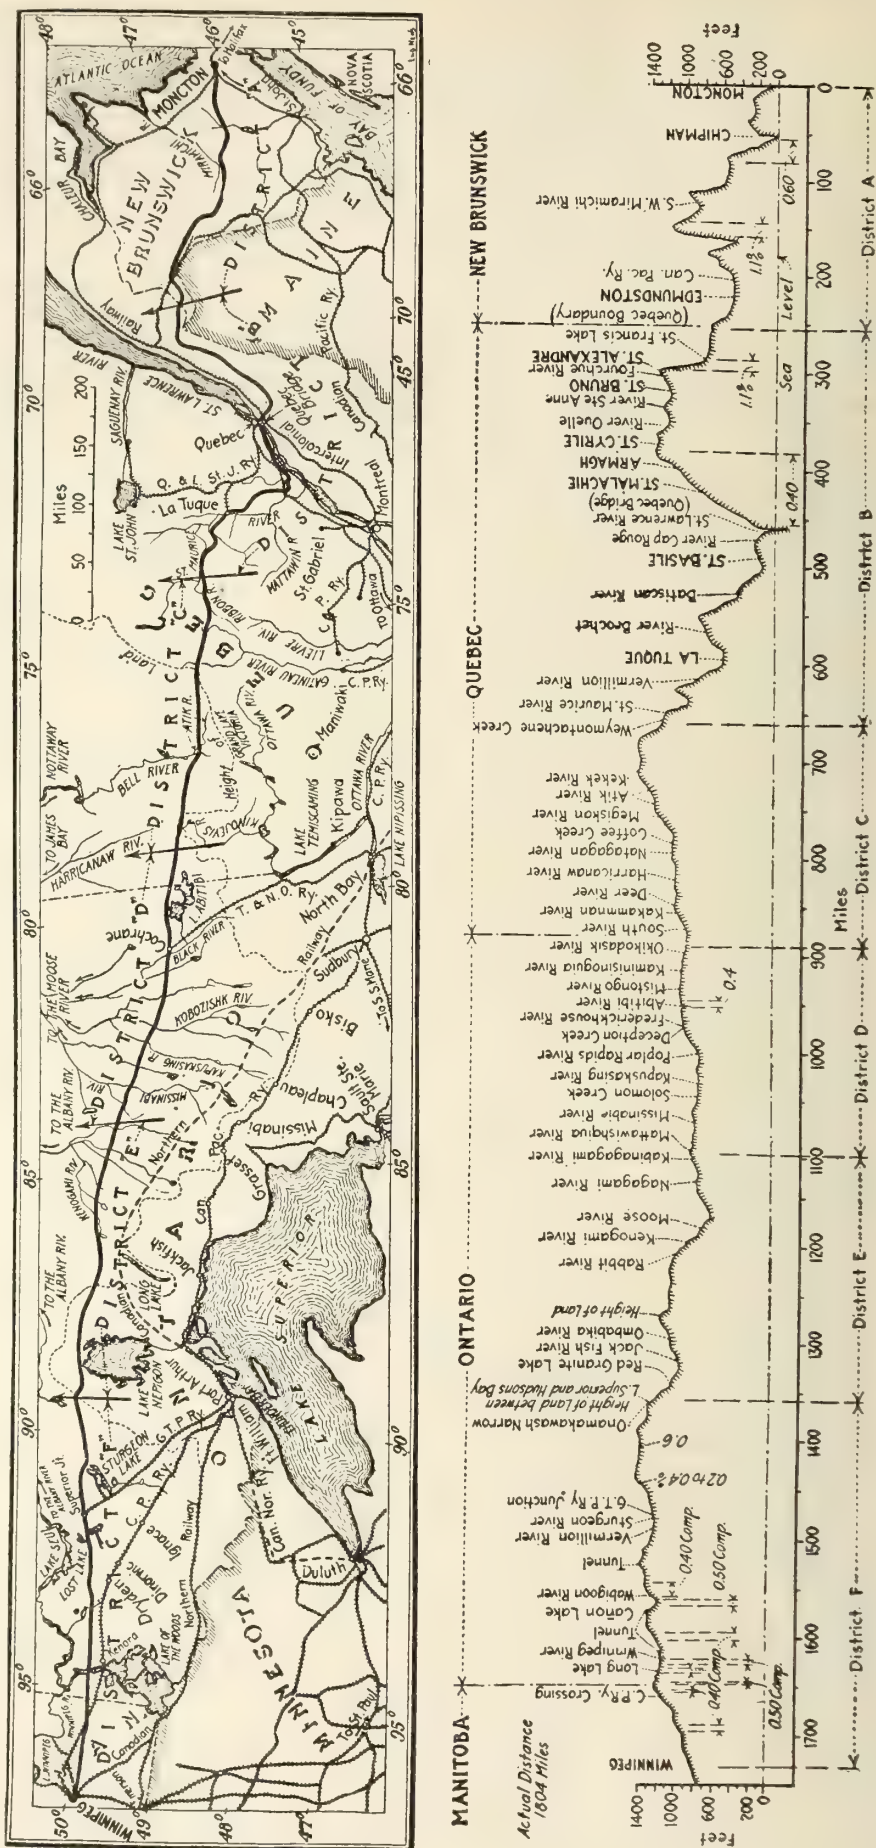

W. B. WAY, heretofore Inspector of Transportation, Eastern Lines, C.P.R., Montreal, has been appointed Superintendent, District 2, N.T.R., O'Brien to Armstrong, Ont., excluding O'Brien. Office, Cochrane, Ont.

H. A. RYAN, heretofore Assistant Superintendent, N.T.R., between Edmundston, N. B., and St. Chrysostome, Que., at Monk, Que., has been appointed Assistant Superintendent, N.T.R., District 2, O'Brien to Armstrong, Ont., excluding O'Brien. Office, Cochrane, Ont.

R. S. RICHARDSON, heretofore Assistant Superintendent, District 3, I.R.C., Moncton, N.B., has been appointed Superintendent, District 3, N.T.R., Armstrong, Ont., to Winnipeg, excluding Armstrong and Superior Jct. to Fort William, Ont. Office, Winnipeg.

Quebec Press Dispatch, May 23.—"The first through train over the N.T.R. from Winnipeg reached here at 9.30 p.m. yesterday consisting of two cars, carrying officials, including: F. P. Gutelius, General Manager Canadian Government Railways; F. P. Brady, General Superintendent; C. A. Hayes, General Traffic Manager; H. H. Melanson, General Passenger Agent; C. B. Brown, Chief Engineer; W. A. Cowan, Divisional Engineer; Gordon Grant, Chief Engineer N.T.R., and others. The train left Winnipeg May 18, and travelled by day. The officials report the road in excellent condition, and announce the inauguration of the passenger service for June 1."

An act was passed by the Dominion Parliament in 1903 providing for the building of the National Transcontinental Ry. This act provided that the Dominion would build a line from Moncton, N.B., to Winnipeg, Man., while the Grand Trunk Pacific Ry. Co., incorporated by another act, was to build a line from Winnipeg to the Pacific Coast, the Dominion guaranteeing the company's bonds upon certain conditions. The line was to be laid out with 0.4% gradient against east bound traffic and 0.6% against west bound traffic, and the construction throughout was to be upon the most modern lines. The specifications for the eastern division to be built under the charge of the

Map and Profile, National Transcontinental Railway, Moncton, N.B., to Winnipeg, Man., 1804.5 miles.

Commissioners of the National Transcontinental Ry., were to be subject to the approval of the Grand Trunk Pacific engineers, while the Western Division was to be built by the G.T. Pacific Ry. under the inspection of an engineer appointed by the Dominion Government. The act further provided that when the Eastern Division was completed it was to be operated in conjunction with the Western Division, as one through line by the G.T.P.R., the rental to be paid being 3% a year upon the actual cost of the line. No rental was to be payable during the first seven years of the 50-year period for which the lease was to run.

Track laying on the Eastern Division was finished by the end of 1913, but the line was not sufficiently completed until the autumn of 1914, to enable the Government to enter upon negotiations with the com-

Manager, Canadian Government Railways, announced that effective May 1, the jurisdiction of the heads of departments of the Canadian Government Railways at Moncton, had been extended over National Transcontinental Ry. and the G.T.P R.'s Lake Superior Branch.

The G.T.P.R.'s Lake Superior Branch from Fort William to Lake Superior Jct., 190 miles, has been operated by that company for some time, together with the 258 mile section of the N.T.R., from Lake Superior Jct. to Winnipeg, as the G.T.P.R. Lake Superior Division. Power to acquire this line by lease or otherwise for five years, together with its terminal facilities and accommodation works, was given at the Dominion Parliament's last session. The lease is to be ratified by Parliament, and the provisions of the Government Railways Act are

The principal points on the main line, Moncton being the starting point, are: McGivins Jct., mileage 56.3; Napadogan, mileage 117.4 (d); Edmondston, mileage 250.5 (d); New Brunswick boundary mileage, 256.3; Monk, Que., mileage 354.4 (d); Quebec Bridge, mileage 360.2; Quebec, general shops and terminals; Hervey Jct., mileage 532.9; Fitzpatrick, mileage 566.6 (d); Parent, mileage 705.5 (d); Doucet, mileage 808.5 (d); O'Brien, mileage 905.3 (d); Quebec, Ontario boundary, mileage 956.2; Cochran, mileage 1027.9 (d); Hearst, mileage 1156.9 (d); Grant, mileage 1282.4 (d); Armstrong, mileage 1413.5 (d); Superior Jct., mileage 1546.1; Graham, mileage 1552.5 (d); Redditt, mileage 1675.7 (d); Ontario, Manitoba boundary, mileage 1712.00; Transcona, Man., terminal yards and general shops, mileage 1779.2; Water St., Winnipeg, mile-

pany respecting the taking of it over under the terms of the contract. The company filed what Senator Lougheed told the Senate were "omnibus objections" to entering upon this contract, and subsequently the Government decided to undertake the operation of the Eastern Division as part of the Canadian Government Railway's system. An order-in-council providing for this was passed, and upon the G.T.P.R. Co. finally deciding not to take a lease of the line, an official announcement was made. April 30, as follows:

"As the G.T.P.R. Co. has declined to take out a lease, the Government will tomorrow, May 1, take over for operation the National Transcontinental Ry., Eastern Division, from Montreal to Winnipeg. At the same time the Government will also take over and operate the Lake Superior Division of the Grand Trunk Pacific lying between Superior Junction and Port William, including the terminals at the latter place."

Following this, F. P. Gutelius, General

to apply to the branch.

The total mileage of the line from Moncton, N.B., to the west side of Water St., Winnipeg, is 1,804.5, to which is to be added the mileage of the Lake Superior Branch, 190 miles, making a total of 1,994.05 miles of new main line to be operated by the Dominion Government. Of this mileage, 457.7 miles from Moncton, N.B., to St. Jean Chrystome, Que., has been operated by the Government Railways officials since Nov. 22, 1914, and certain other mileages on the line between Quebec and Lake Superior Jct. have been operated by the contractors under a special arrangement with the Railways Department.

In addition to the main line, on which there is a small amount of second track, and a line from Quebec to the site of the Quebec Bridge, together 20.79 miles, there are 423.26 miles of track in yards and sidings.

age 1804.5. The "d" in the brackets signifies divisional points.

Rolling stock is being supplied from the Intercolonial Ry., but the Minister of Railways has power to purchase whatever rolling stock is necessary out of the consolidated funds. A number of locomotives and cars have been sent out from Moncton, for distribution along the line, having been taken across the St. Lawrence River at Quebec by the car ferry Leonard.

The Dominion Government took over last autumn the North Ry.'s charter rights to build a railway from Montreal to the N.T. Ry. at the crossing of the Bell River, Que., paying therefor \$250,000.

Railway track has increased in weight 37% during the last 20 years, and during the same period the unit load hauled has increased, in some instances, over 300%.

## Railway Development.

### Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta and Great Waterways Ry.**—The construction programme for the year, J. D. McArthur, President, is reported to have in a recent interview, contemplates the completion of grading to Fort McMurray, Alberta, mileage 300 from Carbondale, the point of junction with the Edmonton, Dunvegan and British Columbia Ry. Track has been laid from Carbondale to mileage 135, about 21 miles north of Lac la Biche. Whole grading is expected to be completed to Fort McMurray by the end of the year, it is not expected that the track will reach that place until Mar., 1916. (April, pg. 136.)

**Bassano and Bow Valley Ry.**—We are officially advised that while the contracting firm of Grant Smith and Co. and McDonnell, Calgary, looked into the matter of the construction of this line, there is no authority at all for the press reports stating that they had acquired the charter. (May, pg. 170.)

**Burrard Inlet Tunnel and Bridge Co.**—The directors are taking legal advice as to the situation created by the fact that the legal advisors of two municipalities are of opinion that the bylaws authorizing the raising of funds for the building of the bridge must be re-submitted to the rate-payers, while the legal advisors of the two other municipalities are of the contrary opinion. The municipality of the district of North Vancouver, which has the largest interest, has decided not to pay out any further money on account of the bridge project unless the money bylaws are re-submitted to a vote. (April, pg. 136.)

**Central Canada Ry.**—J. D. McArthur, President, is reported to have said in a recent interview that the construction of the line from McLennan, Alberta, to Peace River, 50 miles, would be proceeded with immediately and completed this year. Grading is completed for about 28 miles, from McLennan, the Junction point with the Edmonton, Dunvegan and British Columbia Ry., and track had been laid to April 20, on about 20 miles. (May, pg. 170.)

**Dominion Atlantic Ry.**—A steel railway bridge on concrete piers was completed recently over the Avon River in Nova Scotia. The Avon flows into Minas Bay, an affluent of the Bay of Fundy, which accounts for the fact that tides in the river reach 35 to 40 ft. The bridge is 1,200 ft. long c. to c. of abutments, with 9 concrete piers all on rock or hardpan, 35 ft. below river bed, except one which is carried on piles. The rock is overlaid with 5 ft. of gravel covered with 15 ft. of shifting sand. The current reaches as high as 8 miles an hour. Foundation work was extremely difficult, and had to be done at low tide—allowing only 3½ hours a day for a shift. The bridge was built in two years by the Nova Scotia Construction Co., Ltd., of Sydney, N.S., with A. S. Kennedy, Construction Superintendent.

**Edmonton, Dunvegan and British Columbia Ry.**—In a recent interview J. D. McArthur is reported to have stated that the head of steel had reached Big Smoky River, mileage 290 from Edmonton, Alberta, and that it is proposed to complete the line to mileage 357, or six miles west of the Spirit River settlement. The projected branch to Grand Prairie district, will leave the main line in the vicinity of the Spirit River settlement, and will be about 60 miles long. The surveys will be rushed to completion, and grading will be done during the year, but it is not expected that track

will be laid until the spring of 1916.

The construction of the Grand Prairie branch presents some difficult features, the principal being the steep declivity on the east bank of the Big Smoky River, and the overcoming of the Birch Hills, which lie between the Big Smoky River and Grand Prairie city. (May, pg. 170.)

**Hardy Bay and Quatsino Sound Ry.**—A press report stated, May 11, that W. E. Cullen, Spokane, Wash., colliery proprietor, and J. F. Twohy, railway contractor, had gone to Hardy Bay, Vancouver Island, to take over some coal properties, and to inspect the route of the projected 17 mile railway to connect Hardy Bay with Coal Harbor, on Quatsino Sound. (Aug., 1909, pg. 573.)

**Intercolonial Ry.**—Tenders were received by the Department of Railways, up to May 28, for building a spur line of 2.3 miles, leaving the main line about 1.8 miles east of Bathurst, N.B. This is the spur for the construction of which \$62,400 was voted at the Dominion Parliament last session. Industrial sidings will be built from the spur to serve the Bathurst Lumber Co., new pulp mill and other mills. (May, pg. 183.)

**Kent Coal and Ry. Co.**—The New Brunswick Legislature has incorporated a company with this title to build a railway from Rexton to Richibucto Head, and from Rexton to Minto or Chipman, crossing the Intercolonial Ry. between Kent Jct. and Adamsville, N.B. (April, pg. 136.)

**Kettle Valley Lines.**—We are officially advised that it is the intention to operate the line between Midway and Merritt, B.C., for the present under the control of the K.R.V. Ry., of which J. J. Warren is President. The service will be operated connecting with the C.P.R. at both ends of the line, and C.P.R. rolling stock will be used.

The track on the section of the line from Osprey Summit to Princeton, B.C., was tied up with the Vancouver, Victoria and Eastern Ry., April 21, and the ballasting on the section was expected to be fully completed May 31. (May, pg. 171.)

**Lake Erie and Northern Ry.**—We have been officially informed that the line is completed from Galt to Brantford, and that grading is completed southerly from Brantford to within a mile of Port Dover, Ont. The bridge at Waterford was expected to be completed by May 31, and the one over the Grand River at Brantford is expected to be completed by July 1. Track has been laid on the southerly section of the line between Waterford and Simcoe, eight miles, and Johnson Bros., the contractors, expect to have the grading and track laying completed by Aug. 30.

In connection with the projected operation of the line by electricity enquiries are being made for electric material and there appears to be no doubt that the line will be electrified.

A proposition has been made by the company to the Brantford City Council for certain running rights over the Grand Valley section of the Brantford Municipal Ry., at Galt, and between Paris and Brantford. The matter came before the City Council, April 27, when representatives of the Board of Trade were invited to confer with the Brantford Railway Commissioners as to the project. It was stated, May 3, that the city might sell the Grand Valley section of the line to the L. E. and N. R. (May, pg. 171.)

**Roberval-Saguenay Ry.**—The following details of this railway, which includes the

line built under the charter of the Ha Ha Bay Ry., are contained in a recent judgment of the Quebec Public Utility Commission:—The main line extends from Bagotville (or St. Alphonse) on the shore of Ha Ha Bay to St. Mathias (or Ha Ha Bay Jct.) on the Quebec and Lake St. John Ry., 19.38 miles. From Laterriere Jct. a branch extends to Laterriere, 6.50 miles, and while construction has been carried out to Portage des Roches, 12 miles from Laterriere Jct., this latter portion has not been opened up to regular trains. From La Brosse Jct. to Chicoutimi West there is a second branch 3.35 miles, operated by electric power. A branch to St. Alexis, one mile, is projected and subsidized by the Provincial Legislature and the Dominion Parliament, but no work has been done on it. (July, 1914, pg. 323.)

**St. John and Quebec Ry.**—The New Brunswick Legislature has extended the time for building the section of the line from Centerville to Grand Falls. Under the original contract the whole line was to be completed by Sept. 30; the new provision authorizes the carrying on of the work without unnecessary delay. The Government in submitting the measure said the line from Centerville to Gagetown was in operation and the 40% of the receipts to which it was entitled under the operating contract had been paid to the province by the Intercolonial Ry.

The act provides among other things that the Government may retain from the sums received out of the sale of bonds, such amounts as may be necessary to meet outstanding claims against the contractors. Acting under this provision the Government is asking that all outstanding claims be submitted for adjustment so that they may be settled out of the money in hand as far as it will permit. (Feb., pg. 57.)

**Taber Transit Co.**—A meeting of shareholders was held May 1 at the Superior Coal Co.'s offices, Taber, Alta., to ratify a bylaw authorizing the issue of bonds for \$12,000 a mile for the projected railway from Taber, to connect with collieries in the vicinity, and to give connection with the C.P.R. Suffield branch and with Bow City, to ratify an agreement with J. F. Kramer and W. E. Bullock for the purchase of certain lands, and for the completion of organization. The notice calling the meeting was signed by J. F. Kramer, one of the provisional directors. (April, 1914, pg. 166.)

**Toronto, Hamilton and Buffalo Ry.**—It is said that nothing further will be done in the matter of the application of the Hamilton, Ont., City Council to the Board of Railway Commissioners for an order compelling the T., H. and B. R. to elevate its line along Hunter St., for some time. A city official is reported to have stated that Canadian Northern Ry. interests are co-operating with the T., H. and B. R. officials, and that a plan will ultimately be submitted for the elevation of tracks, and the entrance of the C.N.R. into Hamilton, which will settle a number of questions that have been under discussion for some considerable time. (April, pg. 137.)

**Railway Lands Patented.**—Letters patent covering Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, were issued in March, as follows:

	Acre.
Calgary and Edmonton Ry. ....	2,724.00
Canadian Northern Ry. ....	800.00
Canadian Pacific Ry. ....	397.51
Edmonton, Dunvegan and British Columbia Ry. ....	108.09
Grand Trunk Pacific Branch Lines Co. ....	30.36
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co. ....	1,579.68
Total .....	5,639.64

## Mainly About Railway People.

**Sir Thomas Shaughnessy**, President, C.P.R., sailed on the s.s. Adriatic from New York, May 27, for England.

**G. W. Downing**, a car inspector, I.R.C., was killed at Moncton, N.B., May 11, by being caught between two cars.

**W. Somerville**, ticket agent, G.T.R., Seaforth, Ont., has been appointed Secretary-Treasurer of the Seaforth Collegiate Board.

**G. H. Ham**, of the headquarters staff, C.P.R., returned to Montreal, early in May, after a three months trip along the Pacific coast.

**J. K. L. Ross**, director, C.P.R., and Mrs. Ross have offered their residence, Drumbo, Sydney, N.S., as a convalescent home for wounded soldiers.

**Capt. G. E. B. Begy**, of the 4th Battalion, Canadian Overseas Expeditionary Forces, who is a contractor at St. Catharines, Ont., was wounded in the battle of Langemarck.

**Mrs. Robert Thomson** died at St. John, N.B., May 25. Her husband, who died about seven months ago, was a prominent ship owner, etc., at St. John.

**Dr. H. A. Beatty**, Chief Surgeon, Ontario Division, C.P.R., Toronto, has been elected to the executive of the American Railway Chief Surgeons' Association, for this year.

**Major Jas. Lightfoot**, of the Canadian Overseas Expeditionary Forces, proprietor of Lightfoot Transfer Co., Winnipeg, was wounded in the battle of Langemarck.

**H. J. Somerset**, formerly Manager, Perth Electric Tramways Co., Australia, who died in Toronto, April 11, left an estate of \$46,527 to his widow, also life insurance of \$11,733 in her favor.

**Private A. G. Ingals**, of the Canadian Overseas Expeditionary Forces, who was killed in the battle of Langemarck, was an electrician in the Winnipeg Electric Ry. Co.'s service.

**Lt. S. D. Armour**, of the 72nd Seaforth Highlanders, Vancouver, who was wounded in the battle of Langemarck, is a nephew of Stuart Armour, Manager, C.P.R. Hotel, Lake Louise, Alta.

**Capt. W. C. Cochrane**, who is on Major-General Steele's staff in the 2nd contingent, Canadian Overseas Expeditionary Forces, is a son of Hon. Frank Cochrane, Minister of Railways and Canals.

**M. E. Duncan**, Vice President and General Manager, Canadian Car and Foundry Co., died in Montreal May 23, aged 53, of hemorrhage of the brain.

**Lt.-Col. Gordon Stewart**, Ottawa, who is Major of the Ontario Brigade in the Canadian Overseas Expeditionary Forces, is a dredging contractor and son of Robt. Stewart, ex-M.P. for Ottawa.

**Lt.-Col. J. J. Creelman**, of the Second Field Artillery Brigade, Canadian Overseas Expeditionary Forces, and son of A. R. Creelman, K.C., director, C.P.R., was wounded in the battle of Langemarck.

**B. C. Gesner**, Eastern Sales Agent, Galena Signal Oil Co., Moncton, N.B., was born at Cornwallis, N.S., April 23, 1859, and not in 1850, as stated in Canadian Railway and Marine World for April.

**George Bradshaw**, Safety Engineer, Grand Trunk and Grand Trunk Pacific Railways, read a paper on practical methods in accident prevention, before the Richmond Railroad Club at Richmond, Va., May 10.

**Sir Thomas Tait**, President, Fredericton and Grand Lake Coal and Ry. Co., accompanied by Lady and Miss Tait, returned to Montreal recently from Florida where they spent the winter.

**C. L. Cantley**, Assistant Manager, Nova Scotia Steel and Coal Co., and son of T.

**Cantley**, General Manager, who is with the Canadian expeditionary forces in France, has been appointed a Quartermaster-General.

**W. U. Appleton**, General Master Mechanic, Canadian Government Railways, Moncton, N.B., received some painful cuts and bruises, when his gasoline motor car collided with a freight train on the Montreal Transcontinental Ry., near St. Anselm, Que., at the end of April.

**R. W. Burnett**, who resigned the position of General Master Car Builder, C.P.R., recently, has been staying in Chicago, and is going to take a thorough rest for a time. With Mrs. Burnett, he will make an extended tour through the west, including a visit to the San Francisco exhibition.

**D. F. Burke**, of Port Arthur, Ont., who was one of the promoters of the Port Arthur, Duluth & Western Ry., has been informed that two of his sons, who were in

C. F. Black,  
Attorney, Central Vermont Railway.

the 8th Battalion, Canadian Overseas Expeditionary Forces, are prisoners at Munster, Germany.

**Lieut. McLurg**, formerly Manager, Algoma Central Steamship Co., and latterly Sales Manager, Algoma Steel Corporation, Sault Ste. Marie, Ont., who was with the Canadian Overseas Expeditionary Forces, has been wounded, and is a prisoner in Germany.

**Capt. T. C. Irving, Jr.**, Vice President, Robt. W. Hunt & Co., Ltd., Bureau of Inspection, etc., Montreal and Toronto, who is in command of No. 1 company, Field Engineers, in the Canadian Overseas Expeditionary Forces, cabled his father after the battle of Langemarck that he was well.

**Major D. Rykert McCuaig**, son of C. J. McCuaig, President, Sherbrooke Railway & Power Co., who was in the 13th Battalion, Canadian Overseas Expeditionary Forces, and was wounded at the battle of Langemarck, where he fought most heroically, is a prisoner in a German hospital.

**W. P. Hinton**, Assistant Passenger Traffic Manager, G.T.R. and G.T.P.R., returned to Montreal recently after a 12,000 mile trip over the company's rail and steamship lines. While in San Francisco he represented the companies at the American Association of Passenger Traffic Officers convention.

**A. L. Hertzberg**, M. Can. Soc. C. E., Division Engineer, Ontario Division, C. P. R., Toronto, received news early in May, that his son, Lieut. H. F. H. Hertzberg, of the Canadian Engineers, had been wounded at Langemarck, and was in the military hospital at Colchester, Eng. A younger son is also at the front.

**T. Mullins**, whose appointment as City Passenger Agent, C.P.R., Ottawa, was announced in our last issue, was entertained to dinner by his associates at Toronto, May 1, and presented with a gold watch and chain. The surplus amount received from subscribers was sent to the cigarette and tobacco fund for soldiers at the front.

**H. K. Wicksteed**, M. Can. Soc. C. E., Chief Engineer of Surveys, Mackenzie, Mann & Co., Ltd., who spent three months in Venezuela last winter in connection with a coal mining and railway construction proposition, left Toronto again for there May 18, accompanied by R. H. M. Temple, Assistant Solicitor, Canadian Northern Ry.

**Arthur Walsh**, who retired recently as agent C. P. R. Telegraphs, Montreal, was appointed to that position on the opening of the office in Sept. 1886, but had been in telegraph service with the Montreal Telegraph Co., the Western Union and the Great North Western Telegraph Cos. for several years prior to that date.

**Col. H. S. Greenwood**, formerly Assistant Chief Engineer, Mackenzie, Mann & Co., Ltd., Toronto, has been in London, Eng., for some time, serving as a major on the Royal Engineers staff. He is especially engaged in railway work for the War Office and will probably go to the continent in the near future.

**Lt.-Col. W. S. Buell**, of Brockville, Ont., who was at one time interested in the Brockville Navigation Co., was wounded in the shoulder by shrapnel while leading the 4th Battalion, Canadian Overseas Expeditionary Forces at the battle of Langemarck. He is in a hospital in London, Eng., and is not expected to be able to return to duty for two or three months.

**Lieut. H. F. H. Hertzberg**, of the Second Field Company, Canadian Engineers, son of A. L. Hertzberg, Division Engineer, Ontario Division, C.P.R., who was wounded at the battle of Langemarck, is in a hospital at Colchester, Eng., and is reported to be convalescing satisfactorily. His brother, O. P. Hertzberg, is at the front in the 3rd Toronto Battalion.

**C. L. Conacher**, formerly Traffic Manager, Cambrian Railways, Wales, who visited Canada last summer, has been serving as a railway transport officer in London, Eng., on the staff of the War Office (Director of Movements) with the rank of staff captain, since Oct. 1914. He hopes when released from his duties after the war, to revisit Canada and renew the connections he formed here.

**D. R. MacBain**, Superintendent of Motive Power, New York Central Rd., west of Buffalo, N. Y., Cleveland, Ohio, has been appointed by the President of the United States, a member of the board of the National jury of awards at the Panama-Pacific Exposition. He was at one time Master Mechanic, Michigan Central Rd., at St. Thomas, Ont.

**L. M. Miller**, of St. Thomas, Ont., who has been appointed Assistant to the Chief Medical Officer, Ontario Workmen's Compensation Board, Toronto, has been Super-

President of the Railway Hospital Association at St. Thomas, Ont., in charge of first aid work, and has also been acting for the Michigan Central Rd. in connection with the settlement of accident claims.

The will of the late Lt.-Col. Lacey R. Johnson, General Welfare Agent, C.P.R., disposes of his estate to his wife, with the furniture of his house for the use of his unmarried daughters. His model locomotive is left one son, and his gold watch and chain to another. On his wife's death, the property is to be divided among four daughters and two sons, the two unmarried daughters to receive double portions.

G. McLaren Brown, European Manager, C.P.R., and Mrs. Brown, W. Phillips, European Railway and Steamship Manager, Canadian Northern Ry., and Mrs. Phillips, and Hugh A. Allan, of the Allan Line Steamship Co., and Mrs. Allan, attended a reception given by the Mayor and Mayoress of Folkestone, Eng., Apr. 27, to Canadian and British officers stationed at Folkestone and Shorncliffe.

G. McLaren Brown, European Manager, C.P.R., in speaking at the April meeting of Canada Lodge, A. F. and A. M., in London, Eng., made a glowing and sympathetic allusion to the heroism of the Canadians in the recent actions in Belgium, reminding the brethren that only a few months ago several of those who have since fallen had been the guests of the lodge on their arrival from Canada.

O. S. Cockey, General Agent, G.T.R. New York, N.Y., died at White Sulphur Springs, Va., May 9, aged 60. He entered railway service with the Pennsylvania Rd. at Pittsburg, Pa., afterwards going to the Great Western Ry. of Canada, which was taken over by the G.T.R. He was appointed Commercial Agent, G.T.R., at New York, Nov. 1, 1891, and General Agent, May 1, 1894, holding the latter position till his death.

Sir Thomas Shaughnessy, President, C.P.R., has returned to Montreal from a visit to the Panama Exhibition, at San Francisco, and other California points, travelling home by way of Vancouver. He was accompanied by Lady and Miss Shaughnessy. At Vancouver he was met by R. B. Angus, one of the directors, who was accompanied by his son-in-law, C. B. Martin and Mrs. Martin, and the two parties returned to Montreal together.

William Tansley, who has been appointed Assistant Superintendent, District 5, Eastern Division, C.P.R., Smiths Falls, Ont., was born in Shelburne, Ont., Dec. 27, 1872, and entered C.P.R. service in 1889, since when he has been, to 1900, operator and agent at various points on the Ontario Division; 1900 to 1907, dispatcher, Toronto; 1907 to 1912, Chief Dispatcher, Toronto; 1912 to 1914, Assistant Superintendent, Havelock, Ont.; 1914 to May 18, 1915, Assistant Superintendent, District 3, Ontario Division, Toronto.

Joseph Rielle, who died at Montreal, May 9, was born at Laprairie, Que., in 1833, and in 1854 became assistant to the then Assistant Engineer, Montreal Harbor Commissioners, and subsequently was appointed Assistant Engineer. He was a member of the Canadian Society of Civil Engineers from 1887, and in 1904, on the completion of 50 years as a land surveyor, the Society presented him with a testimonial. He was at one time Vice President of the Pontiac and Pacific Jct. Ry.

J. A. L. Waddell, D. Sc. (McGill); L.L.D.; M. Can. Soc. C. E.; M. Am. Soc. C. E.; M. Inst. C. E.; M. S. C. E., France, of Kansas City, Mo., who is a Canadian by birth and who has done considerable engineering work in Canada, one of his latest engagements being through the former firm of Waddell & Harrington, now dissolved, in connection

with bridge construction on the Canadian Northern Pacific Ry., has been given the degree of hakushi (doctor of engineering) by the Japanese Department of Education.

Miles Hoar, who died recently at Sackville, N.B., aged 82, was an interesting link with the old stage coach days. At the age of 19 he was working on the European and North American Ry. survey, and in the following year commenced driving a stage coach between St. John and Moncton, N.B., and later drove between Harvey and St. John, and still later between Moncton and Amherst. On the completion of the railway there, he engaged in the mail service on the railway, and was later employed on a section at Sackville, subsequently being appointed foreman, where he remained for 35 years.

J. F. Richardson, who was appointed Superintendent of Telegraphs, Saskatchewan Division, C.P.R., Moose Jaw, recently, in reported to have resigned and to have left Moose Jaw for Montreal. It is stated that he has been succeeded by D. Coons, who

W. J. Pickrell,  
Master Mechanic, Ontario Division, Canadian  
Pacific Railway.

had been transferred from that position to Calgary, recently, in a similar capacity for the Alberta Division, that J. D. L. Howard heretofore Inspector of Telegraphs, Medicine Hat, has been appointed Superintendent of Telegraphs, Alberta Division, Calgary, and that H. H. Goodfellow, heretofore Assistant Chief Operator at Vancouver, B.C., has been appointed Inspector of Telegraphs at Medicine Hat.

Lance Corporal C. A. McCowan, 13th Battalion, Canadian Scottish, son of A. McCowan, General Car Foreman, Canadian Northern Ry., Winnipeg, who was born in Montreal 22 years ago, was shot in the neck at Neuve Chapelle, Mar. 11, about 9 a.m. He received first aid but could not be removed from the trenches until after dark. While he was being removed with other wounded, the Germans attacked them with machine guns, one of the stretcher bearers who was accompanying McCowan being shot through the wrist. McCowan wrote his father from Shorncliffe early in May

saying that he hoped to be able to return to the front shortly.

J. Billingham, who was appointed Superintendent of Motive Power, Grand Trunk Pacific Ry., Transcona, Man., in August, 1914, has resigned. Prior to his departure for his home in Schenectady, N.Y., he was presented with a case of silver and an address by the local staff. He was born in England, and served an apprenticeship with the London and North Western Ry. there. On going to the United States he was appointed Master Mechanic, Baltimore and Ohio Rd., and was subsequently European Manager, Galena-Signal Oil Co., and later returned to the U. S. as Superintendent of Works, American Locomotive Co., Schenectady, N.Y.

John H. Mills, whose appointment as Master Mechanic, Lake Superior Division, C. P. R., North Bay, Ont., was announced in our last issue, was born at Sherbrooke, Que., Apr. 23, 1865, and entered C. P. R. service, May 1, 1889, since when he has been, to Dec. 20, 1889, in Bridge and Building Department, Sherbrooke, Que.; Feb. 27, 1890 to Jan. 3, 1898, fireman, Farnham, Que.; Jan. 3, 1898 to Jan. 23, 1902, locomotive driver, Farnham, Que.; Jan. 23, 1902 to Apr. 1, 1903, delivering new locomotives from main shops to destination; Apr. 1, 1903 to Dec. 31, 1908, District Master Mechanic, Montreal; Jan. 1, 1909 to Apr. 14, 1915, Master Mechanic, Ontario Division, Toronto.

A. L. Sauve, whose appointment as City Ticket Agent, C.P.R., Ottawa, Ont., was announced in our last issue, was born at Portage du Fort, Que., Oct. 2, 1888, and entered C.P.R. service, July 6, 1906, since when he has been, to Dec. 11, 1907, stenographer and ticket clerk, Ottawa, Ont.; Dec. 11, 1907 to June 5, 1908, stenographer, General Passenger Department, Montreal; June 5, 1908 to May 1, 1909, ticket agent, s.s. Empress of Britain; May 1, to Dec. 10, 1909, City Ticket Agent, Quebec, Que.; Dec. 10, 1909 to Oct. 4, 1911, chief clerk, City Ticket Office, Ottawa, Ont.; Oct. 4, 1911, to Apr. 14, 1915, City Passenger Agent, Detroit, Mich.

F. M. Rutter, A.M.Can.Soc.C.E., who has been appointed Assistant Superintendent, District 3, Ontario Division, C.P.R., Toronto, was born there, Dec. 26, 1880, and educated at Upper Canada College and Toronto University. He entered C.P.R. service in April 1902, since when he has been, to 1904, chain man and rod man on location surveys and construction, Toronto-Sudbury line; 1906 to 1907, transit man, Maintenance of Way Department, Montreal; 1907 to 1911, Resident Engineer, Maintenance of Way, Woodstock, N.B.; 1911 to July 1913, Resident Engineer, Maintenance of Way, Toronto; July 1913 to Apr. 30, 1915, Assistant Division Engineer, Maintenance of Way, Eastern Division, Montreal.

The Michigan Central Rd. annual report for the past fiscal year contains the following paragraph: "Thomas Eedson, retired Auditor of Freight Accounts and Freight Claim Agent, died in Detroit, Nov. 1, 1914, at the age of 73. He came into the service of this company in 1883 from a position with the Canada Southern Ry. Co., and remained in the accounting department until his retirement in 1912. He also held a similar position with the Toronto, Hamilton & Buffalo Ry. Co. from the date of its organization to his death. He was an industrious man, of studious and inquiring mind, and rendered good service in his own department as well as in the organization and conduct of the Freight Claim Association and the Association of American Railway Accounting Officers."

M. A. Fullington, A.M.Can.Soc.C.E., who has been appointed Superintendent, District

3, Eastern Division, C.P.R., Montreal, was born at Johnson, Vt., May 12, 1880, and entered C.P.R. service, Oct. 1904, since when he has been, to Jan. 1905, rodman, Toronto; Jan. to Oct. 1905, transitman, London, Ont.; Oct. 1905 to Apr. 1907, Assistant Engineer, Toronto Terminals; Apr. 1907 to Jan. 1912, Resident Engineer, Districts 1 and 4, Ontario Division, Toronto; Jan. 1912 to Jan. 1913, Engineer, Dominion Atlantic Ry., Kentville, N.S.; Jan. to July 1913, Assistant Division Engineer, C.P.R., Montreal; July to Sept. 1913, Assistant Engineer, Eastern Lines, C.P.R., Montreal; Sept. 1913 to May 10, 1915, Assistant Superintendent, District 4, Eastern Division, C.P.R., Ottawa, Ont.

**W. H. Winterrowd**, who has been appointed Assistant to Chief Mechanical Engineer, C. P. R., Montreal, was born at Hope, Indiana, Apr. 2, 1884, and educated at Shelbyville, Ind., and Purdue University, whence he graduated in 1907. He entered railway service in 1905, since when he has been, to 1906, blacksmith helper, Lake Erie and Western Ry., Lima, Ohio; 1906 to 1907, air brake and care repair man, Pennsylvania Rd., Western Lines, Dennison, Ohio; 1907 to 1908, special apprentice, Lake Shore and Michigan Southern Ry., Elkhart, Ind.; 1908 to 1909, Roundhouse Foreman, Lake Erie, Alliance and Wheeling Ry., Alliance, Ohio; 1909 to 1910, Night Roundhouse Foreman, Lake Shore and Michigan Southern Ry., Youngstown, Ohio; 1910, Roundhouse Foreman, same road, Cleveland, Ohio; 1910 to Sept. 1912, Assistant to Mechanical Engineer, same road, Cleveland, Ohio; Sept. 1912 to May 1915, Mechanical Engineer, Angus Shops, C. P. R., Montreal.

**R. W. McCormick**, who died at Farnham, Que., Apr. 23, was born at Liverpool, Eng., Jan. 8, 1867, and entered railway service in 1879, as operator with the old Canada Central Ry., at Sand Point, Ont., and acted, successively, as operator and agent, at Renfrew, Smiths Falls and Carleton Jct., Ont. He was subsequently, from Oct. 1896 to Feb. 1897, relieving train dispatcher, C. P. R., Ottawa; Feb. 1897 to Oct. 1901, dispatcher, C. P. R., Ottawa; Dec. 1901 to Oct. 1903, Chief Dispatcher, C. P. R., Ottawa; Oct. 1903 to Aug. 1906, Trainmaster C. P. R., Ottawa; Aug. 1906 to Nov. 1907, Assistant Superintendent, C. P. R., successively, at Smiths Falls, and Montreal; Nov. 1907 to Feb. 1911, Assistant Superintendent, District 4, Eastern Division, C. P. R., Ottawa; Feb. 1911 to Sept. 1913, Assistant Superintendent, District 1, Eastern Division, C. P. R., Farnham, Que.; Sept. 1913 to June 1914, Superintendent, District 3, Eastern Division, C. P. R., Montreal; June 1914 to Apr. 23, 1915, Superintendent, District 1, Eastern Division, C. P. R., Farnham, Que.

**William John Pickrell**, who has been appointed Master Mechanic, Ontario Division, C.P.R., Toronto, was born at London, Ont., Sept. 15, 1880, and entered C.P.R. service, Jan. 3, 1900, since when he has been, to July 31, 1901, wiper; July 31, 1901 to Oct. 31, 1904, fireman; Nov. 1, 1904 to July 31, 1906, travelling fireman; Aug. 1, 1907 to Apr. 14, 1908, assistant road fireman; Apr. 15, 1908 to May 9, 1910, locomotive driver; May 10 to June 30, 1910, rule examiner; July 1 to Oct. 14, 1910, locomotive driver; Oct. 15 to Dec. 15, 1910, rule examiner; Dec. 16, 1910 to Apr. 8, 1912, locomotive driver; Apr. 9 to Dec. 1, 1912, District Master Mechanic; Dec. 2 to Dec. 8, 1912, locomotive driver; Dec. 9, 1912 to July 28, 1913, District Master Mechanic, Districts 3 and 4, Ontario Division; July 29 to Aug. 17, 1913, Assistant Superintendent, District 3, Ontario Division; Aug. 18 to Oct. 31, 1913, District Master Mechanic, Districts 3 and 4, Ontario Division, all at Toronto; Nov. 1, 1913 to Apr. 23, 1915, Assistant Superintendent,

District 2, Atlantic Division, Aroostook Jct., N.B.

**Charles W. Van Buren**, whose appointment as General Master Car Builder, C. P. R., Montreal, was announced in our last issue, was born in Rensselaer County, N. Y., Oct. 15, 1867, and entered railway service in March 1889, since when he has been to Nov. 1891, carpenter, New York Central Shops, West Albany, N. Y.; Nov. 1891 to Sept. 1, 1893, assistant foreman; Sept. 1, 1893 to Sept. 1, 1896, in charge of Car Department work, Adirondack Division, same road, Herkimer, N. Y.; Sept. 1, 1896 to July 16, 1905, Car Foreman, Adirondack Division, and Mohawk Division, New York Central and West Shore Rds.; July 16, 1905 to July 1, 1906, General Car Inspector, Eastern Lines, C.P.R., Montreal; July 1, 1906 to July 1, 1909, Divisional Car Foreman, Eastern Division, C.P.R., Montreal; July 1, 1909, to May 31, 1911, Master Car Builder, Eastern Lines, C. P. R., Montreal; June 1, 1911 to Jan. 1, 1915, Assistant to General Manager, Union Stock Yard and Transit Co., Chicago, Ill.; Jan. 1 to April 1915, General Foreman, Car Shops, Milwaukee Refrigerator Transit and Car Co., Milwaukee, Wis.

**Walter C. E. Moberly**, who died at Vancouver, B.C., May 14, aged 83, was born at Steepleorton, Oxfordshire, Eng., and educated at Barrie, Ont. He entered railway service with the Ontario, Simcoe and Huron Ry., and from 1855 to 1857 was engaged in exploring the country from Lake Simcoe to Lake Huron and north to Lake Superior. In the following year he went to British Columbia under the British Public Works Department, and arranged the site of the capital of British Columbia, Queensborough, now New Westminster. He was in 1862-63 engaged in the construction of the Yale-Cariboo wagon road, and in 1864 was appointed Assistant Surveyor General for the colony, and explored the south and south east, when he discovered the Eagle Pass, which was utilized in later years for the C.P.R. route. In 1871, the Dominion Government having decided on the building of a transcontinental railway, he was sent for, and his knowledge utilized, he being appointed engineer in charge of surveyors from the west end of Eagle Pass, easterly through Gold, Selkirk and Rocky ranges of mountains, to Mount Murchison. On leaving Government service, he was one of the promoters, and afterwards Chief Engineer of the Manitoba Southwestern Ry., now part of the C.P.R.

**James Kerr McNeillie**, who has been appointed General Superintendent, Intercolonial Ry., Prince Edward Island Ry. and National Transcontinental Ry. east of Quebec, with office at Moncton, N.B., was born at Toronto, Feb. 23, 1874, and entered railway service in May, 1890, since when he has been, to Nov., 1891, call boy and apprentice, G.T.R., Lindsay, Ont.; Nov., 1891, to Sept. 1896, apprentice, locomotive fitter and machinist, G.T.R., Point St. Charles, Que.; Sept. 1, 1896, to Nov., 1899, trainmaster's clerk and chief clerk, Superintendent's office, C.P.R., Farnham, Que.; Nov., 1899, to June, 1902, clerk, and chief clerk, General Superintendent's office, C.P.R., Winnipeg; June, 1902, to Feb., 1903, Car Service Agent, C.P.R., Winnipeg; Mar., 1903, to Oct., 1907, Car Service Agent in charge of distribution of passenger equipment, C. P. R., Montreal, Que.; 1907, to July, 1908, Assistant Superintendent of Terminals, C. P. R., Toronto; July, 1908, to Feb., 1909, Superintendent, District 1, Ontario Division, C.P.R., Toronto; Feb., 1909, to Mar., 1911, Superintendent, District 2, Ontario Division, C.P.R., London; Mar., 1911, to Feb., 1913, Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que.; Feb., 1913, to June,

1914, Superintendent, District 2 (Montreal Terminals), Eastern Division, C.P.R., Montreal; June, 1914, to May, 1915, Superintendent, District 3, Eastern Division, C.P.R., Montreal.

**F. P. Brady**, who has been appointed General Superintendent, National Transcontinental Ry. between Quebec and Winnipeg, and of the Lake Superior Branch, Grand Trunk Pacific Ry., which are being operated as part of the Canadian Government Railways, with office at Cochrane, Ont., was born at Haverhill, N.H., June 22, 1853, and entered railway service 1869, as station baggagemaster Passumpsic Ry., since which he has been consecutively: 1873 to 1880, train dispatcher Northern Rd., at Concord, N.H.; 1880 to 1888, Chief Train Dispatcher Southeastern Ry., at Richford, Vt.; 1888 to 1889, Trainmaster C.P.R.; 1889 to 1898, Assistant Superintendent same road; 1898 to May, 1901, Superintendent same road at Smith's Falls, Ont.; May, 1901, to Sept., 1902, Superintendent districts 10 and 11 same road at Toronto; Sept., 1902, to May, 1903, Superintendent district 19 same road at Fort William, Ont.; June 1, 1903, to Feb., 1904, Assistant General Superintendent Central Division, Winnipeg, Man.; Feb., 1904, to Sept. 16, 1908, General Superintendent Lake Superior Division, C.P.R., North Bay, Ont.; May 1, 1908, to June, 1909, Member of the Canadian Government Railways Board of Management; June, 1909, to June, 1913, also General Superintendent, Canadian Government Railways, Moncton, N.B.; June, 1913, on the abolition of the Canadian Government Railways Managing Board, to May, 1915, General Superintendent, Canadian Government Railways, Moncton, N.B.

### Railway Taxation in Alberta.

The Minister of Railways informed the Alberta Legislature recently that there had been received from the railway companies in the Province \$635,114.83 on account of taxation on lines, from 1906 to 1914, both years inclusive; the annual amount received being \$68,490.51 a year from 1906 to 1910, inclusive, and \$74,165.57 a year from 1911 to 1914, inclusive. Taxes were levied on the following lines: Calgary-Strathcona line, 190.6 miles; Calgary-McLeod line, 105.2 miles; Dunmore Jct.-Summit Lake line, 210.9 miles; total, 506.7 miles; amount of taxes \$60,730 yearly, during the whole period. Lethbridge-Coutts line, 65.3 miles, amount of taxes, \$7,760.51 yearly to 1910; from 1911 to 1914, inclusive, to the Lethbridge-Coutts line, there has been added the Sterling-Cardston line, 46.8 miles, making 112.1 miles, on which the taxation received was \$13,435.57 a year. Taxation is in arrears as follows:—C.P.R. Lacombe branch, 49.6 miles, \$5,944.72 a year for 1912, 1913 and 1914; C.P.R. Wetaskiwin branch, 51 miles, \$6,112.52 a year, for 1912, 1913 and 1914; Canadian Northern Ry., Lloydminster to Edmonton, 169 miles, \$20,255.22 a year, for 1913 and 1914; Edmonton, Yukon and Pacific Ry. (C.P.R.), from Edmonton to Strathcona, 7.23 miles, \$866.54 a year for 1913 and 1914.

**German Bridge Dynamiter.**—The U. S. Federal Court at Boston, Mass., May 12, refused a writ of habeas corpus to Werner Horn, holding that his attempt to destroy the C. P. R. railway bridge at the New Brunswick-Maine International Boundary, was not an act of war. The court also held that Horn's removal from the State of Maine to Boston, was not illegal. The charges which Horn has now to meet are for violation of the interstate regulations respecting the carrying of explosives.

## Arbitration Award in Enginemen's Wage Controversy.

The board of arbitration appointed in the United States under the Newlands law, to settle the controversy between the western railways and their enginemen for increases in wages and changes in service rules, filed its award in the U. S. district court at Chicago, Apr. 30. Slight increases in pay were allowed, and a number of service rules altered, but considerably different from the form submitted by the men. The board of arbitration consisted of J. C. Pritchard, Asheville, N.C., former judge of the U. S. circuit court, chairman; C. Nagel, St. Louis, former Secretary of Commerce and Labor; H. E. Byram, Vice-President, Chicago, Burlington and Quincy Rd.; W. L. Park, Vice-President, Illinois Central Rd.; F. A. Burgess, Assistant Grand Chief of the Brotherhood of Locomotive Engineers, and T. Shea, Assistant President of the Brotherhood of Locomotive Firemen and Enginemen. The award was signed by the first four members, but Messrs. Burgess and Shea presented a minority report protesting against the award as unfair and unsatisfactory. The chairman filed a memorandum stating that while all the awards were not equitable in his estimation, in the main they were fair. Messrs. Byram and Park also filed a statement that their signatures did not imply approval of the principle or in detail, stating that the agreement under which the arbitration was held gave no latitude for the adjustment of unequal conditions.

The demands of the enginemen were comprised in 16 articles, which were submitted to the board. The railways contended that if these were allowed, they would have involved a payroll increase of \$41,000,000 a year, or 51%. The following are summaries of the awards:

**Basis of Day's Work and Overtime.**—In passenger service, the minimum rate for locomotive drivers shall be \$4.30, and for firemen, \$2.50, 100 miles or less, or 6 hours 40 mins. constituting a minimum day's work, with mileage in excess of 100 pro rata. On short run lines, less than 80 miles, overtime shall be paid for all time actually on duty or held for duty in excess of 8 hours, within 12 consecutive hours. All other passenger overtime shall be computed on a 15 m.p.h. basis, at the rate of 75 and 45 cts. an hour for locomotive drivers and firemen respectively. In freight service the rate shall be according to the class of locomotive as in article 2, for 10 hours or less, with mileage in excess of 100 pro rata, with overtime on a 10 m.p.h. basis and paid pro rata on the minute basis. When performing combination road service, the rate of pay will conform to each class of service, and when two or more locomotives of different weight are used during a trip or a day's work, the highest rate applicable to any locomotive shall be paid. In the article submitted by the men, passenger service was to be paid on the basis of 5 hours or less constituting a day's work, with overtime at 20 m.p.h. In all other classes of service, overtime should be computed at 10 m.p.h. and paid for at 15 m.p.h.

**Rates of Pay.**—In passenger service, the minimum rate of wages shall vary for locomotive drivers and firemen respectively from \$4.30 and \$2.50 for locomotives weighing less than 80,000 lbs. on the drivers, to \$5 and \$4 on Mallet locomotives, regardless of weight on drivers, these rates for firemen applying on a coal basis with a slight reduction in most cases of oil burners. Similarly in freight service, they shall vary from \$4.75 and \$2.75 per day on locomotives weighing 80,000 lbs. on the drivers, to \$6.50 and \$4.25 on Mallet locomotives weighing 275,000 lbs. or over on drivers, with the

firemen's differential on oil locomotives. Through freight rates will apply on all work, wreck, pusher or helper, mine runs, circus trains and milk trains according to class of locomotive, with overtime on the minute basis. Belt line or transfer service is recognized as different from switching, but as conditions vary, the adjustment of compensation is left for local arrangements between the managements and the men. No change is made in the territory where a wage differential exists because of gradients, and the railways subject to the schedules in effect Oct. 10, 1913, shall maintain this differential in addition to the award herein given. Locomotive drivers and firemen shall have preference in the selection of operators where electric operation is subject to steam, but this shall not displace men appointed prior to May 1, 1915. As the conditions of electric operation are new, no uniform rules can be adopted, but the minimum rates awarded in the foregoing are made to apply, but the mileage to be covered and hours of service are to be the same as now existing on the several lines, this to be without prejudice to existing agreements.

**Local or Way Freight.**—A minimum of 30 cts. per 100 miles is to be added to through freight rates for local service, with mileage over 100 pro rata.

**Switching Service.**—The minimum rate of wages per 10 hours or less, with overtime pro rata, for locomotives under and over 140,000 lbs. respectively on the drivers, shall be for locomotive drivers, \$4.25 and \$4.40, and firemen, \$2.70 and \$2.75; similarly with Mallet locomotives under and over 275,000 lbs., \$5.15 and \$5.40, and \$4 and \$4 respectively. The time to begin is when required to report for duty, and to end when the locomotive is placed on the designated track, or the enginemen are released, exclusive of meal time, which shall be between 11.30 a.m. and 1 p.m., or 11.30 p.m. and 1 a.m. If required to work during meal hour, it shall be paid for in addition to the minimum day, and 30 mins. shall be allowed under pay for meals.

**Beginning and Ending of Day.**—In all classes of road service, the enginemen's time will commence when they are required to report for duty, and shall terminate when the locomotive is placed on the designated track or relieved by the hostler at the terminal.

**Terminal Delay.**—Pay shall begin at the time enginemen are required to report for duty. The final terminal delay in freight service shall be computed from the time the locomotive reaches the designated main track switch connected with the yard track, and in passenger service, from the time the train reaches the terminal station, and after the lapse of 30 mins. will be paid for the full delay at the end of the trip at the overtime rate on the minute basis, except when road overtime has commenced, when terminal overtime shall not apply.

**Automatic Release and Tie-up.**—Enginemen tied up under the law will be paid continuous time from the initial point to the tie-up point, and when resuming duty on a continuous trip, they shall be paid from the tie-up point to the terminal: 50 miles, or 5 hours or less, 50 miles pay; up to 100 miles or 10 hours, 100 miles pay; over 100 miles or 10 hours at schedule rates.

**Held Away from Home Terminals.**—Enginemen in pool freight or unassigned service at other than home terminal, will be paid continuous time after 22 hours from previous release at the rate paid for last service. If held 14 hours after the first 32 hour period, pay to be continuous for the next 10 hours, or until the end of the 24

hour period, and similarly for each 24 hour period thereafter. If called for duty after pay begins the time will be continuous.

**Deadheading.**—On company's business on passenger trains, per mile, locomotive drivers and firemen, respectively 4.3 and 2.5 cts., and on other trains, 4.75 and 2.75 cts., provided that a minimum day is paid for.

**Hostlers.**—Minimum pay, 12 hours or less, \$4.20 a day, overtime pro rata. Enginemen to be given preference in these positions. Other locomotive house employees handling locomotives 25% of time, to be paid \$3 for 12 hours or less, overtime pro rata.

**Efficiency Tests.**—Value recognized, but must be conducted under conditions not hazardous to employees.

**Assistance for Firemen.**—Coal must be shovelled forward at specified points or by men on tender for that purpose, so that it can be reached by fireman from the locomotive deck. Coal of proper size to be used.

**Two Firemen.**—When two firemen are deemed necessary on locomotives of over 200,000 lbs. on the drivers, committees will discuss the matter with the proper officials, and in the event of failure of a settlement, to be referred to a committee of five, two appointed by the railway, two by the committee, and one by the four assembled. Rulings for the selection of the fifth man in event of dispute are laid down.

**Miscellaneous.**—Firemen shall be relieved of cleaning all locomotives. Enginemen having to set up wedges, fill grease cups, clean headlights and place supplies on locomotives, shall be relieved of this work where competent locomotive house forces are maintained.

**Official Record of Weight on Drivers.**—Each railway shall keep bulletins at terminals showing weights on drivers of all locomotives in service.

**Throwing Switches and Flagging.**—No general rules formulated owing to complexity of the service and the variety of such rules.

## Refund of Unused Railway Tickets.

The Board of Railway Commissioners passed general order 143, April 29, as follows:

Complaints having been made to the Board, and its appearing that considerable inconvenience and annoyance have been caused the public by delays on the part of railway companies in making repayment to ticket holders, as required under the Passenger Tickets Act, R.S.C. 1906, chap. 38, it is ordered that every railway company repay to every holder of a ticket over its railway, within 30 days from demand in the case of a single line ticket, and within 60 days from demand in the case of a joint ticket, the cost of the said ticket if unused in whole or in part, less the regular fare for the distance for which such ticket may have been used. That every such railway company failing to comply with the foregoing regulation be liable to a penalty not exceeding \$25 for every such failure.

**Railway Stores, Limited**, has been incorporated under the Dominion Companies Act, with a capital of \$20,000 and office at Ottawa, Ont., with very extensive powers, but primarily "to import, export, manufacture, buy, sell and deal in goods, wares and merchandise." It also has authority to build or acquire wharves, railway sidings, electric power plants, or anything else which may be considered necessary for the purposes of its business. The provisional directors are: J. Milk, H. E. White, P. McLaren, J. F. Has-kin, A. Gamble, C. W. Leach, R. J. Willoughby, G. A. Owens, W. L. Best, Ottawa.

## Rates on High Explosives to Grand Trunk Railway Stations.

The Interstate Commerce Commission having had before it the question of rates on high explosives to G.T.R. stations, the following report, prepared by Commissioner Harlan, was adopted under date of April 12:—

Without encumbering this report with dates, figures, rate tables, and other unnecessary details, it will suffice to say that it appears from the testimony adduced of record that in the undeveloped districts of Michigan farmers and others make quite a general use of dynamite in clearing their lands and for other purposes; that there is a substantial movement of high explosives to those regions from Baltimore, Wilmington, and Philadelphia; that the usual route to G.T.R. points in Michigan is by various lines to Buffalo, thence through Canada over the rails of the Canadian member of the G.T. system, namely, the G.T.R. of Canada, and thence to destination of the rails of the G.T. Western Ry., the domestic member of that system; and that for a number of years both the Canadian and the domestic members of the G.T. system have joined with the lines east of Buffalo in maintaining through routes and joint rates for the carriage of high explosives from the points of origin just mentioned to the destinations in question.

In the tariffs under suspension, filed by the respondents (the Philadelphia and Reading Ry.) at the request of the G.T. system, it is proposed to cancel these joint through rates and apply the intermediate rates to the traffic, thus materially increasing the cost of the through carriage, particularly on less than carload shipments. From Philadelphia to Caseville, for example, the present less than carload rate of \$1.32 is raised to \$1.76, an increase of 44 cts. per 100 lbs. To all points the increase proposed on less than carload traffic is substantial. The carload rate between the points last mentioned is raised from 66 to 88 cts., an increase of 22 cts. per 100 lbs. The proposed carload rates to other points are increased in the same general proportion.

The higher charges that will apply, if the tariffs in question are permitted to become effective, have not been justified of record by the respondents, and no substantial effort to do so was made by them so far as their mere reasonableness is concerned. The protestants, on the other hand, offered testimony tending to show that the withdrawal of the present joint rates would practically defeat the movement of high explosives to the destinations in question because the small jobbers in that territory could not handle these articles in carload lots, and the intermediate rates and the increased minimum charges on less than carload shipments, that would be applicable if the joint rates are canceled, would so increase the cost of the explosives as to put them beyond the reach of the farmers and others who use them in small quantities.

The justification offered by the carriers for the withdrawal of the joint rates rests chiefly on the assertion that it is against the policy of the G.T.R. of Canada to maintain joint through rates on high explosives. This statement was definitely made of record and upon the argument, and yet the evidence apparently shows that the Canadian member of the G.T. system for many years has participated in such rates and in recent years, in conjunction with its connections, has moved large quantities of high explosives over its rails under joint rates. It is stated that the existence of such rates was the result of an inadvertence on the part of the domestic member of that system, but if so, the inadvertence appears

to have been consistently observed through a period of years while the traffic in these commodities was moving over its rails in appreciable volume. It appears, however, that under the Canadian act respecting railways, carriers are expressly relieved from any public obligation to carry high explosives; and that act is appealed to as the basis of the policy now asserted by the G.T.R. of Canada of not joining in through rates on such commodities. We do not understand, however, that it now refuses, or proposes in the future to refuse, to carry high explosives in Canada on the local rates established by it for that traffic.

A sharp issue is made on behalf of the G.T.R. of Canada, the Canadian member of the G.T. system, as to the legal power of this Commission to require it to continue to participate in this traffic under the present joint rates. Its rails lie within the Dominion of Canada, and its corporate life and operations as a railway are carried on under the authority of the laws of Canada. It is contended, therefore, that this Commission has no authority to require the G.T.R. of Canada without its consent either to establish or to continue to maintain joint arrangements with our domestic carriers for the through movement of any traffic, and especially for the carriage of dynamite and other high explosives. The Canadian Commission in dealing with movements from the United States into Canada has recently held that the only practicable course for that Commission was not to interfere with the rates published by carriers within the jurisdiction of this Commission, and that upon a parity of reasoning our jurisdiction should be similarly limited with respect to rates published by Canadian carriers for movements into the United States. Some such understanding as between the two regulating bodies is desirable, an *din International Paper Co. v. D. & H. Co.*, 33 I. C. C., 270, as well as in other cases, this Commission has announced the same principle as a reasonable working basis in dealing with such traffic. It is there said (p. 274):

"The Canadian board has held that it should not consider the reasonableness of joint rates from points in the United States to points in Canada, published by U.S. carriers and concurred in by Canadian carriers. It has taken the position that this Commission having jurisdiction over the carriers primarily responsible for the making and publication of such rates, is the proper tribunal to consider the reasonableness thereof. *Continental Prairie & Winnipeg Oil Co. v. C.P. Ry. Co.*, 13 Can. Ry. Cas., 156; *C.N. Ry. Co. v. G.T. Ry. Co.*, 10 Can. Ry. Cas., 129."

We added that, in view of careful investigation that had been made by the Canadian Commission, we would not require the carriers subject to our jurisdiction to withdraw their concurrences in the rates there under consideration, namely, from points in the Dominion of Canada to points in the state of New York.

In the case before us here, however, we are called upon to consider the rights of shippers with respect to rates for the movement of traffic, not to or from points in Canada, but from a point in the United States through Canada to another point in the United States. While our powers respecting the through charges on such traffic seem not to have been considered in any previous formal proceeding before us, we had been under the impression that sec. 1 of the act imposes upon all the carriers participating in such traffic some control with respect to their charges for the service and particularly when the charges take the form of joint through rates. Such joint rates obviously are not under the control of the Canadian Commission and, under the principle referred to in the cases last

cited, seem necessarily to fall within our jurisdiction.

It is doubtless true that this Commission could not require a Canadian line not engaged in such traffic to accept shipments against its will or in violation of any Canadian police or other lawful regulation. But the G.T.R. of Canada does not propose to retire from traffic between domestic points in this country that may move over its rails. It does not propose even to retire from the traffic in high explosives between such points; on the contrary, as heretofore stated, we gather from the record that it proposes to continue to participate in the movement of high explosives from points in the U. S. to other points in the U. S. It will continue to accept through billing on such traffic, so far as this record advises us, even if the joint through rates are permitted to be canceled; but the policy announced by it is simply that it no longer desires to maintain joint rates on such commodities and hereafter will apply its materially higher local rates on all such through shipments. While proposing to continue in general traffic between our domestic points and in the movement of high explosives, the G.T.R. of Canada nevertheless denies that this Commission has any power to review or control its course in the premises with respect to the matter of its rates for the through movement.

There may be that limitation upon our powers respecting the rates and practices of carriers moving traffic between domestic points over intermediate Canadian rails. But obviously no definite ruling upon questions involving a possible conflict of authority as between the rate regulating bodies of this country and of Canada should be announced in such a case as this and upon such a record and without the most ample consideration of the matter in all its phases. We shall therefore express no final conclusions at this time respecting the question of our jurisdiction and the application of our act under the terms of sec. 1 to the rates and practices of the carriers moving traffic between domestic points over intermediate Canadian rails. The domestic member of the G.T. system is clearly subject to all the provisions of our act, both in the matter of its rates and routes, and under our law may inaugurate no such policy with respect to this particular traffic that has been announced by the Canadian member of that system. The points in Michigan on the rails of the domestic member of the system may be reached over reasonably convenient routes lying wholly within the U. S.; and a number of the carriers operating south of the lakes in our own territory are parties to the tariffs in question. The protestants are entitled to through routes and reasonable joint rates on this traffic to such destinations, and we shall expect the respondents to withdraw the tariffs under suspension until such routes have been established over the rails of our own lines at the through rates now in effect in connection with the G.T. system. In such rates and routes to local points on its rails the G.T. Western Ry. will be expected to join.

An order will be entered requiring the respondents to withdraw the tariffs under suspension until through routes and joint rates have been established as indicated in this report.

The Greater Winnipeg Water District Commission has under consideration tenders for the supply of tools and equipment for its machine shops at Deacon, Man. (May, pg. 170.)

The Canada Steamship Lines, Ltd., has given positive instructions that no intoxicating liquors are to be sold on any of its Lake Ontario boats this season.

### Rail Creeping.

By J. J. Eastman, Roadmaster, Prince Edward Island Railway.

Following are some of the causes of rail creeping: (1) The effect of gravity, from the top of the grade to a sag, together with the application of the brakes to the wheels on the down grade, is the first or aggressive cause. (2) Track laid without the proper spaces left at end of rails for expansion, this causing rails to creep in the direction of least resistance, if there are no trains running on it. (3) Track not properly buried in ballast to prevent ties moving sideways. (4) Spikes not driven down tight in contact with rail flange. (5) Slot spikes at joints getting worn out, and in some cases breaking off. (6) Joint bolts not kept perfectly tight. With the exception of the first cause these can, by close attention, be, to a certain extent, remedied.

In order to prevent rail creeping, or at least reduce it to a minimum, track must be well ballasted and filled within 1 in. of top of tie, with good heavy gravel or broken stone ballast, tie properly spaced and placed at right angle with rail, spikes at intervals kept driven down with head in contact with rail flange, slot spikes kept in good condition and in place, track bolts kept tight, and I have found it a good plan where joint ties keep pushing down grade in light ballast to put short struts made of 2 x 3 spruce between ends of ties on the down grade side, for three or four spaces, in order to get the support of the side thrust of three or four more ties to assist joint tie. No doubt the best preventive and final one, with the other conditions I have mentioned being attended to, is to apply a good anti-creeper, of which there are many on the market. I am not in a position to recommend any particular kind, as my experience in the use of them is limited.

But there are some peculiarities about rail creeping that are difficult to solve. I have in mind a piece of track on my own division on a down grade of 1.4% and curves of 9 degrees. On three miles there is only 0.3 mile of tangent altogether, made up of short tangents between curves. The right and left curvature about balances, track direction being about due east and west. This piece of track has in two years crept 18 ins. more on the north rail than on the other. It would be reasonable to think that on a long simple curve the outside rail would have a greater tendency to creep on account of the continual side friction of the wheels, but in the case I have mentioned, on account of the curves being about balanced, it is natural to conclude that the creeping would be about equal on both sides of the track. I would be pleased to have the opinion of some of your readers on this point. The only reason that I can see for this difference is that perhaps the heat of the sun in summer would have a better chance to strike the north rail during midday, especially in clay cuttings, where the south rail would be, to a certain extent, sheltered.—Can. Gov. Ry.'s Employees' Magazine.

### Railway Rolling Stock Notes.

The Canadian Northern Ry. has received 2 box cars from Crossen Car Co.

The Grand Trunk Pacific Ry. has received 13 express refrigerator cars, nos. 6000 to 6012, on an order of 50, from Canadian Car and Foundry Co.

The Intercolonial Ry has received 5 steel snow ploughs from Canadian Car and Foundry Co., and 5 box cars, 80,000 lbs. capacity, from Nova Scotia Car Works.

Press dispatches state that the Russian Government has placed orders, with the

Canadian Car and Foundry Co., for 2,000 box cars, and with the Eastern Car Co. for a similar number. Details of the construction, it is stated, are not complete, but it may be stated that the gauge of the Russian railways is 5 ft.

The private car being built for J. C. Eaton, Toronto, by the Preston Car and Coach Co., is to be of steel exterior finish, with the interior finished in wood. It will have an observation platform, observation room, 3 bedrooms, 2 sleeping sections, a dining room, servants' room and kitchen and will have all the latest improvements that are usually found on a car of this type. It will be provided with electric light and gas, and very probably Edison storage batteries will be used. The type of underframe will be similar to that used on C.P.R. and C.N.R. passenger cars, viz., the box girder type instead of the fish belly type.

Referring to the vote of \$2,250,000 by the Dominion Parliament at its last session for rolling stock for the Canadian Government Railways, some details of which were given in our last issue, we have been officially advised that the orders concerned are as follows:—National Steel Car Co., 8 steel sleeping cars, placed Mar. 11, date for delivery, Aug. 1; Preston Car and Coach Co., 4 steel sleeping cars, ordered Mar. 11, date for delivery July 31; Nova Scotia Car Works, 200 steel flat cars, ordered Mar. 11, date for delivery Aug. 1; Eastern Car Co., 250 steel gondola cars, ordered Mar. 11, date for delivery July 1; Canadian Allis-Chalmers, 3 consolidation locomotives, ordered Apr. 1, date for delivery July 31, and 4 switching locomotives, ordered Apr. 15, for delivery during May; Montreal Locomotive Works, 10 Pacific type passenger locomotives, ordered Mar. 13, 1914, delivered during Aug. 1914; Intercolonial Ry. Shops, Moncton, N. B., 4 baggage cars and 2 postal cars, for delivery by March, 1916. In addition to the foregoing, superheaters will be applied to 12 locomotives at the I.R.C. shops at Moncton.

### Canadian Northern Railway Construction, Betterments, Etc.

**Canadian Northern Quebec Ry.**—The Minister of Railways has approved route map in respect of revised location of the projected railway westward from Huberdean, Que. Huberdean is the terminal point of the old Montford and Galigneau Colonization Ry., and is situated 45 miles from the connection with the Montreal-Quebec line.

**Canadian Northern Ry.**—We are officially advised that while it is proposed to add some additional sidings to the terminal yards at Port Arthur, Ont., it is not proposed to make such extensive additions as a recent press report stated.

No official announcement has been made by the management as to its construction programme for the season for the territory from Winnipeg to Edmonton, but it is said that no new work will be put in hand. Whatever is done will be in the way of completing lines on which track has been laid, and going on with grading where there are uncompleted contracts. Even to what extent this is to be done is as yet uncertain. The only definite announcement is one credited to M. H. McLeod, General Manager, to the effect that ballasting on the main line west of Edmonton will be carried on. This will cover the Canadian Northern Pacific Ry. from the Alberta-British Columbia boundary to the Albreda Summit, construction of which was in charge of the Winnipeg office. The first gangs of men were sent out on the line April 29, and it was expected that over 1,200

would have been sent out from Edmonton by May 3. There are also a number of the smaller steel bridges to be put in by the bridge building companies between Yellowhead pass and Albreda Summit. Track is at present being carried over these streams by temporary bridges.

Two trains a week are being operated on the Peace River Branch, which at present extends from Oudway to Sangudo, Alberta, 38 miles. Grading has been completed from Sangudo, to Whitecourt and settlers are hoping that track will be laid on this section during this year.

**Canadian Northern Pacific Ry.**—A regular train service has been placed in operation on the first section of this line from Port Mann to Hope, B.C. This service will be extended as the other sections of the line are finally completed. The work to be done consists of the completion of the ballasting, and the general finishing up of construction work. It is expected to have the entire line opened up by Aug. 1. (May, pg. 180.)

### Victims of the Lusitania Disaster.

Additional comment on the sinking of the Cunard Line steamship *Lusitania*, by German torpedoes, off Old Kinsale Head, on the south coast of Ireland, May 7, is needless. The world wide indignation at such a heartless, and for all practical war purposes, useless crime, has been voiced in the daily press. There is no doubt that the vessel's destruction was carefully planned with the view of frightening the allied powers and the United States into removing the restrictions placed on shipping so far as Germany is concerned. In the main, the effect will be in the opposite direction. Diplomatic protests have been made to Germany by the neutral powers, and the outcome is a matter of guess work.

Among those who lost their lives in the sinking of the vessel, and who were more or less connected with transportation interests in the Dominion, were the Misses Anna and Gwen Allan, daughters of Sir Montagu Allan, formerly of the Allan Line, Montreal; F. S. Hammond, son of the late H. C. Hammond, formerly President of the Northern Navigation Co., Toronto; F. S. Pearson, who was associated with Sir William Mackenzie and others in a number of traction and allied companies in Mexico and Brazil; and F. Skelton, a director of the Canadian Shovel and Tool Co., Hamilton, Ont., and father of F. A. Skelton, Secretary, Canadian Car and Foundry Co., Montreal.

Among those on board who were saved were Lady Allan, wife of Sir Montagu Allan, Montreal; Mrs. F. S. Hammond; R. Holt, son of Sir Herbert Holt, director, C.P.R., Montreal; F. Orr Lewis, President, Canadian Vickers, Ltd., Montreal; D. A. Thomas, of Cardiff, Wales, who is connected with the projected Pacific, Peace River and Athabasca Railway and allied concerns in the Peace River District, Alberta, and his daughter, Lady Mackworth.

F. S. Pearson, was born in Lowell, Mass., July 3, 1861, and for some years practised as a mining engineer in the U.S. and Brazil. In 1888 he was Manager of the Somerville Electric Light Co., Somerville, Mass., and later served as Chief Engineer, West End St. Ry., Boston, Mass., and of the Dominion Coal Co., Sydney, N.S., which company owned the Sydney and Glace Bay Electric Ry., now owned by the Cape Breton Electric Co. Latterly he was President and director of the Mexico Tramways Co., Mexican Light and Power Co., Mexico North Western Ry., Rio de Janeiro Tramway, Light and Power Co., Barcelona Traction, Light and Power Co., and a director of Sao Paulo Tramway, Light and Power Co.

## Operating Results of United States Railways.

The net operating income of U. S. railways for February, the latest figures available, increased \$52 per mile, or 44.3%, compared with Feb., 1914; but Feb., 1914, was an abnormally poor month, net operating income per mile being 44.0% less than in February, 1913. The increase shown in February, which only partially overcomes the considerable decrease in the same item a year ago, is the result of radical reductions in operating expenses.

Total operating revenues were \$205,112,212, a decrease from 1914 of \$1,961,957. Operating expenses were \$155,031,302, a decrease of \$13,966,146. Net operating revenue was \$50,080,910, an increase of \$12,004,189. Taxes were \$10,995,903, a decrease of \$296,011. This left \$39,028,155 for net operating income, available for rentals, interest on bonds, appropriations for improvements and new construction, and dividends. Operating revenues per mile of line averaged \$897, a decrease of 1.9%; operating expenses per mile averaged \$678, a decrease of 9.1%; net operating revenue per mile averaged \$219, an increase of 30.3%, while taxes per mile were \$48, a decrease of 3.5%. Net operating income per mile was \$171, an increase of 44.3%. Railways operating 228,678 miles of line are covered by this summary, or about 90% of the steam railway mileage in the U. S.

The eight months of the current fiscal year show a decrease in total operating revenues per mile of line of 7.9% compared with the corresponding period of the preceding year, a decrease in net operating expenses per mile of 9.7%, and a decrease in net operating revenue per mile of 3.2%. This net operating revenue per mile increased 3.7% in the east, decreased 17.8% in the south, and decreased 3.7% in the west.

February operating income per mile was 44.3% greater in 1915 than in 1914, 19.6% less than in 1913; 18.1% less than in 1912, and 5.8% less than in 1911.

## Train Operation on Roberval-Saguenay Railway.

The Quebec Public Utilities Commission in a recent judgment upon the petition of the municipalities through which the R.S. Ry. passes, has ordered that the company submit for approval a schedule train service, either by passenger or mixed trains, whereby a train with passenger and baggage accommodation will proceed directly from Bagotville to Ha Ha Bay Jct., so as to connect with the Quebec and Lake St. John Ry.'s outgoing morning train from Chicoutimi, and the same company's incoming train which arrives from Quebec in the evening and which passes Ha Ha Bay Jct. en route to Chicoutimi. This service is to be maintained in constant operation every day except Sundays, or on such days as the Q. and L. St. J. Ry. trains are regularly scheduled. In the event of the company desiring to diminish this service at a future date it shall make application to the Commissioner, filing full reasons, details of traffic and statements in support thereof at least 30 days before it is intended to put such altered schedule into effect. It is also directed that the company take means to render the present mixed train service more conformable to the time scheduled for it than its present operation shows.

In reference to allegations made as to improper and insufficient passage accommodation upon trains and the backing of trains over considerable distances in a dangerous manner, the Commission finds that they have substantial foundation, and

are not to be altogether entertained. The backing of trains, however, does not appear to be sufficiently protected, and the Commission directs that a man be stationed on the front car in backing up, provided with a whistle, bell or horn during the day, and a light at night, to give warning of the approach of the train.

In giving reasons for this order the commissioners state that while the train service at present being given complies with the minimum required by the subsidiary contract between the Department of Railways and the company, is not an adequate and reasonable provision for the passenger requirements of the public, and moreover failed entirely to make connection with the Q. and L. St. J. Ry. trains at Ha Ha Bay Jct. or Chicoutimi, which was one of the reasons for granting the Dominion and Provincial subsidies. The company submitted that the traffic on the line did not warrant the outlay necessary to give the additional service, and pointed out that the present service was given at a loss for the year ended Dec. 31, 1914, of \$3,923.93. The applicants contended that one reason for this deficit was that special freight rates, considerably below its ordinary charges, had been granted certain shippers. The commissioners do not say that a clear intention to this "as it is an apparent or real breach of the law governing such matters." The commissioner's do not say that a clear case is made out for this, "but it certainly appears that the rates charged by the company in certain instances are lower than the general and accepted tariffs would warrant \* \* \* \* We are of opinion that with some reasonable change in its freight tariff charges and more regard for the convenience of passenger traffic the operating returns would be increased. In any event we feel that the object for which public aid has been given in a substantial way (representing approximately one-half of the total cost of the lines) is being largely defeated by the meagre passenger accommodation that is presently afforded."

## Canadian Overseas Railway Construction Corps.

This corps, which has been raised by the C. P. R. management at the request of the British War Office through the Dominion Militia Department, and the details of the organization of which with a diagram of the same are published in Canadian Railway and Marine World for April, has been mobilized at Christopher's Pit, just outside West St. John, N. B., where the officers and men have been accommodated in between 40 and 50 C. P. R. cars which were placed on sidings there.

F. L. Wanklyn, General Executive Assistant, C. P. R., has been appointed Honorary Lt. Col. of the corps.

Following is a list of the officers with particulars of their civil and military qualifications:

### Regimental Staff.

Officer Commanding, rank, Lieutenant Colonel, Colin Worthington Pope Ramsey, age 32; 16 years general railway construction. Captain's Class A certificate Royal School of Infantry, St. Johns, Que., 1902. Gazetted Lt. Col., March 11, 1915.

Chief Engineer, rank, Major, John Garnett Reid, age 37; 18 years general railway construction.

Adjutant, rank, Captain, LeRoy Fraser Grant, age 31; 2 years railway construction and 6 years general municipal engineering. Graduate Royal Military College and two years commissioned officer in permanent force Canadian Militia.

Medical Officer, rank, Captain, Frank

Ernest Pettman, age 36; 2 years general practice and hospital experience, three years in charge of hospitals on railway construction work in B. C.

Quartermaster, rank, Major, Bertram Poidevin Richardson, age 43; 19 years railway construction and general engineering work. 1900-03 Quartermaster and Superintendent of military works South Africa (war medal).

Paymaster, rank, Captain, John Henry Pope, age 31; 12 years general business experience. Field officer's certificate, Divisional School, Sherbrooke, Que., 1903.

### No. 1 Company.

Superintendent of Construction, rank, Major, Chelton Longley Hervey, age 43; 23 years general railway construction work. St. Johns Military Academy and one year sergeant in U. S. Engineers, Spanish-American War. 1909-15 Lieut. Corps of Guides, Divisional Area No. 4.

Mechanical Engineer, rank, Captain. (Various applications being considered for this position.)

Superintendent, rank, Lieutenant, Daniel Hillman, age 38, 14 years general railway construction.

Superintendent, rank, Lieutenant, William Henry Douglas Murray, age 35; 17 years railway and building construction and general contract work; 8 years with volunteers, portion of time non-commissioned officer.

Bridge Engineer, rank, Lieutenant, LeRoy Zimmerman Wilson, age 26, 6 years with Dominion and St. Lawrence Bridge Co.'s designing and erecting engineer. Provincial Lieutenant 4th Field Company, Canadian Engineers. Recently qualified.

Superintendent, rank, Lieutenant, Henry Wellwood, age 36; 12 years general railway construction. Provisional Lieutenant 38th Regiment; recently qualified.

### No. 2 Company.

Superintendent of Construction, rank, Major, Alfred George Tully LeFevre, age 41; 21 years general railway construction. Graduate Royal Military College. Captain and acting Adjutant 5th Westmount Rifles.

Bridge Engineer, rank, Captain, (Various applications being considered for this position.)

Superintendent, rank, Lieutenant, Kenneth A. Ramsay, age 33; 13 years general railway construction. Royal Military College 1900-02.

Superintendent, rank, Lieutenant, Erskine Duncan, age 34; 14 years general railway construction; 2 years with volunteers in ranks.

Superintendent, rank, Lieutenant, Francis Bernard Connors, age 28, 9 years general railway construction; 2 years with volunteers Jan. 13, to Mar. 15, 1915. Sergeant 12th Canadian.

Superintendent, rank, Lieutenant, Henry Lewis Sherwood, age 33; 12 years general railway construction. Graduate Royal Military College, 1903.

Overland Wireless Telephony between Scranton, Penn., and Binghamton, N. Y., 63 miles, has been developed by L. B. Foley, Superintendent of Telegraphs, Delaware, Lackawanna & Western Rd. For some time the company has maintained wireless telegraph communication between Hoboken, N. J., Scranton, Binghamton and Buffalo, N. Y., and between these stations and moving express trains. This service has been relied on in emergencies (storms) to maintain the train dispatching. The use of radio-telephony as well as telegraphy is part of the development of this auxiliary service; it is desired thus to communicate over a distance of 50 miles from a fixed station to a train and over 150 miles between fixed stations.

## Canadian Pacific Railway Construction. Betterments, Etc.

Sir Thomas Shaughnessy, President, returned to Montreal, May 6, after a trip to California, from which he returned via Vancouver, inspecting the company's western lines en route. He stated that on the trip he had given instructions to have full gangs of men put at work all along the line on track improvement and on general betterment undertakings. This kind of work is ordinarily started at this time of the year, and in view of the present situation it was decided to do all of it as soon as possible instead of spreading it over the entire construction season. It is expected that as a result the total amount of work done will be considerably in excess of what would ordinarily have been accomplished. To some extent this same policy is being carried out on the company's eastern lines. There is not, however, the same amount of work to be done in the east as in the west. It is hoped that this policy will tend to relieve the unemployment situation which has been proving a strain upon the municipal authorities in some places. There will not be any new work undertaken at present, but all work in hand will be continued.

**Eastern Division.**—A spur line of about 2,000 ft. has been built a few miles east of Dorval, Que., to the new cavalry remount depot established by the Dominion Government, where accommodation is provided for 3,000 horses. The spur will provide for the handling in and out of the horses, together with feed, etc. A 1,000 ft. platform has been built. The work was done in six days by the company's own forces under the charge of R. McKillop, Division Engineer.

**Ontario Division.**—Darling & Pearson, architects, Toronto, have been engaged to prepare plans for the union station at North Toronto for the joint use of the C.P. R. and the Canadian Northern.

**Pacific Division.**—A press report states that a subcontract has been let to the Bates and Rogers Construction Co., Spokane, Wash., for concrete lining the Rogers Pass tunnel. The estimated cost of the work to be done under the contract is said to be \$300,000. (May, pg. 176.)

## Railway Development in British Columbia.

In an interview by a representative of Canada, a periodical published in London, Eng., Sir Richard McBride, Premier of British Columbia, while visiting England, is reported to have said, recently:—

"Railway development has been progressing at a splendid rate in British Columbia. Of the different railway projects with which the province has been associated, the Kettle Valley Ry., which is part of the C. P. R. system, will be completed and in operation this year. The main line of the Canadian Northern has already been completed to tidewater at the coast, and I have it on the authority of Sir William Mackenzie that a regular train service will be inaugurated during the summer. On Vancouver Island the C. N. R. has proceeded splendidly with construction between Patricia Bay and Alberni, and negotiations are now in progress between the Government and the company to the end that the steel will be laid and a train service on the Island inaugurated in the near future. The Pacific Great Eastern, from Vancouver to Fort George, has been graded throughout the entire mileage, with the exception of a small section round Howe Sound, and upward of 50 miles of the road

are now in operation. The P. G. E. R., in addition to opening up a large section of the interior, will also bring the G. T. Pacific system into touch with the city of Vancouver. It is expected that this line will prove of great value to the country. The G. T. P. R. is operating three trains a week through to Prince Rupert, and I have no doubt that as soon as conditions warrant, the people of the northern district will have a daily trans-continental service.

"In respect of the Pacific Great Eastern, the proposals of the Province are to carry this road to the Peace River, and unquestionably, when money conditions permit, the portion of the line from Fort George north will be at once undertaken. Considerable interest has been taken on the U. S. side in the P. G. E. R. development, in view of the attention which the U. S. Government is devoting to the opening up of Alaska. Those who have studied the problems of western development seem to be of the opinion that unless and until the U. S. Government joins with that of British Columbia or of Canada in permitting the continuance of the P. G. E. R. further north through Yukon and into Alaska, the whole making a main arterial line, the expansion and development of the northern section of the continent will not proceed as it ought to do. Personally, I have been closely in touch with Washington and Ottawa in the endeavor to have the subject actively pushed, and I have every reason to feel that the day is not far distant when we may be able to claim a north and south line from British Columbia right through to Alaska that will give to hundreds of thousands of enterprising people fresh and profitable opportunities of making new settlements."

## A Public Utilities Commission for Alberta.

The Alberta Legislature has passed an act for the creation of a Public Utilities Commission for the Province. It provides for the appointment of three commissioners to hold office for ten years, one of whom shall be chairman. The commissioners are to devote their whole time to the commission's work and may be reappointed upon the expiration of their ten years' term, but no commissioner may remain in office after attaining 70 years of age. Otherwise a commissioner can be removed only by the Lieutenant-Governor upon an address of the Legislature. No commissioner may be financially interested in any public utility in the Province, or in any device or appliance used in the business of a public utility.

The commissioners are to have a supervisory jurisdiction over public utilities with power to make such orders as to equipment, appliances, safety devices, extension of works or system as are necessary for the safety or convenience of the public, or for the proper carrying out of any contract or franchise involving the use of any public property or rights; and to enquire into the merits of any application of a local authority to raise money by debentures, and to grant or refuse permission.

Public utilities owned by the cities or towns of the Province are exempt from the provisions of the act, unless a bylaw be passed bringing them under it, and public utilities owned by corporations existing at present are also exempted.

The commissioners will have jurisdiction in all questions relating to the transportation of goods, or passengers on the lines of any street railway, or steam railway, and may authorize any such company to carry goods or passengers on its lines for any

period of time and at such prices as it may fix. It will have jurisdiction in regard to tolls charged; may order extensions; and has power to see to the making of agreements between municipalities and the owners of public utilities.

It is given full power to hold investigations into all matters within its purview, either upon its own initiative, or upon receipt of a complaint; to obtain information as to how the owners of public utilities are complying with the law; to appraise and value public utilities when necessary; to impose and enforce regulations for the safety of the public and employees, etc.

No franchise for a public utility is hereafter to be granted without the approval of the commissioners; and no railway company may close a station, or stop the sale of passenger tickets or remove an agent, to receive and discharge freight at any point without the consent of the commissioners.

## Discrimination in Favor of Grand Trunk Railway Prohibited.

The Interstate Commerce Commission has rendered a decision in which it finds that the practice of the Crosby Transportation Co., in selling through tickets via its boats and the Detroit, Grand Haven & Milwaukee Ry. between Milwaukee, Wis., and Grand Rapids, Mich., and refusing to sell through tickets between the same points via the Grand Rapids, Grand Haven & Muskegon Ry., is unjustly discriminatory. The Detroit, Grand Haven & Milwaukee Ry. is a steam road, operated by the Grand Trunk Ry. The Grand Rapids, Grand Haven & Muskegon Ry. is an electric interurban line. The following extracts from the decision sufficiently describe both the circumstances of the case and the position which the commission takes: "That the service of the electric road accords with the convenience of a large proportion of the travelling public is evidenced by the fact that a considerable number of persons travel over the electric line in the journey between Grand Rapids and Milwaukee, although put to the inconvenience of buying new tickets and rechecking baggage at Grand Haven. The docks at Milwaukee used by the Crosby Transportation Co. are owned by the Chicago, Milwaukee & St. Paul Ry., but are leased by the G.T.R. The dock at Grand Haven is owned by the G.T.R. It is urged on behalf of the G.T.R. that its ownership of the dock at Grand Haven should give it the right to exclude its competitor from its use and enjoyment. The Crosby Transportation Co. is an independent company, but is the exclusive carrier for the G.T.R. between Milwaukee and Grand Haven. Its arrangement with the G.T.R. permits the use of the G.T.R. dock by the steamboat company. There is nothing in the record that leads to the conclusion that the use of this dock or of the dock at Milwaukee by the transportation company is contingent on that company turning over all of the through traffic to the G.T.R. Neither is it clear that such a condition could be imposed. The electric line from Grand Rapids to Grand Haven is not in any sense a competitor of the Crosby Transportation Co. The latter named company can not be exempted from fulfilling its obligations as a common carrier to furnish a public service without discrimination. We are of the opinion that the Crosby Transportation Co. by selling through tickets over the G.T.R. between Grand Rapids and Milwaukee and refusing so to do via the Grand Rapids, Grand Haven & Muskegon Ry. unduly prefers the G.T.R. and unduly discriminates against the Grand Rapids, Grand Haven & Muskegon Ry. An order will be entered in conformity with the conclusion herein expressed."

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, Telegraph, and Railway and  
Canal Contractors' Interests.  
Official Organ of the various Canadian  
Transportation Associations.

## R. F. Morkill Not Killed as Reported.

Railway Review, Chicago, had the two  
following items in its issue of May 15.

"R. F. Morkill, Signal Engineer of the Grand  
Trunk Ry., has been killed in the war in Bel-  
gium. Mr. Morkill was on leave of absence,  
serving with the Canadian contingent.

"Barton Wheelwright, Inspector of Signals of  
the Grand Trunk Ry., has been appointed Signal  
Engineer, with office at Montreal, Que. R. F.  
Morkill, formerly Signal Engineer, has been  
killed while serving with the Canadian troops  
in Belgium."

Canadian Railway and Marine World is  
pleased to be able to say with Mark Twain that  
the items above quoted are "greatly  
exaggerated."

On May 19, H. R. Safford, Chief Engineer,  
G.T.R., Montreal, telegraphed to one of Mr.  
Morkill's Toronto friends in reference to  
an inquiry as follows:

"No truth in Chicago rumors about Mor-  
kill. Last report stated everything satis-  
factory."

On May 21, H. R. Charlton, General Ad-  
vertising Agent, G.T.R., Montreal, wrote  
Canadian Railway and Marine World as fol-  
lows: "There is no truth in the report that  
Barton Wheelwright has been appointed  
Signal Engineer of the Grand Trunk, nor  
have we any information that Mr. Morkill  
has been reported in the casualty list."

Barton Wheelwright, Inspector of Signals,  
G.T.R., has, we are informed, been acting as  
Signal Engineer since Mr. Morkill left for  
overseas service.

When last heard from, a short time ago,  
Mr. Morkill was engaged in the installation  
of high power searchlights on the English  
coast.

## Acquirement of Branch Lines for the Canadian Government Railway System.

The Minister of Railways moved in the  
House of Commons, Mar. 24, three resolu-  
tions respecting the purchasing of certain  
lines by the Dominion Government. The  
first set out that it was expedient to author-  
ize the Minister, subject to the authority of  
the Governor-in-Council, to construct, pur-  
chase or acquire in whole or in part any  
railway, railway bridge, station, terminal  
ferry, or other work in Quebec, New Brun-  
swick, Nova Scotia or Prince Edward Island,  
provided that the lease or contract for  
purchase be submitted to Parliament; that  
no railway to be acquired shall exceed 200  
miles in length; that no contract for the  
building of any line of more than 25 miles  
shall be entered into without an appropria-  
tion having been made by Parliament; that  
any railway so acquired shall form part of  
the Government railway system, and that  
no railway shall be acquired unless it direct-  
ly connects with some part of the then ex-  
isting Government system. The second  
resolution ratifies and confirms an agree-  
ment made Aug. 1, 1914, with the Inter-  
national Ry. of New Brunswick and Thos.  
Malcolm, for the purchase of the entire  
undertaking of the I.R. of N.B., extending  
from Campbellton to St. Leonard, 112 miles,  
for \$275,000, payable any time within five  
years from date of agreement, and pending  
the payment of the purchase money for the  
lease of the line at \$90,000 a year, payable

half yearly. The third resolution ratifies  
and confirms an agreement dated Mar. 18,  
1915, for the purchase of the New Brun-  
swick and Prince Edward Island Ry. from  
Sackville to Cape Tormentine, N.B., 36  
miles, for \$270,000, and providing that until  
the purchase money is paid interest on that  
amount at 4% shall be paid from Aug. 1,  
1914.

The resolutions were passed, but were dis-  
cussed at some length when they came be-  
fore the House in form of a bill. The  
principal amendment made was one author-  
izing the Minister to lease branch lines,  
with or without an agreement to purchase,  
and another providing that where a line  
over 25 miles in length is acquired no  
money shall be paid therefor until it has  
been voted by Parliament.

This matter was under discussion in the  
session of 1912-13 when power was given to  
the Minister by the House of Commons to  
acquire a line not more than 200 miles in  
length or to build a line not more than 25  
miles in length without the consent of  
Parliament. The Senate declared that this  
should only be done with the consent of  
Parliament, and as the House of Commons  
would not agree, the measure was dropped.

The House of Commons has voted  
\$12,500 for the International Ry. of New  
Brunswick, and \$49,700 for the New Brun-  
swick and Prince Edward Island Ry., to  
bring them up to the standard of Inter-  
colonial branch line construction.

**Dominion Atlantic Ry. Men in Active  
Service.**—The following are those in the  
service of the Dominion Atlantic Ry. Engi-  
neering Department, who are now on, or pre-  
paring for, active service in Europe:

J. G. St. J. Ellis, heretofore Assistant En-  
gineer, who is in England qualifying for a  
commission in the Royal Engineers; W. H.  
Parker, instrument man and masonry in-  
spector, who joined the army at the begin-  
ning of the war as a private, and has since  
received a commission as Second Lieu-  
tenant, 2nd Royal Muser Fusiliers; J. R.  
C. Tyler, instrument man and masonry in-  
spector, 2nd Lieutenant, 7th Battalion York  
and Lancaster Regiment; C. Hyde, rod man,  
with the Canadian Medical Corps, and W. A.  
Archibald, with the McGill Hospital Corps

**Women as Conductors.** One of the results  
of the war in Europe is the employment of  
women to take the places of men, in various  
capacities, to which they are suited. On the  
continent, women have been utilized as con-  
ductors on street cars for some time, and  
their services are now being utilized in  
Glasgow, Scotland, where it is stated the  
experiment is only being tried with two wo-  
men employees of the Corporation Tramways,  
and that no decision has been arrived at as  
to whether it will be adopted extensively,  
but, if it is, it will be only a temporary  
measure to tide over the present shortage

**Merchant Navies.**—Figures quoted show-  
ing the tonnage of the seven chief merchant  
navies of the world are as follows: Great  
Britain 20,030,587; Germany, 4,998,746;  
United States 3,489,736; Norway 2,475,324;  
France 2,246,504; Japan 1,700,062; Italy  
1,571,761. The British tonnage is more than  
3,500,000 tons greater than that of the  
other six countries combined. It is scarcely  
necessary to mention that the German  
merchant marine is not in active service at  
present.

The Medical Officer of Health of Saska-  
toon, Sask., is using advertising signs on  
the municipal railway to educate the  
citizens upon matters under his depart-  
ment's control.

The Moncton & Buctouche Ry. has ar-  
ranged for its locomotive and car repair  
work to be done at the Intercolonial Ry.'s  
shops at Moncton, N.B.

## Transportation Appointments Throughout Canada.

The information under this head, which is taken entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may require any other in our announcements will receive it by advising us.

**Algoma Eastern Ry.—J. A. DRESSER** having retired as Manager of the Lands Department, the work is now being carried on under the supervision of R. S. McCORMICK, Chief Engineer. Office, Sault Ste. Marie, Ont.

**Canada Steamship Lines, Ltd.—C. E. CROFT**, formerly Chief Clerk to Operating Superintendent, Passenger Steamers, Toronto, has been appointed General Agent, Passenger Traffic Department, (Commisary). Office, Yonge St. Wharf, Toronto.

Additional appointments and details of rearrangement of Passenger Traffic territory will be found on another page in the Marine Department.

**Canadian Government Railways.—J. K. McNEILLIE**, heretofore Superintendent, District 3, Eastern Division, C.P.R., Montreal, has been appointed General Superintendent, Intercolonial Ry., Prince Edward Island Ry. and National Transcontinental Ry. east of Quebec, vice F. P. Brady, transferred. Office, Moncton, N.B.

**Dr. W. A. FERGUSON** has been appointed Chief Medical Officer. Office, Moncton, N.B.

Appointments consequent on the taking over of the National Transcontinental Ry. Grand Trunk Branch, and the Lake Superior Branch, will be found on another page under "Government Operation of the National Transcontinental Ry."

**Canadian Northern Ry.—S. J. HUNGERFORD**, Superintendent of Rolling Stock, has had his jurisdiction extended over the Eastern Lines. Office, Winnipeg. (At present he is located in Toronto attending to shell manufacture by the Universal Tool Steel Co., Ltd.)

**W. C. MOORE**, heretofore Road Foreman of Locomotives, Trenton, Ont., has been appointed Master Mechanic, Ottawa Division, reporting to the Superintendent. Office, Trenton, Ont.

**W. H. LONG**, heretofore acting General Car Foreman, Toronto, has been appointed Division Car Foreman, Ottawa Division, reporting to the Master Mechanic. Office, Trenton, Ont.

**W. M. HOOD**, heretofore Travelling Passenger Agent, Toronto, has been appointed City Agent, Passenger, Express and Freight Departments, Oshawa, Ont.

**J. W. FINDLAY**, heretofore Road Foreman of Locomotives, Parry Sound, Ont., has been appointed Master Mechanic, Toronto Division, reporting to the Superintendent. Office, Parry Sound, Ont.

**W. F. MILLER**, has been appointed Division Car Foreman, Toronto Division, reporting to the Master Mechanic. Office, Parry Sound, Ont.

**O. C. BISHOP**, heretofore acting Superintendent, Sleeping, Dining and Cafe Cars and News Department, Winnipeg, has been appointed Superintendent of Sleeping and Dining Cars and News Service, Western Lines. Office, Winnipeg.

**J. M. GRIEVE** has been appointed Assistant Superintendent of Sleeping, Dining and Parlor Cars and News Service, Western Lines, Office, Winnipeg.

**C. D. FRENCH**, heretofore in the General Stores Department, has been appointed storekeeper, Humboldt, Sask., vice S. K. Moorcroft, promoted.

**S. K. MOORCROFT**, heretofore storekeeper, Humboldt, Sask., has been appointed Division Storekeeper, Saskatoon, Sask., vice A. E. Down, who has joined the 28th Battalion for service in Europe.

**T. R. McLEOD**, heretofore Master Mechanic, Ontario Grand Division, Toronto, has been appointed Superintendent, Pacific Division, and his former position has been abolished. Office, Port Mann, B.C.

**Canadian Pacific Ry.—W. H. WINTERROWD**, heretofore Mechanical Engineer, Angus Shops, Montreal, has been appointed Assistant to Chief Mechanical Engineer. Office, Montreal.

**A. E. STEWART**, heretofore District Master Mechanic, District 1, Ontario Division, Toronto, has been appointed Assistant Superintendent, District 2, Atlantic Division, vice W. J. Pickrell, appointed Master Mechanic, Ontario Division. Office, Aroostook, Jct., N.B.

**N. E. GUTELIUS**, heretofore Resident Engineer, Montreal, has been appointed Resident Engineer, Brownville Jct., Me., vice M. Kelly, transferred.

**W. FORREST**, heretofore General Car Inspector, Windsor St. Station, Montreal,

**F. P. Brady**,  
General Superintendent, National Transcontinental Ry., and G.T. Pacific Ry. Lake Superior Branch, Canadian Government Railways.

has been appointed Car Foreman at Lake Megantic, Que.

**F. W. COOPER**, A.M.Can.Soc.C.E., whose appointment as acting Superintendent, District 1, Eastern Division, Farnham, Que., was announced in our last issue, has been appointed Superintendent there.

**M. McD. DUFF**, heretofore Assistant Manager Steamship Lines, Montreal, has been appointed Manager, Great Lakes Steamship Service. Office, Montreal. We are advised that the change is one of title only, and that his duties remain as heretofore.

**M. A. FULLINGTON**, A.M.Can.Soc.C.E., heretofore Assistant Superintendent, District 4, Eastern Division, Ottawa, Ont., has been appointed Superintendent, District 3, Eastern Division, vice J. K. McNeillie, resigned to enter Canadian Government Railways service. Office, Montreal.

**W. D. NEIL**, heretofore at Winnipeg, has

been appointed Superintendent of Telegraph Traffic, Montreal, vice J. Fletcher, transferred to Winnipeg.

**W. TANSLEY**, heretofore Assistant Superintendent, District 3, Ontario Division, Toronto, has been appointed Assistant Superintendent, District 5, Eastern Division, vice J. H. Hughes transferred. Office, Smith's Falls, Ont.

**F. M. RUTTER**, A.M.Can.Soc.C.E., heretofore Assistant Division Engineer, Eastern Division, Montreal, has been appointed Assistant Superintendent, District 3, Ontario Division, vice W. Tansley, transferred. Office, Toronto.

**G. I. EVANS**, heretofore Superintendent, Locomotive Shops, Angus Shops, Montreal, has been appointed District Master Mechanic, Districts 3 and 4, Ontario Division, vice C. Connors, transferred. Office, Toronto.

**G. H. DAVIS**, heretofore Resident Engineer, District 4, Ontario Division, has been appointed Assistant Division Engineer, Eastern Division, Montreal, vice F. M. Rutter, promoted.

**C. CONNORS**, heretofore District Master Mechanic, Districts 3 and 4, Ontario Division, Toronto, has been appointed District Master Mechanic, District 1, Ontario Division, Toronto.

**J. FLETCHER**, heretofore Superintendent of Telegraph Traffic, Montreal, has been appointed Superintendent of Telegraph Traffic, Winnipeg. This is a new position.

**H. G. REID** heretofore Master Mechanic, Lake Superior Division, North Bay, Ont., has been appointed Master Mechanic, Saskatchewan Division, vice M. J. Scott, transferred. Office, Moose Jaw.

**D. COONS**, Superintendent of Telegraphs, Alberta Division, Calgary, has been appointed Superintendent of Telegraphs, Saskatchewan Division, vice J. F. Richardson, resigned. Office, Moose Jaw.

**M. J. SCOTT**, heretofore Master Mechanic, Saskatchewan Division, Moose Jaw, has been appointed Master Mechanic, Alberta Division, vice A. Sturrock, transferred. Office, Calgary.

**D. L. HOWARD**, heretofore Inspector of Telegraphs, Medicine Hat, Alta., has been appointed Superintendent of Telegraphs, Alberta Division, vice D. Coons, transferred. Office, Calgary.

**H. H. GOODFELLOW**, heretofore assistant chief operator, Telegraph Department, Vancouver, B.C., is reported to have been appointed Inspector of Telegraphs, Medicine Hat, Alta., vice D. L. Howard, promoted.

**A. STURROCK**, heretofore Master Mechanic, Alberta Division, Calgary has been appointed Master Mechanic, British Columbia Division, vice D. T. Main, promoted. Office, Vancouver.

**W. H. ROWLANDS**, heretofore assistant port steward, has been appointed port steward, British Columbia Coast Steamship Service, vice J. S. Byrom, promoted to Great Lakes Steamship Service. Office, Victoria.

**Central Vermont Ry.—S. S. RUSSELL**, heretofore Superintendent, Northern Division, St. Albans, Vt., has been appointed Special Agent. Office, St. Albans, Vt.

**Chicago, Milwaukee & St. Paul Ry.—T. P. CASEY**, heretofore Travelling Freight & Passenger Agent, Buffalo, N.Y., has been appointed Canadian Freight & Passenger Agent, succeeding A. J. Taylor, deceased. Office Toronto.

**W. H. D. Snazel**, who acted in Mr. Taylor's place during his several months' absence through illness, continues as Travelling Freight & Passenger Agent at Toronto.

**Dominion Atlantic Ry.—J. A. MACKAY**, has been appointed acting Assistant Engineer, vice J. G. St. J. Ellis, who is in Eng-

land qualifying for service with the Expeditionary Force. Office, Kentville, N.S.

**Edmonton, Dunvegan and British Columbia Ry.**—R. M. HALPENNY, heretofore Trainmaster, Grand Trunk Pacific Ry., Jasper, Alta., has been appointed Superintendent, E. D. & B. C. R., and his former position has been abolished.

**Grand Trunk Pacific Ry.**—A. KILPATRICK, heretofore Superintendent, Edmonton, Alta., to Prince George, B.C., Edson, Alta., has been appointed Superintendent of the Lake Superior Division, vice A. A. Tisdale, who has been granted temporary leave of absence. Office, Fort William, Ont.

T. W. PALOS has been appointed Locomotive Foreman, Graham, Ont., vice R. G. Gilbride, resigned.

C. E. BROOKS, heretofore General Foreman in charge of Shops, Transcona, Man., has been appointed acting Superintendent of Motive Power, vice J. Billingham, Superintendent of Motive Power, resigned. Office, Transcona, Man.

H. McCALL, Superintendent, Winnipeg, Man., to Watrous, Sask., and Melville-Canora Branch, Edson, Alta., has had his jurisdiction extended to include the Regina Division, on the transfer of J. P. Kirkpatrick to Edson, Alta. Office, Melville, Sask.

J. P. KIRKPATRICK, heretofore Superintendent, Regina Division, has been appointed acting Superintendent, Edmonton, Alta., to Prince George, B.C., and intersecting branch lines, vice A. Kilpatrick, temporarily transferred to Fort William, Ont. Office, Edson, Alta.

W. C. C. MEHAN, General Superintendent, Prince Rupert, B.C., has had his jurisdiction extended to include the territory between Prince George, B.C., and the west switch at North Edmonton, Alta.

The following station agents have been appointed,—Pope, Man., P. C. Sells; Asquith, Sask., R. L. Harrop; Yorkton, Sask., T. J. Shields.

**Grand Trunk Ry.**—W. C. SEALY, heretofore Assistant Master Mechanic, Ontario Lines, has been appointed Master Mechanic, Ontario Lines, vice J. Markey, deceased. Office, Toronto.

J. R. LECKIE, heretofore Locomotive Foreman, London, Ont., has been appointed Assistant Master Mechanic, Ontario Lines, vice W. C. Sealy, promoted. Office, Toronto.

J. A. WALTON, heretofore Locomotive Foreman, Palmerston, Ont., has been appointed Locomotive Foreman, London, Ont., vice J. R. Leckie, promoted.

W. H. ARCHER has been appointed Locomotive Foreman, Palmerston, Ont., vice J. A. Walton, transferred.

J. McPEAK, formerly Commercial Agent, Detroit, Mich., who has been on leave of absence through ill health, for some time, has returned to service with the title of Travelling Freight Agent, at Detroit, Mich. H. H. Hamill is Commercial Agent there.

The following station agents have been appointed,—Aultsville, Ont., J. A. Roch; Hoards, Ont., R. S. Davidson; Beachville, Ont., C. V. Vail; Mitchell, Ont., W. A. Abrey; Ilderton, Ont., C. H. Duplan; Vars, Ont., K. J. Mills; outside agency, Pottersburg, Ont., W. J. Duffin. The station at Terra Cotta, Ont., and the outside agency at Omemee, Ont., have been closed.

**Intercolonial Ry.**—T. L. LANDERS, has been appointed acting Resident Engineer, District 3, vice W. A. Cowan. Office, Truro, N.S.

F. F. CAREY, heretofore locomotive driver, has been appointed acting District Master Mechanic, District 3, Moncton, N.B. See also Canadian Government Railways.

**National Transcontinental Ry.**—See under

"The Dominion Government operates the N. T. R.," on another page.

A. E. DOUCET, District Engineer, section B., at Quebec, retired from the service April 30, and the office was closed. The small amount of work still to be done on the line in that district will be under the jurisdiction of Arthur Dick, formerly one of the division engineers.

### Grand Trunk Railway Betterments, Construction, Etc.

**Track Elevation in Montreal.**—The City Engineering Department has submitted to the Board of Control a further estimate of the cost of elevating the G. T. R. tracks from Bonaventure station to St. Henri. The present estimate is \$6,000,000 instead of the \$8,000,000 originally estimated, and towards which the city obtained legislative authority to contribute \$2,000,000. The last estimate of the G. T. R. placed the cost of the elevation at \$10,000,000 and asked the city to

J. K. McNeillie,  
General Superintendent, Canadian Government  
Railways.

increase its contribution by \$500,000. The present estimate is the reply of the city to the railway company. The principal item upon which there has been a reduction in the city's estimates is in regard to the construction of the bridges across the streets. The city takes exception to the general plan adopted by the railway engineers, under which two sets of columns would be placed under the steel bridges which will span the city streets, piercing the embankment on which the tracks will run. The city officials hold that, in many cases, the columns provide unnecessary strength, and that single span bridges will suffice, thus reducing by a large amount the steel work required. The city, too, does not agree that the company should calculate on getting 6% interest on the capital employed in the improvement, and suggests that a lower rate should be substituted. The contention that 3% should be allowed as the cost of marketing securities which may be rendered necessary as a result of the charges imposed in both parties by the Railway Commission, is not acceptable.

It is expected that the report will be approved by the City Council at an early meeting after which it will go before the Board of Railway Commissioners for consideration along with the G. T. R. plans. (May, pg. 176.)

### The Delaware and Hudson Company in Canada.

The Delaware and Hudson Co. owns two railways in Canada—the Quebec, Montreal and Southern, extending from Noyan Jct., to Belleville, 81 miles, from a junction with the G. T. R. at St. Lambert to Fortierville, 109.69 miles, and from St. Constant Jct. to Napierville Jct., 1.40 miles, a total of 192.09 miles; and the Napierville Jct. from St. Constant Jct. to Rouse's Point, Que., 27.06 miles. At the latter point connection is made with the Delaware and Hudson Rd.'s main line, which extends northerly to Wilkes Barre, Pa. The total mileage of railways owned and operated by the company is 903.99, so that almost 25% of its mileage is in Canada.

The directors' report for the year ended Dec. 31, 1914, shows that the revenue in the railway department was \$22,595,028.50, a decrease of \$1,558,466.23 from 1913; the operating expenses excluding taxes were \$15,048,452.04, a decrease of \$161,854.81; the net operating revenue was \$7,546,576.46, a decrease of \$1,396,611.42.

The percentage of expenses to revenues increased from 62.97% in 1913 to 66.60% in 1914. The figures showing the revenues of the Canadian lines are not given separately, but they are to be found, as for the year ended June 30, 1914, in the statistical table published on pg. 162 of our May issue.

The following information is given with respect to the Canadian lines:—

"The Quebec, Montreal and Southern Ry. Co. shows a decrease in operating revenues of \$8,835.17, as compared with previous year. The operating expenses decreased \$16,955.83. Income from hire of equipment increased \$11,514.33. The net income, not allowing for interest due the Delaware and Hudson Co., was \$149,051.37, an increase of \$19,758.62.

"The Napierville Junction Ry. Co. shows a decrease in operating revenues of \$14,668.78 from the previous year. Operating expenses increased \$11,816.45. Net income was \$24,858.11 or 4.14% on capital stock outstanding, a decrease of \$28,015.02, from the previous year. A dividend of 3% for the year ended Dec. 31, 1914, was declared. The freight revenue decreased \$23,019.77, while passenger revenue increased \$8,080.19. The latter increase was due to the inauguration of through passenger train service over the Napierville Junction Ry. between Montreal and points on the Delaware and Hudson Ry. The increase in expenses was due to increased maintenance and increased passenger train service. The cost of maintenance, while higher than the preceding year, was not abnormally high, inasmuch as during the first years of the company's existence the renewals were naturally relatively small."

The D. and H. Co. owns \$1,000,000 of stock in the Quebec, Montreal and Southern Ry. and \$600,000 stock in the Napierville Jct. Ry.

The Grand Trunk and G. T. Pacific Rys. are said to have over 1,200 men serving in the Canadian Overseas Expeditionary Forces. The secretaries to the President, E. J. Chamberlin and to Vice President H. G. Kelley, are among the number.

The Great Northern Ry. has removed its Vancouver, B. C., offices from 314 to 607 Hastings Street.

## Grand Trunk Pacific Railway Construction-

Ballasting is still in progress on the section of the main line between Skeena Crossing and New Hazelton, B. C. An additional train is to be put on the run between Edmonton, Alberta, and Prince Rupert, B. C., June 1, giving a tri-weekly service between these points.

The last pontoon for the G. T. P. R. dry-dock at Prince Rupert was launched in April, and the dock is expected to be ready with a complete outfit with machinery for ship repairs by Aug. 1.

The fuel oil tank equipment at Prince Rupert has been completed and oil burning locomotives have commenced running.

Train service was resumed on the Regina-Yorkton-Canora branch May 15, and it is expected to place a train service in operation on the Weyburn branch of the Regina-International boundary line at an early date. (April, pg. 138.)

## U. S. Government Railway for Alaska.

The President of the United States has announced that the Seward-Fairbanks line, known sometimes as the Susitna route, had been selected for the Government railway to be built in Alaska under the \$35,000,000 appropriation of 1914. The route extends from Seward, on Resurrection Bay, to Fairbanks, on the Tanana River, 471 miles. It includes the existing Alaska Northern Rd., which runs from Seward through the Kenai Peninsula for 71 miles to Turnagain Arm. This branch is to be bought by the Government for \$1,150,000. From Turnagain Arm the route is to be extended through the

Route of United States Government Railway for Alaska.

The Alaska Northern Rd., extending north from Seward, is shown by a lighter line than the railway to be built by the Government.

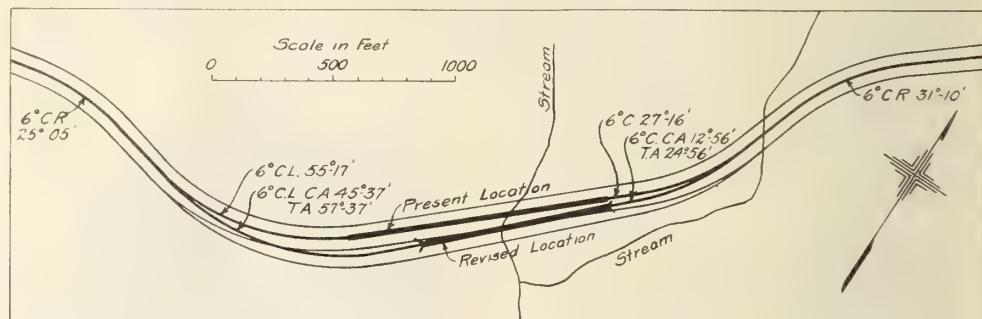

Susitna Valley and across Broad Pass to the Tanana River, and from there on to Fairbanks. It is to be a standard gauge road. A side line is to run from Matanuska Junction into the Matanuska coal field, 38 miles. The road is to be built with its present base at Ship Creek, on Cook's Inlet, and from this point it is expected that the Matanuska coal will be shipped during the greater portion of the year. The estimated cost of construction from Seward to

Fairbanks, including the Matanuska branch, is \$26,800,000.

W. C. Edes, of the Alaska Engineering Commission, has been designated chairman, to be in immediate charge of work and to have power of approval or disapproval of all administrative matters. Lieut. Mears and Mr. Riggs, the other members of the commission, have gone to Alaska to take up the construction and survey work.

## Algoma Central and Hudson Bay Railway Bridge at Bellevue.

The Algoma Central and Hudson Bay Ry. is about to replace the temporary bridge at Bellevue, 20.3 miles north of Sault Ste. Marie, by a permanent structure. The old bridge is a large timber structure of 79-14

Old and New Location A. C. & H. B. R. Bridge, Bellevue, Ont.

ft. spans or a total length of 1,104 ft. It was built in the winter of 1901-2 and contains approximately 1,500,000 ft. b. m. fir timber. It is especially well braced and is a fine piece of timber work. It spans a gully or coulee through which a small creek flows, hence the waterway is negligible.

The new bridge will be built alongside the old one by making a slight revision in the line. The structure will be 810 ft. long

Engineer, A.C. & H.B.R., to whom we are indebted for this data. A contract has been let for the superstructure.

A 45° Triangle has been adopted as a badge by the Oregon Society of Engineers and its significance thus noted: Its three angles remind us of the client, the contractor and the engineer. The sides of the triangle are typical of right dealing. The two equal sides call attention to the fact that contractor and client have an equal claim on the knowledge, training and attention of the engineer. The right angle should be a constant reminder that each is entitled to a square deal.

The C.P.R. as Purchasing Agent for the Allies.— Press reports state that it is announced on good authority that the C.P.R.

Purchasing Department has been placed at the disposal of the Allied Governments, to act as purchasing agent on this continent for supplies of all kinds for war purposes. It was stated a few weeks ago that the City of New York sent representatives to Montreal to look into the C.P.R. purchasing system with a view to its adoption by the corporation.

Pacific Great Eastern Railway.—Van-

Condensed Profile Old and New Location A. C. & H. B. R. Bridge, Bellevue, Ont.

over all, composed of 8-75 ft. intermediate and 7-30 ft. tower deck girder spans supported upon trestle legs on concrete.

The north end of the new bridge will come opposite the 3rd bent from the north end of the present bridge, and the south end opposite the 18th bent, hence the new structure will be 294 ft. shorter than the old one. It will contain approximately 1,500,000 lbs. steel, and designed under Dominion Government specifications, class I.

The foundation work will be put in by company forces under the supervision of R. S. McCormick, M. Am. Soc. C.E., Chief

couver press dispatch May 25:—"Officials of the P. & E. R. announce that, through the Provincial and Dominion Governments, they have secured about \$3,000,000, with which to complete the line as far north as the Hundred-mile House in Cariboo, 223 miles from Vancouver. This work will occupy the company until the end of the year. The railway is in operation between Vancouver and Lillooet, 120 miles."

G. Marconi, the wireless telegraph inventor, left New York May 22 to give his services to the Italian Government in the war.

## Traffic Orders by the Board of Railway Commissioners.

### Express Merchandise, Receipts and Labelling.

General Order 144, April 29.—Re complaints by shippers against sec. 5, sub sec. (c) of the form of Express Merchandise and Receipt, and re labelling "prepaid" and "collect" packages: That sub-section (c) of sec. 5 of the "Terms and Conditions" endorsed on the Express Merchandise Receipt be amended by striking out the concluding words of the sub-section, reading "or from conditions beyond its control"; and by inserting as sub-section ("cc") the following:

"For any loss or damage caused by delay or by injury to or loss or destruction of the shipment, or any part thereof, from conditions beyond the control of the company, unless such loss or damage is caused by the negligence of the railway company upon whose trains or property the shipment was at the time such loss or damage occurred."

That express companies shall firmly affix a printed label to every shipment of goods received for carriage, which label shall indicate in conspicuous type whether the charges thereon have been prepaid, or are payable by the consignee. One such label affixed to any one package or article in a shipment composed of two or more packages or articles may suffice, provided that the label indicates the total number of packages or articles in the shipment. For "prepaid" shipments the label shall be printed in black on yellow paper. For "collect" shipments the label shall be printed in black on white paper. Permission of the consignee shall be obtained before the removal of any tag, wrapper, or portion of wrapper from any package or article for the purpose of verifying a "prepaid" label, or marks indicating prepayment, on a consignment billed "to collect."

And it is further ordered that General Order 142, April 17, be rescinded.

### Allowance for Car Doors for Lime Shipments.

The Board of Railway Commissioners for Canada, 23500, April 3.—Re complaint of Christie, Henderson & Co., Toronto, against refusal of G.T.R. to make an allowance for 296 doors furnished for cars of lime shipped from Galt, Ont. It is ordered that the complaint be dismissed.

### Manure Rates to St. Catharines.

23507, April 10.—Re complaint of W. H. Bunting, of St. Catharines, Ont., against increase by G.T.R. in the rates on manure, in carloads, from Toronto, for Canadian Northern delivery at St. Catharines, as published in G.T.R. Tariff, C.R.C. no. E-3035: It is ordered that the rate of 3½ cts. per 100 lbs. on manure from Toronto to St. Catharines for Canadian Northern Railway track delivery, shown in item 226 of said tariff, be disallowed; the rate of 2½ cts. per 100 lbs., previously in effect, to be restored, subject to a minimum carload weight of 60,000 lbs., and to the provisions of the General Inter-switching Order, no. 4988, July 8, 1908; the said changes to be made effective not later than April 21.

### Winter Rate on Unrossed Green Pulpwood.

23521, April 7.—Re application of E. W. Roberts, of Montreal, for a special winter rate on unrossed green pulpwood, which shall equal that applied on dry, peeled wood by applying the weight per cord of dry wood to the green wood: It is ordered that the application be refused.

### Freight on Malt Grain ex Fort William.

23536, April 10.—Re application of Sudbury Brewing & Malting Co. for an order directing the C.P.R. to apply the milling-in-transit privilege to the "malt grain" ex Fort William, which as "dried grain," or feed, is reshipped from the applicant company's

brewery at Sudbury, Ont.: It is ordered that the application be dismissed.

23572, April 21.—Re complaint of Cowichan Creamery Association, of Duncan, B.C., against rate charged by C.P.R. on alfalfa meal from Enderby to Duncan: It is ordered that the C.P.R. be directed forthwith to reduce its rate on alfalfa meal, in carloads, from Enderby, B.C., to Duncan, to 30 cts. per 100 lbs.

### Demurrage on Coal at Windsor, Ont.

23638, April 28.—Re application of J. H. Duthie, on behalf of the American Coal and Coke Co., for a re-hearing of the complaint that the Michigan Central Rd. has been holding cars for orders in its freight yards at Windsor, Ont., and has refused to bring coal into Detroit, Michigan, until such orders were received: It is ordered that the application for a re-hearing be dismissed.

## Great Northern Railway Lines in Canada.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—The section of the line from Coalmount to Otter Creek was reported practically completed May 5, and preparations were being made for operation. The line is already in operation to Coalmount. The Kettle Valley Lines will connect up its traffic with the V. V. and E. Ry. at Princeton, between which point and Otter Creek the line will be operated as a joint section. The company does not propose to carry on any further construction at present as upon the completion of the Otter Creek-Hope section of the Kettle Valley Ry., it will be operated as a joint section, thus enabling the company to connect up with its New Westminster-Vancouver line.

Vancouver Terminals.—Work has been started at the False Creek flats in laying out the actual site of the terminal buildings. The city's committee has declined to grant the company's request for an extension of time for the completion of the buildings, but will not oppose any application on the company's part for an alteration in the location of the buildings nearer to the Canadian Northern Pacific Ry.'s terminal buildings. (May, pg. 179.)

## Dominion Government Railway to Hudson Bay.

In connection with the work on the terminals at Port Nelson, the Dominion Government steamship Minto, is expected to leave Halifax to place the buoys in Hudson Strait, and Bay. No further hydrographic survey work is to be carried on this season. Construction work on the terminals is to be pushed on rapidly during the season as it is expected that the grading gangs on the line from Pas, Man., will get through their work this season.

Work has started for the season at the several camps on the line, the work in progress ranging from "finishing up" at the Pas end, on clearing of right of way beyond mileage 393, the furthest out station.

The engineers at the different stations are:—Goose Lake, mileage 137, Division Engineer, W. J. D. Reed-Lewis; Resident engineers:—A. M. Hanson, A. McNaughten, and W. W. Christopherson. Landing River, mileage 280, No. 1:—Division Engineer, F. P. Moffatt; Resident engineers:—F. L. Lloyd, S. Hett, L. Johnson. No. 2:—Division Engineer, A. Timbrell; Resident engineers:—W. A. McCarthy, G. C. P. Montizambert, J. Strachan, Jr., and Kettle Rapids, mileage 332:—Division Engineer, L. F. Sil-

cox; Resident engineers, W. A. Hillman, J. S. Fraser, B. Henderson, F. E. Matthews. Kismagistakum, mileage 393:—Division Engineer, G. H. Parker; Resident engineers, H. McNeil, L. Easton. The staff at Pas consists of J. P. Gordon, Assistant Chief Engineer; T. B. Campbell, Division Engineer, and W. T. Jamieson, Resident Engineer. (May, pg. 183.)

## Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,594,300	\$1,163,800	\$430,500	x \$8,800
Aug.	1,367,700	1,123,000	244,700	x 163,900
Sept.	2,109,000	1,519,000	590,700	65,800
Oct.	1,895,300	1,332,100	563,200	x440,900
Nov.	1,670,200	1,123,100	547,100	x417,700
Dec.	1,329,100	908,000	423,100	200,900
Jan.	950,800	773,000	177,800	x175,100
Feb.	1,105,100	823,700	281,400	42,800
Mar.	1,379,000	956,000	423,000	62,600
	\$13,401,400	\$8,719,900	\$3,681,500	x\$1,311,100
Decr.	\$4,392,400	\$3,081,300	\$1,311,100	.....

x Decrease.

Approximate earnings for April, \$1,421,000, against \$1,610,000 for Apr., 1914, and for 2 weeks ended May 14, \$546,200, against \$830,600 for same period 1914.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$10,481,971.72	\$6,703,525.89	\$3,778,445.83	\$338,347.85
Aug.	8,917,764.38	6,554,606.68	3,373,157.70	597,081.54
Sept.	10,754,139.67	6,367,091.28	4,367,048.39	48,630.30
Oct.	9,282,928.49	5,361,600.13	3,921,328.36	2,281,529.43
Nov.	8,057,358.89	5,413,366.72	2,644,072.17	2,244,173.89
Dec.	7,443,962.43	5,244,438.62	2,199,523.81	2,027,297.90
Jan.	6,109,026.94	4,968,793.64	1,140,233.30	140,059.24
Feb.	6,735,678.49	4,756,663.87	1,879,014.62	507,438.16
Mar.	7,552,989.67	4,879,974.94	2,673,014.73	x19,224.14

\$76,635,820.68 \$50,869,981.77 \$25,765,838.91 x\$7,016,587.15

Dec. \$23,608,191.57 \$16,591,604.42 \$7,016,587.15

xDecrease.

Approximate earnings for April, \$7,164,000, against \$9,431,000 for April, 1914; and for 2 weeks ended May 14, \$3,198,000, against \$4,352,000 for same period 1914.

## Grand Trunk Railway Earnings, Etc.

The following figures show the earnings for the G.T.R. (including the Canada Atlantic Ry.), the G.T.W.R. and the D.G.H. & M.R. for March:

### Grand Trunk Railway.

Earnings	\$3,242,450
Expenses	2,419,800

Net earnings \$822,650

### Grand Trunk Western Railway.

Earnings	\$582,750
Expenses	573,800

Net earnings \$8,950

### Detroit, Grand Haven and Milwaukee Ry.

Earnings	\$188,000
Expenses	213,000

Deficit \$24,000

Approximate earnings for April \$4,005,778, against \$4,376,167 for Apr., 1914; and for 2 weeks ended May 14, \$1,785,301, against \$1,923,260 for same period 1914.

### Traffic Receipts of the System.

Aggregate from Jan. 1 to Mar. 31:

	1915	1914	Inc.	Dec.
G.T.R.	\$11,734,513	\$13,098,254	.....	\$1,363,741
G.T.W.R.	2,274,071	2,272,347	\$1,724	.....
D.G.H.&M.R.	757,343	751,222	6,121	.....
Totals	\$14,765,927	\$16,121,823	.....	\$1,355,896

## Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Pacific Section and Lake Superior Branch, 1,194 miles, for April, were \$266,925, against \$193,144 for same period 1914, and the aggregate from Jan. 1 to Apr. 30 was \$1,177,156, against \$1,011,000 for same period 1914.

# Electric Railway Department

## Ontario Railway and Municipal Board Asserts Jurisdiction Over Hamilton, Grimsby and Beamsville Electric Railway.

The Ontario Railway and Municipal Board sat in Grimsby, Dec. 11, 1914, to hear a complaint by four residents of that place that there was a complete lack of conveniences on the company's property, no sanitary arrangements in the cars, and no signs showing sanitary conveniences in Grimsby, all of which was deemed a hardship, inasmuch as the end of the line at Hamilton was 23 miles distant, a ride of upwards of 1½ hour. The Board promised to look into the matter, and arranged with the company to have a conference Dec. 18. On the latter date, G. E. Waller, General Superintendent of Railways, Dominion Power and Transmission Co., which owns and operates the H.G. & B.E.R., represented the company before the Board, and the latter directed that the company, within one week, install signs at Grimsby station showing the location of the conveniences, the signs to be inspected by the Board's engineer. The Board also directed that following this the engineer would be directed to inspect and report on the conveniences in the cars. The company was also asked for suggestions for improvements, but none were at that time offered.

J. C. Royce, the Board's engineer, reported Jan. 26 that he had inspected the cars on the line, and that they had ample space for lavatories. He also reported that proper signs had not been put up in the Grimsby station, but was assured by the General Superintendent of Railways that the company intended improving the accommodations there, as well as the stations at Stoney Creek and Winona.

At a full session of the Board in Grimsby, Feb. 15, there were present, in addition to the original complainants, the clerks of Clinton, North Grimsby, Saltfleet and Barton Tps., and counsel for the company. The judgment given on that occasion directed the installment of conveniences on the cars, the plans and specifications for urinals and closets to be submitted by the company within 30 days, the plans to be prepared by the Board's engineer in the event of the company failing to do this. Station conveniences were also ordered, but judgment was reserved with regard to the open cars, pending the Board's consultation with its engineer.

The company's solicitors, Gibson, Levy and Gibson, Hamilton, telegraphed the Board, Feb. 17, to have the order stayed, following this with a letter, Feb. 20, asking for a rehearing on the ground that the Board had no jurisdiction to make the order. They claimed that for some time they had been considering the bringing together of all the Dominion Power and Transmission Co.'s railway lines under one jurisdiction, and that in planning for this, the status of the Hamilton, Grimsby and Beamsville Electric Ry. had been carefully investigated, and they claimed that it was a railway under the exclusive jurisdiction of the Board of Railway Commissioners for Canada. The Board appointed, Mar. 9, for hearing the points raised.

The company's solicitors based their claim on an order of the Railway Committee of the Privy Council, Jan. 28, 1895, which approved the place and mode of crossing of the G.T.R. by the company's line, and placed certain obligations on the company. Its counsel contended that by reason of the

fact that its railway crossed the G.T.R. under an order of the Privy Council, the company came exclusively under the jurisdiction of the Board of Railway Commissioners for Canada, as the Railway Act, 1888, sec. 306, declared that "each and every branch line or railway now or hereafter connecting with or crossing" certain specified lines of railway, including the G. T.R., "or any of them, is a work for the general advantage of Canada."

On April 7, the Chairman of the Board, D. M. McIntyre, gave the following judgment, which was concurred in:

This is an application under The Ontario Railway Act, sec. 255, for an order directing the company to provide sanitary conveniences on all its passenger cars. The respondent's railway is an electric railway laid in part on a private right of way but mainly on streets of the City of Hamilton and adjoining municipalities under agreements with them. The Board held a sitting at Grimsby on Feb. 15, for the purpose of taking evidence, and at its conclusion indicated that an order would issue as asked by the applicants. On Feb. 20, the company's solicitors wrote raising the question of the Board's jurisdiction to make the proposed order, on the ground that the railway was, for reasons set out in the letter, under the exclusive jurisdiction of the Parliament of Canada. Upon this the Board appointed Mar. 9 in Toronto for argument of the question so raised and notice of the appointment was given to all persons in interest. On the return of the appointment only the company was represented. It then appeared that the company was incorporated by an act of the Ontario Legislature, 1892, chap. 95. In the exercise of its corporate powers the respondent has constructed and is operating some 22 miles of railway from Hamilton to Beamsville through the Village of Grimsby. The railway is a purely local work or undertaking within the meaning of sec. 92, subsec. (10) of The British North America Act. It further appeared that by order of the Railway Committee of the Privy Council of Canada, dated Jan. 28, 1895, the committee approved of the place and mode of crossing by the respondents' railway, The Hamilton, Grimsby and Beamsville Electric Ry., of the G.T.R. on Main Street East, in Hamilton, as shown on plans on file with the committee. The crossing so approved was made shortly afterwards. Upon these facts it is contended by the respondent that after the crossing so approved was made its railway came under the exclusive jurisdiction of the Parliament of Canada by force of the provisions of sec. 306 and 307 of The Railway Act, as enacted in 1888, which are as follows:—

"306. The Intercolonial Ry., the Grand Trunk Ry., the North Shore Ry., the Northern Ry., the Hamilton and Northwestern Ry., the Canada Southern Ry., the Great Western Ry., the Credit Valley Ry., the Ontario and Quebec Ry., and the Canadian Pacific Ry. are hereby declared to be works for the general advantage of Canada, and each and every branch line or railway now or hereafter connecting with or crossing the said lines of railway, or any of them, is a work for the general advantage of Canada.

"307. Every such railway and branch line shall hereafter be subject to the legislative authority of the Parliament of Canada; but the provisions of any Act of the Legislature of any Province of Canada, passed prior to May 25, 1883, relating to any such railway or branch

line, and in force at that date, shall remain in force so far as they are consistent with any act of the Parliament of Canada passed after that date."

These sections were in force at the time the crossing was made pursuant to the Railway Committee's order and continued in force till 1903, when The Railway Act was revised and radical changes were made in the law. The Board cannot adopt the respondent's contention. A consideration of the provisions of the Railway Act, dealing specifically with railway crossings and junctions, as that act was at the time of the transactions in question, leads the Board to the conclusion that the words "Each and every branch line or railway now or hereafter connecting with or crossing the said lines of railway," as used in sec. 306, do not extend to and include street railways or electric railways constructed under provincial authority. To hold the contrary view would have consequences so far reaching, placing as it would, under Dominion jurisdiction, without enquiry or consideration of its special circumstances, every railway constructed under provincial authority which connected with or crossed a federal railway between 1888 and 1903, that the Board cannot adopt it without the most cogent and convincing proof that such was the intention of Parliament.

In the Railway Act of 1888 there is found a group of sections numbered 173 to 177, both inclusive, which deal with "Railway Crossings and Junctions." Sec. 173, as enacted by 56 Vic. Chap. 27, sec. 1, reads as follows:—

"173. The railway of any company shall not be crossed, intersected, joined or united by or with any other railway, nor shall any railway be intersected or crossed by any street railway, electric railway or tramway, whether constructed under Dominion or provincial or municipal authority, or otherwise, unless the place and mode of the proposed crossing, intersection, or junction or union, are first approved by the Railway Committee, on application therefor, of which application ten clear days' notice in writing shall be given by the party or company desiring the approval, such notice to be sent by mail addressed to the president, general manager, managing director, secretary, or superintendent of the company whose railway is to be so crossed, intersected, joined or united; and in the case of crossing by street railways, electric railways or tramways respectively, the Railway Committee shall have the same powers in all respects as to the protection of such crossing and otherwise as are given the Railway Committee by this Act in regard to one railway crossing another."

It must be concluded from this that it was in the contemplation of Parliament that "the railway of any company" that is, by force of the section defining the application of the act, the railway of a company within the legislative authority of the Parliament of Canada, might be crossed by either of two classes of works; first, by "any other railway," secondly, "by any street railway, electric railway or tramway, whether constructed under Dominion, provincial or municipal authority or otherwise." Clearly the words "the railway of any company shall not be crossed, by any other railway" did not, in the view of Parliament, include a crossing of a federal railway by a street railway or an electric railway constructed under provincial authority, otherwise the inclusion of the subsequent words dealing with such a crossing would be insensible. Furthermore, the concluding paragraph of sec. 173, defining the powers of the Railway Committee as to the

protection of crossings, leaves no room for doubt that Parliament differentiates between works designated by the unqualified term "railway" and those intended by the terms "street railway" and "electric railway" and treats the latter as in a class by themselves.

Sec. 177 of the above group of sections, which reads as below, shows that in legislating with reference to "Railway Crossings and Junctions," Parliament treated as generically distinct a railway company incorporated by the legislature of any province.

"177. Every railway company incorporated by any Act of the Legislature of any Province which crosses, intersects, joins or unites with any railway within the legislative authority of the Parliament of Canada, or which is crossed, or intersected by, or joined or united with any such railway shall, in respect of such crossing, intersection, junction and union, and all matters preliminary or incidental thereto, be deemed to be, and be, within the legislative authority of the Parliament of Canada, and subject in respect thereof to the provisions of this act."

Here Parliament assumes jurisdiction over a provincial company whose railway crosses or is crossed by a Dominion railway and defines the extent to which its jurisdictional status is affected thereby, and that is "in respect of such crossing \* \* \* and matters preliminary and incidental thereto." To that extent such provincial railway is declared to be subject to the provisions of the Railway Act of Canada, and applying the canon of interpretation *expressio unius est exclusio alterius*, we are warranted in concluding that to no greater extent is there any displacement of provincial by federal jurisdiction. It thus appears that when Parliament intended that its legislation in respect of "railway crossings and junctions" should apply to street railways, electric railways or railways constructed under provincial authority, it expressly mentioned them under such designation, and in the case of the latter defined the extent to which the provincial jurisdiction should be displaced by the paramount federal authority. The Board is not now concerned with the question as to how far such latter legislation is *intra vires* of the Dominion Parliament, in view of recent decisions by the court of last resort, but seeks merely to discover the expressed intention of Parliament.

When it is contended that secs. 306 and 307 of the Railway Act apply to the respondent's railway—an electric railway, a street railway, constructed under provincial authority—and that by reason of its crossing the G.T.R. in 1895 it thereafter became subject to the exclusive legislative authority of the Parliament of Canada, one searches these sections in vain for the above indicia of intention that they should have such an application. The words used in these sections are general and should not be extended in their application to cases already specially provided for unless an intention that this should be done is manifested in explicit language. In "Maxwell on the Interpretation of Statutes," 4th Ed., pgs. 263-4, the scope and method of application of the principle of interpretation here invoked is thus summarized: "A general later law does not abrogate an earlier special one by mere implication. Generalia specialibus non derogant: the law does not allow the exposition to revoke or alter by construction of general words any particular Statute where the words may have their proper operation without it. It is usually presumed to have only general cases in view and not particular cases which have been already otherwise provided for by the Special Act. \* \* \* Having already given its attention to the particular subject and provided for it, the Legislature is reasonably presumed not to intend to alter that special provision by a subsequent general enactment, unless that intention is

manifested in explicit language. \* \* \* The general statute is read as silently excluding from its operation the cases which have been provided for by the Special one." Although in the foregoing citation the above maxim is treated in its application to an earlier and a later statute—the one general and the other special—the principle of interpretation involved seems equally applicable when one is called upon to co-ordinate several provisions of the same statute, some special and others general. The Board is of opinion that secs. 306 and 307 do not apply to such a railway as the respondent's, with the result of placing it, for all purposes, under the legislative authority of the Parliament of Canada upon its crossing the G.T.R., but that the ultimate consequences to it of such crossing is defined in sec. 177 and as to all other matters than those there enumerated it continues under the legislative authority of the Province. As indicated at the hearing on Feb. 15, an order will issue directing the respondent to provide sanitary conveniences for the use of passengers on all its passenger cars.

An interesting discussion of the constitutional question arising on this application is to be found in the official report of House of Commons Debates, session 1906-7.

The Board was referred to the case, the G.T.R. Co. of Canada vs. Hamilton Radial Electric Ry. Co., 29 O. R., 143, decided in 1897. For the determination of the question arising in this action it was not necessary to do more than hold that jurisdiction to order the crossing of a Dominion by a provincial railway resided in the Railway Committee of the Privy Council of Canada. As to this there is no dispute, since such an order may be supported either by the express provisions of the Railway Act above considered or by the doctrine of incidental powers, elaborated by the court of last resort. The finding of the Board is, therefore, in accord with the decision of Mr. Justice Street so far as he was called upon to interpret this legislation by the precise issue before him.

On May 10 the Board ordered that the company file within 30 days complete plans and specifications for sanitary conveniences on its passenger cars and in its passenger station in Grimsby on the submission of which the Board will fix the time for completing the installation of the same. It is said that the H. G. & B. E. R. will appeal from the Board's decision.

### Morrisburg and Ottawa Electric Railway's Finances.

At a meeting of shareholders in Ottawa, May 1, a committee was appointed to take steps to appeal against an order of the county judge at Cornwall, Ont., calling upon the shareholders to pay up the calls on their shares, and to ascertain if the company cannot be wound up. It was stated at the meeting that \$78,000 had been paid up on the stock, that about \$68,000 was due on subscriptions, that of the \$78,000 only \$10,000 had been expended upon construction work in Metcalfe and Winchester townships, and that the balance had been expended in the maintenance of offices and the payment of salaries. The company's charter will expire in the course of a year or so, its application for an extension of time for construction having been refused at the Ontario Legislature's recent session. An opinion was expressed at the meeting that the surveys made and rights acquired under the charter might be taken over by the Hydro Electric Power Commission of Ontario, which was responsible for the Legislature's refusal of an extension of time, in connection with the plans for municipally owned electric lines. D. Fraser is Chair-

man, and Z. C. Ketchum, Secretary of the Committee. J. G. Kilt, President of the company, has been invited to give an explanation of its affairs to the committee before any definite action is taken.

In the 11 actions against shareholders at Cornwall, the county judge has given judgment for the amounts claimed. Seven writs were issued at Ottawa against other shareholders, and writs against at least 25 other shareholders are to be issued for the non-payment of instalments due. (Nov., 1914, pg. 576, and May, pg. 189.)

### Hydro Electric Power Commission of Ontario's Electric Railways.

Representatives of 15 municipalities met in Hamilton, May 12, and discussed the project for building under the electric railway powers vested in the Commission by the Ontario Legislature, lines from Hamilton to Port Dover, and from Hamilton to Guelph and on to Georgian Bay. The representatives formed an association with the title of the Greater Hamilton Hydro Electric Radial Union, with the following officers:—Honorary President, Sir Adam Beck; President, T. S. Morris, Hamilton; First Vice President, J. F. Vance, Waterdown; Second Vice President, J. A. Tooley, Cayuga; Secretary, C. Peebles, Hamilton. The meeting asked the Commission to immediately inquire into prospects and to give an estimate of the cost of a line from Hamilton to Port Dover.

The central association is the Ontario Hydro Electric Radial Association, and branch associations have now been formed at Toronto, Guelph, Waterloo, London, and Stratford, with others territorially described as the St. Lawrence-Trent Valley; the Brant; the Oxford; the Erie East; the Erie West; the Niagara; the Grey; the Bruce and Simcoe.

The proposed plan for financing construction is as follows:—When the report of the Commission is presented showing the cost, each municipality will vote on the question. If the plebiscite is carried by the people, each municipality will issue debentures covering the amount asked from it. These debentures will be placed with the Commission as security, but not sold. The Commission will then issue bonds covering the total debenture issue, and these will represent the money required for the construction of the electric lines. If at any time a road shows a loss from operation, the municipalities interested will be asked to forward equalized cheques covering the same, or, if so desired, may allow the sale of its debentures to the amount required. The bonds will be issued for 50 years and only interest and sinking fund will be paid during the first 10 years.

We are officially advised that the Commission's engineers are making surveys for an electric line from Hamilton to Niagara Falls.

A meeting held at Winchester, April 23, advocated the building of an electric railway between Ottawa and Morrisburg. E. G. Hewson, representing the Commission, explained what the municipalities had to do prior to the Commission undertaking any surveys, and steps were taken for the formation of a committee to represent the municipalities interested. The Gloucester Township Council passed a resolution, May 3, favoring the building of a line from Billings' Bridge into Morrisburg. (May, pages 185, 189 and 190.)

**Ottawa Electric Ry.**—Under the provisions of the mortgage trust deed of June 29, 1897, notice is given of the redemption of 15 debentures of \$1,000 each, on July 5.

## Reduction of Fares on British Columbia Electric Railway.

The B. C. Electric Ry. announced, May 3, that on and after May 11 it would offer a special non-transfer ticket, good only within the city limits of Vancouver and Victoria, at the rate of 8 for 25 cts. The issue of all types of tickets previously used by the company is being continued at the old rate to cover travel where transfers are demanded. These rates are straight 5 ct. fare, (a strip of 5 tickets for 25 cts. being provided for the accommodation of passengers); workmen's tickets at 10 for 40 cts., consisting of 5 white tickets, which can only be used before 8 a. m. and 5 green tickets which are good at any time, and the usual arrangement of school children's tickets at 10 for 25 cts. The new 8-for-25 cts. tickets are not good on any interurban car.

In connection with the introduction of its new special ticket the company decided to make it popular with the general public. As tickets were printed on cardboard of tango colour, the name tango ticket was chosen and an extensive publicity programme was carried on by the company during the week May 3-10 to bring this name before the public as well as impress upon them the benefits which would accrue to the travelling public from the standpoint of economy and the good to the city as a whole as a result of using tango tickets. Half page advertisements were taken throughout the week in all daily papers in Vancouver and Victoria as well as considerable space in weekly publications circulating throughout the cities. Extensive use was also made of news articles, written from a local standpoint, as to the advantages which the public would derive from the use of the tango ticket. One very striking illustration used in both advertisements and news articles pointed out that 32 rides at 5 cts. fare meant an expenditure of \$1.60, while 32 rides on tango tickets cost only \$1, the result being the saving to the individual of 60 cts. on an investment of \$1.

The company also inaugurated a word competition, prizes being offered both in Victoria and Vancouver, of \$50, the first prize \$20, and eight other prizes ranging down to \$2, for the largest lists of words which could be formed from the letters in the words tango ticket. Throughout the entire week every car in Vancouver and Victoria carried a striking fender sign noting the sale of tango tickets on May 10. Eight sheet posters were also displayed on billboards along the tram lines. As a result of the publicity methods adopted the words tango ticket became during the week the general talk of the public both in Vancouver and Victoria.

The company made May 10 known as tango ticket day in both cities where the new tickets are accepted. The conductors of each car wore white satin badges on which was printed in tango color "Ask me for tango tickets, 8 for 25 cts." Tango pennants, 12 by 16 ins. in size, on which was printed "Use Tango Tickets," were also floated from the trolley pole of each city car. One of the daily newspapers recognized the day as tango ticket day and offered to the readers of its Sunday issue prizes in a guessing contest as to the number of tango tickets which would be sold by the company on the first day of sale.

At a meeting of the Vancouver City Council, May 10, a protest against the new car tickets issued by the B. C. E. Ry. was made by the Auto Public Service Corporation. Alderman McLeath proposed to move a resolution that the Solicitor be instructed to notify the B. C. E. Ry. that in issuing tickets without transfers it is violating the terms and conditions of the agreement between the

city and the company. It is contended that secs. 11 and 12 of the agreement entitle every passenger to a transfer to a connecting car when a fare is paid. Objection was taken to the consideration of the resolution, and notice was therefore given that it would be brought forward at the next meeting.

In announcing the issue of the special tickets Geo. Kidd, General Manager, gave an interview to the local press. He stated that the serious decrease in the company's receipts made it necessary to choose between two alternatives, one was to reduce expenses by cutting down the service and the other was to endeavor to increase travel by lowering the fares. "It must be apparent to every citizen in Vancouver and Victoria," said Mr. Kidd, "that the service as present given cannot possibly be maintained with the present patronage. To cut down the service would have meant that a portion of our plant would be lying idle and a large number of men would have to be laid off, thereby adding to the number of unemployed in the city."

Mr. Kidd said it was impossible for anyone to predict with anything approaching accuracy the effect of an alteration in fares. Actual experience alone could give precise information, and it would depend largely on the increased use which the public would make of the cars to prove whether it was economically possible for the company to sell 8 tickets for 25 cts. If it can be done the B. C. Electric will do it.

"In adopting these low fares," he continued, "the company has not been influenced by the policy of other street railways in Canada or the United States, as shown by their attitude in dealing with the jitney problem. Many street railways in the United States, fortunately for them, are receiving assistance in solving their jitney problems by the strong action of the municipalities and state legislatures, in enacting special regulations to meet the dangerous conditions arising out of a new form of ill regulated and irresponsible competition. The B. C. E. R. Co. has taken no part in fostering an antagonism to the jitney, believing that the common sense of the citizens and the authorities will sooner or later result in adequate regulations being enforced. The public who ride in our street cars are protected by the most stringent regulations under the Tramway Inspection Act, and also by the terms of franchise granted to it in mutual good faith by the various municipalities, franchises which have always been liberally interpreted by the company. To give effect merely to these clauses in the Tramways Inspection Act alone, clauses devised for the protection and safety of the public, over \$300,000 have been spent by us in the last three years, a sum more than equal to the value of all the jitneys that are competing unfairly against us. To give, for example, a few of the Government regulations we are compelled to conform to—and, mind, I am not complaining about them—the type and design of the cars we use is controlled, their brakes and motors are all periodically rigidly inspected, their carrying capacity is limited, passengers are prohibited from riding upon the steps or fenders, gates must be provided to protect passengers against their own carelessness, all cars must have proper warning signals, and the movement of cars passing each other and following each other is regulated; automatic fenders must be provided, sign boards must be visible day and night, designating the exact route cars are to take, and in addition to these requirements our franchises call among many other heavy responsibilities, for a well-timed and

regulated service throughout the day over all routes, paying or non-paying, whether the traffic is light or heavy. Now contrast the exacting obligations we have to meet with the conditions prevailing upon our public thoroughfares today with the jitney service in its present unregulated condition, so that our streets are becoming a menace to every citizen, no matter whether he is a pedestrian, a patron of the jitney or of the car service. All the company asks is that it shall not be subject to unfair competition; we do not fear jitney competition; we have carried the public in Vancouver almost from the foundation of the city, through the many years of its wonderful progress, a progress in which the company has played a conspicuous part, and our business is to continue in bad times as well as in flourishing times, to satisfy the public in all its reasonable demands, and by acting fairly to it, we propose to continue as the transportation company throughout our territory."

"The unfair jitney competition," said Mr. Kidd, "the absence of even the most reasonable regulation of that extraordinary traffic, has certainly affected the credit of the company in the London money market, and until conditions improve any further expenditure on its tramway system will be altogether out of the question. In England the investing public is hard hit by the present war, and nothing would contribute more to maintain their confidence in British Columbia enterprises than strong and speedy action by the authorities resulting in regulations being passed placing the jitneys on the same competitive footing as the street car company. The successful future of the B. C. Electric Ry. and the cities of Vancouver, Victoria and the surrounding municipalities is so interwoven that the authorities and the company should co-operate for their mutual advantage and the benefit of the province. The company has a record to which it can point with pride as to its part in the development of British Columbia, and our desire is to still further that progress along sound economic lines."

"To come back again to the ticket question," Mr. Kidd added, "I have intimated that the reduction of fares is an experiment which we hope will be a success if our patrons give us their loyal support—this they have done for so many years, and if they will continue to do so, and also use their influence to prevent our competitors having unfair advantages—then Vancouver will be able to boast, and that boast will not be an idle one, that here we have the cheapest, safest, cleanest and quickest service in North America. The matter now rests with the public, who must be the final arbiters."

**Toronto-Hamilton Highway.**—The Hamilton, Ont., Board of Trade and representatives of various municipalities passed a resolution, April 29, asking for the building of a traffic bridge across the bay at the Hamilton end of the new Toronto-Hamilton highway. It is proposed that a double track line for electric railway traffic be laid on the bridge. The matter is to be discussed with the Commission which is building the highway.

**Toronto Civic Railway Car Barn.**—A temporary car barn has been erected by the Toronto Civic Ry. on its Bloor St. line between Dorval and Indian Roads, to accommodate the single truck cars now operating on that line. It is a frame structure, with a pit track, to accommodate two cars, and is 85 ft. by 21 ft. It is heated, and while small, will meet the present requirements of this short line.

## Electric Railway Projects, Construction, Betterments, Etc.

**British Columbia Electric Ry.**—In order to facilitate the laying the permanent track on Victoria Road, and the completion of the unfinished portion of the line on Main St., the South Vancouver, B.C., Town Council has offered to pave the centre strip and to lay the tracks. (May, pg. 190.)

**Hamilton, Ont.**—A press report states that there is some talk in the city as to the establishment of a cross town street car line "with flexible trolley poles and no tracks."

**London and Port Stanley Ry.**—The Board of Railway Commissioners will make an order granting the railway a strip of land owned by the G. T. R., along Bathurst St., London, Ont., from William to Richmond Streets for the purposes of the railway. The L. & P. S. R. has certain rights in the G. T. R. station, and it is said that an arrangement will be made between the G. T. R. and the London Railway Commission for an exchange of lands, which will give the city's electrified railway all that it desires, and at the same time enable the G. T. R. to make certain improvements on its line. The L. and P. S. R. will have its terminals on the south side of the G. T. R. station on Richmond St., independent of the G. T. R., and so situated as not to interfere with the projected elevation of its tracks.

P. Pocock, Vice Chairman of the London Railway Commission, stated recently that the work of electrifying the line was expected to be completed by the end of May, and the last of the rolling stock was expected to be delivered early in June. The construction of the terminals will not be a heavy piece of work.

In connection with the electrification of the line, a local press report stated that the Michigan Central Rd. was about to build a line west of its bridge in St. Thomas to connect with the London and Lake Erie Transportation Co.'s line, between London and Port Stanley, and run its traffic over that line instead of over the L. and P. S. R. We are officially advised that it is not proposed to build such a line, and London press reports state that the M. C. R. traffic will still be run over the L. and P. S. R. (Mar., pg. 190.)

**Moncton Tramways, Electricity and Gas Co.**—The Moncton, N.B., city council discussed with E. B. Reeser, General Manager, May 6, the proposed extension of the car line on Bonaccord St., but no decision was reached. (April, pg. 147.)

**Montreal Tramways Co.**—In the course of the discussion which has been going on at the meetings of the Board of Control for some months past, G. R. MacLeod, the city's railway engineer, reported May 6, that the cost of developing a system of 100 miles of street railway track, and 10 miles of subways by the city would be about \$49,000,000. He expressed the opinion that it would not be a good plan to enter into competition with the company; but it would be better for the city to buy out the company entirely. The details of the estimates are: "Surface lines, 100 miles, say \$3,000,000; four hundred cars, \$3,000,000; power houses, substations, etc., \$1,500,000; real estate for power stations, car houses, etc., \$2,000,000; probable cost of widening and extending streets, \$7,000,000; grade separations to cross railways, \$1,000,000—total \$19,000,000; while those for the subways are: Ten miles of subways, \$25,000,000; twenty miles of track complete, \$1,000,000; stations and terminals, say, \$2,000,000; electrical equipment, say \$2,000,000—total, \$39,000,000." An appendix gives a list of the probable routes, of the surface

lines and the subways. The discussion on the situation was further adjourned. (May, pg. 190.)

**Niagara Falls, Ont.**—A press report receives the report that the Ontario Department of Public Works has under consideration plans and specifications for an aerial railway over the whirlpool rapids. The report states that a private company desires to obtain such a franchise.

**Ottawa Electric Ry.**—We were officially advised, May 25, that it was expected that the city was to commence the renewal of the Bank St. pavement, between Gladstone Ave. and Sparks St., about one mile, about the end of the month. As this is one of the busiest streets in Ottawa, the O.E.R. has agreed to divert its cars during the progress of the work so that it can be rushed through in the shortest possible time. The rails to be used are of the Lorain girder section 115-462, and will be laid on an 8 in. concrete slab and the surfacing will be of creosoted wood block on the track allowance and asphalt between the tracks and the curbs. The work will be carried out by the Ottawa Construction Co., and it is expected that it will be continued night and day, and completed in about eight weeks.

**Pictou County Electric Co.**—We have been officially advised that the work on the extension from Posher's bridge to Parkdale, 0.50 mile, has been postponed for a few weeks. L. T. Flaherty, Stellarton, N.S., is Manager. (Mar., pg. 108.)

**Regina Municipal Ry.**—The Regina, Sask., City Council in its estimates for this year has authorized the expenditure of \$10,000 to build an extension of the Young St. line. The extension is to be made so as to connect the power house line with the C.P.R. Arcola branch to facilitate the haulage of coal. (Mar., pg. 108.)

**Sandwich, Windsor and Amherstburg Ry.**—We are officially advised, in connection with a recent press report that the company had offered to construct a belt line by way of Lincoln Road and Ottawa St., Walkerville, Ont., that the offer has not yet been accepted by the Town Council. The matter will have to be submitted to a vote of the people before anything is done. (May, pg. 190.)

**Sudbury and Copper Cliff Suburban Electric Ry.**—A local press report states that construction will be restarted on this line in Sudbury, Ont., early in June. All the grading has been completed, most of the ties have been placed, and some track has been laid. (Dec., 1914, pg. 555.)

**Three Rivers Traction Co.**—We are officially advised that the company has started construction on a circuit line in the city of Three Rivers, Que., and a suburban line to Cap de la Madeleine, a total length of about seven miles. The line in the city will traverse the principal business and residential sections and pass the C.P.R. station, the Richelieu and Ontario Navigation Co.'s wharf, and other public places. Part of the suburban line is not yet located but it will extend to Cap de la Madeleine near the Roman Catholic Church, and shrine, to which there is considerable pilgrimage traffic. The Union Bag and Paper Co. has a large mill in the same vicinity. The cars will touch all points on the city line and then proceed to Cap de la Madeleine. Sixty pound steel rails will be used; the overhead construction is to be part span work on the wider streets and bracket work on the narrower ones. The construction is in charge of J. C. Smith, Vice President, and is being done by the staff of the Shawinigan Water and Power Co.,

of which the company is a subsidiary. It is intended to complete the entire line as quickly as possible, and it is hoped to do so by Sept. 1. Power will be supplied by the Shawinigan Water and Power Co. and will be transmitted at 50,000 volts, and will be converted into direct current by means of motor generator sets in the Shawinigan Co.'s substation.

The company expects to purchase 8 cars of the p.a.y.e. type with the necessary plant for construction and snow cleaning.

The officers and directors are: President, T. McDougall; Vice President, J. C. Smith; Secretary-Treasurer, W. S. Hart, Montreal; other directors, J. Wilson, D. Murphy, Ottawa. (May, pg. 190.)

**Toronto Ry.**—Plans are being prepared, for the reconstruction of the College St. line from Bathurst St. westward. The eastern section has already been rebuilt.

The Ontario Railway and Municipal Board issued an order, April 26, directing the company to start construction of a double track line on Ossington Ave., from Bloor St. to Hallam St., along the latter street to Dufferin St., along that street to Lappin Ave., and along that avenue to a junction with the present line on Lansdowne Ave., and to complete it by Aug. 1. The Board's original order of Nov. 6, 1914, was that the line should be completed by June 1. The company argued for delay on account of the financial stringency, and the probable effect on its receipts by the jitney traffic. (Nov., 1914, pg. 517.)

**Toronto Suburban Ry. Co.** informed the Ontario Railway and Municipal Board, April 30, that if the city of Toronto desires to build car lines on Pacific Ave. and Annette St., within the old municipality of Toronto Junction, the company will abandon its charter rights to build on those streets. The matter is now before the City Council, and if the Council approves a bylaw will have to be submitted to provide funds for construction.

Track has been laid from Islington almost to the west bank of the Humber River, a temporary bridge having been erected over Mimico Creek. The piers and abutments for the bridge across the Humber River are practically completed, and it is expected that the steel work will be delivered early in June. Ballasting is being carried on along the line to Georgetown, and progress is being made with the electrical installation. Tracklaying and other work is being gone on with westerly of Georgetown. (May, pg. 190.)

**Western Canada Power Co.**—At the annual meeting, May 7, the capital stock was increased from \$5,000,000 to \$10,000,000, and a bylaw providing for the issue of part of the capital as preference stock was adopted. The retiring directors were re-elected with the exception of T. J. Drummond, Vice President, who had retired, C. C. Giles being elected to succeed him as a director. The directors subsequently re-elected C. H. Cahan as President, and elected A. R. Doble as Vice President in place of T. J. Drummond. The company has, in connection with its power plant, a railway in operation from Ruskin to Stave Falls, B.C., six miles, and owns the charter of the Burrard, Westminster Boundary Ry. and Navigation Co., which proposes to build electric railways centring in New Westminster.

**Winnipeg Electric Ry.**—The substation at Stony Mountain, Man., for the operation of the Winnipeg, Selkirk and Lake Winnipeg Ry.'s Stonewall branch, a subsidiary of the W. E. Ry., is reported to have been completed. The branch, 7.50 miles long, was opened for traffic Dec. 12, 1914, a temporary provision for power being made. (April, pg. 147.)

## Jitney Automobile Operation in Canada.

The jitney automobile service has now invaded a dozen or more places in Canada, the most extensive spread from the Pacific to the Atlantic coast in less than six months. With the exception of Sudbury, Ont., where construction has been started on an electric railway, the jitney comes in competition with an electric railway in each place, and in three places with those operated by municipalities. In every city where the jitney is in operation electric railway revenues are being affected, and the city councils are endeavoring to recoup themselves, either for the revenue lost on percentage of the street railway traffic, or of actual car revenue, by the license fee fixed for the jitneys.

The experience of United States cities is being reproduced in Canada, viz., that the jitney cannot operate profitably for a 5 cent fare on a longer route than 3 miles. The result of this is that there is talk of adopting a zone fare for electric railway service, which has hitherto been considered unnecessary, as it would have a tendency to concentrate instead of spreading out the population. The question of the permanence of the jitney service at all seasons of the year is being considered, and it is thought likely that with the coming of the winter, it will practically cease in Canada, with the probable exception of Pacific coast cities.

In Halifax, N.S., application has been made to the City Council for permission to license a jitney in the city and has been referred to the city solicitor to see whether it would interfere with the Halifax Electric Tramway Co.'s rights under its agreement with the city.

One jitney started operating in Sherbrooke, Que., April 15.

The number of jitneys being operated in Montreal is still limited, although it was reported, May 4, that 15 were being operated on the Park Ave. route alone. Another route has been opened up from Place d'Armes Square to Bernard St. The Manager of the Montreal Jitney Association is reported to have said that there was a difficulty in getting cars to put on routes which the public ask to have opened up. The Mayor has issued a statement in which he says that the citizens must be safeguarded against all dangers arising from the new form of traffic, and that the city's interest must be protected particularly against any loss of percentages receivable from the Montreal Tramways Co. A feature in connection with the traffic is the entry of 14 and 16 passenger jitney busses into the service, and the revival of the Canadian Autobus Co.'s plans. This company ran some experimental trips with a model autobus, May 3. It has a capacity of 40 to 45 passengers, and is stated to have been built to suit the conditions of Montreal traffic. The company has a franchise from the city to operate these vehicles, and has nothing to do with the "jitney" service. W. H. Dandurand is President of the Autobus Co.

In Ottawa one jitney started to run in the middle of April, it operated for one day, and nothing has been heard of it since.

The question of regulating the jitney traffic in Toronto was considered by the Police Commissioners and a bylaw is being prepared for regulating and controlling the traffic. In the meantime the police force is exercising control under the general traffic regulations. The traffic started Mar. 30, and on May 6 the Chief of Police reported that there were 150 jitneys in operation. This number has been increased since. Up to that date the principal traffic had been controlled by the Toronto Jitney Association, but since then the Independent Jitney Association has been organized, and by

May 18, it and the unorganized jitnies had practically driven the Toronto Jitney Association's cars off Yonge St., which is the most profitable route. The Toronto Jitney Association's cars are now operating on other routes, some cross town ones having been opened up. In nearly every case the street car routes are being followed. The Toronto Ry.'s traffic being perceptibly affected, particularly on the Yonge St. route, which was probably the best paying one the company had. It is now possible to obtain a seat on any Yonge St. car at almost any time of the day. A service was started on Yonge St., north of the C.P.R. tracks, Mar. 30, to Glengrove, 2½ miles, at a 5 ct. fare, six tickets for 25 cts., and another to the Rosedale Golf Club, at a straight 10 ct. fare. This service competes with the Toronto and York Radial Ry.'s Metropolitan Division, on its most profitable section. Competing with the Toronto Suburban Ry. is a service operated by 10 cars from West Toronto to Lambton, two miles, at a 5 ct. fare, 6 tickets for 25 cts.

The Deputy Chief of Police of Hamilton, Ont., in conjunction with the Hamilton Jitney Association's officers, has drafted a set of regulations for the control of the jitney traffic in the city. These are under the consideration of the Police Commissioners and the city council. The question of putting a tax on the owners of cars is to be considered directly by the City Council, and the suggestion is made that \$5 a year for each passenger seat in each car be charged, the idea being to replace the revenue taken away from the city as a result of the inroad made on the Hamilton St. Ry.'s earnings by the jitney traffic. Prior to drawing up the regulations the police department made an investigation of the extent of the traffic, which showed that on May 10, between noon and 8 p.m., 651 jitneys stopped at the corner of King and James Streets. Pending the passing of the bylaw the police are inspecting all cars put into the service and are regulating the traffic. The routes operated over are practically the same as those of the street railway, with a 5 ct. fare and 6 tickets for 25 cts.

The jitney has not yet made its appearance in London, Ont., but the city council is being urged to give the matter consideration so as to be prepared to act promptly when any proposition is made for such a service.

G. Markes, who was a partner in a jitney service at Sudbury, is seeking a franchise for a similar service in Stratford, Ont., and the city council has granted a franchise to a local company with the title of Motor Busses, Limited, to operate a jitney service in the city. Nothing has as yet been done in the way of putting a service in operation.

A jitney service is being operated at Sudbury, Ont., where the construction of an electric railway has been started.

The Manitoba Public Utilities Commission has issued a memorandum to the different municipalities in which the Winnipeg Electric Ry. and its subsidiaries operate, referring to the applications being made for a reduction of fares on the lines, and intimating that if the municipalities do not put the jitney traffic under proper regulations the W. E. R. can no longer be expected to continue its progressive policy of extensions. In Winnipeg the jitney traffic, which began in the middle of February, now covers practically the whole of the city, there being according to late advices 480 cars in operation, the fares charged being 5 and 10 cts., according to the distance traversed. The Winnipeg Jitney Dispatch Service has been organized to give special and casual service to any point, at rates to be arranged be-

tween the driver and his customer. At a meeting of the Real Estate Exchange, May 6, E. Anderson addressed the members on transportation problems as affected by the jitney. He dealt with the topic first as affecting the public, and secondly as affecting the street railway. Rapid communication is the only way to build up a city, and this he pointed out, can only be regularly and properly given by an electric railway; the long haul resulting in a loss, which is only made up by the short haul traffic in the centre. The jitney can give a more attractive service in good weather during a certain period of the year in the short haul area, but at no time can it give a profitable or satisfactory service for the long haul.

There were about 10 jitneys being operated in Regina, Sask., May 10, the first car making its appearance April 28. The city is charging a license fee of \$25, but has under consideration a bylaw for the full regulation of the traffic. The Minister of Municipal Affairs has promised that a measure authorizing municipalities to make regulations to control the jitney traffic will be submitted at the legislature's current session.

The jitney is only being operated in one city in Alberta—Edmonton—but steps are being taken in Calgary by the city council to enact a bylaw so that the officers will be prepared to act promptly, when any move is made to start such a service there. The bylaw passed by the Edmonton City Council is given in another column. The owners of jitneys operating in the city are of opinion that the council has not the power to pass such a bylaw, and it is possible that a case will be taken before the courts to test its validity. The question of the acceptance of a personal bond instead of an insurance policy was referred to a committee for consideration, and on May 5, it was decided to suspend the operation of this clause to July 5, so as to permit the jitney owners to secure policies. Pending the hearing of a test case there has been a considerable decrease in the number of jitney cars being operated, licenses having been taken out only for the larger seated cars.

British Columbia was the first Province in which the jitney appeared, and it was the first to take definite steps for its control. It introduced an amendment into the Municipal Act, authorizing municipalities to make regulations for the Government licensing and regulating all motor vehicles operating within their bounds, and a section granting similar powers was introduced into the Vancouver Corporation Act. A summary of these provisions has already appeared in Canadian Railway and Marine World. There are at present about 300 cars being operated in Vancouver and vicinity, and about 125 in Victoria. The service given by them is as a rule in the well settled sections only, and mainly along the British Columbia Electric Ry.'s routes, a 5 ct. fare being charged. Between Vancouver and New Westminster the cars run along the paved highway, with a 25 ct. fare. The draft regulations drawn up under the terms of the act have been under consideration, and several modifications have been made in consequence of representations by the jitney associations. The regulations come into operation June 1.

The New Westminster, B.C., City Council has appointed a special committee to draw up regulations for the jitney traffic.

The Victoria Jitney Association has been formed with W. T. Scott as Traffic Manager. It is in correspondence with the Provincial Government as to the regulations to be made under the act, and has appointed a committee to investigate the question of accident insurance rates.

## Mainly About Electric Railway People.

**C. E. A. Carr**, Railway Supplies, etc., Toronto, formerly General Manager, Quebec Ry., Light and Power Co., received word, May 13, from Ottawa, that his son, C. C. Carr, had been wounded at Langemarck, and has since been listed as missing.

**City Engineer Arnold** has been appointed Superintendent of the Saskatoon, Sask., Municipal Ry. by the City Council, by a majority of one, for a trial period of two months. In accepting this additional work he expressed the opinion that an expert street railway man should be employed.

The Brantford, Ont., Municipal Railway Commissioners and the city council's hydro electric commissioners have had some meetings in reference to a merger of the working staff by the appointment as joint Manager of **L. G. Ireland**, now manager of the city's hydro electric plant. Our advices, May 19, pointed to the probability of Mr. Ireland being appointed joint manager by June 1.

**John G. Baukat**, who is acting as Manager, London (Ont.) Railway Commission, which is electrifying and which will operate the London & Port Stanley Ry. was, from 1898 to 1899 assistant engineer, in charge of power and equipment, Port Chester Ry., of Port Chester, N.Y.; 1899 to 1902 in General Electric Co.'s railway department, Schenectady, N.Y.; 1902 to 1905, Chief Engineer, Schenectady Ry., Schenectady, N.Y.; 1905 to 1909, Assistant Superintendent of Electrical Equipment, New York Central & Hudson River Rd.; for a short time Chief Engineer, Miami Valley Construction Co., New York, N.Y.; 1910 to 1911, Mechanical Engineer, Wilmington-Philadelphia Traction Co., Wilmington, Del.; 1911 to 1913, Superintendent of Equipment, Lehigh Valley Transit Co., Allentown, Pa. In 1913 he was appointed electrical engineer, National Steel Car Co., Hamilton, Ont., and in 1904 was appointed on the Hydro Electric Power Commission of Ontario's staff.

**Col. H. H. McLean, K.C., M.P.**, President, St. John Ry., who will command the New Brunswick and Nova Scotia regiments and the 41st and 42nd Quebec regiments in the third Canadian overseas contingent, was born at Fredericton, N.B., Mar. 22, 1855, and educated there. He became an attorney in 1876, a barrister in 1877, referee in equity in 1889, and a K.C. in 1899, and is considered one of the foremost commercial and shipping lawyers in the province. In addition to being President of the St. John Ry., he is, or has been, intimately connected with several other transportation companies and allied interests, including the Alexander Gibson Ry. and Manufacturing Co., New Brunswick Southern Ry., Fredericton Ry., Carleton Electric Light Co., Grand Falls Water Power and Boom Co., New Brunswick Ry., New Brunswick Fish and Game Co., Algonquin Hotel Co., St. Andrews Land Co., St. John Bridge and Ry. Extension Co., etc., and is connected in a legal capacity with the C.P.R., Dominion Express Co., Dominion Coal Co., Cumberland Ry. and Coal Co., Maine Central Rd., etc. He has been associated with the military since joining the volunteers during the Fenian raids, and became Captain and Adjutant of the 62nd St. John Fusiliers, and afterwards Lieutenant-Colonel commanding that corps until 1903, when he was appointed Commandant of the 12th Infantry Brigade, which position he held until 1911. He was promoted to Colonel in 1911, and raised the 28th New Brunswick Dragoons, to the command of which he was appointed. He was Captain and Adjutant of the provisional battalion from New Brunswick and Prince Edward Island for service during the northwest rebellion in 1885; Commandant of

the Bisley team in 1899; in command of all troops assembled at St. John, N.B., for the reception of the Duke and Duchess of Cornwall and York, now King and Queen, in 1901; and also in command of the Infantry Brigade at Halifax, N.S., for the same purpose; in command of the 7th Infantry Brigade, for the tercentenary celebrations at Quebec in 1908; in command of the Canadian contingent at the coronation of the King and Queen, London, Eng., in 1911. He is President of the New Brunswick Provincial Rifle Association and a member of the Canadian Council of the British Red Cross Society. In 1877, when there was a possibility of war between Great Britain and Russia, he raised a volunteer force of 100 men, for which he received the thanks of the War Office, and during the South African war he offered to raise a similar force, and was thanked by the general officer commanding. He holds the long service decoration, and was appointed an honorary aide de camp to the Governor General in 1910. He was appointed Vice Consul for the Argentine Republic in 1908, and since that year has represented Sunbury and Queens, N.B., in the House of Commons.

## Electric Railway Notes.

Moncton Tramways, Electricity & Gas Co., Moncton, N.B., is in the market for 2 or 3 one man, p.a.y.e., single end operation, single truck cars.

The Brantford Municipal Railway Commission has ordered three more single truck, p.a.y.e. cars from the Preston Car and Coach Co., for operation on the Eagle Place loop.

The London, Ont., City Council has passed a bylaw for the operation by the London St. Ry. of a Sunday service on the same terms and conditions as have heretofore prevailed.

The Winnipeg Electric Ry. has completed the new car signs which were directed by the Public Utilities Commissioner. The order necessitated, it is stated, the rearrangement of 380 signs.

The Three Rivers Traction Co., which is building a line in Three Rivers, Que., and a suburban line to Cap de la Madeleine, will probably order 8 single truck p.a.y.e. cars as well as the necessary construction and snow fighting outfit.

The Edmonton, Alberta, City Council has under consideration a recommendation of the finance committee that three business men of the city, not connected with the council, conduct a thorough investigation into the Edmonton Radial Ry.'s financial affairs.

The Ottawa Electric Ry. at the request of the Ottawa City Council began to stop its cars on the far side of the street, instead of the near side, April 29. This is a return to the old system, which was discontinued at the request of the City Council about two years ago.

The Saskatoon, Sask., City Council decided, May 7, to speed up the cars on the Municipal Ry. so as to give a faster service. The schedule adopted was drawn up by the Street Railway Men's Union, and laid before the council by City Engineer Archibald, who is also Superintendent of the Municipal Ry.

The Commissioners operating the Municipal Ry., and the Hydro Electric Power plant in Brantford, Ont., held a joint meeting, May 11, to discuss plans for placing these two utilities under one management, L. C. Ireland, the manager of the power distribution plant, being suggested for the joint office.

The Port Arthur Electric Ry., which is

owned and operated by the city, is hauling the city refuse from central points to outside dumps. A special car was built last year for the purpose. The experiment is being watched closely to see what comparison there is as to cost, with the previous system of hauling by horses.

Street cars in various parts of Great Britain and Ireland are being utilized to a considerable extent in a great recruiting campaign. They are decorated by artistically designed recruiting posters, and at night are illuminated by a large number of 16 c.p. colored lights. They are very attractive, and are said to be doing excellent work.

Representatives of rural municipalities of Manitoba served by interurban electric lines owned by the Winnipeg Electric Ry. met at Winnipeg, May 1, and passed resolutions asking for the provision of a freight and parcel station at the old market between Main and Princess Streets, and the granting of such franchise to the W. E. Ry. as would enable it to handle such traffic, from the interurban lines now having terminals at the north end city limits.

The Regina, Sask., Municipal Ry. put in operation a new time schedule, May 10, giving a faster service on all down town lines on week days. No change is made on two lines and the service on the Highland Park line has been discontinued. It is proposed to submit a bylaw at the first opportunity to see if a Sunday car service is wanted. The council refused to grant a request for a single fare for a return trip to the market on Wednesdays and Saturdays. Commissioner Reid pointed out that the Council received 4.2 cents from each passenger while it cost 4.8 cents each to carry them.

**Ejection of Passenger Justified.**—In the recent case of Capital Traction Co. vs. Brinley, decided by the Court of Appeals of the District of Columbia, U.S.A., it appeared that the appellee boarded a street car and tendered an overdue transfer to the conductor in payment of his fare. The conductor refused to accept the transfer, and informed the appellee that he would have to pay his fare or leave the car. The latter insisted that the transfer was all right, whereupon the conductor stopped the car and summoned the motorman for the purpose of removing the appellee from the car. The appellee then tendered payment of his fare, but the conductor refused to accept it and ejected the appellee, who brought action for wrongful ejection. The court, reversing a verdict judgment below, held that the appellee having voluntarily assumed the status of trespasser, his offer to pay his fare came too late, and that the trial court erred in not directing a verdict for the appellant.

**Edmonton Radial Ry. Depreciation.**—The Edmonton, Alta., City Council has been charging depreciation at 10% a year on the cost of the municipal railway's permanent track. It has been contended that this was altogether too high and the rate has been reduced to 6%. This will make a difference in operating charges that along with other things will enable the management to make a better showing, although the mileage of track is undoubtedly too large for the population, there being 54 miles and only about 62,000 people.

**London & Port Stanley Ry.**—J. G. Baukat, who has been on the Hydro Electric Power Commission of Ontario's staff for some time, has been sent to London, Ont., as acting Manager of the London & Port Stanley Ry. and is making preliminary arrangements for the organization of a staff to operate it after its re-opening in July as an electric line.

## Manitoba's Public Utility Commissioner Shows Why Electric Railways Cannot be Extended or Fares Reduced.

The Public Utility Commissioner of Manitoba, H. A. Robson, has issued a memorandum to the City of Winnipeg and surrounding municipalities stating why he cannot order the extension of electric railway lines or the reduction of fares, as follows:

"Several applications have recently been made either for orders for street car extensions in and around Winnipeg or for reduction of fares. The proposed extensions include

"1. A line to Morse Place, i. e., the Johnson Ave. extension into Kildonan;

"2. An extension of the Sargent Ave. line through into St. James to make a belt line with Portage Ave.;

"3. A line to the St. Boniface stockyards;

"4. A line through the northwest part of the city to Brookside cemetery.

"The jurisdiction of the public utility commission, to order construction or impose penalties in the alternative depends on the presence of certain facts—1, A contract requiring the company to build, or 2,—the extension to such an extent of business that a fair return on the capital investment is assured.

"New lines in the city may be required under the company's franchise, if a certain population exists in the territory to be served. Otherwise the obligation to build depends on condition 2 above. Suburban lines also generally depend on condition 2.

"In the city, the company has built many lines at the request of the council, without the lines being within the stipulation as to population. Several useful lines now in operation would not have existed but for this voluntary construction. Rural lines have been built on the assumption that they would so increase population thereon as to justify the investment. There are instances where it is obvious that this expectation has not yet been realized.

"The street railway company in ordinary times, and particularly before recent competition, was making such earning that it might carry further financial load and still ensure a fair return upon the value of the undertaking. But from the figures showing the reductions, due somewhat no doubt to financial depression, but primarily to the automobile competition, there is not now such a revenue that a fair return on the value of the property exists.

"There is evidently no contractual obligation to build the new lines, and because of the shrinkage just referred to the obligation under the law does not exist. So that nothing can be done in present circumstances towards enforcing the construction of these new lines.

"A few words may be added to elaborate the situation. The automobile competition gets the patronage in the populous districts where the paying traffic is found. This factor has substantially depleted the revenues which have been carrying the system as a whole.

"The street railway company reaches the outskirts of the community, and takes the 'long haul.' It is common to all such systems that the outer traffic is carried on at a loss which is met by the productive lines in the settled districts. The short fare pays the loss on the long fare. For instance, the passenger from Trent Ave., Kildonan, to Deer Lodge, pays a fraction over 4 cts., or perhaps 3 cts. Other examples are to be found at all points. This is a loss, and is made up ordinarily by the greater number of more profitable short runs down town. If the down town business is taken away

or substantially reduced, the result is obvious. The compensation for the long haul is gone. The company cannot be required to build lines which cannot be operated out of their revenue. The remunerative down town business has enabled it to carry the investment and operate lines which would not carry themselves, and which otherwise would not have been built.

"Every season so far there has been a certain amount of new track laid and operated. This has largely been in comparatively unoccupied parts. City growth, like that of the country, follows transportation lines. The incentive to the company to build into new territory in the hope of recoupment with development has gone.

"The street railway will make the new community and the bus will take the business. The general revenues will not now carry losing lines as they have done heretofore. Street car fares to and from suburbs have already been materially reduced or wholly extinguished because of general profitability of the system as a whole. In so doing the company either voluntarily or by slight pressure departed from the rates to which it was entitled under its franchise contracts. At present the company may well say it cannot build new lines to open new districts, or communities or to accommodate workmen and industrial establishments, because the revenue in which they have been carrying such lines in the past has gone into other channels. It cost money in large sums to build roadbeds, lay tracks and equip railway systems. This money is borrowed and the charges met out of revenue. With the present encroachments on revenue street railway transportation companies are not likely to be able to borrow new capital or to pay the interest on it if they were.

"These are matters for thought by the municipal councils of the city and surrounding municipalities. Some expedient must be devised for the encouragement of continued building of electric railways through all parts of the whole large urban area of which Winnipeg is the head and centre. Without continuously increasing any reliable transportation lines these communities will stagnate. The movement to encourage market garden traffic is an evidence of this. Cheaper industrial sites can only be made available by transportation of a cheap and reliable kind.

Accordingly, while this state of affairs exists nothing can be done with existing applications for new lines or further reduction of fares. When circumstances are altered, and the company's financial returns improve, these matters may be brought up again for reconsideration."

**Vancouver Bridges burned.**—The Connaught bridge and the Granville St. bridge, Vancouver, B.C., owned by the city, were damaged by incendiary fires, April 28. These bridges cross False Creek in the vicinity of Cambie St.; the first named is 4,091 ft. long, of which 3,514 ft. consists of steel spans, while the second is 3,342 ft. long, of which 2,069 ft. consists of steel spans. The city engineer estimates that 650 ft. of the steel work of the Connaught bridge will have to be replaced at an estimated cost of from \$60,000 to \$100,000. The damage to the Granville St. bridge was confined to the floor, and is not large. Owing to the damage to the Connaught bridge the B. C. Electric Ry. has had to rearrange its Oak St. line traffic from Eburne to Hastings and Cambie Sts.

## Electric Railway Finance, Meetings, Etc.

### British Columbia Electric Ry., and allied companies.

	Feb. 1915	Feb. 1914	July 1, 1914 to Feb. 28, 1915	July 1, 1913 to Feb. 28, 1914
Gross earnings	\$558,512	\$704,003	\$5,197,906	\$6,034,831
Expenses	469,187	513,748	4,040,925	4,407,215

Expenses	484,565	516,007	4,525,490	4,924,213
Net earnings	72,570	201,244	1,229,551	1,828,869

### Detroit United Ry.—The proposal of the

Detroit, Mich., City Council to purchase the lines within the one fare zone for \$23,285,000 has been refused by the company, and a new proposition has been tentatively agreed upon. Under this the proposition to purchase will be submitted to the ratepayers, and if a favorable decision is given, the price will be fixed by the six circuit judges sitting in chancery. The manner in which payment is to be made is left open.

**Grand Valley Ry.**—The bondholders of the Grand Valley Ry. applied, April 12, at Osgoode Hall, Toronto, to reduce the amount of \$25,000 proposed to be paid to E. B. Stockdale, who was receiver during the liquidation proceedings. Judgment was reserved. The company's line was sold under liquidation proceedings to the City of Brantford, Ont.

**Hamilton St. Ry.**—The earnings upon which the percentage is payable to the city for the three months ended Mar. 31, were \$132,536.19 against \$148,292.50 in 1914, the percentage being \$10,602.90 against \$11,863.40. The decrease is stated to be accounted for by the depression, and "the manner in which the jitney traffic has cut into the company's earnings."

### GENERAL MANAGER WANTED

For a short, up-to-date Canadian electric railway handling heavy freight and passenger service. Must be a good executive man, familiar with freight tariffs, divisions, etc. Apply Box 26, Canadian Railway and Marine World, with record of experience and references.

## Niagara, St. Catharines and Toronto Railway Club.

The Niagara Central Club, consisting of employees of the Niagara, St. Catharines & Toronto Ry. and allied lines, has been organized with club rooms at St. Catharines. One, the N. S. C. & T. Ry., has taken a three years' lease of a very substantial two story brick house on the corner of St. Paul and Chestnut Streets, almost

bed rooms are only to be used on the written order of the Dispatcher or Superintendent.

The club has a membership of nearly 200 and the officers are as follows: President, E. F. Seixas, General Manager; Vice President, W. R. Robertson, Superintendent; Secretary-Treasurer, J. S. Sainsbury; Com-

Jitneys must not carry more passengers than are set out in the schedule in the by-law, namely: A car of an originally rated seating capacity of 5 passengers may take 8, including the driver; a rated 7-passenger car may take 11, including the driver, and cars above that size may take passengers 40% in addition to their seating capacity.

Right hand doors must be kept permanently fastened, and a seat permanently fixed thereto. No exception is made of left

Reading Room, Niagara Central Club.

Card Room, Niagara Central Club.

directly opposite the terminal station, and has furnished it completely. The employees have organized themselves into a club and with a small monthly subscription maintain the club house.

The main entrance is on St. Paul St. On the right of the entrance hall is a large comfortably furnished reading room which

mittee, A. F. McGill, R. Wilson, R. W. Robertson, H. Rule, J. Hurtubise. No reasonable expense has been spared by the company in the furnishing and the large attendance of members attests to their appreciation of the company's action in affording its employees a place of this character.

hand drive cars, for no person will be allowed to enter by the right hand side.

No person may enter or leave when a jitney is in motion.

Change making or fare collection while a jitney is moving is prohibited.

Jitneys may not stop for taking on or letting off passengers except within 2 ft. of the

Bed Room, Niagara Central Club.

Billiard Room, Niagara Central Club.

is supplied with daily papers, current periodicals, monthly magazines and technical journals. It also contains an upright piano and a Victrola. At the end of the hall is a pool and billiard room containing a modern combination table. Off this room are the lavatories, and coat room.

On the second floor is a small completely equipped writing room, a commodious card room, which is also equipped with several of the standard games, such as checkers, cribbage, crokinole, etc. There are also two completely furnished bed rooms for employees who are members of the club to use in case of late and special runs. The

### Jitney Automobile Regulations in Vancouver.

The Vancouver City Council has passed the following rules for the regulation of jitney automobile traffic:

Automobiles plying for hire are to be examined, and their drivers as to fitness for driving, by an inspector, and the city council will grant licenses on his recommendation. The jurisdiction of the chief constable was removed from the bylaw as being bad law, in the opinion of the city solicitor.

curb, and not nearer than 30 ft. from a street corner. Passengers in the front seat must not encroach upon the driver's 50% space.

Route signs must be displayed both front and rear in a way not obscuring the vision of the driver.

Non skid appliances are to be worn in wet weather.

A bond must be filed with the city indemnifying an owner or any number of owners joining together for \$1,000 for any individual injury, and for \$5,000 for any collective claims, such bond to be approved by the city council with the consent of the obligee.

## Dominion Power and Transmission Company's Annual Report.

Following are extracts from the report for the calendar year 1914. The directors regret that there has been an interruption of that onward progress which has characterized the company's record from its incorporation. Towards the middle of the year there seemed excellent prospects of a resumption of general business activity, but the declaration of war and its effects on general business have quite visibly affected this company's gross revenue for the full year. The closing down of factories has reduced considerably the power receipts, and the street railway traffic has fallen off to a marked extent, while the other railways also show some diminution of business. In view, however, of the wide spread and general derangement of business that has taken place, this company's position cannot but be regarded with considerable satisfaction. Bond interest and other overhead charges have been promptly met, and payments of bonds and on account of bond sinking funds have been made amounting for year to \$134,390.00. We have carried out the sound policy of setting apart 20% of our gross revenue for the exclusive purpose of renewals and maintenance, and after paying dividends during the year amounting to \$461,392.00 we are able to show a balance to the good of \$65,599.10.

After the commencement of the war the advisability of continuing the work on the new steam power station was very carefully considered, and it was decided that in view of the improbability of any absolute necessity for a further supply of power under existing conditions, and in view of the state of the money market the completion of the system might well be deferred for the time being. Considerable progress has been made, however, not only with the work on the site of the station, but with the boilers, turbines and electric equipment remaining in the manufacturing establishments of the contractors respectively. Payments amounting to \$402,254.60 have been made on this account. It will probably be advisable to complete the buildings and install the plant during the coming summer, so that there may be in readiness for operation at least one of two units before the approach of another winter.

The operations of the company in all its branches have during the year been carried on with almost absolute freedom from interruption and with satisfaction to customers. The directors look forward with great confidence to the company's future.

The statement appended to the report relates to the company's general operations and does not give separate information for the railways owned and operated, viz.—Hamilton St. Ry., Hamilton and Brantford Ry., Hamilton and Dundas Ry., Hamilton, Grimsby and Beamsville Electric Ry., and Hamilton Radial Ry.

The directors for the current year are:—J. R. Moodie, President; Jas. Dixon, Vice President; Jno. Knox, Treasurer; W. C. Hawkins, Managing Director and Secretary; W. Southam, Lloyd Harris, J. W. Sutherland and C. E. Neill. E. P. Coleman is General Manager.

**Montreal Railway Y. M. C. A.**—Following were the officers elected at the annual meeting in Montreal, May 7:—Chairman, C. Manning; Vice Chairman, H. A. White; Treasurer, A. A. Maver; Secretary, F. J. Fradd; Executive Committee: W. A. Kneeland, S. Dugh, D. A. Hinchlisse, J. Harrower, T. McHattie, F. W. Britton, W. J. Hyman. The reports spoke of the satisfactory work done during the year.

## New Cars for Toronto Railway.

At a sitting of the Ontario Railway and Municipal Board, Apr. 30, to consider plans for the 50 new cars which the Board had previously ordered the Toronto Ry. to build, it developed that the company had proceeded to build the cars without receiving the approval of the plans by the Board, as called for by the order for their construction. Two cars had already been built and placed in service, and 18 others were in various stages of construction. The Chairman, D. M. McIntyre, expressed surprise at the failure of the company to submit the plans, and stated that if the company built any cars it would do so at its own risk, in the event of the Board refusing to approve the design. The hearing was adjourned to May 17.

On the latter date, consideration was given to the above mentioned matter, and also an application from the Toronto Railway Employees' Union for the abolition of the running board on cars. D. W. Harvey, Assistant Engineer of Railways Department of Works, Toronto, submitted plans prepared in that department for the reconstruction of the present cars. The Chairman suggested that an order might be issued calling for nothing but closed cars, but reserved judgment for the present. For the 50 new cars called for as above, Mr. Harvey submitted plans for a new car of composite construction, for the consideration of which the company asked time. The Board decided to leave the consideration of the plans to its engineer, the city engineer and an official of the company.

## Lethbridge Municipal Railway Operating Results.

The Commissioner of Public Utilities, for the City of Lethbridge, Alta., has made the following report:

The year 1914 saw some radical changes in the operating of the municipal railway, notably the change to one man one car and the introduction of the straight 5 ct. fare. So far the one man one car has worked out satisfactorily and we have not had an accident that could be charged to one man operation; indeed from the standpoint of safety to the travelling public the cars are safer.

The 5 ct. fare has not been long enough in force for me to say with any degree of accuracy as to its effects but so far there has been no decrease in traffic. The revenue and expenditure was as follows:

	1913.	1914.
Expenditure .....	\$91,440 84	\$83,098 00
Revenue .....	60,609 62	46,053 56
Deficit .....	\$30,831 22	\$37,044 44
Passengers carried ....	1,420,011	1,054,848
Car miles .....	433,183	357,938
Revenue per car mile..	13.99c	12.87c
Total cost per car mile..	21.11c	23.22c
Passengers per car mile	3.28	2.94
Av. fare per passenger.	4.17c	4.21c

Taxes to the extent of \$5,518.81 were added to our expenses for 1914. The one man one car was put into operation on June 19 and the 5 ct. fare on Dec. 15, 1914. The position of inspector has been discontinued and the accountant is now doing the work. The sub-station operator is now helping the accountant to count tickets, thus enabling us to dispense with a clerk from the Treasurer's office.

The following is a comparison of the number of passengers carried per month and also the earnings per month for 1913 and 1914:

	Passengers.		Earnings.	
	1913.	1914.	1913.	1914.
Jan. ....	110,268	129,076	\$ 4,516 32	\$ 5,332 64
Feb. ....	107,529	112,657	4,409 62	4,610 34
Mar. ....	117,153	112,695	4,838 07	4,670 66

April .....	112,250	92,598	4,684 77	3,865 91
May .....	116,617	79,656	4,847 32	3,350 71
June .....	142,181	71,752	6,010 73	3,011 30
July .....	125,489	103,037	5,259 46	4,481 38
Aug. ....	119,419	70,478	5,000 72	2,991 81
Sept. ....	112,266	61,798	4,675 01	2,618 84
Oct. ....	113,724	67,477	4,715 42	2,857 77
Nov. ....	111,618	70,151	4,618 73	2,981 02
Dec. ....	131,497	83,473	5,469 25	3,723 68

	1,420,011	1,054,848	\$59,045 42	\$44,496 06
Advertisements and rentals			1,564 20	1,557 50

Total ..... \$60,609 62 \$46,053 56

The number of working hours per man per week was reduced to 54, thereby enabling me to put on two additional men.

The auditors' report gives the following figures:

Property at cost .....	\$354,238 72
Losses covered by debentures, including debenture discounts and losses on operating, 1912 and 1913 .....	93,938 77

## Franchise for Electric Railway in Transcona.

The Manitoba Legislature at its recent session passed an act respecting the town of Transcona, containing the following section:

"3. Upon a report from the Public Utility Commissioner that substantial default has been made and continues in the performance of his obligations regarding the same by the person to whom has been granted a right to construct railway tracks over and upon the streets and highways of the Town of Transcona, under the terms of any contract made and approved under the authority of sec. 2 of chap. 123 of the Statutes of Manitoba, 4 George V., the Lieutenant Governor in Council may revoke the approval given under said section, whereupon the grant by the said town, pursuant of such approval, shall be extinguished, and the town may, subject to the like approval, proceed to again exercise the power and authority vested in it by the said section."

The Public Utility Commissioner has reported as follows:

"That substantial default has been made and continues in the performance by John Henry Kern of his obligation regarding the construction of railway tracks over and upon the streets and highways of the Town of Transcona, under the terms of contract made and approved under the authority of sec. 2, chap. 123, of the Statutes of Manitoba, 4 George V."

On May 7 the Lieutenant Governor in Council revoked the approval of the Kern contract.

## Winnipeg Passes Bylaw to Secure Competent Jitney Drivers.

The Winnipeg City Council passed the following bylaw, April 19:—

"No license shall be issued for the operation upon the streets of the city of Winnipeg of a motor bus, automobile, or jitney, driven by gasoline or electricity, for hire, unless the applicant for such license shall produce a certificate from the Chief of Police of good character and shall have passed a satisfactory examination by those appointed by the city for that purpose, showing that he is capable and competent to operate a motor bus, automobile, jitney or other vehicle driven by gasoline or electricity, with safety and skill, and the License Department is hereby directed to ascertain if any parties operating such motor busses, automobiles, jitneys driven by gasoline or electricity, for hire, are competent, and if any such motor busses, automobiles, jitneys or other vehicles being operated for hire are found to be operated by incompetent drivers or chauffeurs or owners, then the licenses of such drivers, chauffeurs or owners shall be cancelled forthwith and shall not be restored until such drivers, chauffeurs or owners have passed an examination showing that they are capable and competent to operate such motor busses, automobiles, jitneys or other vehicles with safety and skill."

### Edmonton Bylaw to License Jitneys and Their Drivers.

The Edmonton, Alta., City Council passed the following bylaw to regulate the operation of jitney cars, effective April 26:—

1. For every car coming within the purview of the bylaw, an annual fee of \$10 for every seat (excluding the driver's seat), according to the seating capacity of the car as set forth in the application and in the license; the seating capacity being determined by the seating capacity for which car was made or sold, and in other cases determined by a measurement of 18 ins. for each passenger, a separate license being required for each car.

2. For every driver other than the licensed owner, an annual fee of \$5. In case any person applying for a jitney license under the provisions of this bylaw has obtained a license as a common carrier of passengers or for a vehicle for hire for the current year under the provisions of bylaw 523, the sum paid for such license shall be credited to the sum payable by the applicant under the provisions of this bylaw, and all licenses issued under this bylaw shall expire on the 31st day of December next succeeding the date of the issue of the same, and no deduction shall be made by reason of the license being issued after the 1st of January in this or any other year. Fares to be charged by every jitney car, route and destination thereof and the license number shall be displayed on a sign attached to the car while in operation in some prominent manner satisfactory to the Inspector of Licenses, and no person shall attach to any jitney car operating in the City of Edmonton any sign other than the sign required as above and by the Motor Vehicles Act, excepting that a banner may be carried on either side or both sides of the engine hood of such car, indicating any special direction of place to which such car is proceeding, such banner not to exceed 3 ft. in length or 16 ins. in width.

3. Every owner or driver operating a jitney car shall wear on the breast of his coat a button or tag which shall be issued by the License Inspector.

### Nipissing Central Railway Operation for 1913-14.

The annual report of the operations of the Nipissing Central Ry. by the Timiskaming and Northern Ontario Ry. Commission for the year ended Oct. 31, 1914, shows receipts from operation, \$107,666.07, and from operations other than transportation, \$886.60; total, \$108,552.67, against \$85,509.26 for the year ended Oct. 31, 1913. The expenditures were:—Maintenance of way and structures, \$12,974.22; maintenance of equipment, \$6,169.91; traffic expenses, \$722.24; transportation expenses, \$41,176.77; general expenses, \$22,007.08; total operating expenses, \$83,050.22; taxes, \$15; net revenue, \$25,487.45. Out of this \$25,000 was paid to the Treasurer of the Province of Ontario.

The general balance sheet shows liabilities of \$530,000 on account of capital stock; \$229,194.16 on account of advances received from the Timiskaming and Northern Ontario Ry., and \$13,257.65 for accounts payable and unclaimed wages, a total of \$772,451.81. The assets are \$799,849.78, viz.:—Valuation of road and equipment, \$369,632.28; townsite property, North Cobalt, \$245,160; working assets, \$30,328.72; deferred debit items, \$3,329.28; franchise, \$142,399.52. The difference of \$27,397.97 is carried in credit of profit and loss account.

The traffic statistics show:—Passenger

car hours, 2,419; passenger car miles, 25,756; total passengers carried, 135,451; average daily receipts, \$351.03; average receipts per car hour, \$4.07%; average receipts per car mile, .38¼ cts.; earnings per passenger, .07¼ cts.; freight car hours, 38; freight car miles, loaded, 118; freight car miles, empty, 64.

The total trackage operated is 19.93 miles, of which 4.92 miles of main line is owned by the company; 10.45 miles of main track is leased from the T. & N.O. Ry. (of which 5.28 miles is maintained by the company and 5.17 miles by the Commission); and 4.56 miles of company and private sidings and spurs. The rolling stock consists of 8 double end interurban type motor cars; one combined switching motor car and snow plough, and three flat work cars.

### Halifax Electric Tramways Co's. Report.

The report for the calendar year 1914 states that no extensive construction work was undertaken. The principal items of capital expenditure were the paving of Cogswell St., new equipment for cars, additions to incandescent and street lighting systems, and the installation in the power house of a new railway motor generator set, turbine feed pump and switchboard. In addition to expenditure for maintenance charged to operating expenses, a substantial sum was set aside for depreciation.

Owing, in large measure, to conditions resulting from the existing war, the earnings were not as large as might have been expected under normal conditions, but the directors feel that, all things considered, the results of the operations are satisfactory.

The receipts were:—Passenger earnings, \$319,880.53; electric light and power, \$254,045.19; gas department, \$64,678.87; miscellaneous, \$6,637.21. Total, \$645,241.80.

Disbursements were:—Operating expenses and taxes, \$375,423.64; interest on bonds, \$30,000; miscellaneous, \$1,004.22; dividends, \$112,000; balance to surplus account, \$126,813.94.

The surplus account at Dec. 31 was \$921,735.58.

Following are comparative statistics:—

	1914.	1913.
Passenger receipts ....	\$319,880.53	\$301,771.11
Per cent. operating expenses to income ....	58.62	56.36
Passengers carried ....	7,316,727	6,876,003
Car mileage .....	1,370,430	1,275,527

The directors, who were re-elected, are:—E. A. Robert, President; Hon. N. Curry, J. W. McConnell, O. E. Smith, Vice Presidents; W. G. Ross, F. H. Wilson, Sir F. W. Borden, H. H. Smith, W. M. P. Webster, J. A. Neville, J. E. Wood and P. J. McIntosh. J. W. Crosby is Manager.

### Toronto Railway Employees' Wages.

The agreement between the Toronto Ry. and its employees, which has been in effect for nearly three years, will expire in the middle of June, and the men have been meeting to decide on terms to be asked under a new agreement.

The wages under the present agreement are as follows:—Motormen and conductors, 23½ cts. an hour for first year; 25½ cts. second year; 27½ cts. thereafter, platform time, 6 days a week; 4 cts. an hour extra for Sunday work. The company pays half cost of uniforms for men in second year and supplies uniforms free to men over two years in service. Motor and truck repair men, who are employed six days a week, are paid at the same rate. Shed foremen get 27½ cts. an hour; assistants, 24½ cts.; car washers 23½ cts., but as the car washers are also shed men, they are really getting 24½ cts.

The business depression, which was accentuated by the war, and latterly the jitney competition, have adversely affected the earnings to such an extent that the management feels that instead of increasing wages, as some of the men seem to expect, they should be reduced as has been done in many manufacturing industries.

### Guelph Radial Railways Report for 1914.

Following are the financial statements for the calendar year 1914, of the Guelph Radial Ry., which is owned and operated by the City of Guelph, Ont.:—

ASSETS.		
Cash on hand .....	\$	111.55
Cash in bank .....		3,021.90
	\$	3,133.45
Accounts receivable .....		459.98
Line and equipment Jan. 1, 1914 .....		174,410.35
New equipment .....		15,695.00
Car barn building .....		4,136.01
New switches .....		1,177.50
Charter .....		289.90
Gas works siding .....		101.50
		195,810.26
Less sale of old engine, etc. ....		110.67
		195,699.59
Supplies on hand .....		3,204.59
Insurance premiums unexpired .....		465.71
		\$202,963.32

LIABILITIES.		
Power accounts payable .. \$	585.56	
Sundry accounts payable ..	222.82	
		\$808.38
Capital stock .....		169,870.00
Surplus profits .. \$19,863.95		
Less dividend .. 8,450.00		
		11,413.95
Profits for 1914 .. 8,450.00		
Depreciation reserve .....		19,863.95
		12,420.99
		\$202,963.32

EARNINGS.		
Passenger receipts .....	\$44,674.80	
Freight receipts .....	2,697.04	
Advertising .....	349.20	
Sale of power .....	40.00	
Rent .....	230.00	
Interest and discount .....	143.06	
Park receipts .....	95.45	
		\$48,229.55

EXPENDITURES.		
Passenger operating .....	\$11,948.07	
Freight operating .....	785.23	
Oil and waste .....	178.69	
Coal .....	498.90	
Painting .....	127.18	
Office salaries .....	1,603.83	
Stationery .....	103.35	
General expense .....	612.85	
Insurance .....	640.54	
Car barn maintenance and wages .....	5,831.75	
Track .....	4,624.49	
Line .....	416.45	
Power house .....	71.00	
Park expense .....	836.71	
Taxes .....	1,634.89	
Hotel taxes .....	19.00	
Power .....	6,373.67	
Legal expenses .....	101.17	
Injury and damage claims ..	887.90	
Bills receivable .....	15.00	
		\$37,912.67

Profit for year .....	11,216.88
Depreciation .....	2,766.88
Net profit .....	\$8,450.00

### Calgary Municipal Railway Earnings, Etc.

The results of operation for April, 1915, were as follows, compared with April, 1914:

	1915.	1914.
Revenue .....	\$44,298.72	\$43,746.00
Maintenance of Way and Structures .....	807.31	1,262.00
Maintenance of Equipment .....	2,495.06	6,274.21
Transportation .....	23,092.39	33,579.68
General Expenses .....	1,171.77	2,300.00
Total Operating Expenses .....	27,566.33	44,016.51
Balance Revenue over Expenses .....	16,732.39	13,210.01
Fixed Charges .....	16,696.67	15,125.67
Surplus for month (1915) ..	\$335.72	
Deficit for month (1914) ..		\$1,915.66

# Marine Department

## Construction of Car Ferry Terminal at Carleton Point, P. E. I.

Rapid progress is being made with the building of the car ferry terminal at Carleton Point, P.E.I., for the car ferry to be established by the Canadian Government Railways across Northumberland Strait. The mainland terminal will be located at Cape Tormentine, N.B. The two terminal sites were selected as the result of the investigations by the late A. K. Kirkpatrick, M.Can.Soc.C.E., into the best location for such a route, considering natural harbor conditions, ice formations, currents, tides and shifting of sand. This report appeared in full in Canadian Railway and Marine World for Oct., 1912.

The Carleton Point terminal will consist of a landing pier extending southerly from the shore for about 2,200 ft., beyond which there will be a breakwater 500 ft. long, with an opening 600 ft. wide, between which, with the harbor formed, will be dredged to a depth of 20 ft. An 8 ft. tide has to be contended with. The landing pier and breakwater will both be of the same general construction, consisting of a stone fill, faced on both sides with large stones, the outer end consisting of 9 concrete cribs, to form the landing stage. The inner end of the landing pier will have a top width of 20 ft. for about two thirds the length from the shore, widening to a maximum of about 80 ft. near the landing stage, where there will be several tracks. Only a single track will lead out the greater length of the pier. On the sea side there will be a stone parapet. The outer end of the pier will be 13 ft. above low water, rising from a point two thirds out from the shore, to an elevation of 19 ft. above high tide at the shore line. The outer end concrete cribs will be from 102 to 113 ft. long. There will be 5 at the outer end, with 4 forming the landing stage. The breakwater will consist of a stone core, with large stone facing, rising 15 ft. above low water, and 10 ft. wide at the top, located so as to protect the landing stage from southerly seas.

The completed work so far consists of the filling of the breakwater to low water level, as well as about 1,300 ft. of the landing pier completed to the same state. In addition, from 400 to 500 ft. of the outer end of this section of the landing pier has been filled to high tide level. The contractors, Roger Miller and Co., Toronto, have a very complete plant on the work, consisting of the plant on the site, a plant at Point du Chene, N.B., where the cribs are being built, and a quarry 5 miles back from the latter place on the Intercolonial Ry. Point du Chene Branch.

The quarry, which is on a siding about 1,000 ft. from the I.R.C. line, consists of a cutting at right angles to the siding, from which additional sidings have been laid into the working. The stripping involved the removal of about 8 ft. of red clay, which was accomplished by means of a steam shovel. The quarry face varied from 25 to 40 ft. in depth, and is about 300 ft. long. Back from the face, from 10 to 20 blast holes are drilled with a cyclone drill, and the whole face of 300 ft. blown out at one charge. The estimated quantity of stone released in a single blast is about 30,000 tons. This blasted stone is handled by a 60 ton steam shovel operating on a track parallel to the quarry face, into 6 yd. steel skips, 8 ft. square, placed on the flat cars. Paralleling the quarry face, and extending from the inner end of the quarry cut to

the outside of the main siding from the I. R.C., there is a 600 ft. span cableway, which picks up the big stones, and carries them out to the cars waiting on tracks paralleling the main siding. There are 40 steel frame flat cars in constant service. Each car holds 4 steel skips on its deck. The cableway towers are each mounted on 18 pairs of standard car wheels, which operate on short lengths of track at each end, so that the cableway may be moved in towards the quarry face as the cut progresses.

It is the intention to use a 25 ton locomotive crane in the quarry this summer for the removal of the larger facing stones, in addition to the cableway. This crane will operate on a track alongside the face opposite to that from which the core stone is being removed by the steam shovel. From the quarry the stone is taken over the I.R.C. to Point du Chene, a 100 ton I. R.C. locomotive working continuously. At

tion of the pier, 1,500 ft. from the shore, just back of the point where the concrete cribs will be located, there were placed two wooden cribs, 100 by 30 ft., end to end across the pier site, which were sunk in position. The backs of these two cribs were banked for 80 ft. with stone to protect them from the seas, the inner faces of the cribs being left open for the docking of the stone scows between the cribs and the shore on the protected side of the cribs. No stone was dumped in this vicinity, a clear length of about 150 ft. of the pier filling being left open. On this crib there was erected a 95 ft. tower, with a 105 ft. tower at the shore end of the pier. Between the piers there was suspended a cable. The scows towed across from Point du Chene are docked on the inner face of the cribs, and the steel skips lifted from the scows by the cableway, and run along to the desired dumping position. By this means the upper portion of the pier is being filled. In the

Site of Car Ferry Terminal at Carleton Point, P.E.I.

Point du Chene, the steel skips are lifted bodily from the flat cars by derricks along the wharf edge, and placed on scows for removal to the pier site at Carleton Point, a 40 mile tow.

Two methods for dumping the stone on the site have been employed. For the lower portion of the core fill, the stone at Point du Chene has been deposited from the steel skips into dump scows, towed to the site, and dumped in the required position. This method of conducting the work is possible up to the low water line, above which point it is impossible to float the scows at high tide. As noted above, most of this portion of the work is completed. For the upper fill portion, the steel skips have been loaded bodily on flat scows and towed to the site, where for the landing pier, the skips are lifted from the scows by an overhead cableway, carried out over the desired point, and dumped.

This landing pier cableway involved the installation of a considerable piece of plant. At the outer end of the filled por-

tion of the pier, 1,500 ft. from the shore, just back of the point where the concrete cribs will be located, there were placed two wooden cribs, 100 by 30 ft., end to end across the pier site, which were sunk in position. The backs of these two cribs were banked for 80 ft. with stone to protect them from the seas, the inner faces of the cribs being left open for the docking of the stone scows between the cribs and the shore on the protected side of the cribs. No stone was dumped in this vicinity, a clear length of about 150 ft. of the pier filling being left open. On this crib there was erected a 95 ft. tower, with a 105 ft. tower at the shore end of the pier. Between the piers there was suspended a cable. The scows towed across from Point du Chene are docked on the inner face of the cribs, and the steel skips lifted from the scows by the cableway, and run along to the desired dumping position. By this means the upper portion of the pier is being filled. In the

For transporting stone across from Point du Chene there have been in service 5 scows. Of these a large one, 125 x 34 ft., 12 ft. high, with a capacity for 1,000 tons, and equipped with a derrick, is to be used principally for transporting the large facing stones. For the lower core fill, there are two 120 x 35 ft., 13 ft. dump scows, with capacity for 850 tons. These two scows are being used for carrying the steel skips. In addition there are two deck scows, 100 x 30 ft., 8 ft. deep, for deck loads only. Three tugs are employed on the work, two for towing the scows across, and a third for assisting on the site. The largest, the J. O. Gravel, is a 100 ft. steel vessel, 12 ft. draught, equipped with a searchlight, and used in towing across. A smaller tug, the D. M. Fraser, is an 85 ft. vessel, with 9 ft.

draught, and is employed for work around Carleton Point.

For the building of the outer end pier cribs the company has built a wooden floating drydock, 125 x 47 ft., 12 ft. deep, at Point du Chene. This dock has a gate at one end, and the water entrance is controlled by valves. As it will not sink completely of its own weight, concrete weights have been added along the inside bottom edge, which will clear it from docked vessels. The outer end pier cribs will be of a reinforced concrete and wood construction, the bottom being of wood, with the sides, ends, inner walls and framing of reinforced concrete. The wooden bottoms were necessitated to float the cribs from Point du Chene where they are being built, to the dock site, as it was feared that a complete concrete crib would not clear bottom in the minimum water of 16 ft. These cribs are being partially completed in the drydock, and built up to height of about 15 ft., when the valves in the dock are opened, the crib floated out and completed. They will be towed over to the site when required.

The cribs for the outer tower of the cableway were also built in the drydock at Point du Chene. The first one was towed to the site in the drydock, the latter being submerged and the crib floated out at the site. This course was followed as it was feared that the crib might break up if any heavy weather was encountered on the tow across. The second crib was towed over alone, the journey across being successfully made. The largest scow, which is of steel frame construction, was also built at Point du Chene.

The connecting line of railway from the Prince Edward Island Ry. Cape Traverse Branch to the site at Carleton Point, about 2 miles, has been graded, and considerable of the track laid. Most of the line will be laid separately with the P.E.I.R. narrow gauge, (3½ ft.) the standard gauge line being only carried back about a mile from the Carleton Point terminal, where an interchange yard will be established in the meantime, though it is the intention to change the whole P.E.I.R. to standard gauge in order to have through traffic for lines on the mainland.

The engineer in charge for the Railway Department at both Carleton Point and Cape Tormentine, is F. B. Fripp, A.M.Con. Soc.C.E. A. B. Gibson is engineer for Roger Miller and Co., and we are indebted to him for the information on which this article is based.

### Railway Companies and the Operating of Steamboat Lines.

Washington, D.C., press dispatch, May 15.—“The application of certain railways to retain ownership or continue operation of boat lines on the great lakes, despite the prohibition in the Panama Canal Act, was denied to-day by the Interstate Commerce Commission. All the railways applying steamship properties under the new law must give up their boat lines by Dec. 1.

“This is the first case involving extensive which has been decided against the railways. The decision is regarded as of great importance to all the ports on the lakes which are reached both by boat and rail lines.

Steamship lines organized as separate corporations and named in the report are owned on the lakes by the Pennsylvania, New York Central, Lehigh Valley, Rutland, Erie and Grand Trunk Railways. They operate practically all over the lakes, but the principal traffic is in coal, ores and grain between Buffalo and the upper ports. The traffic in package freight also is considerable.

The Interstate Commerce Commission has, under the Panama Canal Act's provisions, authorized the following railway companies to continue their interests in steamship services:

The Pennsylvania-Ontario Transportation Co.'s car ferry between Ashtabula, Ohio, and Port Burwell, Ont., in which the Canadian Pacific Ry. and the Pennsylvania Rd. are jointly interested.

The Grand Trunk Milwaukee Car Ferry Co., owned by G. T. Western Ry. Co.

The Ontario Car Ferry Co., between Charlotte, N.Y., and Cobourg, Ont., owned jointly by Grand Trunk Ry. and Buffalo, Rochester & Pittsburg Ry.

### Gasoline Tug and Lighters for Hudson's Bay Company.

The Hudson's Bay Co. is having a small gasoline tug and four lighters built for use in lightering vessels at Fort Churchill, the company's principal distributing centre on Hudson Bay. The accompanying illustration shows the elevation of the tug. It is a steel frame craft, with steel upper works and a wooden hull secured on the steel ribbing, which is made up of angles. It is provided with a wooden hull to facilitate beaching, as the provisions for keeping it in condition are necessarily limited at that far northern point. It has a length overall

Hudson Bay Co. Gasoline Engined Tug for Lightering on Hudson Bay.

of 36 ft., a moulded width of 9½ ft., 11 ft. over gunwales, and a moulded depth of 4 ft., drawing about 3 ft. of water. It is of the turtle back design, with the upper works protected by a conning hood at the front, and well enclosed to fit it for navigating the extremely rough waters that are frequently encountered in the shallow harbor at Fort Churchill. It has a 30 h.p. Buffalo gasoline engine, fuel for which will be carried in a 150 gal. tank placed forward. In the hold are two berths with lockers below. The hull is of 2 in. rock elm planking.

The lighters are of somewhat similar construction, a steel frame with 2 in. elm planking on the hull, and are 50 ft. long, 14 ft. beam and 6 ft. deep. They are open in the top, with no decking. Both the tug and lighters are being built by the Polson Iron Works, Toronto, and will be loaded on flat cars for transit to Montreal, where they will be transhipped by steamship, to Hudson's Bay. They are all nearing completion.

Dominion Government regulations regarding the exportation of grain, provide that no grain shall be exported to the United States except for domestic consumption; grain exported to the United Kingdom must be to a specified consignee, and if exported to foreign countries, a special permit must be obtained.

### Oregon Washington Railroad and Navigation Co's Ownership of Steamboats.

Upon application of the Oregon-Washington Rd. & Navigation Co. under sec. 5 of the Act to Regulate Commerce, as amended by sec. 11 of the Panama Canal Act, for an extension of time beyond July 1, 1914, during which petitioner may continue to operate boats on the Willamette and Columbia rivers, Lake Coeur d'Alene, and the Snake River, the Interstate Commerce Commission has held:

That the company does or may compete with its boats in their operations on the Willamette and Columbia rivers, Lake Coeur d'Alene, and the Snake River within the meaning of the act. That the operation of these boats is in the interest of the public and of advantage to the convenience and commerce of the people; that their continued operation by petitioner will neither exclude, prevent, nor reduce competition on the routes by water, and that the application should be granted. That the rates, fares, schedules, and regulations of these boats on the Columbia and Willamette rivers, on Lake Coeur d'Alene, and on the Snake River, governing traffic subject to the act, moved by them, must be filed with the Commission and posted to the public as required by the act and the Commission's rules and regulations.

### Canada Steamship Lines Rearrangement of Passenger Territory.

The following covers the territorial rearrangement of the Canada Steamship Lines' Passenger Traffic Department, for the current year, with the respective agents and locations:—

H. D. PATERSON, General Agent, Toronto, for Ontario, west of and including Kingston and Sharbot Lake, and also the City of Detroit, Mich.

W. F. CLONEY, General Agent, Rochester, N.Y., for New York Central line from Batavia, to, but not including Albany, N.Y., and south of N.Y.C. line, to and including Bethlehem, Scranton and Wilkesbarre, Pa., also including the City of Pittsburgh, Pa., and the middle southern States from Louisville, Ky., to New Orleans.

J. V. FOY, General Agent, Buffalo, N.Y., for the Lake Shore line, Buffalo, N.Y., to Toledo, Ohio, and the State of Ohio.

H. W. CRAWFORD, District Passenger Agent, Chicago, Ill., for the State of Michigan, City of Detroit excepted, middle western States as far as St. Paul, Minn., Omaha, Neb., and Kansas City, Mo., and Big Four line St. Louis, Mo., to Terre Haute, Ind., and territory inside these lines, also the States of Illinois and Indiana.

## Shipping Letters From the Head of the Lakes.

F. & W. Jones, Brokers, Fort William, Ont., have issued weekly letters as below: April 24.—The outlook for coal is not over bright. Five cargoes have arrived and four more are en route. None of the docks appear to have any definite advice as to the quantity of coal to be handled during the season, but it is generally conceded that the movement will be light. The C.P.R. expects to have about 125,000 tons of service coal arrive before September. We have no reliable information of any charters made for dealers' coal, but anticipate that at least 250,000 tons will be handled before autumn. Western rail shipments are very light, about 100 cars a day at all docks.

Navigation opened officially April 20. The accumulated stocks at all elevators then stood at approximately 17,000,000 bushels of all grains. Lake shipments from the opening to date have totalled 3,500,000 bush. and while being somewhat lower than the same period last year (4,837,479 bush.), can be considered as satisfactory. With car arrivals from the west the stocks at elevators now stand at 17,000,000. Forty-two vessels have loaded grain and cleared since the opening to date, six of them for Buffalo. Despatch in loading has been good, the stocks held well covered outbound shipments. It is expected that movement will continue active well into May, when a gradual decline in activity is looked for. Advises arriving from the west continue to be favorable to a large crop; the acreage under cultivation is estimated at an increase of 25% over 1913 and should expectations eventuate a crop is looked for available for lake shipments of about 350,000,000 bush. The present exceptionally favorable weather conditions, together with the large quantity of autumn plowing make an early crop most probable and in many places harvest is looked for from three to four weeks earlier than usual.

May 1.—Four coal cargoes have been unloaded this week—two in Canadian bottoms and 2 in U. S. Of these, only one was bituminous, the balance being anthracite and for dealers, no service coal has arrived to date. Four vessels are now under the rigs and 3m ore are en route. All docks have fair stocks on hand and are not in need of arrivals for immediate shipments. Western car shipments have been brisk, and in excess of last week's output. All the coal docks are in full working order, there has been no Sunday work and docks will only agree to do such extra work when it is absolutely necessary.

During the past week 5,217,497 bush. of grain have been shipped east, 14 in Canadian bottoms and 5 in U. S. Receipts have fallen off and stocks show a decrease of approximately 4,250,000 bush. compared with this time last year. Dispatch remains good, most vessels loading at two or three elevators. Weather conditions were unfavorable Thursday and Friday, a severe northwest gale with rain delaying movements around the harbor and necessitating the use of tugs. It is anticipated that shipments will remain steady during the first half of May and pick up again by July, when the start of an early crop is expected.

Stocks on hand at date, receipts and shipments during the week are as follows:

	Stocks.	Receipts.	Shipments.
Wheat .....	7,210,987	1,422,523	5,011,281
Oats .....	3,635,783	249,809	288,232
Barley .....	527,841	33,046	7,198
Flax .....	1,403,497	65,631	20,401

May 8.—Coal movement continues slow and with no immediate prospect of improvement in activity. Seven cargoes arrived during the week, two of which are still under the rigs. They are expected to be

unloaded on Sunday and Tuesday respectively. Four of the cargoes were bituminous coal, three anthracite, 4 were carried in Canadian bottoms and 4 in U. S. At time of writing there are advices of only one cargo being en route, and that for the Canadian Northern Coal Dock. Coal stocks are still very heavy, the western car shipments having shown considerable decline, in fact the western coal dealers are feeling the effect of the past trade depression equally with all other industries. The people of the western Provinces have undoubtedly utilized wood fuel wherever it could be secured, and in many instances have fallen back on the coal products of the west, although it is unquestionable that the western coal is very much inferior in quality to the eastern coal.

Shipment in grain has been fairly active, during the week there have been 32 vessels loaded and cleared with grain for eastern points, bringing up the total to 96 since the opening of navigation, 20 of which were billed to Buffalo. Stocks in elevators now stand at 10,220,478 bush. of all grades, showing a reduction on last week's stocks of 2,500,000 bush., after allowing for car arrivals from the west. Seeding in the western Provinces has made great headway and it is now estimated that at least 85% of it has been done. It is difficult to ascertain the exact amount of additional acreage put under cultivation, but it is certainly questionable whether it will reach previous estimates, it will probably not be 20% over the amount under cultivation in the season of 1914. The greater bulk of seeding now done is in wheat acreage and the prospects are that the acreage of oats, barley and flax which will be ultimately laid down, will be less rather than more than last season's acreage. The weather outlook is certainly good and taking into consideration the fine condition of the land on account of the autumn plowing, etc., should the present favorable conditions continue, there is every prospect for a large and good grade crop.

Stocks on hand at date, and receipts and shipments during the week:

	Stocks.	Receipts.	Shipments.
Wheat .....	5,097,160	951,034	3,064,861
Oats .....	3,177,493	278,481	737,769
Barley .....	530,979	53,155	50,017
Flax .....	1,414,846	58,766	47,417

May 14.—Only two cargoes of coal have been unloaded this week, one anthracite and one bituminous. There are no ships at the docks at present. Two are en route with coal, both being for the C.P.R. dock. The dock companies at these points expect a very slack season until July, but anticipate a considerable increase in coal arrivals beginning about the middle of July and continuing for the balance of the season. Western car shipments are still very light and stock piles are being reduced very slowly.

This week has seen a big drop in grain shipments, only 14 cargoes leaving these ports as against 32 last week. The shipments, which totalled 2,845,940 bush., show a decrease of over 1,000,000 bush. from last week's figures. Only one cargo, about 350,000 bush., went to Buffalo, the majority of the Canadian vessels discharging at Port Colborne. There is little prospect of any big increase in grain movement for some time, as grain shippers have sufficient grain in the east to fill all the present export demands, stocks of grain in eastern elevators at present being 4,081,757 bush. wheat; 1,830,821 bush. oats. The greatest bulk of this amount is in store at Montreal. Receipts from the west are steadily dropping off, this week's figures showing a decrease of over 140,000 bush. against those of last

week. Stocks on hand at date, and receipts and shipments during the week are:

	Stocks.	Receipts.	Shipments.
Wheat .....	4,060,880	867,685	1,903,965
Oats .....	2,369,789	164,178	971,882
Barley .....	497,230	25,890	59,638
Flax .....	1,434,188	44,068	24,726

## Coast, Lake and River Officers for 1915.

The following appointments, made by navigation companies engaged in Canadian navigation, for their various steam vessels and tugs for this year, have been reported to Canadian Railway and Marine World since those published in the April and May issues. The first column shows the names of the vessels, the second those of the captains and the third those of the chief engineers.

The Empress of Ireland Disaster. The judgment of the Admiralty Court in the case of the C. P. R. against the owners of the s. s. Storstad for the loss of the Empress of Ireland, which was run down during a fog, in the St. Lawrence River, May 29, 1914, has been delivered in favor of the C. P. R. The amount of damages to be awarded is being gone into. The whole of the blame for the disaster was attributed to the first officer of the s. s. Storstad, for altering the course of the vessel during the fog. No blame whatever was attached to the officers and crew of the Empress of Ireland. The owners of the Storstad are appealing against this judgment.

### Grounding of the s.s. Glenmount.

An investigation was held at Kingston, Ont., May 7, into the Montreal Transportation Co.'s s.s. Glenmount touching ground near Gull Island shoal in the St. Lawrence River, Apr. 30, while in charge of F. Patenaude, an unlicensed pilot. It was shown in the evidence that the Glenmount was bound down from Kingston with grain and was drawing 13 ft. 7 ins. of water. The weather was overcast and dark just prior to the grounding, but was sufficiently clear to maintain full speed of 10 knots. The master, H. Peters, stated that as it is the custom with the firms navigating vessels in these waters to place a pilot on board who assumes control, in order that the master may obtain sufficient rest before resuming responsibility when working the vessel through the canals, he, following the custom of years, was not on the bridge, but was standing by his cabin door looking out, and owing to the fact that he was not conversant with the lights and buoys in that vicinity, and with the idea prevailing in his mind that the pilot was in charge and in full control, he did not take notice of things around. He practically stated that he would not care to interfere with the pilot unless he saw something radically wrong.

The pilot, F. Patenaude, who holds a master's certificate, but no pilot's license, stated that this was his first mishap in 30 years, and it was his first trip on the Glenmount. At the time of the accident he was alone on the bridge, the second officer having left the bridge some time previously. He did not enquire the speed of the vessel, and said that he never steered by compass, nor took any bearings, nor timed his actions in relation to the speed of the vessel.

The second officer, L. Dicks, stated that he possessed a mate's certificate for the coasting trade, and that prior to the accident he had left the bridge to give orders to the man on the lookout and did not return to the bridge until after the accident had occurred. He did not take any notice of the lights, being unfamiliar with the locality.

Following is the judgment delivered by Capt. L. A. Demers, Dominion Wreck Commissioner, concurred in by Capt. T. O'Connor and Jas. Murray, Kingston, Ont., as nautical assessors:

The court finds that, in view of the existing custom, whereby the owners of vessels plying between Kingston and Montreal order that a pilot, having no license as such, be sent to join the ship at Kingston, to assume full control of the navigation of the vessel, virtually relieving the master and officers of responsibility, in order that the master may be enabled to rest prior to assuming command when working his ship through the locks, this custom having prevailed from time immemorial, according to statements made by counsel, and the masters of ships having surrendered the control of the navigation of their vessels almost entirely, no blame can be attached to the master, Henry Peters, who is hereby exonerated. With regard to the second officer, his absence from the bridge, though it did not contribute to the grounding, is censured, especially in view of the information which the court has received, that officers have orders not to leave the bridge. With reference to the pilot, the court places the onus of this casualty on his shoulders. Knowing under what conditions he was engaged he should have taken every precaution, and unusual precautions in view of the condition of low water existing, a fact of which he was well aware. It is the court's opinion, however, that he has manifested an indifference by navigating only on assumption that the vessel had about covered the distance. Though lights were observable ahead and astern, no use whatever was made of those aids to navigation. We assume that it is not always possible to take compass bearings, but in this instance had it been done, it is unlikely that this casualty would have happened. Therefore, it is our opinion that the only conclusion we can arrive at is that the pilot, Frank Patenaude, carelessly navigated the vessel on this occasion. Having no license as pilot, and the court having no power to impose a fine, he not being on the articles as master or officer, and not being a licens-

ed pilot, his certificate as master cannot be dealt with. The mate's log was examined and found to be absolutely useless to impart information, and we would suggest that better supervision be exercised by the master with regard to the keeping of the log by the first mate, so that when it is required to substantiate statements which may be made, correct information may be found therein.

### Atlantic and Pacific Ocean Marine.

The Cunard Co. has chartered the British s.s. Earl of Forfar for freight service between Canada and Europe. She arrived at Montreal during May.

The s.s. Henriette Woermann, formerly owned by the Woermann Line, Hamburg, Germany, but which was captured off the west coast of Africa, early in the war, has been chartered to the Cunard Co., by the British Government, and is being operated between Liverpool and New York, under the name of Polymnia.

The Union Steamship Co. of New Zealand announces that it has purchased the steamships Canada Cape and Wyandotte, both being well known in Vancouver, for its freight service between Australasia and the Pacific coast. The names of the vessels have been changed to Waihenao and Waimarino respectively.

The first steamship to arrive at Montreal for the present St. Lawrence navigation season, from outside points, was the s.s. Thespis, under charter to the Dominion Government. She was from St. John, N.B., and arrived Apr. 30. The first trans-Atlantic vessel to arrive was the Thomson Line s.s. Jacona, from Newport, Eng., May 1, and the first trans-Atlantic passenger steamship, was the C.P.R. s.s. Metagama, which arrived May 2.

The C.P.R. is now issuing a new form of outward steamship ticket on its trans-Atlantic lines. One form is issued for all classes, instead of a separate form for each class as heretofore. Care has been taken to make the new form as simple as possible

under the many requirements of the Dominion and U. S. Governments, the accompanying regulations and the necessity for completeness in one ticket to cover all classes.

The Russian-American Line's s.s. *Czaritz* has been added to that company's service, and was announced to make her maiden trip to Archangel, Russia, May 22. She has recently been completed at Glasgow, Scotland, and is a twin screw vessel with quadruple expansion engines with a speed of about 18 knots an hour. She is a thoroughly up to date vessel with accommodation for about 60 first class, 350 second class and 1,400 third class passengers. Pickford and Black, Ltd., Halifax, N.S., act as Canadian agents.

The C.P.R. s.s. *Metagama* arrived at Quebec, May 1, and Montreal, May 2, being the first trans-Atlantic vessel to arrive at these ports for the present St. Lawrence navigation season. This was also the *Metagama's* first trip up the St. Lawrence, her maiden voyage to Canada having been made in April. Capt. Webster, who was in charge, was presented with an umbrella by the harbor master, on behalf of the Harbor Commissioners. The sailings of the steamships *Metagama* and *Missanabie* for May were cancelled, both vessels having been requisitioned by the Government. Passengers booked by these vessels were transferred to other lines.

### Maritime Provinces and Newfoundland.

Anthracite coal rates coastwise from New York to Maritime Province points are quoted as follows: To Halifax, \$1.25 and free discharge; to St. John, N.B., \$1.25; to Fredericton, \$2 to \$2.25; to Moncton, \$2 to \$2.25; to Dartmouth, \$1.47; Wolfville, \$1.50.

The Department of Public Works received tenders to May 20, for dredging at Buctouche Beach and Lower Derby Beach, N. B. One of the conditions on which any tenders are considered is that the dredges proposed to be employed on the work, shall have been registered in Canada prior to the sending in of the tender, or shall be built in Canada after the filing of the tender.

In addition to the vessels which Canada Steamship Lines, Ltd., has chartered out for the St. Lawrence Gulf, and coasting trade, as mentioned in previous issues, it has several which will make a few trips to Sydney, N.S., on a per trip basis. The charterers have the option of using any of the vessels on charter for the Gulf trade for trans-Atlantic service on increased payments, which have been arranged.

The C. P. R. is reported to have sold its s. s. *St. George*, to the British Government, by whom it is said, it will be used as a hospital vessel. The *St. George* was purchased, in 1913, from the Great Western Ry., of England, for operation on its Bay of Fundy service, between St. John, N. B., and Digby, N. S. For six years prior to the purchase, she had been operated by the G. W. R. between Rosslare, Ireland and Fishguard, Wales, in connection with the fast trans-Atlantic mail service to London. She was built at Birkenhead, Eng. in 1906, and is equipped with three sets of turbine engines, some renewal to which has been made since she has been on this side. Her dimensions are, length between perpendiculars 350 ft., breadth of beam 41 ft., depth moulded to main deck 17 ft. 8 ins., and to shelter deck 25 ft. 11 ins. On account of the vessel being built for short runs, the bunker capacity is limited, and when brought to Canada she was towed all the way. She sailed from St. John May 3 for England.

### Province of Quebec Marine.

An order in council has been passed continuing the pilotage laws for the pilotage district of Quebec, and repealing all previous bylaws.

The Public Works Department is receiving tenders for the construction of an extension to the training pier at Cap Chat, Gaspé county.

The Montreal Transportation Co.'s s.s. *Rosemount*, in passing through the Lachine Canal, May 3, carried away the lock gates at Cote St. Paul. They were replaced and traffic was resumed May 5.

The Quebec Board of Trade is negotiating with Canada Steamship Lines, Ltd., for the calling of the company's vessels at St. Pierre des Becquets, in Nicolet county, and if this can be arranged for the Dominion Government is to be urged to build a wharf there for the accommodation of the traffic.

The old lighthouse on White Head at Perce in the Gulf of St. Lawrence, is being replaced by a reinforced concrete structure, and while construction is proceeding a temporary fixed white light is being exhibited from an anchor lens lantern on a pole 20 ft. high set close to the site.

The small steamboat *Ludivica*, owned by H. T. LeBlanc, Tusket Wedge, N.S., is reported sold to the St. Simeon Lumber Co., St. Simeon, Que. She was built at Tusket Wedge in 1906, and is screw driven by engine of 6 n.h.p. Her dimensions are, length 45 ft., breadth 11.2 ft., depth 5.4 ft.; tonnage, 17 gross, 11 register.

Canada Steamship Lines s. s. *Louis Phillippe*, made her first trip in the ferry service between Montreal and Longueuil, May 1. She was built at Levis last year, her dimensions being, length 169½ ft., beam 43 ft. 2½ ins., depth moulded 12¼ ft. The propelling machinery was transferred from the company's s. s. *Dundurn*, which was dismantled.

The s.s. *Canada*, registered at Quebec, no. 117146, has had her name changed to *Percesien*. She is owned by the Gaspé and Baie des Chaleurs Steamship Co., Quebec, and appeared in Canadian Railway and Marine World's list of coast, lake and river officers for 1915, in the April issue, under the name *Acadian*, which it was first de-

cided to adopt. She was built in Scotland in 1892, and was then named *Pro Patria*.

The Quebec Harbor Commission is continuing the work of widening the Louise Embankment and deepening the St. Charles River, which was begun last year. The embankment will be widened about 300 ft. for about 1,300 ft. of its length. The crib foundations 200 by 60 ft. are being built at Indian Cove and floated down to the site on completion, and towed into position at high tide.

The steamboat *Christine*, formerly owned by Lord Strathcona, and now by J. S. Thom, Quebec, Que., and under charter to the Dominion Government for patrol purposes in the St. Lawrence River, was run down and sunk by an unknown steamship, off the Isle of Orleans, May 18, with the loss of eight out of a crew of 14. She was built at Glasgow, Scotland, in 1881, and was screw driven by engine of 40 n.h.p. Her dimensions were, length 126 ft., breadth 17.2 ft., depth 9.9 ft.; tonnage, 140 gross, 95 register.

Reports from New York state that a plot was being arranged there by some German subjects to purchase a steamship, load it with heavy ballast and cement, take it to the St. Lawrence on the excuse that it is to enter the Atlantic trade, and sink it at the narrowest part of the channel near Three Rivers, so as to effectually block the channel. Montreal shippers state that nothing has been heard of such a plot there, but it is stated that a German named Von Novelli, was in Montreal recently negotiating for the purchase of a vessel, but without success.

### Ontario and the Great Lakes.

Press reports from Hamilton state that the Public Works Department is arranging to make a complete survey of all the shores of Hamilton harbor.

The Algoma Steamship Line s. s. *J. Frater Taylor*, which grounded on Blake Point, Isle Royale, towards the end of April, was drydocked at Port Arthur during May, and had considerable repairs made.

The Imperial Oil Co. is reported to have placed an order at Collingwood, for the construction of a steam barge, to cost about

### Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during April.

The Canadian Canal opened April 13, and the U.S. Canal, April 17.

\$200,000, for delivery in March, 1916, for use on the Upper Lakes and St. Lawrence route.

The Great Lakes Transportation Co.'s s.s. Glenfinnan while upbound with package freight, grounded on the Vidal shoals above the Sault locks on the Canadian side, Apr. 30, and had to have her cargo removed before being released.

A press report states that the Trent Valley Canal will probably be opened for traffic in the spring of 1916. It is stated that the opening would have taken place during the current year, but there are a quantity of obstructions yet to be removed.

The Owen Sound Board of Trade is negotiating with the Great Lakes Transportation Co., for one of the company's vessels to call there weekly. It is stated that if there is some guarantee of about 250 tons of freight weekly, a vessel will call there.

The Calvin Co., Kingston, Ont., is offering for sale, its s.s. Frontenac, which was built at Garden Island, Ont., in 1901. She is screw driven by engine of 75 n.h.p., and is of the following dimensions,—length 89 ft., breadth 21.8 ft., depth 7.8 ft.; tonnage 111 gross, 64 register, and has a draught of 7 ft. at the after end.

The steamboat Newminko, owned by W. Hanna and Co., Port Carling, was destroyed by fire there recently, the loss being estimated at \$12,000. She was built at Gravenhurst, Ont., in 1909, and was screw driven by engine of 13 n.h.p. Her dimensions were: length 84 ft., breadth 16.5 ft., depth 5.7 ft.; tonnage, 128 gross, 81 register.

The Merchants Mutual Line s.s. Mapieton when leaving the Welland Canal, Apr. 30, bound from Ashtabula, Ohio, to Quebec with coal, struck a submerged boulder, right in the channel about 800 ft. from the end of the pier. Temporary repairs were made and she proceeded on her voyage, and after unloading was to dry dock for examination.

The steamships F. M. Osborne and Valcartier, collided on the Corsica Shoal in Lake Huron, May 13, during a dense fog. Both vessels sank in 19 ft. of water and were reported to be resting on a good bottom, but considerably damaged. The F. M. Osborne is owned by the Davidson Steamship Co., Bay City, Mich., and the Valcartier, by Lake Commerce, Ltd., Toronto.

The Northern Navigation Co.'s s.s. Noronic, which was built at Port Arthur, had the following dimensions:—Length 362 ft., breadth 52 ft., depth 28¾ ft. Last autumn she was put in dock at Lorain, Ohio, and her beam increased 6 ft., giving her an increased speed of 1½ miles an hour and increased stability. She was given a test run May 6, which is said to have proved satisfactory.

The Department of Marine has authorized the change in the name of the s.s. Howard M. Hanna Jr., wrecked during the storm of 1913, to Glenshee. She was salvaged by the Reid Wrecking Co., Sarnia, and purchased from the underwriters, and after being repaired and refitted, was sold to the Great Lakes Transportation Co., being now operated on the Great Lakes with other of that company's vessels.

The s.s. Glenshee, formerly Howard M. Hanna Jr., made her first trip from the head of the lakes during the first week of May. She was one of the victims of the big storm of 1913, and was declared a total loss. She was subsequently salvaged, repaired and sold, not to Canada Steamship Lines, as stated in Toronto daily papers, but to the Great Lakes Transportation Co., of which Jas. Playfair is President and General Manager.

The Lake Simcoe Navigation Co. is operating the steamboats Monarch and Otonabee, this summer, on a daily schedule

from Barrie to Peninsular Park, Jackson's Point, etc., making connection at Barrie with G.T.R. trains. These vessels were purchased from the liquidator of the Peterborough and Lake Simcoe Navigation Co., and are owned by H. Waddington, Toronto. The head office of the company is at Toronto, and there is a local office at Barrie.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above tidewater, for April, as follows,—Superior 601.34; Michigan and Huron 579.48; Erie 571.45; Ontario 245.04. Compared with the average April levels for the past ten years, Superior was 0.30 ft. below; Michigan and Huron 0.91 ft. below; Erie 0.97 ft. below, and Ontario 1.44 ft. below. It was anticipated that during May, Superior, Michigan and Huron would be 0.3 ft. higher, and Erie and Ontario 0.4 ft. higher.

The Algoma Central Steamship Line s. s. E. D. Carter is reported to have been sold to Boland and Cornelius, Buffalo, N. Y., for \$250,000. It is also stated that a contract for the carriage of ore and coal is included in the deal. She was built at Wyandotte, Mich., in 1906, and is of steel, equipped with triple expansion engines with cylinders 22½, 36 and 60 by 42 ins., supplied with steam by 2 Scotch boilers with induced draught. Her dimensions are, length 504 ft., breadth 54 ft., depth 30 ft.; tonnage, 6,359 gross, 5,063 register. She was purchased by the Algoma Central Steamship Line from E. D. Carter, Erie, Pa., about a year ago, for the same amount, it is said, as she is being sold for now.

The Marine Department has issued a warning to mariners relative to the use of the rifle ranges at Long Branch, near Toronto, and at Niagara on the Lake, where rifle practice is taking place. Owing to the extreme range of the rifles used, it has been found necessary to demarcate more clearly the area of water lakeward. At Long Branch seven spar buoys have been placed to mark the limits of the area likely to be struck by spent or ricochet bullets, 2,500 yards from the shore, and at Niagara on the Lake, seven spar buoys mark the area, from 1½ miles from Fort Massasauga at the mouth of the Niagara River, to 1½ miles north from the shore. Vessels should not cross the areas marked off when red flags are flying from the butts.

The s.s. Turret Chief, formerly owned by Canadian Lake and Ocean Navigation Co., and abandoned to the underwriters after being wrecked during the storm of Nov., 1913, on Lake Superior, is reported sold to A. B. Mackay, of Hamilton, Ont. She has been lying on the bottom at Port Arthur since she was salvaged, and it is stated that she is to be repaired and then placed in trans-Atlantic service. Reports state that she has been chartered for a trip from the head of the lakes to Great Britain, with grain. She was built at Sunderland, Eng., in 1896, and is of steel construction with double bottom for water ballast. She is equipped with triple expansion engines with cylinders 20, 34 and 57 by 39 ins. of 1,100 i.h.p., supplied with steam by two water tube boilers 12¼ by 10 ft., by Babcock and Wilcox. Her dimensions are, length 253 ft., breadth 44 ft., depth 19 ft. 7 ins.; tonnage, 1,881 gross, 1,197 register. She was operated in ocean service before being brought to the lakes.

The Wallaceburg Steamship Co., of which H. B. Smith is General Manager, has chartered the s.s. Olcott from the Peninsular Steamboat Co., Sandusky, Ohio, for operation on the Wallaceburg and Detroit route daily from June 10, during the summer. The Olcott was built at Toledo, Ohio, in 1901, when she was named Lakeside, and was lengthened in 1906 and renamed. She is of

steel construction with six bulkheads, four of which are watertight, steel boiler house, complete electric light plant, the bow strengthened for ice operation, and can carry both freight and passengers. She is equipped with fore and aft compound engines with cylinders 18 and 42 by 24 ins., of 800 i.h.p., at 150 r.p.m. There are two Scotch boilers 13¼ by 11½ ft. supplying steam at 180 lbs. Her dimensions are, length 148 ft. 5 ins., breadth 28 ft., depth 12 ft.; tonnage, 337 gross, 229 register. There is accommodation for about 1,000 passengers and her speed is 15 miles an hour. She is excellently furnished, a special feature being made of the men's combined smoking and observation room, and in addition to the ordinary dining accommodation, a modern lunch counter has been installed. She will call at Windsor and Walkerville, each way.

### Manitoba, Saskatchewan and Alberta.

An order in council has been made fixing the rates at which the repair slip which is maintained at Selkirk, Man., for the repair and upkeep of the Government dredging fleet, may be utilized by vessel owners, when it is not engaged in Government work.

The Peace River Navigation Co.'s s.s. Northland Call, which was completed recently at Peace River Crossing, Alta., made her first trip to Fort St. John, May 10. She is 100 ft. long by 18 ft. beam and of 40 tons capacity. Her speed up stream is about 6 miles an hour.

The Northland Transportation Co., Ltd., which is being formed at Saskatoon, Sask., to carry on a general navigation business, is in process of organization, but it has not yet been decided whether the company will commence operations this year or not, much depending on the general state of business, which is suffering from war conditions.

Peace River Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with \$50,000 capital and office at Peace River Crossing, Alta., to carry on the general business of carriers of merchandise and passengers by land and water, and in connection therewith to own and operate steam and other vessels, railway terminals, telegraph lines, telephone lines, hotels, elevators, etc. The incorporators are, J. K. Cornwall, C. Young and A. L. Sawle, Edmonton; G. Magar and L. M. Powers, Peace River Crossing.

### British Columbia and Pacific Coast.

The Vancouver Harbor Commissioners have deposited with the Dominion Public Works Department, plans and description of a bulkhead and fill to be built in the portion of False Creek known as the Granville St. mud flats, at Vancouver.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince George has completed her overhaul of hull and machinery, and has returned to service to northern ports. She will operate on a bi-weekly service until June 8, when a tri-weekly service will be put on.

Greer, Coyle and Co., tug owners, Vancouver, have purchased the tug Freno from A. Wallace, North Vancouver. She was built at North Vancouver in 1912, and is screw driven by engine of 24 n.h.p., burning oil as fuel. Her dimensions are, length 79.2 ft., breadth 18.8 ft., depth 8.3 ft.; tonnage, 94 gross, 64 register.

The Grand Trunk Pacific Coast Steamship Co.'s new dock at Seattle, Wash., to replace the one destroyed by fire last year, will be completed and ready for traffic in July. Every precaution against fire has been

## Mainly About Marine People.

taken in the new structure. The new dock will have greater capacity than the old one, in order to take care of the company's increasing coastal trade from that port. An unusual feature of the dock is a hardwood driveway the entire length of the superstructure, composed of Australian ironwood.

Navigation on the Yukon River was reported to have been opened May 5, the earliest of which there is any record, by the Side Streams Navigation Co.'s s.s. Vidette, which left Lake Lebarge on that date for Dawson. It was stated that owing to low water, the trip would take much longer than customary. The management of the White Pass and Yukon Route, which operates the British Yukon Navigation Co. and the American Yukon Navigation Co., announces that navigation on the Yukon River between the headwaters of the river at Whitehorse, Yukon and the mouth of the river at St. Michael, Alaska, will open June 1.

The Canadian North Pacific Fisheries Co., with which the Mackenzie and Mann interests are associated, has ceased business, and the entire plants and vessels are being offered for sale. The company was originally formed several years ago by the incorporation of a number of small whaling concerns owing to the failure of the sealing business. Some new whaling vessels were acquired, and subsequently the company sold out to the Mackenzie and Mann interests and the present company was formed with a capital of \$3,000,000. New vessels were added and the plants extended, but it is stated locally that the actual business done did not compensate for the increased capital and other expenditures.

## The Water Levels in Montreal Harbor.

In an interview with a representative of a Montreal daily paper, L. L. Henderson, General Manager, Montreal Transportation Co., and a past President of the Dominion Marine Association, is reported to have said: "Representations are being made to the Government regarding the situation, which is very serious. Well known vessel owners in Montreal are preparing to lay off some of their vessels and we are following suit. One factor in the causing of low river levels is the use to which canals are being put. They were built primarily for navigation purposes and now are being handed over to manufacturers as power propositions. The manufacturers along the banks of the Cornwall canal are taking too much water to permit of large draught vessels passing through lower down. That situation must be faced. Either the levels of the river must be restored or freight rates must be increased."

The interview continues, that Mr. Henderson pointed out that three of his company's vessels, the Northmount, Rosemount and Westmount, were stopped at Kingston and 100 bush of grain lightered from each, and the vessels sent through the rapids and the Cornwall canal, and that the lightering operations had taken all the profit from the trip, the expenses between Fort William and Montreal not being covered.

A Motor Ship of 450 h.p. equipped with reversible propeller blades to avoid reversing the engine has been built by the Nederlandsche Fabriek, of Amsterdam, Holland. It is an oil tank vessel 185 ft. long and 36½ ft. beam, with a capacity of 835 tons of oil. The reversing of the propeller is effected by rotating the three blades around a central axis, hence the pitch of the propeller can be changed and it can be thrown into neutral position as well as into fore and aft position, when desired.

The marriage is announced to take place at Woodlands, Que., June 3, of Miss E. M. Ross, daughter of W. G. Ross, Chairman, Montreal Harbor Commissioners, to H. McD. Brown.

L. J. Pyette, who, until three years ago, was master of the s.s. Assiniboia, of the C. P.R. Great Lakes Steamship Service, when he retired owing to ill health, died at Owen Sound, May 13, aged 55.

The marriage of Miss M. L. Weller, daughter of J. L. Weller, M.Can.Soc.C.E., Engineer in Charge, Welland Ship Canal, to E. P. Muntz, Toronto, is announced to take place during June.

Hon. J. D. Hazen, M.P., Minister of Marine and Fisheries, underwent a slight operation for throat trouble in the Royal Victoria Hospital, Montreal, May 4, which we are advised was entirely successful.

P. 422.  
J. S. Byrom,  
Superintendent, Great Lakes Steamship Service,  
Canadian Pacific Railway.

Sir William Price, whose resignation as Chairman, Quebec Harbor Commission, was announced in our last issue, has reconsidered the matter at the request of the Prime Minister, and will retain the position for the present navigation season.

W. H. Rowlands, heretofore Assistant Port Steward, has been appointed Port Steward, British Columbia Coast Steamship Service, C.P.R., Victoria, vice J. S. Byrom, whose appointment as Superintendent, Great Lakes Steamship Service, C.P.R., Port McNicoll, Ont., was announced in our last issue.

H. A. Bayfield, heretofore Superintendent of Dominion Government dredges in British Columbia, has been appointed Assistant Engineer in connection with the Government terminal works at Port Nelson, Hudson Bay. He has served with the Intercolonial Ry. and the Great Northern Ry., and was for some time Mechanical Superintendent of the Montreal harbor works. He is a member of the Canadian Society of Civil Engineers, and of the American Society of Civil Engineers.

C. E. Croft, who has been appointed General Agent, Passenger Traffic Department (Commissary), Canada Steamship Lines, Yonge St. Wharf, Toronto, was born at Cobourg, Ont., Aug. 26, 1882, and entered transportation service in 1904, since when he has been, to 1909, secretary to Traffic Manager, Richelieu and Ontario Navigation Co., Montreal; 1909 to 1913, chief clerk to Traffic Manager, same company, Montreal; 1913 to 1914, chief clerk to Manager, Eastern Lines, same company, Montreal; 1914 to 1915, chief clerk, Superintendent of Operation, Passenger Steamers, Canada Steamship Lines, Ltd., Toronto.

J. S. Byrom, whose appointment as Superintendent of Great Lakes Steamers, C.P.R., Port McNicoll, Ont., was announced in our last issue, was born in Jersey City, N.Y., Feb. 10, 1872, of British parentage, and on the death of his father, six months after, was taken to Scotland, where he was educated. At the age of 15 he went to sea, before the mast, and for two years sailed in ships of various rigs round the British coast. In 1889 he came to Halifax, N.S., on the Allan Line Sardinian, and entered the service of the Canadian Pacific Navigation Co., at Vancouver, B.C., serving as coal trimmer, sailor and steward, successively. From the autumn of 1890 to the spring of 1895, he served as assistant and chief steward on various Pacific steamships running out of San Francisco, after which he entered the Kootenay Lakes Steam Navigation Co.'s service as steward, and remained in that service on the absorption of the company by the C.P.R. In 1901 he returned to the Pacific coast, the C.P.R. having acquired the Canadian Pacific Navigation Co., in the previous year, and was appointed shore steward and storekeeper, including a general supervision of all marine stores and labor, of the C.P.R. British Columbia Coast Service, which position he retained until his present appointment. Prior to leaving Victoria, B.C., for Port McNicoll, he was entertained to dinner at the Empress Hotel, by his associates and close personal friends.

**Prison Ships.** The Financial Secretary to the Admiralty stated in the British House of Commons recently, that nine vessels had been utilized for prisoners of war, at a cost of £86,000 a month, varying from £7,000 to £12,000 a month according to tonnage. Three of these vessels have been liberated, leaving the following in the service,—Allan Line s.s. Scotian, 1,132 prisoners; Canadian Northern Steamships s.s. Royal Edward, with 1,200; C. P. R. s.s. Lake Manitoba, 1,242; Cunard Co.'s steamships Ascania, 1,397; Ivernia, 1,575, and Saxonia, 2,300. The cost of fitting each of these vessels for the purpose was from £1,000 to £1,500, clothing and boots are supplied as required, while the cost of provisioning the men is under discussion with the owners. It was stated that possibly the vessels would all be liberated for other Government service by the end of April, as other accommodation was being arranged for.

The Allan Line s.s. Grampian was reported to have been in collision with the s.s. Kingsway and in clearing to have fouled the s.s. Moltkefels, in the River Mersey, near Liverpool, Eng., May 17. She was slightly damaged and put back to dock for examination.

The value of imports at St. John, N.B., for the fiscal year ended Mar. 31, were \$9,112,916, and the exports \$43,872,932, against \$9,433,220 and \$21,359,760 respectively for the previous year.

## The Welland Canal's Great Engineering Features.

For years the interest of those who follow the engineering of waterways has been centered in the Panama and the New York State Barge canals. They were tremendous projects, replete with details of the greatest interest to engineers, both in design and construction. Now that the work of building them is drawing to a close, interest will probably shift to the construction of the Welland Ship Canal, on which the Canadian Government will spend \$50,000,000. And well will it deserve the attention previously given to Panama and the New York work. Only those who have had occasion to look into the Welland designs carefully appreciate fully the magnitude of the enterprise. In length it is not notable. Its locks, however, will stand with the great ones of the world. They are to have clear inside dimensions of 80 x 800 ft., with 30 ft. of water on the sills, while each of them will have the great lift of 46½ ft. At Thorold will be constructed a flight rivaling that at Gatun, for though the locks themselves will not accommodate as big a vessel the lift will be greater. At this point there will be three of them in flight, each with a lift of 46½ ft., or a total lift of 139½ ft. Moreover, as at Gatun, the flight is double, one for upbound and the other for downbound vessels. In details the locks will be very interesting. The most unusual feature will be the use of swinging single leaf gates. The adoption of this design followed only after a most careful study of all other alternatives. It would not be surprising if the Canadian peninsula just west of the Niagara River should become a Mecca for canal engineers during the next few years.—Engineering Record.

## An Alaska River Opened to Commerce.

The United States Secretary of Commerce has just announced that a practicable navigable channel from Behring Sea into the mouth of the Kuskokwim River has been discovered by Capt. Lukens, of the U.S. Coast and Geodetic Survey. This river is the second greatest in Alaska. It is 9 miles wide at its mouth and navigable for over 600 miles inland. The great submerged flats of its delta extend 100 miles out to sea, and it was through this dangerous delta that the surveying steamer Yukon made the discovery of the channel, which hitherto had not been charted. It is expected that the newly discovered channel will make it possible for steamship companies to send vessels up into the Kuskokwim and thus initiate the development of the latent mining, fishing and agricultural resources of the region. In making the survey, Captain Lukens reports that he took 14,256 soundings, covering an area of over 100 sq. miles, in some instances locating soundings by observations on mountain peaks more than 60 miles distant. The whole working season was confined to 83 days, and in July alone 29½ of these days were lost on account of bad weather.

Plans are being made at Seattle for the construction by different companies of two light draught steamships designed especially for the navigation of the Kuskokwim. They will be ready at the opening of navigation next spring.—Engineering News.

The various insurance companies concerned with the salvage of silver bars from the wrecked C.P.R. s.s. Empress of Ireland, have had their appeal dismissed, the award of \$59,257 to the Canadian Salvage Association being confirmed.

## Trade and Supply Notes.

The material which appears in this column is supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. ~~Advertisements will not be accepted~~ with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Dominion Iron & Steel Co., Sydney, N.S., has received an order from the South African Government Railways, for 35,000 tons of steel rails.

Canadian Consolidated Rubber Co., Ltd.—Lt. Col. A. E. Massie, the company's Manager for the Maritime Provinces, with headquarters at St. John, N. B., left recently for Europe in command of the divisional train. Army Service Corps, second Canadian contingent. W. R. Stewart is acting as Division Manager during his absence.

Henry J. Coles Ltd., London Crane Works, Derby, Eng., have issued a catalogue of cranes of more or less standard design including steam travelling, fixed base, shunting, stacking, permanent way, gantry or portal, double barrel and navy cranes, also petrol and oil motor driven, electric and overhead travelling cranes and single and double chain grabs.

Canadian Locomotive Co., Kingston, Ont., A. W. Wheatley, Vice President and General Manager, who returned recently from Russia, has given out the following statement: "In order to take care of additional shell orders, consisting of 4.5 and 60 pounders, we are proceeding with the erection of our new blacksmith shop, intending to use it in connection with the shell manufacture and to take care of the new orders—at the same time permitting us to go ahead with locomotives, should we secure orders for same. The new shop will be on the water front on the south side of the plant, being 233 x 67 ft. The steel is on the ground, and we hope to have this shop ready for occupancy in six weeks. We are placing orders for the necessary machinery. At present we have 400 employees, and with the new orders, this number should be increased to between 600 and 700, with a prospect of still greater increase should we be fortunate enough to secure locomotive orders. While we are putting all of our old employees to work, we anticipate a shortage of skilled mechanics, which must necessarily be taken care of by going outside. We have sufficient work on hand to keep us going for a year at least."

The Dominion Bridge Co., Ltd., Montreal, has issued catalogue S1, 108 pages, 11½ by 8½ ins., describing and illustrating a number of its most important erections. The foreword states that the company was incorporated in 1883 and that its first large contract was for the cantilever bridge at St. John, N.B., one of the next being the C. P.R. bridge over the St. Lawrence River at Lachine. Among the principal bridge structures described and illustrated and which are of special interest to transportation men are the C.P.R. ones over the Lachine Canal, Montreal, and over various rivers at Vaudreuil, St. Rose and Three Rivers, Que., Mud Lake, Ont., Kildonan, Man., Surprise Creek, Salmon River and Pitt River, B.C.; G.T.R. ones over Lachine Canal and at Rockfield and Beloeil, Que.; Canadian Northern Ry. ones at Bout de L'Isle, Riviere des Prairies and St. Maurice, Que.; Lytton, Ashcroft and several other points in B.C.; Intercolonial Ry. ones at Miramichi, N.B., and Grand Narrows, N. S.; Canada Atlantic Ry. at Coteau, Que.;

Dominion Atlantic Ry. ones at Windsor, Jaspereaux and Bear River, N.S.; National Transcontinental Ry. viaducts at Cap Rouge and Little Salmon River, Que.; the Alexander interprovincial bridge, Ottawa, and the British Columbia Government bridge over Fraser River; the Intercolonial Ry. ferry landing at Port Mulgrave, N.S.; C.P.R. subways at Montreal; C.P.R. train shed at Windsor St. Station, Montreal; Canadian Vickers Co.'s ship-building berth, Montreal; Montreal Harbor Commissioners' sheds; National Transcontinental Ry. locomotive shops, Quebec, and lift locks on Trent Valley canal at Peterborough and Kirkfield, Ont.

## Telegraph, Telephone and Cable Matters.

G. Smith, inventor of the duplex and quadruplex systems of telegraphy, died at Amityville, N.Y., May 4, aged 77.

G. Scott, chief of the Pacific Cable Board's office at Vancouver, B.C., died after a short illness, at English Bay, May 14, aged 38.

The Great North Western Telegraph Co. has installed a 16-circuit selector concentration unit of the standard Western Union type, in its Montreal office.

The Great North Western Telegraph Co. has opened offices at Beaumaris, Cardinal Canal, Wheatley, Ont., and Joliette station, Que., and has closed its offices at Devlin and Southwold, Ont.

The Association of Railway Telegraph Superintendents will hold its 34th annual convention at Rochester, June 22 to 25. The programme includes a number of interesting papers for discussion, and the social features include an automobile ride, a dinner and a steamship trip on Lake Ontario.

W. Marshall, who was appointed Assistant Manager, C.P.R. Telegraphs, Western Lines, Winnipeg, recently, was presented with an address, a cabinet of silver and a gold watch, by the Toronto staff, May 12. Prior to going to Winnipeg he had for some time been Superintendent of Telegraphs, Ontario Division, C.P.R., Toronto.

Major J. C. N. Kennedy, R.E., who died in Queen Alexandra's Hospital, London, Eng., Apr. 20, as the result of an operation, was born in Peterborough, Ont., and was in the British Army for nearly 30 years. During the developing period of the wireless telegraph system as invented by W. Marconi, he was appointed by the British Government to assist in the experiments and tests.

## Among the Express Companies.

The Board of Railway Commissioners has passed an order amending the terms and conditions endorsed on the express merchandise receipt. It is given in full on another page under Traffic Orders by Board of Railway Commissioners.

H. Conybeare, Canadian Ex. Co.'s messenger at Lindsay, Ont., who decamped with about \$3,000, and was arrested at Edmonton, Alta., was convicted at Lindsay, May 1, but sentence was suspended, and he was placed under a bond of \$400, on the understanding that he enlist for service with the Canadian expeditionary forces, which he did.

The National Elevator Co.'s elevator at Port Arthur, Ont., with a capacity of 500,000 bush., was burned, May 3. There was only a small amount of grain in it. The loss is estimated at \$100,000, covered by insurance for \$60,000.

### Transportation Conventions in 1915.

June 9-11.—American Railway Master Mechanics' Association, Atlantic City, N.J.  
 June 14-16.—Master Car Builders' Association, Atlantic City, N.J.  
 June 15.—Train Despatchers' Association of America, Minneapolis, Minn.  
 June 16.—Freight Claim Association, Chicago, Ill.  
 June 22-25.—Association of Railway Telegraph Superintendents, Rochester, N.Y.  
 June 23-25.—Association of Transportation and Car Accounting Officers, Niagara Falls, N.Y.  
 July.—American Railway Tool Foremen's Association.  
 July 14-17.—International Railway General Foremen's Association, Chicago, Ill.  
 Aug. 17.—International Railroad Master Blacksmiths' Association, Philadelphia, Pa.

 Western Canada Railway Club—Louis Kon, Box 1707, Winnipeg. Meetings at Winnipeg, 2nd Monday each month, except June, July, and August.

Accommodations in Jasper Park. The Grand Trunk Pacific Ry. has decided to establish a summer tent city in Jasper Park in the Rocky Mountains with sleeping tents and marquees for meals. The Dominion Government is also providing shelter houses. It is the intention to build a large hotel in the park some time in the future.

### DEPARTMENT OF THE NAVAL SERVICE.

Tender for 30 Ton Steam Wharf Crane—Halifax Dockyard.

TENDERS addressed to the undersigned at Ottawa, and endorsed "Tender for Steam Wharf Crane, Halifax Dockyard," will be received up to noon of the 1st of July, 1915, for the manufacture, supply, and erection of a 30 ton Steam Wharf Crane, of the Derricking Jib Type, for the above mentioned Dockyard.

The tender should be accompanied by an accepted cheque in favor of the Deputy Minister of the Naval Service, on a chartered Canadian bank, for \$1,600.00, which cheque will be forfeited should the successful tenderer decline to enter into the contract as agreed, or fail to complete the work in accordance with the conditions of the contract and specification.

Representatives of firms desirous of tendering are to state in making application for specification the name of the firm manufacturing and erecting the crane, observing that subletting any portion of the contract is inadmissible.

The specification and conditions of contract may be seen at the office of The Consulting Naval Engineer, Ottawa.

Newspapers copying this advertisement without authority will not be paid for same.

The Department does not bind itself to accept the lowest or any tender.

G. J. DESBARATS,

Deputy Minister of the Naval Service.

Department of the Naval Service,  
—79499. Ottawa, April 30th, 1915.

### FOR SALE,

Steamer "Frontenac," length 89 feet, beam 21½ feet, draft (about) 7 feet. Inspection invited. May be seen in Kingston, Ont. Ask for particular, The Calvin Co., Ltd., Kingston, Ont.

### THE VICTORIA ROLLING STOCK AND REALTY CO. OF ONTARIO, LIMITED.

NOTICE is hereby given that a dividend of 3½% on the paid-up capital stock of the Company for the six months ended May 31st, 1915, has been declared payable June 1st, 1915, to the shareholders of record as of the 31st of May, 1915.

By order of the Board,

G. T. CHISHOLM, Secretary.

Toronto, May 8th, 1915.

### CANADIAN PACIFIC RAILWAY COMPANY.

#### DIVIDEND NOTICE.

At a meeting of the Board of Directors held to-day, a dividend of two and one-half per cent. on the Common Stock for the quarter ended 31st March last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from Special Income Account, was declared payable on 30th June next to Shareholders of record at 3 p.m. on 1st June next.

By order of the Board,

W. R. BAKER,  
Secretary.

Montreal, 10th May, 1915.

### GRIFFIN & BRINKERHOFF

P.O. Box 97, Windsor, Ont.

*Loading  
Northern Electric  
Railway Signal Wire  
from one of the big shipping  
platforms of the Company's new  
plant at Montreal*

## *Northern Electric* RAILWAY SIGNAL WIRE AND CABLE

There are no second or third or fourth grades of Northern Electric Railway Signal Wire or Cable for sale. We do not make them. We make only the one grade, and that embodies the best of all our engineering knowledge and a manufacturing experience extending over many years.

When you consider our unequalled facilities for turning out "Made Better in Canada" products, you will ask us to figure on all your requirements.

*Northern Electric Company*  
LIMITED

Montreal Halifax Toronto Winnipeg Regina Calgary Edmonton Vancouver Victoria

## Go to Chicago With Your Ad Man

Attend with him the big Convention of Associated Advertising Clubs of the World, June 20 to 24, 1915

You will assimilate more knowledge of modern methods of Advertising, Selling, Distribution, and Management during these five days than could be obtained in a lifetime of book study.

You will be brought in touch with the men who have done and are now doing the big things of business. You will participate in the biggest business meeting the world has ever known. You will listen to the expressed thoughts of distinguished Americans concerning present day and future business movements.

You will enjoy Chicago's wonderful park system, boat rides on Lake Michigan, modern hotels, theatres, and other amusements, including the big street pageant, and the Gridiron Show given at the Auditorium Theatre by 150 Chicago Advertising men.

**Distinguished Speakers.** President Wilson, State conditions permitting, will head the notable

array of speakers. Hon. William Jennings Bryan, George Horace Lorimer, Arthur Brisbane, John H. Fahey and Henry Watterson are among the others who will be heard.

Advertisers in and publishers of trade and technical journals will hold special Departmental meetings to discuss their own problems and learn how they can co-operate to better advantage. Other departmental meetings will take up such subjects as catalogues, engraving, printing, mailing lists, sales plans and kindred subjects.

The ladies are wanted too. Special entertainment—teas, luncheons, automobile trips, etc., is being arranged for them by Mrs. Chas. H. Porter and her committee.

Clear up your desk. Take a five days' vacation in a lake-cooled city. Mix with the business builders. You will return a better business man; a better physical man; and a better thinking man.

For further information, programme, rates, etc., address Convention Bureau, Advertising Building, Chicago, Ill.

Offices throughout the Civilized World.  
Executive Offices:  
NOS. 346 and 348 BROADWAY,  
N.Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

Correspondence Invited.

## Your Hands Can't Earn the Money You Need

You'll have to work for low wages all your life if you depend upon your hands to make your living. To earn more money you've got to learn how to work with your *head*—you must have *special training* for some particular line of work.

And you can get this training without leaving your home or losing an hour from your work—the International Correspondence Schools can bring it to you right in your *home* during your *spare time*.

They can train you for the very job you want—where you can earn more than enough to meet your needs.

If you want to advance in your present occupation, the I. C. S. can train you for promotion. If your present work is not pleasant, the I. C. S. can qualify you for a good position in the kind of work you like best.

Every month more than 400 I. C. S. students of all ages and occupations voluntarily report getting better jobs and bigger pay as a *direct* result of I. C. S. training. What these men did *you* can do.

### Mark the Coupon

What occupation attracts you most or what position do you want? Mark it and mail the coupon now, and learn how the I. C. S. can help *YOU* to earn more money.

All lessons for Canadian students are corrected at the Canadian Instruction Department in Toronto by instructors who are thoroughly familiar with conditions in Canada.

#### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 1072, SCRANTON, PA.

Please explain, without obligation to me, how I can qualify for the position before which I mark **X**:

# SAFETY FIRST

The best way to educate your employes to the safety habit is by signs.

The "SAFETY FIRST" sign will be before them many times each day and warn them of the constant danger they are subject to in the course of their duties.

Enamelled iron signs, on account of the brilliancy of their colors, attract immediate attention. They never fade and are as good in ten years' time as the day they are put up.

We make to order in any colors, with any lettering or design.

We will be pleased to quote you prices and submit sketches on request.

# FIVE FAIRMONT MONEY-SAVERS

Throughout Canada hundreds of FAIRMONT Engines and Motor Cars are giving the best of satisfaction. For years you have imported them, and this year's business is the biggest yet. FAIRMONTs work every day in the year, and haul loads impossible for other cars.

Quantity prices to railroad companies.  
Easy payments to railroad men.

Lubricator Body.

## Another Step Toward Efficiency

The Detroit Automatic Flange Lubricator is just another step toward efficiency expressed in dollars and cents. Its use means a direct saving in increased wear for your tires. Its installation means no extra work for the man in the cab. The

### Detroit Automatic Flange Lubricator

gives efficient flange lubrication just when it is needed; the feed is governed entirely by the requirements of the service.

The New Detroit Flange Lubricator consists of an oil reservoir and a feed nozzle on the flange; between these is the lubricator body with a ball valve controlling the feed of oil from the tanks to

the flange. The lateral thrust of the engine moves the ball "B," against the plunger "P," this opens valve. This allows oil to reach the flange.

Its use means another step toward efficiency. For the inside facts, write for Catalogue FO-81. A request letter will bring a copy.

## The Light of Day on the Right of Way

### HEADLIGHTS

Commercial Acetylene furnishes a strong, penetrating light without being blinding. Nothing to get out of order. Economical to maintain. Small gas cylinder supplies several weeks' lighting.

### CAR LIGHTING

Commercial Acetylene furnishes an ideal system for all kinds of passenger cars. It combines efficiency and economy. Standard cylinder supplies from one to two months' lighting of the average car.

### SIGNALS

Commercial Acetylene furnishes an absolutely reliable light. Failures eliminated and cost of maintenance reduced. Cylinder placed at foot of pole supplies several months' lighting without attention.

# Consider the Cost of Stopping Your Trains at Junction and Passing Track Switches in

comparison to the cost of a Model 5  
Low-voltage Switch Machine Layout—

Model 5 Outlying Switch Machine

The elimination of one train stop per day will equal the total cost of maintenance, operation, interest and depreciation of a Model 5 Outlying Switch Layout.

## *Additional Stops are Dollars Saved.*

Four or more train stops per day eliminated will show a large yearly saving.

You not only effect a large yearly saving on a small investment, but you eliminate delays of several minutes for each train entering

and leaving the siding, and thus facilitate traffic movements.

Further, you secure an efficient switch lock and insure a stop indication unless the switch points are in proper position.

With these facts before you, why not protect each outlying switch which will warrant the investment?

Ask our nearest office for further information.

## Berry Brothers' Varnishes

Are the Result of Years of Experience

The man who has always lived in one small community talks only of those things pertaining to that community; is not the type of man the government would select to be admiral of a fleet or general in the army, or minister to some foreign court. The man who has been everywhere and seen life in its innumerable phases is as broad as his experience.

All the experience of those who make, sell and use varnishes have been embodied in the progress of BERRY BROTHERS' VARNISHES. These varnishes are the result of world-wide and time-tested experience, and therefore meet needs better.

*Let us send you some interesting literature on varnish problems*

## Why Cars "De Luxe" Are Fitted With Fabrikoid Curtains

Fabrikoid harmonizes with every detail of cars "De Luxe." It is as pliable as the softest leather; but it never splits. It looks like the richest curtain material on the market; yet it never creases, cracks or scales. In short

REG. U. S. PAT. OFF.

measures up to every requirement for car curtains. Besides, DU PONT FABRIKOID can be cleaned with soap and water; it is weather and water-proof; cuts your car curtain costs and is exceptionally low in first cost. Investigate—better still, write for samples and convince yourself.

# Meeting One Financial Obstacle to Adequate Signal Protection

There is little doubt that there would be a tremendously greater amount of mileage protected by automatic block if first cost were the only difficulty to be encountered. The great difficulty, however, in the universal use of fixed automatic block signals is found in the continuous cost of maintenance.

The advantage in this respect of

## Simmen Automatic Block Cab Signals

is shown by the fact that none of the four roads which are operating the Simmen System have found it necessary to provide any special organization or additional labor for inspection purposes.

The reason for this is that the track and overhead installation of the Simmen System is so simple (involving no apparatus along the track except standard telephone overhead construction and simple signal rails) that the regular track and line maintenance labor is ample to care for these elements.

All operating electrical apparatus is either in the cab or in the dispatcher's office.

The cab apparatus is easily inspected when the car is in for regular inspection.

The apparatus in the dispatcher's office is readily inspected and cared for by the dispatcher, with the occasional assistance of a lineman.

This enormous comparative saving in maintenance costs is proved by the experience of the four roads on which the **Simmen System** is now, and has for some time been, standardized.

The importance of this fact in any signal installation is obvious.

## THE TATE FLEXIBLE STAYBOLT

VALUED NOT FOR WHAT IT COSTS  
BUT FOR WHAT IT SAVES—

It is quite difficult at times to determine the difference in the values of one article over another, for true values are oftentimes obtained only by service tests and experiments covering years of investigations and watchful attention.

**The true value of a staybolt** depends largely on what it can accomplish in the full scope of its usefulness over a long period of service, and in determining such, consideration should be given not only to the staybolt itself, but more particularly to what it accomplishes as a connecting member of the firebox in conserving and prolonging the life of the complete assemblage under all conditions of service.

**We recognize** that railroads are careful buyers—they have to be. The wisdom of obtaining net results at a minimum of expense in the use of their equipment over long periods of service, is the outcome of vast experiences, in which matters of true value regarding all purchases, are based not so much from the viewpoint of economy from first costs, as that obtained in the resulting or ultimate cost based on the service rendered.

**The Tate Flexible Staybolt** is designed and made to give satisfactory results in the final measure of its usefulness, as an economic, safe and reliable factor in reducing the costs of firebox repairs and maintenance. This fact has been demonstrated in all instances where the Tate Bolt has been used, and it is the only way by which we can prove and point to its true value as a staybolt.

**SPECIFY AND APPLY THE TATE BOLT TO NEW FIREBOXES AND RENEWALS**

W. P. HINTON,  
Assistant Passenger Traffic Manager,  
Montreal, Que.

# The Science of Water Treatment

The Dearborn Company was organized because of the conviction on part of its founders that a scientific handling of the water treatment question was the only solution for the steam user of the troubles constantly arising as a result of scale formation, foaming, corrosion and pitting of boiler tubes, with all the attendant injury to the boilers, loss of heating efficiency, and waste of fuel.

Periodical removal of scale is unsatisfactory since there is a constantly increasing ratio of heat loss and fuel waste—as the scale gradually forms—aside from the injury to the boilers.

The Practical Method is **Prevention** and this can be effectively done only by attacking the mineral ingredients in the water with the proper reagents, changing their nature and character and eliminating their harmful qualities.

The application of scientific knowledge is most important in the choosing of reagents. Provision must be made for the various minerals present in the water, determined by analysis, as well as for the by-products that will be formed as a result of reactions brought about. Failure to give this phase due consideration may result in more serious trouble than the first condition of the water produced.

Unscientific "dope" compounds, ineffective and often harmful, have caused steam users endless annoyance and trouble.

We'd like an opportunity to demonstrate results by our methods. Gallon samples of the water supplies for analysis constitute the first step. May we have them?

**Dearborn Chemical Company of Canada, Limited**

Office and Works,  
1220-1230 Dundas Street, TORONTO, ONT.

# The "National" Truck for Interurban Service

WITH MOTORS.

WITHOUT MOTORS.

When we can say that we have never had a dissatisfied customer it means that the "NATIONAL" Truck has unusual merit. It solves the problem of minimum weight with maximum efficiency and smooth riding qualities.

"There are no rough spots on the road that uses the "NATIONAL" Truck.

# LOCOMOTIVES

Long experience, new equipment, efficient management and expert workmen, are guarantees that our Locomotives will give record service. Over 1,200 Locomotives have been built at our Works since the erection of the plant. We are builders of Simple and Compound Locomotives adapted to every variety of service, for Railway Contractors, for Industrial Purposes, Mines, all classes of Railway Work, etc.

We are also builders of stationary boilers, suitable for contractors and industrial plants. Grey iron castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped. We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

**CANADIAN LOCOMOTIVE CO., Limited, Kingston, Ontario**

## Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

# PEDLAR'S "PERFECT" PRODUCTS

## MADE IN CANADA

### PEDLAR'S "PERFECT" CULVERTS

have proven to be the least costly and most satisfactory for all forms of culvert construction. Made of heavy gauge, anti-corrosive **TONCAN** metal possessing wonderful strength, ductility and malleability. Used and recommended by the leading railways, street car systems, municipal corporations, engineers and contractors, both at home and abroad.

The narrow and deep lateral corrugations give these culverts ample strength to resist exterior stress from rolling loads, while its elasticity permits of the preservation of a "springy" road bed.

Easy to Haul—Easy to Install—Not affected by frost—No cost for upkeep.

Shipped assembled in lengths up to 40 feet—coupling bands supplied free for greater lengths. Diameters from 8 to 84 inches—special sizes made to order.

Write for complete Culvert Reference Book No. 4-R.M. containing drainage tables, and important data.

# 450 Railroad Shops in the United States and Canada Use Thermit

*Let us send you this pamphlet.*

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No. 2144, which contains full information on Thermit in Railroad Shops.

## The Parmelee Pipe Wrench "The Toothless Wonder"

### PRICE LIST C

Size	Set No.	Pipe Handled	Set Complete	Extra Handle	Extra Girths
19 in.	1	2, 2, 2, 1 in.	\$5.00	\$2.25	3, 1, 2, 1 in. \$ .75
29 in.	2	2, 1, 1 1/2, 1 1/2, 2 in.	7.50	2.50	4, 1, 1 1/2 in. 1.00
25 in.	3	1 1/2, 2, 2 1/2, 3 in.	7.50	3.00	1 1/2, 2 in. 1.25
					1 1/2, 2, 2 1/2, 3 in. 1.25

Prices on larger sizes furnished upon application.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

## The June Railway Mechanical Conventions at Atlantic City.

The two great railway mechanical conventions of the year, the American Railway Master Mechanics' Association, and the Master Car Builders' Association, were held in Atlantic City, N. J., the former on June 9 to 11, and the latter on June 14 to 16. The most important features of these annual conventions are the reports of the standing and special committees, and the individual papers presented, the principal ones of which are given on this and following pages, either in full or in abstract:—

### Report of Committee on Fuel Economy.

The American Railway Master Mechanics' committee, W. Schlafge, Mechanical Superintendent, Erie Rd., chairman, and of which W. H. Flynn, Superintendent of Motive Power, Michigan Central Rd., formerly Master Mechanic of its Canada Southern Division, was a member, submitted a report, of which the following is an abstract: Since its last report, the committee has been made a standing one, and as a result, an endeavour has been made to limit the scope of the report to a few of the leading essentials of fuel economy, that these might be completely determined.

The design of a locomotive boiler and firebox, together with appurtenances, which will permit of the largest possible amount of evaporation from a given amount of combustible burned, has the maximum efficiency, and is, therefore, the best boiler from the standpoint of fuel economy. Greater attention is now being given to the design of boilers, fireboxes, grates, ash pans and front ends, as these parts are interdependent. Comparisons of locomotives of 10 years ago with present day designs show that the ratio of total evaporative heating surface to grate area is now about 15% less, and the ratio of firebox heating surface to total evaporative heating surface, about 25% more than formerly, which is a step in the right direction. The amount of air opening in ash pans varies between large limits, from 3% to 18% of the grate area for bituminous, and from 10% to 33% for anthracite coal. The committee recommends that the air openings should never be below 12% for locomotives with 70 sq. ft. grate area, increasing for smaller grates.

The superheater means a saving of from 20% to 25% in coal and water, if properly maintained. Best operating results are obtained with full throttle opening and short cutoff. The principal causes of loss of superheater efficiency result from too high water causing priming, fire in poor condition, and the plugging of the superheater flues or superheater leaks. For best results, a temperature indicator is desirable, and a number of lines have so equipped their locomotives.

To obtain the best operating efficiency and fuel economy, in addition to the foregoing, the enginemen must be well instructed in their several duties. In consequence, the committee proposes a standard manual of instruction, which will embody all the essential points of efficient locomotive operation, and will at the same time be brief and

free from technical data. These instructions would be given in class and individually, followed by examinations.

The report contains the committee's conception of such a set of instructions. They commence with an introduction, explaining the need of co-operation, and showing the great expenditure on coal made by the railways. Bituminous and anthracite coals are then explained, followed by instructions on the inspection of the locomotive, preparation of the fire, taking coal and water, making the start, method of firing, operation of the locomotive, condition of fire reaching terminal, cleaning fires, final inspection and work reports and special instructions for the operation of superheater locomotives. The section on the method of firing is illustrated by 10 firebox diagrams, graphically illustrating the right and wrong methods. The instructions are very complete.

### Report of Committee on Draught Equipment.

The Master Car Builders' Association committee, D. F. Crawford, General Superintendent of Motive Power, Pennsylvania Lines West, chairman, submitted a report of which the following is an abstract:

Twenty questions were sent to the members, replies to which were received covering 956,879 cars. Sixty per cent. of these are of steel centre sill construction and are equipped with friction draught gear from a minimum of 100,000 lbs. to a maximum of 260,000 lbs. capacity. The capacity of these cars varies from 80,000 to 120,000 lbs. The question is involved whether the construction of a car is taken into consideration when a decision is being reached as to the capacity of the gear to be applied. It is evident that a draught gear of low capacity necessitates a better construction of car in order to take care of the shocks, which are meant to be absorbed by the gear.

The cars are about equally divided between friction and spring draught gears. About 75% experience trouble with the breaking off of the 1½ in. rivets in the drawbar yoke of high capacity gears, but only a very small number experience difficulty with keys when used in place of rivets in yokes, or depending on keys instead of yokes. The preference in types of gears would appear to be with the friction type, over 80% favoring that kind. Opinion differs widely on recommended coupler travel in high capacity gears. With the friction type, this varies from 1 to 5 ins., with the larger number favoring travels around 2¾ ins.; with the spring type, from 1½ to 2¾ ins., the majority favoring 2½ ins. travel. Opinion also differs in the size of rivets used in front and back drawbar follower stops, varying from ¾ in. with no. 6 both front and back, to 5/8 in. with no. 20, front and back. The greatest unanimity appears to be with ¾ in. no. 9, ¾ in. no. 10, and ¾ in. no. 12. Seventy per cent. experience difficulty in keeping up the nuts on drawbar carry iron bolts. A speed limit on switching locomotives and cars in dump yards is reported by only 25%.

### Report of Committee on Maintenance and Operation of Electrical Equipment.

The American Railway Master Mechanics' Association committee, C. H. Quereau, Superintendent of Electrical Equipment, New York Central Rd., chairman, submitted a report of which the following is an abstract: Fourteen steam railways have been electrified to the extent of 591.3 route miles, including 1,761.65 miles of track. Ten years operation has proved its ability to handle successfully a heavy and exacting traffic, and experience gained has demonstrated that the only question to be considered is whether it will pay. This can only be determined by a detailed study of each problem.

The report includes plans and lists of shop equipment of shops built by two railways. A study of these shows that they are equally adapted to the repairs of either steam or electric equipment, and that the tools are necessary in any event for the maintenance of steam equipment alone. On the electrification of one line the only equipment required to be added to the shop that formerly handled steam equipment alone, was as follows: 21 x 12 in. portable hydraulic press using 1,100 lbs. water, and capable of exerting 190 tons pressure; hook for lifting the front end of locomotives; lifting beam for motors; lifting beam for removing and replacing cabs; special chuck for boring bearings; tension device for re-winding armatures on a driving wheel lathe; 3 k.w. insulation testing transformer mounted on a truck with voltmeters for testing between 200 and 6,000 volts; and a cradle for holding armatures. The manner in which the electrical equipment is handled is exactly the same as with any other equipment.

A noteworthy feature is that electric shops usually have lighter equipment than steam shops, due to the individual parts to be handled being lighter. The average age of employes in such shops is less than in steam shops, owing to the newness of the business, in which men have not had time to age in the service, the average older man fearing to take up a new line of work. Workmen with extensive electrical training are not essential, as 90% of the problems to be handled are mechanical. One characteristic difference between electric and steam equipment is that with steam equipment, the defect can be located in 5 mins., while with electrical, it takes an hour or two to locate, and from 5 mins. to a day to repair. A detailed discussion of maintenance methods would be unprofitable, as there are no acknowledged standard methods of handling the work.

The usual plan on the electrification of a road is to qualify the regular steam enginemen for service on the electric locomotives, which can be accomplished in a few days under the supervision of a qualified travelling engineer. A knowledge of the book of rules, significance of train orders and signals, experience in handling air brakes and an intimate knowledge of the territory constitute 90% of the qualifications of an engineman. The operation of electric equip-

much simpler than steam equipment. It is thought advisable to consider only the mileage per detention in connection with

the records of the maintenance department, and the train delays under the subdivisions of man failure, electrical and mechanical.

## Report of Committee on Car Construction.

The Master Car Builders' Association Committee, W. F. Keisel, Jr., Assistant Mechanical Engineer, Pennsylvania Rd., chairman, submitted a report, of which the following is an abstract:

**Outside Hung Side Doors for New Cars.**—Doors may be of either wood or steel, the former to be on a steel frame. They must be provided with continuous weather and fire proofing around the top, bottom, front and back edges when closed, with the top supported against outward pressure. The closed door stop must be of metal, preferably continuous, and if not, with at least two supports. The door bottom to be supported against outward pressure at least at two points. Bolt fastened door hangers to be so arranged that door cannot be removed without taking down track, the bolts to be at least  $\frac{3}{8}$  in., 4 per hanger. Door track to be either above or below the door opening. On wooden doors, the hasp fastener must be at least 24 ins. long, fastened with at least five  $\frac{3}{8}$  in. bolts, nuts on the inside. The hasp must be rivetted on steel doors.  $\frac{3}{4}$  in. bulging of door must not interfere with operation. These recommendations apply particularly to 6 ft. door openings and single outside hung side doors.

**Draught Gear.**—A large number of failures can be traced directly to weak centre sill construction and incorrect analysis of draught gear effect on centre sill construction, which has led to an elaboration in the report on draught gear problems. Rules have been formulated based on fundamental principles and comparable with the strength of other parts of the car. Many roads are modifying wooden cars, and the design shown herewith is submitted for the purpose of illustrating the use of the rules and formulae. The draught attachments must be of metal, either integral or rivetted, with a strength value of the draught attachments and centre sill equivalent to 10 sq. ins. of steel in tension and compression,  $6\frac{1}{4}$  sq. ins. rivet bearing area, and  $12\frac{1}{2}$  sq. ins. in shear, with a ratio of unit stress to end load not exceeding 0.15. The metal draught arms to extend at least 30 ins. beyond bolster, and securely fastened to bolster and centre sills, and where possible butted against compression members placed between the draught arms and needle beams and also between the needle beams. Hardwood or yellow pine centre sills may be considered equivalent to steel in centre sill construction between bolsters, if they have 4 times the specified unit values, but if reinforced with metal, either the wood or steel alone must meet the strength requirements.

The intensity of end force is assumed at 250,000 lbs. static, considered as concentrated on the draught gear centre line, or distributed between the draught gear and end sill, with the point of contact between the horn of the coupler and the striking plate 2 ins. above the top of the coupler shank. A 5 in. deep shank is  $4\frac{1}{2}$  ins. from centre line to point of contact of coupler horn. The end force on the striking plate is  $250,000 - R$ , where  $R$  is the draught gear resistance when the horn touches the striking plate. Hence, with a 5 in. deep coupler shank, with the horn touching the striking plate the draught gear is solid, the end force of 250,000 lbs. is effective on a line a distance  $Y$  above the

$$\text{centre line, } Y = 4.5 \left( 1 - \frac{R}{250,000} \right)$$

In the design shown, the area of the centre sill is 21.28 sq. ins. Since under end shock the critical strain is compression, no reduction for rivet holes is necessary. The total moments of the sections about the top line of the cover plate is 98.44 in.-lbs., which, divided by the area 21.28, places the neutral axis of the section 4.626 ins. below the top line of the cover plate. The total moment of inertia works out to 296.4. As the neutral axis is equidistant from top and bottom fibres, the section modulus in both cases is the same,  $SM = 296.4 \div 4.625 = 64$ . Then  $\frac{1}{2} X = \frac{1}{2} X$  from which  $X = 6.6$  ins., A SM 21.28 64 the maximum permissible eccentricity of end force.

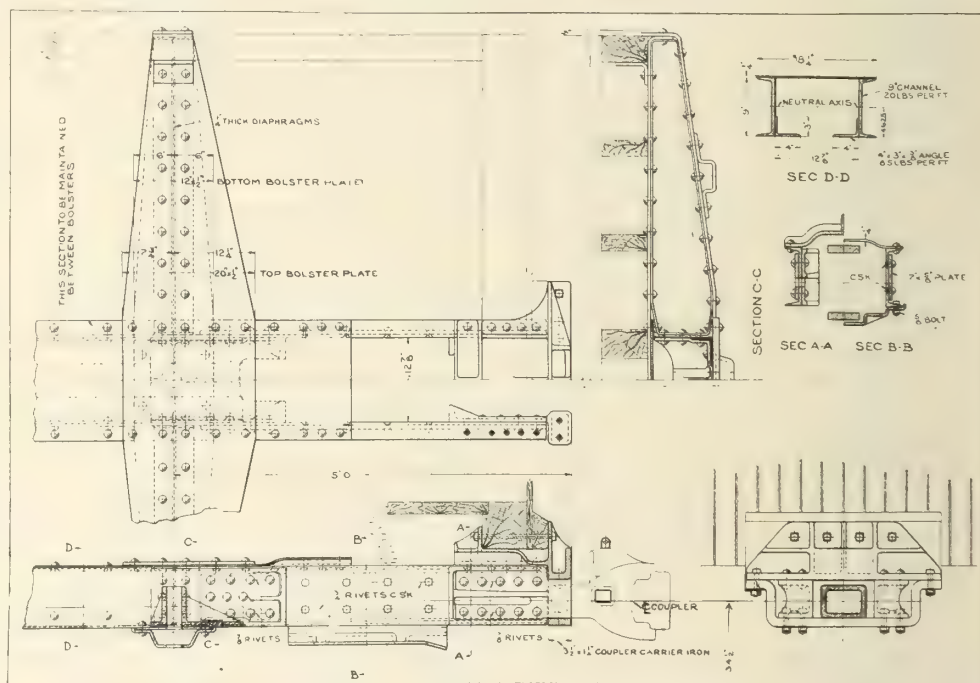

The permissible location of draught gear centre line depends on its resistance when

The highest line on which the total end force may be concentrated is  $2\frac{3}{4}$  ins. above the neutral axis, or 4 ins. above the centre line of the draught gear, therefore the draught gear resistance when the horn of the coupler touches the striking plate must

$$\text{not be less than } 250,000 \left( 1 - \frac{4}{4.5} \right) = 27,800$$

lbs. Further analysis shows the minimum tension area is 17.2 sq. ins.; minimum compression area, 20.5 sq. ins.; minimum bearing area, 20.0 sq. ins.; and minimum shearing area, 13.8 sq. ins.; which meet requirements.

**Standard M. C. B. Box Car.**—A tentative design of car is submitted in the report, that has a strength slightly in excess of the minimum requirements, a weight and cost the least possible per unit of strength, and one that will permit the substitution of stronger or patented parts. The steel sheathed type was selected as it avoids losses of lading on account of the shrinkage of single courses of wood, and because the smooth exterior reduces wind resistance, and because it permits the elimination of

Standard Reinforcing for Draught Gear of Existing Wooden Cars.

the coupler horn touches the striking plate. If this resistance,  $R$ , is 20,000 lbs., then

$$Y = 4.5 \left( 1 - \frac{20,000}{250,000} \right) = 4.14. \text{ Hence, under}$$

these conditions, the centre line must not be more than  $6.6 + 4.14 = 10.74$  ins. below the neutral axis, or not more than  $6\frac{1}{2}$  ins. below the bottom line of channels. If  $R$  is 125,000 lbs., then  $Y$  is 2.25, giving a distance below the neutral axis of 8.85 ins. The design calls for the location of the draught gear  $3\frac{3}{4}$  ins. above the bottom line of channels. The centre sill area is more than 16 sq. ins., so that it will meet requirements for steel underframes in existing cars, if the draught gear conditions are such that the ratio of unit stress to end force does not exceed 0.09. With the same procedure as before with this value,  $X$  is 2.75 ins., indicating that the resultant end force of 250,000 lbs. may take effect only within a range of  $2\frac{3}{4}$  ins. above or below the neutral axis. As the actual location of the draught gear shown is  $1\frac{1}{4}$  ins. below the neutral axis, it would be permissible to concentrate all the end force directly on the draught gear.

diagonal bracing.

All parts of the underframe thought to be unnecessary have been eliminated, and as the side and end angles are a part of the side and end frames, the underframe consists of the centre sill construction, two bolsters and two crossbearers, the latter transferring the load from the centre sills to the side frame. The bolster cover plate is to be not less than  $\frac{3}{8}$  in. for 30 ton cars; 7-16 in. for 40 ton cars; and  $\frac{1}{2}$  in. for 50 ton cars. The centre sill end construction will have an area of 25.46 sq. ins., a neutral axis of section 4.938 ins. below the top of the cover plate, a moment of inertia of 462.4, and a section modulus at the top of 93.6, and at the bottom, of 86.03, giving a ratio of stress to end load less than 0.06. This centre sill is made up of a cover plate, two channels and two angles.

The side and end framing will be made of U shaped posts, with bottom angles and top Z bars. The side sheeting will be  $\frac{1}{2}$  in. thick, and the end sheeting,  $\frac{1}{4}$  in. The section modulus of all posts on a side, excepting the corner posts which will be 15.75, will be 20.7. The bottom angles and top Z bars for

the 30 ton cars will be  $\frac{3}{8}$  in. thick; 40 ton, 7-16 in.; and 50 ton,  $\frac{1}{2}$  in.

This box car has the following general dimensions:

Length of frame over striking casting .....	42 ft. 6 in.
Length over sheathing .....	9 ft. 1 $\frac{3}{8}$ in.
Length, inside .....	40 ft. 6 $\frac{1}{8}$ in.
Width, inside .....	8 ft. 6 in.
Height, inside .....	9 ft. 0 in.
Height, from rail to bottom of bolster .....	2 ft. 6 in.

Height, from rail to floor .....	3 ft. 8 $\frac{1}{2}$ in.
Height, from rail to top of running board .....	13 ft. 4 $\frac{1}{2}$ in.
Height, from rail to top of brake staff .....	14 ft. 2 in.
Width, at eaves .....	9 ft. 2 $\frac{3}{4}$ in.
Height, at eaves .....	12 ft. 5 $\frac{1}{2}$ in.
Side door opening:—	
Width and height .....	6 ft.; 8 ft. 6 $\frac{1}{4}$ in.
Cubic volume under carlines .....	3,096 cu. ft.

Complete drawings of this tentative design accompany the report.

## Report of Committee on Design, Construction and Inspection of Locomotive Boilers.

The American Railway Master Mechanics' Association Committee, C. E. Fuller, Superintendent of Motive Power, Union Pacific Rd., chairman, submitted a report, of which the following is an abstract:

Owing to the lack of time, the committee confined itself to the question of a uniform method of determining stresses:

### Longitudinal Barrel Seams and Patches.—

In figuring net section of the plate, use the actual rivet hole diameter; in figuring rivet shear, use the actual diameter of the driven rivet; and in figuring the stress in the plate and the shear in the rivet when the barrel is not cylindrical where it joins the firebox wrapper sheet, use the maximum diameter. When the shells are cut to apply domes or manholes, the amount of metal in the flange and liner shall be equal in strength to the metal removed. When a separate flange is used at the base of the dome, its entire net area shall be assumed as reinforcement. Where the dome sheet is flanged directly to the shell of the boilers, a vertical distance of 2 ins. from the base of the flange shall be assumed as reinforcement, using the net area after the rivet holes are deducted and using 28,500 lbs. tensile strength per sq. in. as the ultimate strength if the dome sheet is welded vertically. Investigation of the strength of seams shall be along the lines of established engineering practice.

### Longitudinal Gusset Braces and Flat Surfaces.—

In figuring the stress in diagonal braces, allow for the angularity of the braces. The sectional area of the brace and the strength of the attachment of the brace to the shell both be investigated and the lowest net strength used. In determining the strength of gusset braces for supporting the back head and tube sheets, use 100% of the rivet bearing area, measured at right angles to the longest edge of the gusset sheet, and of the three, select the minimum value. The calculation of stress in gusset braces shall cover both the section of the plate and the strength of the fasteners, and the lowest net strength shall be used. In figuring flat stayed surfaces such as back heads, the boundary of the unsupported flat surface shall be located a distance equal to outside radius of the flange measured from inside of shell. No supporting value shall be assigned to the stiffness of flat plates on flat surfaces, as it is too small to be of material value. Reinforcing plates such as back head liner shall not be figured as having any staying or supporting value, but shall merely be considered as mechanical reinforcements for various attachments, such as longitudinal stays, staybolts, etc. The distance beyond the outer row of flues on the tube sheets, assumed to be self-supporting, shall be 2 ins. In calculating the area to be stayed on front tube sheet, the area of the dry pipe hole shall be deducted. T irons or other members, when used subject to bending, shall be calculated without addition for strength of plate, and the stress in such beam and its abutments must not exceed 12,500 lbs. per sq. in. The spacing of

the rivets over the supported surface shall be in conformity with that specified for staybolts. No allowance for value of such beams shall be made in calculating the total area of longitudinal braces that may be attached thereto. Where there are a number of diagonal stays supporting a flat surface, such as back head or front tube sheet, the proportion of area allotted to each brace shall be as follows: Divide the entire net area to be stayed by the entire net area of braces. If it is felt that any individual brace is so segregated as to receive more than its fair proportion of the load, it shall be investigated separately as to the area which it supports. Patches when applied to the barrel of a boiler shall be designed with longitudinal and circumferential seams at least equal in strength to the main longitudinal and circumferential barrel seams. Patches may be applied to flat stayed surfaces with properly designed single rivetted seams without impairing the strength of the sheet.

**Staybolts, Radial Stays and Crown Bar Bolts.**—In figuring the net area of staybolts to obtain the stress, the area of the tell-tale hole shall be deducted. When figuring area at root of thread, the area must depend upon the type of thread used, namely, U.S., V., or Whitworth. In determining the area for figuring stress on staybolts, the area of one staybolt shall be deducted from the rectangular area included between any four staybolts. In boilers with crown bars supported on fire box side sheets and sling stays, the sling stays shall be considered as carrying the entire load.

## Report of Committee on Brake Shoe and Brake Beam Equipment.

The Master Car Builders' Association Committee, C. H. Benjamin, Purdue University, chairman, submitted a report, of which the following is an abstract:

**Brake Shoes** have been tested at various speeds from 20 to 80 m.p.h., under pressures of application of from 1,080 to 2,000 lbs., from which certain conclusions have been deduced. The coefficient of friction diminishes as the pressure is increased, but for pressure between 12,000 and 18,000 lbs., the difference is slight. Pressures in excess of 18,000 lbs. are not economical. The coefficient of friction at high speeds is much less than at moderate speeds, the average at 80 m.p.h. being less than 10%, or less than half the corresponding average at 40 m.p.h. The coefficient of friction of filled or composition shoes is in all cases considerably greater than the average for cast iron shoes whether soft or chilled. General conclusions cannot be drawn as to the effect of speed on loss of weight, except that pressures in excess of 18,000 lbs. cause an abnormal loss. As pressure and speed increase, the wear of the shoe compared with the work done in stopping the wheel increases.

**Brake Beams**—For testing, apply an initial load corresponding to the beam in the

second column of the table below, and then reduce to zero. Apply a 500 lb. load and reset the deflection instrument to zero. Apply the test load shown, and measure the deflection, which is desired to be 0.0625 in., and not exceeding 0.07 in. Then apply the set load, when the permanent set should not exceed 0.001 in. The beam should stand a total motion of the machine head of not less than 2 ins. without failure.

No. of Beam.	Def'n Load.	Set Load.	Ratio.
1 .....	6 500 .....	14 000 .....	47.0
2 .....	12 000 .....	24 000 .....	50.0
3 .....	18 000 .....	30 000 .....	60.0
4 .....	24 000 .....	36 000 .....	66.7
5 .....	30 000 .....	42 000 .....	71.2
6 .....	36 000 .....	48 000 .....	75.0

The test load corresponds with the working load, and with the exception of no. 1, varies at 6,000 lbs. intervals. The last column shows the ratio between the two loads.

## Report of Standing Committee on Train Brake and Signal Equipment.

The Master Car Builders' Association committee, R. B. Kendig, General Mechanical Engineer, New York Central Rd., chairman, submitted a report of which the following is an abstract:

**Sliding Brake Pipe Hanger.**—It has been found almost impossible to produce a gauge for use in determining the end locations of the brake and signal pipes to fix them in their proper relation to all other parts of the car so as to permit of the required lateral and vertical movements, with sliding or swinging hangers, without interference. The 1913 and 1914 reports contain ideas that will enable any road to design satisfactory devices.

**Clasp Truck Brake for Passenger Equipment Cars.**—There are about 2,500 sets of clasp brakes on about a dozen lines. It appears to be maintaining its claims for reduced brake shoe wear per given number of ft. lbs. of brake work done, for reduced number of hot journals in so far as the brake may be responsible for them, for smoother riding of the car during the time of brake action and for remarkably low cost of maintenance, both with respect to the parts of the rigging itself and to the cost of brake shoe renewal, while the stopping efficiency is about 20% greater than the single shoe arrangement. Clasp brakes should be used where the wheel load is approximately 12,000 lbs., and should be used on all 4 wheel truck passenger cars weighing 96,000 lbs. or over, and on all 6 wheel truck cars weighing 136,000 lbs. or over.

### Hand Brakes for Heavy Passenger Cars.—

No design of hand brake gear examined seems to be entirely satisfactory. What is needed is a hand brake rigging for heavy cars that will quickly take up all the brake chain slack, bringing the shoes in contact with the wheel, after which some means is required for easily increasing the leverage so as to make possible the required brake pressure by the average man, this increased leverage to come into play when the shoe movement is practically little or nothing. There is much to recommend the application of the hand brake to a single truck, since it reduces the total leverage.

**Mathew Kelly**, Resident Engineer, Toronto Terminals, district 4, C.P.R., Toronto, writes: "As a subscriber to Canadian Railway and Marine World for several years I wish to say that I find it very interesting."

The Canadian Pacific Ry. has in its board room in Montreal a map of Canada, size 100 x 10 ft., which took 3 draughtsmen 18 months to make.

## Report of Committee on Counterbalancing.

The American Railway Master Mechanics' Committee, S. G. Thompson, Superintendent of Motive Power, Philadelphia and Reading Ry., chairman, submitted a report of which the following is an abstract:

The report only considers the counterbalancing of two cylinder locomotives, as the three and four cylinder ones are less of a problem, their reciprocating parts largely balancing themselves. The principles are illustrated diagrammatically in the accompanying illustrations, representing conditions at high speed. The radius of the circle in each case represents the centrifugal force of the counterbalance, that is the centrifugal force of the weight added to partly counterbalance the reciprocating parts. The revolving parts may be assumed as perfectly balanced, so that the weight added for that purpose need not be considered, and is not represented in the figures.

Fig. 1 represents, by shaded and unshaded portions, the total weight of reciprocating parts, the shaded portion within the circle being balanced by the overbalance when the wheel is in the position shown. The portion without the circle is the unbalanced weight of reciprocating parts, which tends to cause

The main driving wheel should have added approximately half the total weight of the main rod, plus two thirds the weight of the eccentric arm, considered acting at crank pin distance, for outside valve gear.

The overbalance should be distributed as nearly equally as possible among all driving wheels, adding to it the weight of the revolving parts for each wheel. This sum for each wheel, if placed at a distance from the driving wheel centre equal to the length of the crank, or a proportionally less weight if at a greater distance, will be the counterbalance required.

Centrifugal and reciprocating forces are usually figured at a speed in miles per hour equal to the diameter of the driving wheel in inches, which may be considered a maximum for good practice. This is ordinarily referred to as diameter-speed. At this speed the reciprocating parts, due to the laws of inertia, tend to continue their motion at the end of each stroke with a force about equal to 40 times their weight. This dynamic augment varies with the stroke, ranging from  $29.1 \times W$  at diameter speed with an 18 in. stroke, to  $54.9 \times W$  at diameter speed with a 34 in. stroke. The overbalance exerts a

weight of the reciprocating parts on each side of the locomotive below 1-160 of the total weight of the locomotive in working order, and then balance half the weight of the reciprocating parts. This general rule is based on diameter-speed, and should keep the dynamic augment well within the limits of good practice. Where the normal speed is regularly considerably below the diameter-speed, it may be desirable to increase the proportion of the reciprocating weights to be balanced, to as much as 60 or 65%.

Another counterbalancing rule is, to set an arbitrary percentage by which the dynamic force of the overbalance will be allowed to increase the static weight; for example: It is desired that the dynamic force of the overbalance at a diameter speed, should not increase the static weight on a wheel more than 50%. Then a 4-4-2 locomotive with 26-in. stroke and a static weight on one wheel of 30,000 lbs., the maximum permissible weight of reciprocating parts to be balanced in one wheel,

$$50\% \text{ static weight on one wheel} \times 0.312 \\ W = \frac{\text{crank radius in ins.}}{\text{diameter speed}} \times 15,000 \times 0.312$$

total reciprocating weight to be balanced on one side of this locomotive would be 720 lbs., and with 50% of the total reciprocating parts balanced on one side, the total weight of these parts must be designed to weigh 1,440 lbs.

The converse of this, given a weight of reciprocating parts balanced in one wheel,  $W$ , as 360 lbs., the dynamic augment,  $A = W \times 3.2 \times \text{crank radius in ins.} = 360 \times 3.2 \times 13 = 15,000$  lbs. Therefore, 15,000 lbs. dynamic weight is added to the 30,000 lbs. static weight, giving a total of 45,000 lbs. on the rail.

The dynamic augment may be expressed in percentage of the static weight on one driving wheel. 50% increase in the static weight on the driver at diameter-speed would represent good average practice, while much less than this percentage is greatly to be desired. The secret of proper counterbalancing for any class of locomotive in any service is to reduce the weight of the reciprocating parts as far as possible, lighter than the average practice, and more in line with those built in 1914, with specially light reciprocating parts.

Great benefit will be obtained if the railways will determine the maximum load that they can carry on the rails, bridges, etc., and then reduce the weight of the reciprocating parts to a point where the dynamic augment of the parts balanced will be only a small proportion of this maximum allowed load. Special designs of piston heads, cross-heads, hollow piston rods, and the use of high grade materials, including heat treated carbon and alloy steel, aluminum, etc., make it possible to construct very light parts, the expense of which will be many times justified by the consequent saving in repairs to equipment and track, as well as the saving due to the increase in tractive power of the locomotives. With a refinement of design along these lines, it is altogether possible to construct reciprocating parts approaching in lightness 1-240 of the total weight of the locomotive in working order, instead of 1-160 as expressed in the previously mentioned general rule representing a fair average. With an increased tendency toward these very light parts, the percentage of parts balanced or unbalanced becomes less and less a factor. Greater efficiency is thus given to the locomotive, in that more and more of the weight allowable on the rail will be used in starting and pulling the train.

Figs. 1 to 4 Diagrammatic Representation of the Principles of Counterbalancing.

causing or fore and aft irregular movement of the locomotive.

Fig. 2 shows the position of the wheel after a quarter turn, in which the effect of the unbalanced reciprocating parts is eliminated, and the distorting forces are caused by the centrifugal force of the overbalance acting in a downward direction, the resultant effect on the track being the static weight on the driving wheel plus the centrifugal force of the overbalance. This position gives the greatest pressure on the rail.

Fig. 3 is similar to fig. 1, and shows the effect of unbalanced reciprocating parts in the opposite direction, after another quarter turn. Slight differences in figs. 1 and 3, due to angularity of connecting rods, etc., need not be considered.

Fig. 4 shows the downward force on the track when crank pin is down and overbalance is up, this force being the difference between the static weight on driver and centrifugal force of the overbalance. This position gives the least pressure on the rail. The proportions show the overbalance to neutralize about half the static weight on the wheel, leaving half the static weight as the downward force on the track for this position of the crank.

The reciprocating parts to be considered in counterbalancing are: piston head, rod and nut; cross-head, cross-head key, pin and nuts; approximately half the total weight of the main rod; arm and link fastened to cross-head for outside valve gear. Each driving wheel should have sufficient weight added to counterbalance exactly the weight of its revolving parts, which are: crank pin, crank-pin hub, and the proportion of the weight of the side rods attached to the pin.

centrifugal force equal to about 40 times its weight, and is at a maximum at the top and bottom position of the crank. This force is added to the static weight, in the lower position of the overbalance, and is opposed to this weight, in the upper position, as shown in figs. 2 and 4. Approximately one fortieth of the static weight on a wheel will therefore give the weight of the reciprocating parts which could be balanced without causing the wheel to rise from the track at diameter-speed. This amount of balance would also double the load on the rail when the balance is down.

The method most generally used for many years in counterbalancing locomotives has been to balance a portion of the total weight of the reciprocating parts, usually about two-thirds. A second method, and the one recommended in the 1896-97 reports to the A.R.M. M., is to leave unbalanced, on each side of the locomotive, a portion of the reciprocating parts equal to 1-400 of the weight of the locomotive. Tests made on several locomotives disproved the value of both of these methods, and emphasized another relationship which seems paramount to proper counterbalancing: The ratio of the total weight of the reciprocating parts on each side of the locomotive to the total weight of the locomotive in working order. These tests also showed that the lighter the reciprocating parts can be made, better results will be obtained, and also that when counterbalancing for very high speed, a larger portion of the reciprocating weights can be left unbalanced than has been the practice.

A simple counterbalancing rule for good average results on any class of locomotives in any service, is as follows: Keep the total

### Report of Committee on Car Wheels.

The Master Car Builders' Association Committee, W. C. A. Henry, Superintendent of Motive Power, Pennsylvania Lines, chairman, and of which R. W. Burnett, ex-General Master Car Builder, C.P.R., is a member, submitted a report of which the following is an abstract:

The report is a progress one, as it was impossible to complete in time the various investigations on car wheel designs that are under way. A circular of enquiry elicited replies from roads covering 1,297,909 cars. Of wheels reported cracked or broken, 904 were 625 lb. wheels, 651 were 675 lb. and 647 were 725 lb. Of the 625 lb. wheels, 63.6% were under refrigerator cars, and as on all cars of 60,000 lbs. and less, only 11.6% are refrigerator, the percentage of failures is disproportionate. A large number of 625 lb. wheels failed under refrigerator cars of a gross weight of 105,000 lbs. or over, which is a greater weight than is supposed to be carried by those wheels.

Breaking and cracking of plates of cast iron wheels occurs to a large extent on roads having long and heavy grades, and the heating due to the continued application of the brakes is undoubtedly the reason for these failures. M.C.B. practice is to brake cars to 60% of their light weight with 50 lbs. pressure. The result of this is that a 60,000 lb. refrigerator car weighing 44,000 lbs. with 625 lb. wheels will have a braking power in many instances equal to or greater than a 100,000 lbs. car weighing 40,000 lbs. with 725 lb. wheels. It is again recommended that wheels of the proper size be used, as at present many cars are running with lighter wheels than are proper.

A suggested change of tread taper from 1 in 20 to 1 in 38 is not approved, as it is thought that any change would be detrimental to the wheel.

### Report of Committee on Locomotive Headlights.

The American Railway Master Mechanics' Association committee, D. F. Crawford, General Superintendent of Motive Power, Pennsylvania Lines, chairman, and of which W. H. Flynn, Superintendent of Motive Power, Michigan Central Rd., and formerly Master Mechanic of its Canada Southern division, is a member, submitted a report of which the following is an abstract:

Incandescent lamp headlight standards should be adopted. The voltage should be 6 volts, as this will permit the use of standard 6-volt automobile lamps in the cab, markers, etc., having the strongest possible filament of the most rugged construction. A complete line of 6 and 7 volt lamps has been manufactured for some years past for automobile service. This voltage will permit the use of a small storage battery on the locomotive, if so desired, and can be obtained from a small turbo-generator as readily as any other voltage.

An incandescent lamp of approximately 50 mean horizontal candle-power will give sufficient light to meet the recommended maximum requirement of 3,000 apparent beam candle-power. Concentrated filament tungsten lamps are now regularly manufactured in candle powers of 50, 100 and 160 at 6 and 7 volts, for headlight service. The two larger sizes are not deemed necessary by the committee. The lamps recommended for use in the headlight are 50 c.p., 7 volt, G-20 clear bulb, Edison screw base (style 100), loop-back tungsten filament, multiple burning, headlight lamp, and for use in the

cab, markers, etc., 6 c.p., 7 volt, G-10 clear bulb, double-contact bayonet candelabra base (style 1000), tungsten filament, multiple burning lamps. Standard bayonet double-contact sockets are recommended for bayonet base lamps. Standard Edison screw sockets, equipped with Benjamin lamp grip, or equivalent, are recommended for use with the headlight lamp. When metal reflectors are used, the minimum nominal diameter should not be less than 16 ins. When parabolic glass reflectors or semaphore type lenses are used, the minimum nominal diameter should not be less than 12 ins.

The report also outlines the recommended method of photometering and contains recent federal and state headlight legislation in the United States.

### Report of Committee on Loading Rules.

The Master Car Builders' Association committee, A. Kearney, Assistant Superintendent of Motive Power, Norfolk and Western Ry., chairman, submitted a report of which the following is an abstract.

The suggestions in the main have reference to new rules covering shipments of materials and machinery which have not been completely covered by former rules. In addition there are a number of corrections and minor alterations. The question of loading heavy stone shipments was considered, especially what is termed mill-block, containing 100 cu. ft. and upwards. Tests made with such blocks showed that at 4 m.p.h. with the standard end stakes, the blocks moved slightly. Tests in train service demonstrated the same thing. This subject is covered by a suggested addition to the present ruling on stone loading. Illustrations show the approved method of loading mining cars in gondola cars, loading gasoline tractor engines on flat cars and loading brick 15 ins. or less in length without door protection.

In the matter of loading rules regarding the overhead inspection of box cars, few additional roads have done very much toward even trying the proposed certificate of inspection card, although it was recommended by the American Railway Association. Those that are experimenting have found difficulty, it is reported, and quite naturally, on account of so few roads having taken up the proposed inspection. It may be unfortunate it has not received wider attention, if for nothing else than to ascertain its value or determine what, if any, alterations and modifications might be effected to make it more suitable, and possibly better accomplish the desired end, or possibly permit the working out of some entirely different direction for higher general efficiency.

With reference to loading rules regarding interline loading, after consultation with the American Railway Association, it has been concluded that doubtless the energies of the M. C. B. committee might be best utilized by assisting the committee of the American Railway Association. It was considered such a course would be most profitable, besides being helpful toward a better understanding of the M. C. B. loading rules requirements, which have for their principle mainly the safe carriage of shipments. It should also tend to harmonize related rules reached by the classification committee in the formulation of their schedules.

### Report of Committee on Smoke Prevention.

The American Railway Master Mechanics' Association committee, E. W. Pratt, Assist-

ant Superintendent of Motive Power, Chicago and North Western Ry., chairman, submitted a report of which the following is an abstract:

No new tests were made during the year with smoke preventing apparatus on locomotives, but as inquiries had been received by the committee on the smoke improvements in Chicago, the report deals with developments in that city. Another year's use of the steam jets, quick action blowers, etc., recommended in the 1913 report, confirms the belief that locomotives so equipped and properly handled are practically free from smoke. These devices are accepted as standard by the city.

City smoke inspection costs about \$39,000 a year, and railway inspection about \$65,000 a year. The railway inspectors have formed a joint smoke inspection bureau, which has issued instruction cards to all its inspectors.

The Ringelmann Smoke Chart.

These inspectors not only inspect their own lines, but also other lines. The city inspectors have their work divided into districts. They inspect the smoke for a total of 2 hours daily, either in one period, or in 15 min. periods, the Ringelmann chart shown herewith being used. An engine-minute covers the observation of one locomotive during one entire minute. During this minute, 14 secs. or less are not counted; 15 to 45 secs. count as  $\frac{1}{2}$  min.; and 45 to 75 secs. as 1 engine-minute. One minute of no. 1 density is a smoke unit, so that  $\frac{1}{2}$  min. of no. 1 is 0.5. The percentage of smoke density is obtained by multiplying the smoke units by 20, and dividing the product by the total engine minutes. The tabulation for Feb. 1915, shows the G. T. R. with the lowest percentage density, 1.91%. The total city density has decreased from 22.3% in 1910 to 7.41% in 1914.

### Report of Committee on Settlement Prices for Reinforced Wooden Cars.

The Master Car Builders' Association committee, J. McMullen, Mechanical Superintendent, Erie Rd., chairman, and of which H. G. Griffin, General Car Inspector, C.P.R., is a member, submitted a report of which the following is an abstract:

To get the proper perspective of the matter of settlement prices, it is necessary to keep steadily in view the essential fact that the basic, arbitrary prices now provided in the rules for wooden cars are quite liberal; hence, before it may be adjudged fairly that any particular part of a car or an appliance, even though obviously an improvement over wooden construction, merits a special price as a betterment, it should be determined whether the basal price does not cover, reasonably, any difference in value that such part or appliance bears over the type of construction upon which the basic prices were determined. Changes are recommended in rule 116 covering the prices for car bodies.

On the question of depreciation to be figured on rebuilt cars, the committee was unable to come to any conclusion, or arrive at any working basis upon which all could agree.

## Report of Committee on Locomotive Stokers.

The American Railway Master Mechanics' Association Committee, A. Kearney, Assistant Superintendent of Motive Power, Chicago and North Western Ry., Chairman, submitted a report of which the following is an abstract:

Another year's experience with the locomotive stoker strengthens the conviction that it is not only accomplishing its purpose, but withstands the test of continuous service with remarkable durability. While it may be said that nothing novel has been presented during the past year, a great deal of very good work has been done along already established lines. The effort has been chiefly in the refinement of detail parts; redesigning and improving them to better withstand the service. In some cases manufacturers have added new parts; in others, parts more durable have been substituted; again, parts have been entirely eliminated. There is no thought that the stoker is unlike other mechanical devices on the ground that it is not susceptible to failure; and when it gives way it will usually do so under service strains. The theory that the parts of the stoker be amply strong and in excess of the strength of the engine has its advantages. Attention is being given the matter of accessibility of parts. The stoker manufacturers have advanced considerably in their attempt to apply machines to existing locomotives, and it is safe to say their work has been somewhat hampered. Stokers will occasionally become inoperative by clogging, due to wet coal, and lump coal. Most of the clogging is caused by junk and foreign matter.

Time and experience have brought progress in the way of improving the manipulation of the scatter-type stoker, both in the care of the machine, as well as in a more efficient use of fuel. Instructions and experience have effected marked improvement, and now it is rather rare to find a fireman disturbing the grates so long as a sufficient steam pressure is maintained to handle the train efficiently and successfully. The stoker is started, stopped and otherwise controlled with better regulation of fire and less loss of steam through the relief valve. Experience shows that the grates should not be disturbed as long as the fire is maintained in good condition, and the required air is permitted to pass through the grates to supply the proper rate of combustion.

The cost of stoker maintenance has been somewhat affected in the aggregate during the past year by the modifications, improvements and changes introduced currently. Scatter-type stokers cost per 100 miles from 43 to 68 cts., and operate from 1,000 to 5,000 miles per failure.

It has been an open question as to whether it is more economical to prepare coal at wharves or on the tenders of the locomotives. There is strength in the theory that the centralization of crushing plants may be economical under service and physical conditions. Then again it is claimed to be good practice in certain localities to crush coal at outlying wharves or at coaling tips, as against equipping locomotives with individual crushers. The aggregate cost of maintenance of a crusher at a wharf may be less than that for a number of locomotives, and it should not be forgotten that while crushers may be obtained that will fairly well handle the major portion of foreign matter found in fuel, it is conceded difficult to cope with such conditions after it reaches the locomotive. Regardless of this, however, it may be economical to equip locomotives with individual crushers on account of the proportion or volume of fuel supplied, aside

from the advantages in being able to handle a wider range in grade of fuel supplied at outlying stations and on branch lines.

In the past year 15 Hanna stokers were applied to Mallet locomotives, 72.2 sq. ft. of grate area, and 12 Standards to mastodon locomotives, 45 sq. ft. grate area, on the same road. They are handling sometimes slack and in other cases run of mine coal, from which the product under 2½ in. has been screened; they have been put in general fast and slow freight service. Following is a statement of the stokers in active service: Underfeed type: Crawford; Overfeed or scatter type: Street, Hanna, Standard and Kincaid; Chain grate type: Ayers.

**Crawford Stoker.**—There are 282 Crawford double underfeed stokers on the Pennsylvania Lines West of Pittsburg. It is still the only underfeed type in service. 9 are being tried out experimentally on other lines, making a total of 291 in service. A new pattern is being constructed for test.

**The Street Stoker** shows the largest number in service, totaling 531, with 24 on order. The latest design has a variable speed engine and a friction clutch, instead of differential gear. In the latter designs the crusher was set aside. These stokers are in operation on 15 railways, mostly on eastern roads. They are operated in passenger, general fast and slow freight service, performing their work satisfactorily.

**The Hanna Stoker** is equipped with durable crushing facilities on the tank, consisting of a heavy helicoid conveyor screw and a bulkhead containing a restricted opening, partly encircled by two stationary knives. Coal is forced through the restricted opening in the bulkhead by the revolving conveyor screw, assisted by the two stationary knives for breaking the larger lumps, handling slack as well as run of mine coal efficiently. In the past year 18 Hanna stokers have been in continuous operation. Two distinct recourses can be utilized in emergencies; 1st, if any part of the tender conveyor becomes inoperative, the conveyor can be thrown out of operation and the coal shoveled into the locomotive hopper; 2nd, if the entire stoker becomes inoperative, coal can be shoveled to the plate by hand, from which it is driven to any section of the fire box by means of a blasting chamber and distributing plate.

**The Standard Stoker** is equipped with adequate crushing facilities on the tank, consisting of a durable helicoid conveyor screw and a bulkhead having a restricted opening partly surrounded by fixed centre punches. Coal is forced through the opening in the bulkhead by the revolving conveyor screw, assisted by the stationary centre punches for crushing the larger lumps. During the past year 20 Standard stokers have been put in operation in slow and fast freight service, and are working satisfactorily.

**The Gee Stoker** continues in service on a consolidation locomotive, and operates satisfactorily. It is still undergoing development.

**The Kincaid Stoker** continues to progress. The distributing features are attached to the fire door; coal is shoveled into a hopper elevated in front of and attached to the door, from which it gravitates to a distributing apparatus and is delivered to the fire box.

**The Elvin Stoker** has not substituted some other device or devices for the scoop. It is thought that within the near future the machine will be tested out on a locomotive.

**The Raite Stoker**, claimed to be either underfeed or a scatter type, embodies a combination of the two methods.

**The Ayers Stoker** is of the traveling grate

type, and reports progress. Last year a number of experimental trips were made, which are reported to be encouraging. It is thought that it will soon be ready for service.

During the past year, locomotive stoker patents were issued to 14 parties. The committee has been unable to learn of any further activity in the use of the following stokers: Barnum, Dickerson, Heyden, Heyden-Modified, Erie, McMullen, Harvey, Strouse. Stokers under development not yet applied are: Elvin, Raite, Dunning. Stokers for which no advice can be obtained as to their status are: Barnum, Dickerson, Erie, Heyden, Heyden-Modified, Harvey, Strouse.

The following are stokers in active service and on order respectively: Street, 531, 24; Crawford, 291, 1; Hanna, 18, 5; Standard, 22, 0; Gee, 1, 0; Ayers, 1, 0; and Kincaid, 1, 0.

The Street delivers fuel to 3 points of entrance through the back head of the boiler above the fire door; the Hanna delivers fuel to its distributing apparatus in the fire door proper; while the Standard elevates its feed by means of a vertical screw located just inside of the fire door to a point about on a level with the fire door. They are all three of the scatter type and each employs the steam jet in the distribution of its fuel.

It seems safe to say that the mechanical stoker has demonstrated by extensive service that it is capable of supplying coal to a locomotive fire box at a rate and under sufficient control to satisfactorily maintain the working steam pressure. It is also obvious, being a machine and working continuously, it should be capable of maintaining a more regular rate of steaming with certain grades of fuel than might be obtained in average hand firing practice. The average steam pressure for a division run seems to be in favor of the stoker on account of the higher average pressure maintained, especially toward the end of the run. It might be said, therefore, that greater work is done with the stoker, in terms of speed or tonnage, or both, under certain physical and operating conditions, while in another service with equally large locomotives and heavy tonnage, but under more favorable grade line and fuel conditions, as high efficiency has been obtained hand firing. It is also evident that the stoker, since it is a mechanical device, is only limited in capacity by its allowable dimensions, and its endurance should be that of machinery dependent upon design and attention.

The committee feels itself unable to point to any rule in terms of weight of locomotive or train load, or general conditions, where the stoker will always be applicable or necessary on account of the wide range of physical and operating conditions, as well as character of fuel, and the question of fuel is by no means a minor factor, for the reason that the choice of available coals demands consideration of their character as well as price, as the net result of using some of the finely divided grades of stoker prepared or mixed coal may be offset by a more attractive rate of consumption, better evaporation, and lower cost per ton mile with run of mine after it has been crushed to the desired grade.

## Report of Committee on Car Trucks.

The Master Car Builders' Association Committee, J. T. Wallis, General Superintendent of Motive Power, Pennsylvania Rd., chairman, and of which J. Coleman, Superintendent Car Department, G. T. R., and L. C. Ord, Assistant Works Manager, Car Shops, C. P. R., are members, submitted a report of which the following is an abstract:

**Specifications and Tests of Cast Steel**

**Sides**—For a proof test, take a minimum of one frame from each heat, and not less than 2% of all the frames supplied. In the 80,000, 100,000 and 140,000 lb. cars, the initial load will be respectively 20,000, 25,000 and 35,000 lbs., with proof test loads of 110,000, 125,000 and 175,000 lbs., the maximum deflection in each case not exceeding 0.15 in., and maximum set, 0.01 in. After applying the initial load, reduce the load to 5,000 lbs. and set the deflection instrument at zero; apply the requisite proof load and measure the deflection; reduce the load to 5,000 lbs., and measure the set.

**Truck Sides** shall not vary more than 3% above nor 2% below the determined normal weight of the casting. These for 100,000 and 140,000 lb. cars are respectively 505 and 665 lbs.

**Cast Steel Bolsters.** The objection raised

was based on a car loading that would raise the centre of gravity to 6 ft. above the rail, when it was determined that the distance from centre plate to side bearings must be at least 24 ins., in order to avoid overturning. The committee has arranged the design of the top plate of the bolsters so as to take the side bearing plates with spreads of 48 to 58 ins.

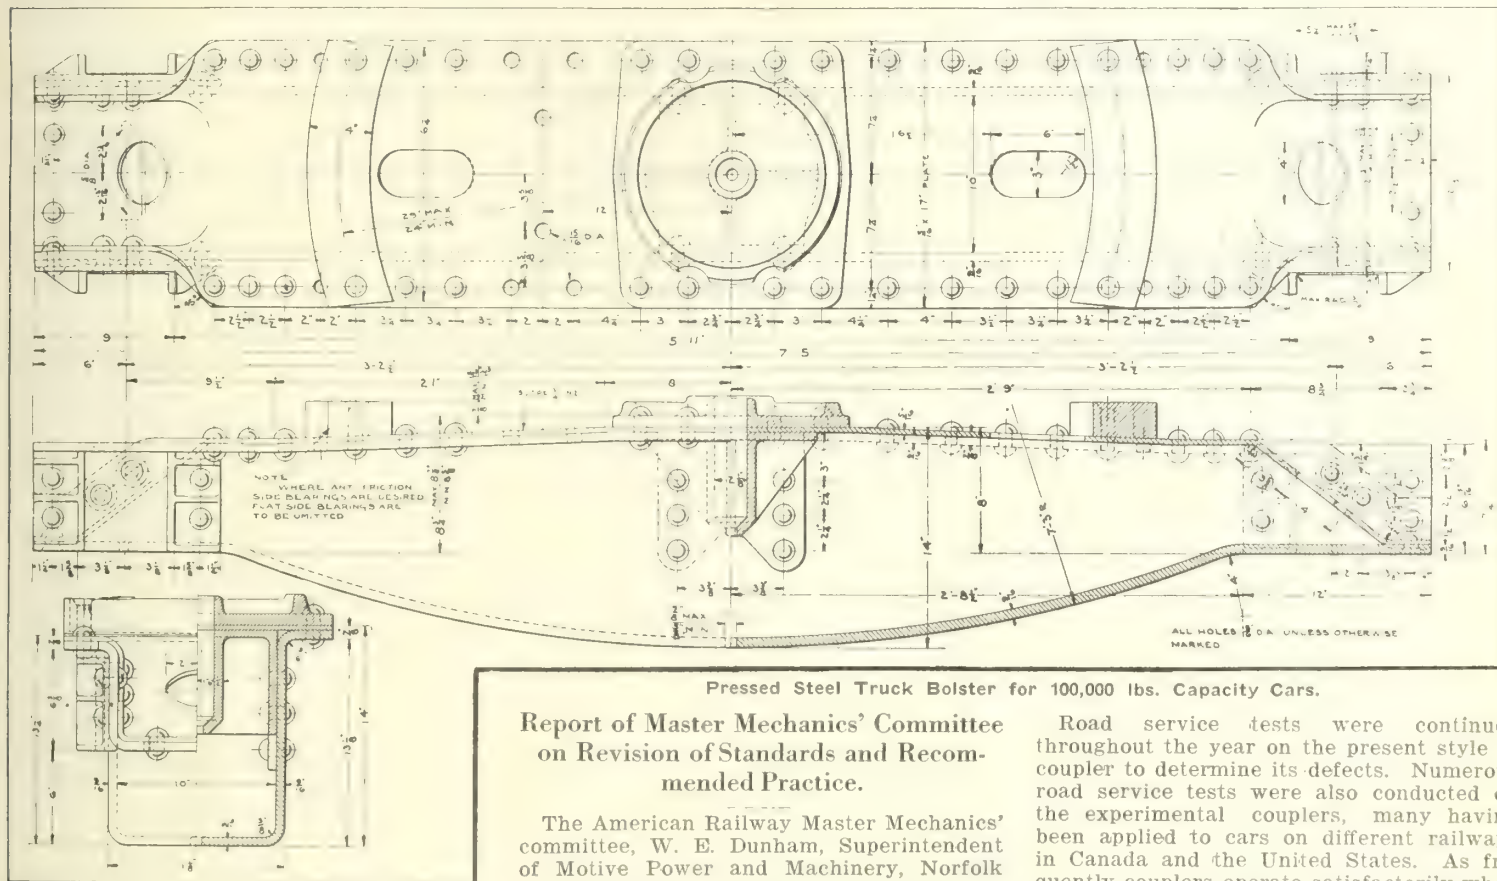

**Centre Plates and Gauges.** The design for 80,000 lbs., 100,000 lbs. and 140,000 lbs. capacity cars and gauges for same has been changed, providing for a uniform height of flange of  $1\frac{1}{4}$  ins. on the outer ring of the female centre plates, and the radial diameters changed so as to provide a total clearance of  $\frac{1}{4}$  in. instead of the present  $\frac{1}{8}$  in. There is no necessity for increasing the bearing surface of centre plates for 140,000 lb. cars.

of sufficient capacity to prevent steam entering the gauge. Safety valves must be set to pop at not more than 6 lbs. above working pressure. A copy of the monthly inspection report must be placed under glass in the locomotive cab.

Regulations are given covering the operation of brakes on locomotives and tenders handled dead in the train and offered for interchange.

### Report of Standing Committee on Couplers.

The Master Car Builders' Association Committee, R. L. Kleine, Chief Car Inspector, Pennsylvania Rd., chairman, submitted a report of which the following is an abstract:

Pressed Steel Truck Bolster for 100,000 lbs. Capacity Cars.

### Report of Master Mechanics' Committee on Revision of Standards and Recommended Practice.

The American Railway Master Mechanics' committee, W. E. Dunham, Superintendent of Motive Power and Machinery, Norfolk and Western Ry., chairman, submitted a report of which the following is an abstract:

A revision is recommended in the specifications for steel axles for locomotive tenders, a copy of the recommended form being given.

For journal, box, bearing and wedge, minor changes in the drawings are recommended to correct errors and to improve certain details.

An error in the specifications for 33 in. cast iron wheels is corrected.

A revision of the specifications for boiler and fire box steel, locomotive forgings, cylinder castings, etc., and cast steel locomotive frames, is recommended, tentative modified specifications accompanying the report.

To conform to the latest revision of the United States federal regulations for the inspection and testing of locomotive boilers and their appurtenances, a revision is recommended in the rules of inspection and testing of locomotive boilers. At dates from 1916 to 1921, the minimum factor of safety is set on a rising scale varying from 3.25 to 4. Flexible staybolts without caps must be tested monthly. Every gauge shall have a siphon

Road service tests were continued throughout the year on the present style of coupler to determine its defects. Numerous road service tests were also conducted on the experimental couplers, many having been applied to cars on different railways in Canada and the United States. As frequently couplers operate satisfactorily when new, only developing defects with age, the committee cannot offer recommendations until the couplers have seen further service, not having been in service long enough to determine all the weak points or the seriousness of the defects. This is the consensus of opinion of the 32 roads submitting preliminary reports. These new couplers are now under trial on the C. P. R., G. T. R. and Intercolonial Ry.

Tests on the new couplers in the service testing machine were conducted, daily logs being taken and the couplers carefully inspected after each 10,000 cycles. Both couplers of the no. 5 contour were separately subjected to 30,000 cycles of the machine, every cycle representing one each of the following: coupling, lock setting, uncoupling, closing knuckle and throwing knuckle open.

It is recommended that all new equipment be designed to accommodate these new couplers. As a result of the investigations the committee unanimously decided to permit the manufacturers of the new couplers to make the final changes in accordance with the programme in the 1913 report.

to the design submitted last year for 80,000 lb., 100,000 lb. and 140,000 lb. cars was that the detachable centre plate added weight, the trouble with the integral plate not being considered of sufficient importance to warrant the extra expense of a separate centre plate. Two designs of bolsters are thus submitted, with and without separate centre plates. Tests also show that there is sufficient support under the centre plate.

**Bolster Weights**—Variations from the normal weight of more than 3% above and 2% below are not permitted. The normal weights for the 80,000 lb., 100,000 lb. and 140,000 lb. cars are to be respectively 710 lbs., 775 lbs. and 1,000 lbs.

**Pressed Steel Truck Bolsters**—Four bolsters of each capacity, 80,000 lbs., 100,000 lbs. and 140,000 lbs. were tested, from which the average normal weight was determined for the three as respectively 795, 865 and 1,140 lbs. The design for the 100,000 lb. car bolster is shown in the accompanying illustration.

**Spread of Side Bearings**—The 50 in. side bearing spread recommended last year was defeated by a small majority. This spread

## Report of Committee on Boiler Washing.

The American Railway Master Mechanics' committee, J. Purcell, Assistant to President, Anderson, Popoka and Santa Fe Ry., chairman, submitted a report of which the following is an abstract:

Early this year 20 questions covering every phase of boiler washing, were sent to 118 heads of mechanical departments of member companies, the answers to which are embodied in the report. Replies covering 51,294 locomotives were received. Of these, 9,760 made less than 500 miles between washings; 11,283, from 500 to 1,000 miles; 8,312, from 1,000 to 1,500 miles; and 20,472, over 1,500 miles; the passenger locomotives made about 30% better mileage than the freight. Only about 5% of the roads practice changing the water, and about 15% practice a regular system of blowing out boilers at terminals. About 35% are blown out regularly and systematically on the road to remove mud or sludge and to prevent foaming, but in the majority of these, it is left entirely to the discretion of the crew as to when it should be done,

ing plants are on the western lines in the bad water country. 45 roads report using chemicals directly in the tender tanks, 19 using soda ash and 26 boiler compound, this practice being more prevalent on lines having a few bad water districts. 76 roads use boiler compounds, soda ash and other chemicals to prevent incrustation, and 29 use boiler compounds or other chemicals to prevent foaming, but treated water appears to increase the tendency to foam, frequently requiring the additional use of anti-foaming compounds. But few roads treat water to prevent corrosion, and 7 claim increased repairs to valve packings due to foaming, with other general increases in repairs. Increased mileage as high as 300% is made possible, with an average of 100%. None of the roads use mechanical water purifiers. 16 roads have special rules governing washing, but the majority follow the Interstate Commerce Commission's instructions.

As a result of the above it was felt that only general instructions on boiler washing might be offered. All boilers should be washed every 30 days or more frequently if required, thoroughly cooling off the boiler first unless an improved hot water system is used. This is recommended to be done by operating the injector with the boiler pressure until the injector refuses to work. Then apply water pressure to feed pipe, letting steam escape through an outlet in the top of the boiler, at the same time allowing the water to escape slowly through the blow-

Boiler Washing Nozzles Recommended by Committee.

results showing that when intelligently performed, mileages over 2,000 are possible without foaming trouble. The maximum number of washout plugs in a boiler is 52, and a minimum of 10, averaging for all modern power, 22.

The cost of washing boilers varies from 10 cts. to \$5.50, costing about 35% less with hot than cold water. The conclusions drawn are that it can be thoroughly done with cold water for less than \$3.50. The average pressures used were 96 lbs. at the pump, and 72 lbs. at the nozzle. Hot water washing is used on 54 roads, with 13 installations on one line, and its use is rapidly increasing. It is claimed to be very desirable for pooled locomotives, where the power must be quickly turned. The reduction in water consumption from the use of hot water averages 3,427 gals., or 36%, some roads running as high as 9,000 gals. A saving in time of 1 hr. 54 mins., or 42%, and in fuel of 897 lbs., or 36%, also results. It also entails reduction in boiler troubles, such as cracked sheets, leaky stays, etc., averaging 34%.

Water softening plants at wayside tanks are reported from 31 roads, appearing to give better results than when the chemicals are placed in the tender tanks. Most treat-

off cock until the temperature is about 90 degs., when the plugs may be removed and the boiler allowed to drain.

To wash the boiler, remove all the plugs and begin washing through the holes on the side opposite to the front end of the crown sheet, washing top of the latter at the front, working back so as to shift the mud and scale away from the back ends of the flues. The crown sheet is next washed from the boiler head, next washing the back ends of the flues through holes in the connection sheet. Then wash the water space between the back head and the firebox door sheet through holes in the back sheet. Arch tubes must be washed and scraped every time the boiler is washed. The side sheet water spaces are next washed through the holes in the side of the boiler opposite the crown sheet. Then wash the barrel through a hole in the bottom, washing towards the front if there is a mud drum; otherwise wash towards the throat sheet. Wash as great a space of the tubes from that position, finishing the balance from the front end. The mud ring is then washed through the side and corner holes in the mud ring. When cooling and filling boilers, fill through the injector check. Recommended washing nozzles are shown herewith.

## Report of Committee on Arbitration.

The Master Car Builders' Association committee, J. J. Hennessey, Master Car Builder, Chicago, Milwaukee and St. Paul Ry., chairman, and of which J. Coleman, Superintendent Car Department, G. T. R., is a member, submitted a report of which the following is an abstract: During the year, 48 cases were decided. A feeling has arisen that the rules should not be revised so often, and that their effectiveness should extend over a longer period. In view of this the committee has refrained from asking for further suggestions this year. In so far as interpretations of the rules are concerned it is recommended that they be placed on the page opposite the rules, as the latter are well understood, but might become confusing if the changes were added in the body of the article. Only the recommended changes are given in this abstract.

In rule 2, the last three paragraphs, the words "on both sides of car" to be added after "carried."

Rule 3, par. d, change "journals" in second line to "axles"; sec. d to be divided into two paragraphs, that cars built after Oct. 1, 1915, with axles other than M. C. B. standard be not accepted in interchange, and that cars built after Oct. 1, 1916, with journals other than M. C. B. standard be not accepted in interchange; advance date of effectiveness to Oct. 1, 1916.

Rule 8 changed to read: "Billing repair card shall be made in duplicate, the original to be known as the billing card and the duplicate to be known as the record repair card, and to be of the form shown on pages 107, 108, 109 and 110, all items of repairs to be in handwriting."

Rule 21, sec. a, after "roof" in last line, add "or for the cost of applying temporary hand railings to, or boarding over the opening on, empty well hole cars."

Rule 40 eliminated.

Rule 42 to have the following substituted for the eliminated second paragraph: "In the case of four or more longitudinal sills requiring renewal or splicing, if the repairs of each of such sills are due to decay or elongated bolt holes, the car shall be held and joint inspection statement forwarded to owner, who shall promptly authorize repairs at his expense, or destruction of car; in this case, any sill decayed and cracked, or decayed and broken, must be considered as a broken sill."

Rule 54 change to read: "Car owners are not responsible for damage to any part of the brake apparatus caused by unfair usage, derailment or accident that requires repairs or renewals."

Rule 60, after "tested" in second line, add: "or dirt collectors not cleaned."

Rule 68 to read: "Flat sliding; cast iron, cast steel, wrought steel or steel-tired wheels; if the spot is 2½ ins. or over in length, or if there are two or more adjoining spots, each 2 ins. or over in length, the same responsibility to apply to mate wheel, regardless of length of slid spot. A separate defect card to be furnished in the case of wrought-steel or steel-tired wheels."

Rules 70, 74, 80, 83 and 98 have "forged" changed to "wrought."

Rule 94, an addition as follows: "Except as follows: In the case of repairs covered by defect card, if the owner changes the original standard of parts so involved, the charge must be no greater than if original design had been followed. If owner elects to dismantle the body or trucks, or both, charge may be made for such material as would have been required for the repairs covered by the defect card, but no labor shall be charged in such case, except in so far

as labor is already included in M. C. B. prices for material."

Rule 95 to have new paragraph as follows: "Couplers, including yokes, springs, followers, and friction draught gears complete, when lost with the coupler."

Rule 96 to be corrected by changing the 4 columns for scrap credits on pg. 110 into 1 column, "credit for scrap;" also eliminate second paragraph and form on pg. 109.

Rule 97 to change "bills of statement" to "billing repair cards."

Rule 108, to be changed to read: "No labor to be charged for the inspection of cars, testing or adjusting of angle cocks or tightening unions; no charge to be made for the material or labor of lubrication."

Rule 112, heading to be changed to: "Settlement for destroyed or damaged cars."

Rule 120, disposition of worn out cars, to read: "Where the labor cost of repairs exceeds 10% of the base price of car body, as given in rule 116, such car shall be jointly inspected by handling line and a representative of car owner or of a disinterested line (whichever can be most conveniently obtained), and form furnished as shown on pg. 105, showing all defects found on car and an estimated total cost of the repairs. Upon receipt of this information, owner must either authorize destruction or repairs. In the latter case owner must forward to handling company necessary plans and specifications for such repairs. If owner authorizes destruction, handling line shall allow credit for all material at M. C. B. scrap prices, less labor cost of destruction. The base price of car body under rule 116, as referred to above, not to include value of air brakes, or other additions for special items as referred to in rule 116."

Rule 122, in third paragraph, change "should" to "must"; and add additional sentence: "A separate bill, with copy of freight or express bill attached, should be rendered for the freight or express charges, showing reference to bill covering repairs."

Passenger Car Rules.—Rule 3, last two paragraphs of c, called d.

Rule 4, new paragraph: "Billing repair cards shall be furnished in all cases where repairs have been made."

Rule 10, after "inches" in third line from bottom, add: "or having seamy journals, fillets in back shoulder worn out, the length of journal increased  $\frac{1}{2}$  in. over standard length, or collars broken off or worn to  $\frac{1}{4}$  in. or less under fair usage."

Rule 15, change "spot" in third line to "surface."

### Report of Committee on Forging Specifications.

The American Railway Master Mechanics' Association committee, C. D. Young, Engineer of Tests, Pennsylvania Rd., chairman, submitted a report of which the following is an abstract: The committee issued a circular to the members, in which criticisms were requested on certain fibre stress figures to be used in heat treated carbon and alloy steel materials for forgings. Replies developed that there was little information available covering the results of the use of this material and the committee is, therefore, not prepared to recommend final figures for proper stresses for these heat treated parts, but feels that the following table expresses the maximum fibre stresses which should be used in this grade of material in the design and, presents it to the association as information, suggesting that it be submitted as recommended practice, with the understanding that this subject will again be reviewed after more extended experience of

the membership before considering it for advancement as an association standard:

	Heat-treated carbon. Tension and com- pression.	Alloy. Tension and com- pression.	Bend- ing.	Bend- ing.
Main and parallel rods .....	10,000	14,000	12,000	17,000
Piston rods .....	11,000	15,000	13,500	18,000
Driving axles .....		20,000		24,000
Crank pins .....		17,000		20,000

After consideration of the criticisms of a specification for alloy steel forgings of the chrome-nickel type, and of the quenched and tempered carbon steel and alloy steel (chrome-vanadium type) specifications, the committee recommends the following: That the present standard specifications for quenched and tempered carbon steel axles, shafts and other forgings for locomotives and cars, pg. 510, 1914 Proceedings, be modified in accordance with the proposed specifications for quenched and tempered carbon steel forgings as submitted in the report; this is in order to harmonize this specification with the alloy steel specifications and also includes a recommended proof test. That the present specifications for alloy steel forgings, pg. 505, 1914 Proceedings, be modified as submitted in the report; this change consists in adding to the present alloy steel specifications for chrome vanadium, a chrome-nickel alloy and also a recommended proof test. The committee recommends that these be submitted to letter ballot as recommended practice.

### Report of Committee on Prices for Labor and Material.

The Master Car Builders' Association committee, F. H. Clark, General Superintendent of Motive Power, Baltimore and Ohio Rd., chairman, submitted a report of which the following is an abstract: The special committee appointed to suggest additional prices or modifications of present prices in the rules of interchange, did not prepare a circular of inquiry this year, covering freight car price rules, because it was thought proper by the committee to review the work already done and make only such changes as would make the rules clearer, so they would be more readily understood. It was found necessary, however, to add some additional items and prices for both labor and material that were not covered in the present rules.

Changes were made in the scrap prices for axles and for wheels from dismantled cars, and the prices for new wrought steel wheels based on new prices for scrapped wheels. Changes were also made in the credits for air brake hose fittings, and prices for pipe nipple on end of train line, release rod, triple piston and ring, triple main piston and ring, K type triple piston, K type main piston, triple piston ring, and a number of other small fittings. Changes were made in computing the prices for lumber. A new list of prices for the maintenance of passenger equipment is also included.

### Report of Committee on Compensation for Car Repairs.

The Master Car Builders' Association committee, D. F. Crawford, General Superintendent of Motive Power, Pennsylvania Lines West, submitted a report of which the following is an abstract: It was concluded that it is proper that those making repairs to cars should be fully reimbursed for the actual expense incurred by them, including what are generally referred to as overhead charges, and that there should be added to the direct labor cost an allowance for the

expenditures made for: Direct supervision, to include the proper proportion of the wages of foremen, assistant foremen, gang foremen, clerks, etc., chargeable to the actual repairing of freight cars; amounts paid all other men whose time is properly chargeable to freight-car repairs, excepting those engaged in the manufacture of stock material; shop expenses, the proportion assignable to the actual repairing of freight cars, the expenditures for general employees, power, heating, lighting, shop supplies, and incidental expenses connected with shop operation; shop switching, as provided for by the authorized accounting system; superintendence, the proportion properly chargeable to freight car repairs of the salary and expenses of the general superintendents of motive power, mechanical superintendents, master car builders, superintendents of motive power, master mechanics, etc.; and the use of facilities, to include interest on the investment, depreciation, maintenance, insurance and taxes on that part of the plant or plants used for the repairing of freight cars. These allowances should be carefully segregated so that the allowances applicable to the repairs of cars, and those applicable to the manufacture of material, should be separate and distinct. As for material, an especially determined allowance, including an adequate amount for storehouse expenses, is required.

To determine as accurately as practicable what allowance should be made for the above items, the committee assigned the task of assembling the necessary data to a sub-committee, which submitted a series of 9 questions to the members. Replies were received from 58 railways owning 1,618,675 cars, and 11 private lines owning 52,102 cars. A summary of these replies showed that the average for the direct labor was 27.7 cts. an hour; direct labor plus direct supervision, 31.5 cts.; proportion of shop expenses, shop switching and superintendence, 9.4 cts.; a total of 41 cts. Consequently, as the average hourly payment for direct labor was 27.7 cts. an hour, and for direct labor and all supervision was 41.0 cts. an hour, an allotment of 48% must be added to the hourly payment for direct labor to fully reimburse those repairing freight cars, without any allowance for the use of facilities, such as interest on the investment, depreciation, taxes and insurance on, and maintenance of, shops, repair tracks, etc.

It is recommended that the prices for individual items of work performed, as now embodied in the code of rules of interchange of cars, be based on the average time required to perform each operation. That to simplify calculation and accounting a rate of 28 cts. an hour be used as representing the average hourly cost for direct labor, adding to this amount 12 cts. an hour as meeting the requirements for overhead charges. The reduction in the total hourly charge from 41 cts. to 40 cts. reduces the overhead rate from 48% to 44.4%, and is felt advisable, due to the fact that November, for which the figures were obtained, might not generally be considered as a representative month. That fixed prices, including labor and material, be determined and listed separately for such items as: Application of cotter keys, knuckle pins, knuckles, air hose, safety appliances, brake shoes, and kindred repairs such as are ordinarily done in classification yards. These fixed prices to apply whether the work is performed in the classification yards, shops or repair yards. That this report, with the approval of the convention, be referred to the committee on prices for labor and material, with such instructions as may be necessary to make effective the above recommendations.

### Report of Committee on Train Resistance and Tonnage Rating.

The American Railway Master Mechanics' committee, P. F. Smith, Jr., Superintendent of Motive Power, Pennsylvania Lines, chairman, submitted the following report:

Your committee has, in accordance with instructions, endeavored to get additional information to enable it to submit a final report at this convention. While some information has been available, yet we desire additional data as to the comparison of the drawbar pull curve of superheater locomotives, as compared with that of saturated locomotives. Also, we desire data as to the resistance of the 90 ton cars now coming into use. We will be able to obtain the information desired and submit a final report in 1916, and would ask permission to carry over the final report to that time.

### Report of Master Car Builders' Committee on Revision of Standards and Recommended Practice.

The Master Car Builders' Association committee, T. H. Goodnow, Assistant Superintendent of Car Department, Chicago and North Western Ry., submitted a report of which the following is an abstract: After due consideration of the present standards and recommended practices, together with replies from members to a circular of enquiry, also requests involving standards presented through the Secretary, a number of recommendations have been made, minor errors corrected, and a large number of suggestions not concurred in. Only the recommended changes are dealt with in this abstract.

Journals on M. C. B. sheets 3, 6, 9, 12 and 12-C should have journal box wedges provided with a hole through the flange of the wedge for all sizes of journals to facilitate the wedge removal by use of a packing hook. The marking of freight equipment cars recommended in 1914 and lost by letter ballot is again recommended, with the omission of the light weight stencilling at the end of the car. Additional sizes for lining for outside framed cars is recommended for sides and ends. Springs on sheets H and H-1 to be made standard. That committee be appointed to develop a standard steam hose coupling. Committee to be appointed to investigate safety chains for interchange of passenger equipment. A classification for house car equipped for carrying liquids, etc., as follows: XT—Box tank car, a box car without doors, metal lined, or enclosing tank for the shipment of water or other liquids. The description of RA meat and refrigerator cars should read: "A car with body, doors and hatch plugs equipped with insulation, brine ice tanks, and without ventilating devices;" the RM car to read: "This car has body, doors and hatch plugs equipped with insulation; with trap doors in the roof for admittance of ice and salt; also water seals inside the car;" the RS car as follows: "Standard refrigerator, a car with body, doors and hatch plugs equipped with insulation with ice tanks and either with or without ventilating devices; GF gondola car, a car equipped with coke racks and having solid bottoms; GS gondola car, a car with fixed sides and ends, and flat bottom composed of dump doors at inside edge, and dumping to the side of track."

Height from rail to top of platform buffer for passenger cars established nominally at 51 ins. U. S. railway mail service full postal car specifications and floor plans to be in-

corporated in M.C.B. proceedings. Method of making insulation tests, together with description of testing machine as approved by U. S. government railway mail service to be incorporated in the M.C.B. proceedings.

The following disposition was made of the subjects: approved, 6; Secretary instructed to make changes or additions, 10; referred to committee on car wheels, 1; referred to committee on car trucks, 1; referred to committee on train lighting and equipment, 1; referred to committee on draught gear, 2; referred to special committee to be appointed, 2; and referred to letter ballot for change in standard or recommended practice, 14.

### Report of Committee on Train Lighting.

The Master Car Builders' Association committee, T. R. Cook, Assistant Engineer of Motive Power, Pennsylvania Lines, chairman, submitted a report of which the following is an abstract:

One of the most important items that the committee has under consideration is the standardization of armature pulleys. This was of such importance that it was felt desirable to obtain as broad a view as possible on the matter, and the committee held a joint meeting with the Association of Railway Electrical Engineers' committee on standards, and with various axle dynamo manufacturing companies' representatives. The committee also invited to this meeting representatives from all railway companies operating a considerable number of axle dynamos, who did not have representation on the committee. New pulley designs were evolved, which were recommended for use on all new and remodeled axle dynamos provided with ball or roller bearings. These provide for either 8 or 11 in. pulleys. It was also recommended that in all new or remodeled ball or roller bearing axle dynamos the details of the pulley end of the armature shaft shall be in accordance with prescribed dimensions shown in a drawing attached to the report.

### Report of Committee on Dimensions for Flange and Screw Couplings for Injectors.

The American Railway Master Mechanics' Association committee, M. H. Haig, Mechanical Engineer, Atcheson, Topeka and Santa Fe Ry., chairman, and of which W. H. Winterrowd, Assistant to the Chief Mechanical Engineer, C.P.R., is a member, submitted a report of which the following is an abstract: A pitch of 10 threads per inch could be adopted with the least expense to all, of a modified U.S. thread, for use on all injector couplings. Investigation shows that certain sizes of coupling nuts can be selected as standard for certain sizes of iron and copper pipe, and that certain sizes of sleeves can be adopted as standard for use with definite sizes of nuts and pipes. Diagrams of these are shown in the report. It would be impracticable to attempt a universal set of sizes or capacities of injectors, or a set of common pipe or coupling sizes for each size of injector. The proposed standards for injector nuts include greater thicknesses throughout than common practice to prevent abuse with improper tools.

Copper pipe extending the full length of the coupling sleeve is favored under all conditions. When brazed, the end should be belled out to fit the chamfer at the upper end of each sleeve. The inside diameter of sleeves for iron pipe should be smaller in many cases than the inside

diameter of the pipe. Flange couplings should be made of forged steel.

### Report of Committee on Specifications and Test of Materials.

The Master Car Builders' Association committee, C. D. Young, Engineer of Tests, Pennsylvania Rd., chairman, and of which A. Copony, Master Car Builder, Western Lines, G.T.R., and E. P. Tilt, Engineer of Tests, C.P.R., are members, submitted a report of which the following is an abstract: The following newly draughted specifications are recommended for submission to the members: Structural steel, steel plate and steel sheets for passenger equipment cars; structural steel, steel plate and steel sheets for freight equipment cars; malleable steel castings for passenger and freight equipment cars; miscellaneous steel castings for passenger and freight equipment cars; journal bearings for passenger and freight equipment cars; mild steel bars for passenger and freight equipment cars; rivet steel and rivets for passenger and freight equipment cars; and galvanized sheets for passenger and freight equipment cars.

The specifications for chain for passenger and freight equipment cars to be altered, so as to make possible the use of electric welded chain. A digester test is recommended to be added to the physical properties and tests in the specifications for steam heat hose for passenger equipment cars. In this section also, add the word "steam" after the name of the road on the label. Changes are proposed in the standard specifications for air brake hose for passenger and freight equipment, as laid down in the report. On the request of the Manufacturers' Association, a list of 9 test laboratories is given where tests may be made in accordance with the requirements of the air brake hose specifications. The coupler specifications are proposed to be changed so that for every 1,000 ordered, there will be furnished by the manufacturer 1,008 instead of 1,013 as formerly, reducing by 5 the number to be subjected to the strike test.

### Report of Committee on Master Mechanics' Subjects.

The American Railway Master Mechanics' committee, A. W. Gibbs, Chief Mechanical Engineer, Pennsylvania Rd., presented the following report:

That the present standing committee be continued. That the following subjects be assigned to special committees: Equalization of long locomotives, so as to secure the most effective guiding from the trucks, both leading and trailing; tender trucks, best practice and type of tender truck for passenger locomotives, has a swing truck any advantage over a rigid truck?; reciprocating and revolving weights, committee to report on possibilities of lightening; transmission of electric power from motors to driving wheels of electric locomotives, committee to report on the progress in this direction; use of pyrometers on superheater locomotives; piston valves, rings and bushings, best material and sizes, with particular reference to superheated steam; metal pilot designs; and modernizing existing locomotives, which can then remain in service for 10 or 15 years.

That the following subjects be assigned for topical discussion: Advantages, if any, of compounding superheater locomotives; side bearings on tenders; tender derailments, causes and remedies; road instruction for engineers and firemen; and cross head design.

## Report of Committee on Superheater Locomotives.

The American Railway Master Mechanics' Committee, H. H. Vaughan, Consulting Engineer, C.P.R., chairman, did not submit any written report in view of the lack of new material concerning superheater locomotives. It submitted, however, the results of further tests made by the Pennsylvania Rd. on its class E 6s locomotives as published in the Pennsylvania Rd. pamphlet no. 27 with a recommendation that it be incorporated in the proceedings, which was adopted.

## W. H. Flynn on Compounding Superheater Locomotives.

In the discussion on compounding superheater locomotives at the American Railway Master Mechanics' Association's convention at Atlantic City, W. H. Flynn, Superintendent of Motive Power, Michigan Central Rd., and formerly Master Mechanic of its Canada Southern Division, said: We have 90 compound locomotives on our division, and about 12 of them are equipped with superheaters. The results have so pleased the mechanical department, as well as the operating department, that I think I am safe in saying that we will apply superheaters to the balance. On the division where we conducted one of our most important tests we found we could increase the tonnage of the superheater compound over the saturated compound 15%. That seems an astonishing figure, but it is true; and the superheater compound would handle that increased tonnage more satisfactorily than a saturated compound would do it, and not burn quite as much coal. These are used in slow speed freight service. We had occasion to put one of these superheater compounds on a passenger train, and we found the locomotive would run about 10 or 12 miles faster than a locomotive of the same class without the superheater-compound arrangements.

## Disposition of Committee's Reports at Atlantic City.

**American Railway Master Mechanics' Association.**—The committee on locomotive headlights was continued another year. The report of the committee on the design, construction and inspection of locomotive boilers was accepted, and the recommendations will be submitted to a letter ballot. The recommendations of the committee on superheater locomotives was adopted. The committee on flange and screw couplings for injectors was continued and directed to submit another report next year.

**Master Car Builders' Association.**—Revision of standard and recommended practice; motion carried that committee include in its report a recommendation in favor of adopting the left side as the standard location of passenger car uncoupling levers, and that it be submitted to letter ballot. Train brake and signal equipment; conductor's valve, clasp truck brakes and hose coupling gasket gauge to be submitted to letter ballot as recommended practice. Car wheels; report received and will be printed, and the secretary will arrange for making the curves as suggested. Arbitration, prices for labor and material, compensation for car repairs, and settlement prices for reinforced wooden cars; accepted. Couplers; the sense of the convention was that the strength of the coupler and its resultant weight as presented by the committee is necessary to provide for the proper strength and service in inter-

change. Safety appliances; accepted. Loading rules; recommended to be submitted to letter ballot. Car construction; referred to letter ballot the specifications for box car outside hung doors for new cars, the rules under draught gear, and recommendations concerning malleable cast iron and shearing values of structural, rivet and mild steel. Specifications and tests for material; to be submitted to letter ballot for adoption as recommended practice.

## Election of Railway Mechanical Association's Officials.

The following elections took place at Atlantic City:

**American Railway Master Mechanics' Association.**—President, E. W. Pratt, Assistant Superintendent of Motive Power, Chicago and North Western Ry.; First Vice President, W. Schlafge, General Mechanical Superintendent, Erie Rd.; Second Vice President, F. H. Clark, General Superintendent of Motive Power, Baltimore and Ohio Rd.; Third Vice President, W. J. Tolbert, General Mechanical Superintendent, Chicago, Rock Island and Pacific Ry.; Treasurer, Angus Sinclair, Editor, Railway and Locomotive Engineering; executive members, C. H. Hogan, Assistant Superintendent of Motive Power, New York Central Rd., J. F. DeVoy, Assistant Superintendent of Motive Power, Chicago, Milwaukee and St. Paul Ry., J. T. Wallis, General Superintendent of Motive Power, Pennsylvania Rd.

**Master Car Builders' Association.**—President, D. R. MacBain, Superintendent of Motive Power and Rolling Stock, New York Central Lines West; First Vice President, R. W. Burnett, ex General Master Car Builder, C. P. R.; Second Vice President, C. E. Chambers, Superintendent of Motive Power, Central Rd. of New Jersey; Third Vice President, T. W. Demarest, Superintendent of Motive Power, Pennsylvania Lines West; Treasurer, J. S. Lentz, Master Car Builder, Lehigh Valley Rd.; executive members, C. E. Fuller, Superintendent of Motive Power, Union Pacific Rd., F. F. Gaines, Superintendent of Motive Power, Central of Georgia Ry., and I. S. Downing, General Master Car Builder, Cleveland, Cincinnati, Chicago and St. Louis Ry.

**Railway Supply Manufacturers' Association.**—President, O. F. Ostby, Commercial Acetylene Railway Light and Signal Co.; Vice President, E. H. Walker, Standard Coupler Co.; Executive Committee, First District, J. G. Platt, Hunt-Spiller Manufacturing Corporation, Second District, C. D. Eaton, American Car and Foundry Co., Fourth District, J. F. Schurch, Damascus Brake Beam Co., and Seventh District, C. B. Cass, Westinghouse Air Brake Co.

## Canadian Railway Officials at Atlantic City Conventions.

Among the Canadian and allied railway officials, etc., in attendance were the following:

**GRAND TRUNK RY.**—A. A. Maver and R. Patterson, Master Mechanics; J. Powell, Chief Draughtsman, Motive Power Department and Secretary, Canadian Railway Club; J. Coleman, Superintendent Car Department; J. Hendry and T. A. Treleaven, Master Car Builders; K. F. Nystrom, Chief Draughtsman, Car Department.

C. W. Van Buren, General Master Car Builder, Canadian Pacific Ry.; A. L. Graburn, Mechanical Engineer, Canadian Northern Ry.; M. Goodrich, Master Mechanic, Ottawa and New York Ry.; W. T. Kuhn, Superintendent of Motive Power, Toronto,

Hamilton and Buffalo Ry.; W. H. Flynn, Superintendent of Motive Power, Michigan Central Rd.; W. Gillespie, Master Car Builder, Central Vermont Ry.; W. E. Ladley, Superintendent of Motive Power, Reid Newfoundland Co.; G. R. Joughins, Superintendent of Motive Power, Intercolonial Ry.; H. J. White, General Car Foreman, Canadian Northern Quebec Ry.; and G. N. Fosnot, Chief Clerk to Master Mechanic, Central Vermont Ry.

J. Powell, Chief Draughtsman, Motive Power Department, G.T.R., and Secretary, Canadian Railway Club, was also among those present at the annual meeting of the Society of Railway Club Secretaries at Atlantic City, June 12.

## Railway Supply Exhibits at the Atlantic City Convention.

The Railway Supply Manufacturers' Association exhibit, was, as usual, of a very comprehensive nature. While the total of exhibits was somewhat smaller than last year, there was a larger number of new devices than has hitherto been the case. Among the principal exhibitors were the following,—

American Brake Shoe & Foundry Co., Mahwah, N. J.—Locomotive and car brake shoes illustrating modern practice.

Anchor Packing Co., Philadelphia, Pa.—Packing for air pumps; throttles and general railway purposes.

Buffalo Brake Beam Co., New York, N.Y.—Buffalo freight brake beams; truss beams with malleable iron or forged steel struts; beams for E. & L. equipment and all classes of electrical equipment for standard, broad and narrow gauge; Buffalo passenger brake beams for all classes of service including P. C. and L. N. equipment with automatically adjustable heads and safety locks.

Dearborn Chemical Co., Chicago, Ill.—Water treating preparations scientifically prepared to suit conditions shown by analysis of the boiler water supplies, for prevention of scale, corrosion, pitting and foaming.

Detroit Lubricator Co., Detroit, Mich.—Bullseye locomotive lubricators; flange lubricators; air cylinder lubricators; sight feed lubricators; force feed oilers; Detroit packless radiator valves.

DuPont Fabrikoid Co., Wilmington, Del.—Fabrikoid car window curtain material; Fabrikoid vestibule curtain material; Fabrikoid car seat upholstery material.

Edison Storage Battery Co., Orange, N. J.—Edison storage batteries for train lighting; industrial shop and baggage trucks; multiple unit control; locomotive headlights; railway signaling; inspection lamps.

Flannery Bolt Co., Pittsburg, Pa.—Tate flexible staybolts, including standard water space stays, flush type, adjustable crown stays, section of boiler showing typical installations, tools for installation of Tate bolts, photographic views of various installations and display at the Panama Pacific Exposition. F. B. C. nut locks for freight and passenger cars.

Franklin Railway Supply Co., New York, N.Y.—Franklin fire door; Franklin water joint.

Galena-Signal Oil Co., Franklin, Pa.—Reception booth.

Garlock Packing Co., Palmyra, N. Y.—Air pump and throttle packings; air brake and triple valve gaskets; special packings for accumulators and compressors; general line of shop packings.

Goldschmidt Thermit Co., New York, N. Y.—All materials for welding locomotive frames and other broken locomotive parts; large sample welds on crank shafts; photo-

graphs of important welding operations; demonstrations of the process as applied to pipe welding and samples of metals and alloys produced free from carbon by the Thermit process.

Hunt Spiller Manufacturing Corporation, South Boston, Mass. Cylinder bushings; cylinder packing; piston heads; valve bushings; valve packing; valve bull rings; eccentrics and straps; crosshead shoes; driving boxes; pedestal shoes and wedges; rod bushes.

Independent Pneumatic Tool Co., Chicago, Ill.—Reception booth.

Johns-Manville Co., H. W., New York, N. Y.—Magnesia lagging; fire felt lagging; vitribestos; pipe coverings; air pump and throttle packing; sheet packing; gaskets; millboard; transite and ebony asbestos wood; asbestos shingles; friction and rubber tapes; electrical materials; fibre and sectional conduit; dry batteries, asbestos roofings; asbestos corrugated roofing; waterproofing and mastic; J-M expander rings; hair felt insulators; passenger and refrigerator car insulations; Vulcabeston; high temperature and insulating cements; smoke jacks; cork; armored hose; brake band lining; asbestos-metallic brake blocks.

Locomotive Superheater Co., New York, N. Y.—Locomotive superheaters and accessories.

McCord & Company, Chicago, Ill.—Steel and malleable journal boxes; force feed locomotive lubricators.

Norton, A. O., Inc., Boston, Mass.—Self lowering high speed jacks.

Safety Car Heating & Lighting Co., New York, N. Y.—Safety under-frame car lighting equipment; Pintsch mantle car lighting equipment; gas and electric lighting fixtures safety electric fan; oxy-Pintsch metal cutting and welding equipment.

Westinghouse Air Brake Co., Pittsburg, Pa.—Reception booth.

Westinghouse Electric & Manufacturing Company, East Pittsburg, Pa.—Reception booth. Lighted with 200-watt type C Mazda lamps.

Wheel Truing Brake Shoe Co., Detroit, Mich.—Samples of abrasive brake shoes for truing up car wheels and locomotive driver wheels.

The Quebec Transportation Club's annual meeting was held at Kent House, Montmorency Falls, June 1, when there was a large attendance. Following are the officers and committee for the current year.—Hon. President, H. G. Matthews, General Manager, Quebec Ry. Light, Heat and Power Co.; First Hon. Vice President, E. O. Grundy, General Freight and Passenger Agent, Quebec Central Ry.; Second Hon. Vice President, W. M. MacPherson, Manager, White Star-Dominion Line; President, J. S. Thom, Manager, Quebec Transportation Co.; First Vice President, J. H. Davidson, Superintendent, Lake St. John Division, Quebec Grand Division, Canadian Northern Ry.; Second Vice President, J. A. Everell, Superintendent, Quebec Ry. Light and Power Co.; Secretary-Treasurer, A. F. Dion, Traffic Manager, Quebec Harbor Commission; Committee, G. J. P. Moore, W. J. Thompson, J. T. Cassels, J. A. Cote and J. A. Vallerand.

Canadian Society of Civil Engineers, Vancouver Branch.—Following are the officers for the current year elected at the annual meeting, June 3:—President, R. F. Hayward; Vice President, H. C. Carry; Secretary-Treasurer, A. H. Robertson; Executive Committee: D. Cameron, C. E. Cartwright, A. G. Dalziel and E. G. Matheson. G. R. G. Conway, T. H. White and N. Kerr, being members of the executive council of the association are ex-officio members of the Vancouver Executive Committee.

## Birthdays of Transportation Men in July.

Many happy returns of the day to:—J. H. Black, ex-Superintendent, Timiskaming and Northern Ontario Ry.; now at Cobalt, Ont., born near Smiths Falls, Ont., July 8, 1874.

M. S. Blaiklock, Engineer Maintenance of Way, G.T.R., Montreal, born at Quebec, July 19, 1859.

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., born at St. Thomas de Montmagny, Que., July 25, 1877.

H. F. Bradley, Passenger Manager, Allan Line Steamship Co., Montreal, born at Waterville, Que., July 20, 1876.

D'Alton C. Coleman, Assistant General Manager, Western Lines, C.P.R., Winnipeg, born at Carleton Place, Ont., July 9, 1879.

Geo. Collins, Superintendent, Ottawa Division, Ontario Grand Division, Canadian Northern Ry., Trenton, born at Kingston, Ont., July 20, 1860.

G. C. Conn, Vice President, Pere Marquette Rd., Detroit, Mich., born at Woburn, Mass., July 1, 1867.

D. D'E. Cooper, Canadian Freight Agent, Lehigh Valley Rd., Toronto, born at Buffalo, N.Y., July 8, 1862.

John Corbett, ex-General Foreign Freight Agent, C.P.R., Montreal, born in Lanarkshire, Scotland, July 19, 1863.

H. Darling, Locomotive Foreman, G.T. Pacific Ry., Smithers, B.C., born in Northumberland, Eng., July 27, 1873.

S. E. Dewey, Commercial Agent, All Rail Line, G.T.R., New York, born at Beckenham, Kent, Eng., July 4, 1879.

F. C. Foy, Canadian Passenger Agent, New York Central Lines, Toronto, born there, July 5, 1881.

J. F. Gildea, District Master Mechanic, C. P.R., Montreal, born at Strood Park, near Horsham, Sussex, Eng., July 7, 1884.

A. D. Huff, ex-Division Freight Agent, G.T.R., Ottawa, now Traffic Manager, Laurentide Co., Montreal, born at Chatham, Ont., July 17, 1866.

C. W. Johnston, Assistant to Passenger Traffic Manager, G.T.R., Montreal, born at Actonvale, Que., July 27, 1879.

A. E. Lock, Car Accountant, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., born at Albany, N.Y., July 14, 1879.

R. G. McNeillie, Assistant General Passenger Agent, Western Lines, C.P.R., Winnipeg, Man., born at Lindsay, Ont., July 1, 1883.

H. D. Mackenzie, District Master Mechanic, Intercolonial Ry., Stellarton, N.S., born at Churchillville, N.S., July 22, 1864.

T. J. Maguire, Accountant Quebec Central Ry., Sherbrooke, Que., born at Quebec, July 31, 1860.

J. E. Morazain, Assistant Superintendent, District 3, Eastern Division, C.P.R., Montreal, born at Wheatland, Que., July 31, 1875.

R. E. Perry, Assistant General Freight Agent, Canadian Government Railways, Moncton, N.B., born at Drayton, Ont., July 5, 1876.

R. Preston, Assistant Superintendent of Motive Power, Western Lines, C.P.R., Winnipeg, born at Toronto, July 28, 1863.

J. E. Quick, General Baggage Agent, G.T.R. and G.T.P.R., Toronto, born at Richmond, Ontario Co., N.Y., July 10, 1851.

G. Ruel, Chief Solicitor, Canadian Northern Ry., Toronto, born at St. John, N.B., July 5, 1866.

P. E. Ryan, Secretary, National Transcontinental Railway Commission, Ottawa, born there July 26, 1876.

Geo. Stephen, General Freight Agent, Canadian Northern Ry., Winnipeg, born at Montreal, July 5, 1876.

R. F. Struthers, Chief Inspector of Time Service, C.P.R., Winnipeg, born at Stratford, Ont., July 31, 1879.

Sir Thos. Tait, President, Fredericton and Grand Lake Ry. and Coal Co., Montreal, born at Melbourne, Que., July 24, 1864.

## Greater Winnipeg Water District Railway.

In connection with the project for securing a water supply for Winnipeg and surrounding municipalities from Shoal Lake, adjoining Lake of the Woods, the Greater Winnipeg Water District Commission had a big problem to be solved before bids could be advertised—that of transporting materials to the work. In addition to its great length the aqueduct line traverses a swampy country which is well nigh impassable except when the ground is frozen, and it was realized that reasonable bids for the construction of the works could not be secured until means of access to the remote parts could be provided. The Commission decided, therefore, to open up the territory for construction purposes by building its own railway and operating the line with its own forces, charging the contractors for the transportation of materials according to a schedule of rates published in advance of the receipt of tenders. The route, about 90 miles long, exclusive of sidings, was surveyed, built and placed in service in a single working season, a feat of no mean magnitude considering the character of the country. The line is laid with 60-lb. rails, is well drained and designed for heavy and continuous traffic. It is hoped, on each contract, to maintain a rate of progress sufficient to complete the aqueduct by the autumn of 1918, and it was of first importance that no delays in the delivery of materials should be caused by roadbed defects.

The terminus of the line is at Deacon, south and west of Transcona, where the Grand Trunk Pacific shops are located. A station and a storehouse for cement and other freight has been erected at Deacon. Cars of supplies, received from foreign roads, are delivered on the transfer tracks at Paddington, near Winnipeg, and picked up by the district's train crews and unloaded at Deacon or hauled to the work. The road is a single track line with about ten permanent sidings and spurs, making a total trackage of about 105 miles, and arrangements have been made to cut the track and put in switches, if necessary, at points where contractors may best be served.

The contractors are arranging their plants on a plan calling for movable wooden platforms to lie lengthwise of the main track and span the railway ditch. These platforms, upon which the sand and gravel will be dumped direct from the cars, are in units that can be picked up and moved ahead successively as construction progresses. At each camp the contractors will provide storage for cement. At the eastern terminal of the line, at Indian Bay, are yards and storage tracks. The railway follows the aqueduct line closely for almost its entire length.

Canadian Overseas Railway Construction Corps. In the list of officers of this corps given in Canadian Railway and Marine World for June it was stated that there were two vacancies, viz., No. 1 Company, Mechanical Engineer, rank captain; and No. 2 Company, Bridge Engineer, rank captain. We are advised that these have been filled by the appointment of Lieutenants D. Hillman and H. Wellwood respectively, they having been recommended for promotion by the officer commanding, Lt. Col. C. W. P. Ramsey.

## Railway Development.

### Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta and Great Waterways Ry.**—Ballasting has been completed on the first 50 miles of track laid out of Carbondale, the junction with the Edmonton, Dunvegan and British Columbia Ry., and the gangs are engaged on ballasting the remaining 85 miles on which track has been laid. It is expected to complete the ballasting and other finishing work to Lac la Biche, mileage 114, by Sept. 1. At this point the company is building a hotel for tourist traffic. Grading is in progress between the end of steel and Fort McMurray, 165 miles, which it is expected to complete this season. (June, pg. 212.)

**Athabasca and Fort Vermillion Ry.**—A. G. Mackay, Edmonton, Alberta, solicitor for the company, is reported to have given out the following statement, June 11: "We have been busy in formulating plans ever since the charter was granted by the Legislature. Through the Hudson's Bay Co. I have got into touch with C. E. Law, Canadian representative of D. A. Thomas of Cardiff, Wales, who is interested in the Pacific, Peace River and Athabasca Ry. As a result of three interviews matters have been got into working shape, and all the necessary documents are signed and all forces amalgamated for business. Within two weeks, one of the ablest expert bridge engineers on the continent, and one of the most reliable and competent bridge builders with an experienced staff will reach Athabasca Landing to begin work. After the question of the crossing of the river has been settled reconnaissance work will be pushed throughout the entire route from Athabasca to Fort Vermillion. It is expected that this survey work will be completed in three months. If the project is found to be a feasible one, application will be made to the Dominion Parliament and the Provincial Legislature, and if this is given construction work will be started at once, with the expectation of completing the line within two years." (May, pg. 170.)

**Central Canada Ry.**—A subcontract is reported let to J. Timothy for grading the last 22 miles to Peace River Crossing, Alta. Track laying is reported completed to mileage 28 from McLennan, the junction with the Edmonton, Dunvegan and British Columbia Ry. The grading to be done includes some very heavy work, but it is expected to have it finished by Oct. 1. Track laying is expected to be completed and the line ready for operation by Dec. 31. (June, pg. 212.)

**Edmonton, Dunvegan and British Columbia Ry.**—Edmonton, Alberta, papers June 18, report that a subcontract has been let for the grading of the whole or part of the 60 mile line from the Spirit River to the Grand Prairie settlement to G. Webster. (June, pg. 212.)

**Edmonton, Dunvegan and British Columbia Ry.**—Work has been commenced on the piers and abutments for the bridge across Big Smoky River, mileage 290 from Edmonton, Alta., and grading is in progress all the way to the Spirit River, mileage 357 from Edmonton. It is expected to complete construction to this point this year. Ballasting to the Big Smoky River has been fully completed for the first 200 miles, and the gangs are at work on the remaining 90 miles. (June, pg. 212.)

**Glengarry and Stormont Ry.**—This newly completed railway from St. Polycarpe, Que., 27.5 miles, was opened for traffic May 31. It is leased to the C.P.R., and is being operated as part of the Eastern Division.

**Intercolonial Ry.**—We are officially advised that a contract has been let to J. W. McManus and Co., Moncton, N.B., for building the industrial spur line at Bathurst, N.B., 2.3 miles.

Contracts have been let for buildings as follows: Combined station and freight shed, Trenton, N.S., Rhodes, Curry and Co., Ltd., Amherst, N.S.; combined station and freight shed, Derby Jct., N.B.; and station building at Humphreys, N.B., McLaggan, McBean and Bell; freight shed, 400 x 40 ft., at Levis, Que., G. B. Mitchell, Montreal.

Tenders are under consideration for building a number of small concrete culverts and arches, and the concrete substructures for steel viaducts at Ottawa Brook and Walker's Gulch, on the Sydney, N.S., Sub-division.

Press reports state that in addition to the regular season's work on the Sydney Sub-division, a number of steel bridges will be renewed and strengthened.

The general work of betterments for this year includes the relaying of about 75 miles with new 85 lb. rails. An Atlantic type shovel has been bought for ballasting, and there are now at work on the line four steam shovels getting out material. (June, pg. 212.)

**The Kent Coal and Ry. Co.,** which was incorporated by the New Brunswick Legislature last session, is authorized to build the following lines: From between Kent Jct. and Harcourt on the Intercolonial Ry. to Chipman; from Chipman to Minto, and from Rexton to Richibucto on the Kent Northern Ry. to Richibucto Head, all of which lines are to be subject to the approval of the Lieutenant Governor in Council. The company is authorized to acquire the Kent Northern Ry., and may acquire stock or other securities in any coal company owning coal areas in the counties of Queens or Sunbury; construct wharves or docks, and for the purpose of its business may navigate passenger vessels. The authorized capital is \$400,000, and the company may issue bonds for \$25,000 a mile in respect of its projected railway. The office of the company is fixed at Richibucto, N.B., the provisional directors being: W. W. Duncan, T. J. Lannen, A. L. Marsh, A. C. McNaughten, F. Erickson Brown, Toronto; T. J. Bourque, Richibucto, N.B.; A. R. Slipp, Fredericton, N.B., and D. K. Hazen, St. John.

The Kent Northern Ry., which the company is authorized to acquire, extends from Kent Jct. on the Intercolonial Ry. to Richibucto, N.B., 27 miles, and operates under lease the St. Louis and Richibucto Ry., 7 miles. The company was incorporated by the New Brunswick Legislature in 1874 and the line was opened for traffic in 1883. The St. L. and R. Ry. Co. was incorporated by the New Brunswick Legislature in 1882, and the line was opened in 1885. After a somewhat checkered career, the line was leased to the K.N.R., but it does not appear to be regularly operated. (June, pg. 212.)

**Kettle Valley Lines.**—The first train on the Kettle Valley Ry. as a factor in the east and west traffic of southern British Columbia was run between Midway and Merritt, 275 miles, May 31, thereby connecting the C.P.R. Crowsnest Pass line with the transcontinental line. The Penticton Board of Trade and the municipal council entertained K.V.R. and C.P.R. officials, who travelled on the opening train. The line is leased to the C.P.R., and it is being operated in connection with that company's lines, under the

charge of O. E. Fisher, Superintendent, with offices at Penticton. The new line starts at Midway, and runs through to Merritt, 274.8 miles, which mileage includes 1.5 miles from South Penticton to the wharf in Penticton. From Princeton, mileage 71.3, to Brookmere, mileage 109.8, the track is owned by the Vancouver, Victoria and Eastern Ry. (G.N.R.), and is operated as a joint section with the K.V. Lines. At Merritt connection is made with the Nicola branch, which connects with the main transcontinental line at Spences Bridge. The other mileage operated is from Carson to Grand Forks, 4.00 miles, and from Grand Forks to Lynch Creek, 18.5 miles. The line also extends to Republic, Wash. (June, pg. 212.)

**Pacific Great Eastern Ry.**—Announcement has been made in Vancouver that through an arrangement with the Dominion and Provincial Governments funds have been provided for the continuance of construction between Vancouver and Fort George, B.C. The line is at present in operation for some miles out of North Vancouver toward Squamish, and from Squamish to Lillooet, 120 miles. Considerable work has been done between Lillooet and Fort George, and it is expected to have the line completed for a further 100 miles by the end of the year. The objective for the year's tracklaying is the Hundred Mile House in Cariboo district. (May, pg. 171.)

**Peace River Tramway and Navigation Co.**—The Board of Railway Commissioners has approved location plans for the projected lines at the Peace River Chutes, 5.00 miles, and along the north bank of the Peace River from Smith Landing to Fort Smith, Alta., 15 miles. (Jan., pg. 11.)

**Timiskaming and Northern Ontario Ry.**—The survey party, in charge of W. R. Maher, which has been working for some time along the Long Sault rapids on the Abitibi River, returned to Cochrane, June 6, their camp having been burned out. (May, pg. 173.)

**C.P.R. British Columbia Employees and the War.**—The company's records show that 206 of its employees in British Columbia have been engaged in active service in Europe, or are preparing for it. Of this number, eight are reported killed and three missing. The killed include, J. H. Avery, clerk, local freight office, Vancouver; R. Burns, chief clerk, Fuel Department, Vancouver; C. Dennehey, rod man, Nelson; A. Lee, trucker, Vancouver; H. Springthorpe, car cleaner, Vancouver; A. J. Stewart, laborer, Vancouver, and F. G. Olson, train clerk, Vancouver. The missing are, A. J. Cleeton, shed foreman, Rossland; L. C. Smith, civil engineer, Nelson, and S. B. Weber, clerk in Marine Superintendent's office, Vancouver.

**A Kettle Valley Ry. Construction Suit.**—Grant Smith and Co. have entered action in the British Columbia courts to recover \$699,609 balance claimed to be due for work on the line. The statement sets forth that the net cost of construction on the Penticton-Hydraulic Summit section was \$2,804,168.73, and the contractors' profit of 10% made the total amount due \$3,084,585.60. \$2,384,976.60 had been paid on account, leaving the amount claimed, on which the contractors claim interest from Oct. 21, 1914.

**Projected Elevator at Owen Sound.**—The Owen Sound, Ont., Town Council is considering the advisability of submitting a bylaw to the ratepayers, to authorize \$300,000 of debentures for the construction of a modern concrete elevator of 1,000,000 capacity. If the decision is made to build an elevator it will probably be placed under the management of a commission of three members.

## Progress on Rogers Pass Tunnel Construction, Canadian Pacific Railway.

The following table shows the progress made during Feb., Mar., April and May, and also the totals to May 27, for which we are indebted to J. G. Sullivan, M.Can.Soc.C.E., Chief Engineer, C.P.R. The figures show the number of feet.

	Jan. 28 to Feb. 25.	Feb. 25 to Apr. 1.	Apr. 1 to Apr. 29.	Apr. 29 to May 27.	Total to May 27.
Pioneer heading, east end .....	619	682	692	596	9,221
Main tunnel, east end .....	116	271	405	377	5,450
Main tunnel, east end .....	417	440	519	624	3,769
Pioneer heading, west end .....	687	710	516	652	7,270
Main heading, west end .....	606	857	707	575	6,081
Main tunnel, west end .....	176	479	542	593	2,165

## National Transcontinental Railway Operation.

Since the first announcement of the taking over by the Dominion Government of the National Transcontinental Railway, including the Grand Trunk Pacific Ry.'s Lake Superior branch, for operation in conjunction with the other Canadian Government Railways, there has been some temporary modification of the plans, consequent upon questions relating to what is known as the G.T.P.R. Lake Superior Division, which includes the N.T.R. from St. Boniface, Man., to Graham, Ont., 258.4 miles, and the G.T.P. R. branch from Graham to Fort William, 190 miles. Among the appointments announced in our last issue was that of R. S. Richardson as Superintendent of District 3, Armstrong to Winnipeg (excluding Armstrong) and Superior Jct. to Fort William. The question of the taking over of the Lake Superior branch, while authorized by the Government had not then been arranged, the matter of terms, whether lease or purchase, being under discussion. As also stated in our last issue the G.T.P.R. announced the appointment of A. Kilpatrick, as Superintendent of its Lake Superior Division, vice A. A. Tisdale, on temporary leave of absence. The question of jurisdiction over the Superior Jct.-St. Boniface section of the N.T.R. was thus raised, and the whole question was taken into consideration. As the result of negotiations it is said that a temporary arrangement has been made respecting the operation of the lines in question. The arrangement, it was reported June 11, is such that the G.T.P.R. will continue to operate the line from St. Boniface via Superior Jct. to Fort William, on behalf of the Dominion Government, pending the completion of the negotiations for the taking over of the Superior Jct.-Fort William line. The G.T.P.R. local staff will, it is said, be absorbed into the Canadian Government staff gradually, so that when terms are finally arranged the G.T.P.R. local staff will be non-existent. It is further stated that the Lake Superior branch will be taken over on the basis of a rental, the amount named approximately \$500,000 a year. The eastern terminus of the G.T.P.R. will, it is stated, be Transcona, Man., which terminal facilities will be used jointly with the N.T.R. F. P. Gutelius, General Manager, Canadian Government Railways, is reported to have stated, June 11, that it would be some time before the final arrangements were completed, and the agreement entered into, there being many details to be worked out. One of these is as to the rolling stock, it being said that G.T.P.R. rolling stock on the division is to be taken over. (June, pg. 210.)

## Grand Trunk Pacific Railway Construction.

The company started operating three through trains a week in each direction between Winnipeg and Prince Rupert, June 6. Heretofore there have only been two

trains a week from Edmonton to Prince Rupert, the Winnipeg-Edmonton service being conducted independently. The train for Prince Rupert leaves Winnipeg on Tuesdays, Fridays and Sundays at 6 p.m., while on the other days of the week it does not run further than Edmonton. The eastbound trains leave Prince Rupert, Tuesdays, Thursdays and Saturdays. A tri-weekly steamship service between Prince Rupert, Vancouver and Seattle, will be maintained in connection with the train service.

The question of the building of a transfer track between the G.T.P.R. and the C.P.R. at Calgary, Alta., came before the Board of Railway Commissioners there, June 9. The Board decided that the transfer track should be laid on land owned by the Globe Elevator, and that they should be put down by the G.T.P.R. The company, however, states that it is impossible to provide the money for this at present, but it is willing to pay a rental for its use if somebody else will build it. The Commissioners suggested that the city buy the land, build the track and collect the cost, spreading the payment over a term of years. The city does not appear to view the project with favor.

The importance of Prince Rupert as a trading centre is developing rapidly. Fishing is at present the most important industry from which the railway derives its traffic there. Until the advent of the G.T.P.R. the fishing steamboats carried most of their catch to Seattle, Wash., whence it was shipped east. During 1914, about 100 steamboats used Seattle as their landing port, and from that place some 40,000,000 lbs. of fish, principally halibut and herring, were shipped east. In Jan., 1914, the Dominion Government authorized the carriage of fish for the U.S. in bond through Canada, and the G.T.P.R. set out to obtain a share of the trade. Starting with the shipment of 60,000 lbs. in Sept., 1914, the shipments increased to 598,881 lbs. in March, 1915, 533,285 lbs. in April, by express, in addition to 789,240 lbs. in March and 740,000 lbs. in April by special train. Fourteen steamboats are now landing their catches at Prince Rupert, and the number is increasing. Special wharves are being built for the accommodation of the traffic. Five fish trains a week are being run from Prince Rupert to Chicago. The first car of copper ore for the smelter at Granby Bay, was reported to have reached Prince Rupert June 7, and a continually increasing tonnage of mineral traffic is looked for. It is stated that from 3,000 to 5,000 tons of ore for smelting will be carried at an early date.

The company's new hotel at Edmonton, Alberta, is completed and will be opened for business July 1. (June, pg. 224.)

## Inverness Railway and Coal Company's Finances.

Canadian Railway and Marine World for June contained some information about the meeting of I.R. & C. Co.'s bondholders called for June 30 to consider action to be taken in view of the company's inability to

meet the interest on its securities matured May 1. In connection with the notice calling the meeting the following circular was issued by the Secretary, L. W. Mitchell:

The conditions at present existing may be briefly summarized as follows: The company is capable of producing approximately 1,000 gross tons of coal per working day, but the cost of mining the coal, in view of the depth and extent of the workings, has reached a point where the margin between the cost of production and the price realized is very small. Under normal conditions the percentage of slack coal produced by the company is above the average, owing to the friable nature of the coal seams, and it has always been found difficult to market this without suffering heavy loss. Under present conditions, with the limited market, and that market calling for screened coal to a very large extent, the percentage of slack is naturally high, with the result that, owing to the company's inability to market its production of slack coal, it has been necessary from month to month to waste considerable tonnage. The quality of the coal has not shown the expected improvement in chemical analysis as the workings have been extended, nor has it become any less friable in formation. The revenue from the railway is largely dependent upon the coal shipments, inasmuch as the local business is small, and were the company's mines to close it is doubtful if the railway could be operated on a paying basis. The management are of the opinion that it can be operated with a prospect of paying interest on its outstanding securities only by the perfecting of a system of briquetting coal without the use of a binder in the shape of pitch, which will enable the company to make use of its slack coal. Such a method of briquetting slack coal is being carried out on the continent, and experiments on an extensive scale are being conducted in England with every prospect of success.

The holders of a large proportion of outstanding bonds have expressed their approval of an arrangement to waive default already existing in respect of the interest which matured May 1 and of several instalments of sinking fund, and to postpone the payment of interest and sinking fund for a period of years after the close of the war, and it is suggested that the meeting to be called should consent to such waiver and postponement. During such period an opportunity will be afforded to ascertain whether the proposed system of briquetting can be conducted successfully from the company's properties, and the meeting will be asked to adopt a plan to provide the necessary funds, by authorizing an issue of prior lien securities or otherwise.

## Locking Gear Ordered for Dampers of C.P.R. Locomotive Ash Pans.

The Board of Railway Commissioners passed the following general order, 145, May 31:—Re order 15988, Feb. 17, 1912, providing that all railway companies equip their locomotives with ash pans that can be dumped or emptied without the necessity of an employee getting under the locomotive, except in cases of emergency. Upon hearing the matter at Ottawa, April 6, 1915, in the presence of counsel for and representatives of the Canadian Pacific, Grand Trunk, and Canadian Northern Railways, the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen; and upon reading the further submissions filed it is ordered that the C.P.R. be directed, by July 1, 1915, to equip its locomotives with a locking gear for the dampers of the ash pans: provided that no locomotive shall be operated from and after that date unless so equipped.

### Canadian Northern Railway Construction, Betterments, Etc.

**Canadian Northern Quebec Ry.**—The original route of the projected extension of the old Montford and Gatineau Colonization Ry. from Huberdeau, Que., was approved by the Minister of Railways, Sept. 30, 1912. The new location, which has just been approved, was found necessary for the betterment of grades and curvature. It proceeds along the east bank of the Rouge River to the Argenteuil county line, crossing to the west side of the river, and ties in with the originally approved route about six miles from Huberdeau. The route has been approved to near St. Remi d'Amherst.

**Canadian Northern Ontario Ry.**—The Hamilton City Council has been notified by the company of its objection to the construction of cement sidewalks on Palmerston Ave., between Gertrude St., and 550 ft. northerly, within the area through which the C.N.O.R. is located.

A start will be made early in July to finish up all the work on the line to Port Arthur, generally referred to as the Sudbury-Port Arthur line, but which actually covers the section of the line westerly from Ruel to Port Arthur. The principal work to be done consists of clearing out cuttings which have been affected by the winter weather, lining and surfacing. It is expected to have this work done by the middle of September.

**Canadian Northern Ry.**—The terms of the agreement between Port Arthur, Ont., and the company, which was defeated by the ratepayers at the January municipal elections is again under consideration. The company has offered a number of concessions, which are considered reasonable, and it is expected that a new agreement will be reached at an early date.

A press report states that arrangements are being made for an early start on the construction of the projected line from Bienfait to Esteven, Sask. Construction material was delivered at Bienfait, and Midale early in June, but up to June 12, nothing further had been done.

The Board of Railway Commissioners has authorized the opening for traffic of the line northwesterly from Battleford, from the present terminal at Edam, mileage 37, to Turtleford, mileage 57, Sask.

Construction is reported to have been resumed on the line from Oliver to St. Paul de Metis, Alta. D. F. McArthur took in a grading outfit, May 24, and at a meeting held at St. Paul, a few days previously the Minister of Municipal Affairs stated that on the representations of the Government Mr. McArthur had been given this contract. About 14 miles of grading had previously been done by him.

It is reported that 250 teams, with the necessary men, are grading south of High River, on the Calgary-MacLeod Line, Alberta. The section of the line between Calgary and DeWinton is also being graded. The Northern Construction Co. is the general contractor and the Wilson-Frederick Co. is reported to have a subcontract.

**Canadian Northern Pacific Ry.**—A Vancouver report, June 5, says that up to May 31 there had been deposited on the company's terminal site at False Creek, 1,500,000 cubic yards of material. Of this amount 400,000 yards had been pumped into the area enclosed by a bulkhead extending transversely down the creek since the reclamation operations were resumed in January. A 64-acre section of the company's holdings are barricaded, the entire tract being nearly 165 acres. It is estimated that it will take 3,250,000 yards of dirt to reclaim the whole of the property. The aspect of

the central portion of False Creek is being rapidly changed. At low tide an island of considerable size can be seen where formerly there were mud flats.

The Vancouver City Council decided, June 3, to take steps to compel the company to expedite work on the station and other buildings on the terminal site. (June, pg. 218).

### Grand Trunk Railway Betterments, Construction, Etc.

**Track Elevation in Montreal.**—The report of the City Engineering Department, respecting track elevation, referred to in our last issue, shows that the elevation of the tracks would affect 32 streets, as follows: Mountain, Aqueduct, Versailles, Lusignan, Guy, Richmond, St. Martin, Seigneurs, Chatham, Canning, Fulford, Dominion, Vinet, Atwater, Greene, Rose de Lima, Du Couvent, Place St. Henri, St. Philippe, Ste. Marguerite, Lacasse, DeCourcelles, St. Remi, Wellington, Hibernia, Charlevoix, D'Argenson, Atwater (aqueduct), St. Patrick, St. Ambroise, and Croissement. The cost of the work will be largely determined by the type of construction adopted. The city desires that tunnels with supporting columns in the centre of the roadway be adopted, while the city's engineering department favors overhead structures supported on columns, a system which has been found satisfactory in London, Eng., as well as in the United States. It is also claimed the column system would be more advantageous to the general street traffic. Working on this basis the estimated cost of the elevation would be: cost of work, \$2,635,045; general expenses, including engineers' fees, \$342,555; purchase of land, \$1,339,300; damages, \$500,000; total \$4,816,900. However, allowing for possible deviations from this general scheme by the adoption of some alternative plans at some of the streets, or by order of the Board of Railway Commissioners, the city's railway engineer, G. R. MacLeod, puts \$6,000,000, including interest at 5%, as the outside cost of the work. The G. T. R. estimate is \$8,000,000, which includes interest at 6%. (June, pg. 223.)

### Union Station for North Toronto.

Work has been started on the union station to be built at North Toronto for joint use by the C.P.R. and the Canadian Northern Ry. P. Lyall & Sons, Ltd., have the contract for the excavations, the only one let. Darling and Pearson, architects, Toronto, are preparing plans for the building, which are expected to be completed at a very early date, and plans of the track layout, etc., are being prepared under the direction of J. M. R. Fairbairn, Assistant Chief Engineer, C.P.R. An illustration made from a preliminary sketch of the building has been published in a Toronto daily paper, but that plan will be considerably changed. The station, 115 x 44 ft., will be built with its west end facing the east side of Yonge St., just south of the C.P.R.'s West Toronto-Leaside line on a

portion of which work has been in progress for over two years, the progress having been delayed materially by prolonged differences with the city. The building will face south, a central entrance leading into a general waiting room 50 x 69 ft. This waiting room will be flanked on the right by men's and women's rest rooms and lavatories, and on the left by telephone and telegraph booths and ticket office. A central exit from the waiting room will pass into a midway under the tracks, from which stairs will lead up to three platforms, serving the six tracks. The platforms will have umbrella sheds. There will also be a shelter 60 x 20 ft. on the station side of the track level.

On the Yonge St. side of the building there will be a clock tower, with an entrance way on the ground level leading into a concourse back of the main waiting room. The concourse will communicate with the midway, and it is through this routing that it is expected the majority of the passengers will pass, eliminating the waiting room. The baggage room will be located under the tracks to the east of the midway, and will be served by a driveway on the Yonge St. side, where the baggage will be delivered and received. The station will be built of cut stone, and will have a flat roof.

### Great Northern Railway Lines in Canada.

**Vancouver, Victoria and Eastern Ry. and Navigation Co.**—The Board of Railway Commissioners has authorized a connection with the C. P. R. near Granby Smelter, B. C.; and also with the Kettle Valley Ry., at Brookmere, B.C.

**Vancouver Terminals.**—The Board of Railway Commissioners, June 2, authorized a change in the location of the projected station building at False Creek, Vancouver, from the Prior St.-Park Lane section of the property, to next the property line of the Canadian Northern Pacific Ry., and directed that work is to be commenced at the expiration of six months from the date of the order, and completed by June 1, 1917.

Filling-in work on the False Creek flats is still being proceeded with, the City Engineer estimating that 800,000 cubic yards of material are still required on the company's property. The question whether the station to be built will be a union station with the Canadian Northern Pacific Ry., or an entirely separate building though adjacent thereto, is not yet decided. (June, pg. 225.)

**The Dominion of Canada Trust Corporation**, which is being wound up in London, Eng., attributes its failure among other things to the cancellation by the Dominion Parliament of the Halifax and Eastern Ry. charter. That company was chartered several years ago to build a railway from Dartmouth through the Musquodoboit River Valley, but despite liberal subsidies by the Dominion and by Nova Scotia, the company was unable to raise the necessary capital, and about three years ago the Dominion Government decided to build the line itself, hence the cancellation of the charter.

Railway Bridge Between St. Leonard, N.B., and Van Buren, Me.

This illustration shows the first passenger train crossing the bridge. A full description of the bridge appeared in *Canadian Railway and Marine World* for May 24, 1914, and its location, etc., were given in the June issue, pg. 205.

## Traffic Orders by the Board of Railway Commissioners.

### Switching Rates at Hamilton.

23681. May 14. Re complaint of Steel Co. of Canada Ltd., against the switching rates charged by Toronto, Hamilton & Buffalo Ry. in its Hamilton terminals, under Tariff C. R. C. 858, effective April 1, 1913, as amended by Supplement 4, effective May 5, 1913: Upon reading what is alleged in support of the complaint and on behalf of the railway company, and the report of the Chief Traffic Officer of the Board, it is ordered that the complaint be dismissed.

### Paper Rates to Central Freight Association Territory.

23708. May 20. Re complaint of Laurentide Co. Ltd., against rates charged by the railway companies on paper to Central Freight Association Territory, effective May 27, 1915, it is ordered that the following tariffs, C.R.C. no. E.2999 Canadian Pacific Ry.; C.R.C. no. E.3157 and C.R.C. no. P.115 Grand Trunk Ry.; C.R.C. no. E.641 Canadian Northern Ry.; C.R.C. no. 1103 Ottawa & New York Ry. be suspended until further order.

### Glengarry and Stormont Railway Tariff.

23709. May 19. Approving Glengarry Stormont Ry.'s Standard Freight Tariff, C. R. C. 1.

### Refund of Overcharge on Household Goods.

23781. May 28. Re complaint of C. M. Sinclair, of Bridgeburg, Ont., against rate charged by Windsor, Essex & Lake Shore Rapid Ry. on shipment of household effects from Kingsville to Bridgeburg. Upon reading what is alleged in support of the complaint and on behalf of the railway company; upon its appearing that the rate charged should have been 52c. per 100 lbs., and that the charge would have been \$3.12 instead of \$4.10; and upon the railway company consenting to abide by any decision arrived at by the Board, it is ordered that the company be authorized to refund to the complainant the difference in the said charges, viz., 98c.

### Freight on Mixed Carloads of Lumber and Shingles.

23813. June 2.—In the matter of the complaint of the Grain Growers' Lumber Co., of Vancouver, B.C., that, under note 2 of Supplement 45 to Tariff C.R.C. 1806, the C.P.R. exacts a higher weight basis on mixed carloads of lumber and shingles to points in Western Canada than to points in Eastern Canada under Tariff C.R.C. no. W. 1615, and Transcontinental Tariff C.R.C. 1790: Upon hearing the complaint, in the presence of counsel for the C.P.R., no one appearing for the complainant, although duly notified; upon reading the report of the Chief Traffic Officer of the Board, and hearing what was alleged, the board ordered that the complaint be dismissed.

### C.P.R. Release Form for Carriage of Perishable Freight.

23860. June 16.—The order 23392, Mar. 4, 1915, directing the C.P.R. to accept shipments of such perishable freight as beer, fruit and vegetables for carriage in heated cars, upon the shipper signing a "release" waiving all claim for damages by frost, as set forth in the order; and the application of the C.P.R. for approval of the draft of "release" submitted in conformity with the requirements of the said order: Upon reading the form of release submitted, and the report of the Chief Traffic Officer and the Law Clerk of the Board, it is ordered that the said form be approved.

### Moncton and Buctouche Ry. Freight Mileage Tariff.

23861. June 15.—The application of Moncton and Buctouche Ry., under Sec. 327 of

the Railway Act, for approval of its Standard Freight Mileage Tariff, C.R.C. no. 21: Upon the report and recommendation of the Chief Traffic Officer of the Board, it is ordered that the said tariff be approved.

## Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,504,300	\$1,163,800	\$430,500	x \$83,800
Aug.	1,367,700	1,123,000	244,700	x 163,900
Sept.	2,100,900	1,519,000	580,700	65,800
Oct.	1,895,300	1,332,100	563,200	x440,900
Nov.	1,670,200	1,123,100	547,100	x417,700
Dec.	1,329,100	908,000	423,100	200,900
Jan.	950,800	773,000	177,800	x175,100
Feb.	1,105,100	823,700	281,400	42,800
Mar.	1,379,000	956,000	423,000	62,600
Apr.	1,429,000	940,000	489,000	74,800
	\$14,880,400	\$10,659,900	\$4,170,500	\$1,236,300

Decr. \$4,573,400 \$3,337,100 \$1,236,300  
x Decrease.

Approximate earnings for May, \$1,193,900 against \$1,641,600 for May, 1914, and for two weeks ended June 14, \$543,100 against \$736,900 for same period, 1914.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$10,481,971.72	\$6,703,525.89	\$3,778,445.83	\$338,347.35
Aug.	8,917,764.33	6,554,606.68	3,373,157.70	597,981.54
Sept.	10,754,139.67	6,387,091.28	4,367,048.39	48,530.30
Oct.	9,282,928.49	5,361,600.13	3,921,328.36	2,281,529.43
Nov.	8,057,358.59	5,413,286.72	2,644,072.17	2,244,173.89
Dec.	7,443,962.43	5,244,438.62	2,199,523.81	2,027,297.90
Jan.	6,109,026.94	4,968,798.64	1,140,233.30	140,059.24
Feb.	6,735,678.49	4,756,663.87	1,879,014.62	507,438.16
Mar.	7,852,989.67	4,879,974.94	2,973,014.73	x126,224.14
Apr.	7,455,859.54	4,763,104.33	2,682,755.21	657,109.81

\$84,091,680.22 \$55,638,086.10 \$28,453,594.12 x \$7,673,696.96  
Dec. \$25,872,793.61 \$18,190,096.65 \$7,673,696.96  
x Decrease.

Approximate earnings for May, \$6,996,000 against \$9,533,000 for May, 1914, and for two weeks ended June 14, \$3,208,000, against \$4,329,000 for same period, 1914.

During the weeks ended May 31, June 7 and 14, the mileage was increased to 12,491, 12,633 and 12,748 respectively.

## Grand Trunk Railway Earnings, Etc.

The following figures show the earnings for the G.T.R. (including the Canada Atlantic Ry.), the G.T.W.R. and the D.G.H. & M.R. for March:

Grand Trunk Railway.			
Earnings	.....	\$3,200,300	
Expenses	.....	2,032,800	
Net earnings	.....	\$1,167,500	
Grand Trunk Western Railway.			
Earnings	.....	\$608,250	
Expenses	.....	590,500	
Net earnings	.....	\$17,750	
Detroit, Grand Haven and Milwaukee Ry.			
Earnings	.....	\$197,200	
Expenses	.....	205,000	
Deficit	.....	\$7,800	

Approximate earnings for May, \$4,015,302 against \$4,309,610 for May, 1914, and for two weeks ended June 14, \$1,908,290, against \$1,996,679 for same period, 1914.

### TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to May 31:

	1915	1914	Incr.	Decr.
G.T.R.	\$14,971,617	\$16,633,441	.....	\$1,661,824
G.T.W.R.	2,850,844	2,847,518	\$3,326	.....
D.G.H. & M.R.	961,518	953,424	8,094	.....
Totals	\$18,783,979	\$20,434,383	.....	\$1,650,404

## Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section and Lake Superior Branch, 1,104 miles, for May, were \$274,541, against \$440,857 for May, 1914, and the aggregate from Jan. 1 to May 31, was \$1,431,697, against \$2,055,408 for same period 1914.

## Canadian Pacific Railway Construction, Betterments, Etc.

**Ontario Division.**—The Board of Railway Commissioners has ordered the C.P.R. to build a transfer track at Trenton, Ont., to connect with the Canadian Northern Ry.

Work was started, June 1, on the removal of old buildings and excavation on the site of the new station at North Toronto for the C.P.R., the Canadian Northern Ry. to have a joint right of use. The work is being done by the P. Lyall and Sons Construction Co., Montreal. The contract for the building has not been let.

**Kootenay Central Ry.**—The Board of Railway Commissioners has approved of revised location for half a-mile of this line from lot 3947 to lot 272 East Kootenay District, B.C.

**British Columbia Division.**—Reports from Vancouver, B.C., state that four tracks from the C.P.R. right of way to the new government wharf and elevator at the foot of Salisbury Drive, are to be laid at an early date. The matter is under consideration by the city council, with a view to securing proper protection for the public. (June, pg. 220.)

**Rogers Pass Tunnel.**—A system of ventilation is being worked out which will permit of the operation of this tunnel by steam power instead of by electricity as was at one time spoken of.

**Locomotive Boiler Inspection in Nova Scotia.**—The Nova Scotia Government has passed an order in council approving the regulations drawn up under the provisions of the amendment to the Provincial Railways Act passed last session, for the testing and inspecting of locomotive boilers used on railways subject to provincial jurisdiction. The regulations, which come into effect July 1, call for certified monthly inspections by the officer in charge of locomotives; quarterly inspection by the company's inspector, and an annual report by the inspector and the officer in charge of each locomotive. Specification cards for each locomotive are to be filed with the Government. The 38 regulations deal in detail with the manner of inspection.

**C.P.R. Manufacturing Munitions.**—A press report says:—"Linked with Sir Thomas Shaughnessy's conferences with the British officials in London are reports that the C. P.R. plants are being turned into a great munitions factory. The Angus locomotive and car shops of that company, at Montreal, are working 24 hours a day with a force of 12,000 men, and all the other C.P.R. plants and shops are preparing to begin this kind of work."

**Fire Guards on Prairie Railways.** The Board of Railway Commissioners' Chief Fire Inspector, Clyde Leavitt, has issued notice to the Canadian Pacific, Canadian Northern, Grand Trunk Pacific, Great Northern and Edmonton, Dnvegan & British Columbia Railways to establish and maintain fire guards on both sides of their right of way in Manitoba, Saskatchewan and Alberta, in accordance with the Railway Act, sec. 298, sub sec. 4, and general order 107, regulation 8.

**Telephone Train Dispatching on the G. T. Pacific Ry.** The system of dispatching trains by telephone has been installed throughout the G. T. P. R. main line. Portable telephones are carried on each train, keeping the train crews in touch with the dispatchers at all times and places. A regular system of watch inspection has also been put into force.

The Canadian Northern Ry. started a campaign, June 18, for the destruction of weeds along its lines in Saskatchewan. W. Kilby, Regina, is in charge.

# Mainly About Railway People.

**Sir Thomas Shaughnessy** sailed from Liverpool towards the end of June, for New York, after a business trip to England.

**Lieut. Hon. R. H. P. Howard**, who was killed in action at Ypres recently, was a grandson of the late Lord Strathcona.

**Lady Mackenzie**, wife of the President of the Canadian Northern Ry., has offered a house at Lakefield, Ont., as a convalescent home for soldiers.

**W. G. Cooper**, Road Foreman of Locomotives, Wabash, Rd., St. Thomas, Ont., died there, June 11, after an attack of typhoid fever.

**David McNicoll**, ex Vice President, C.P.R., who spent most of the winter in the south, is visiting his son on his ranch at Penticton, B.C.

**John G. Haslett**, who died at Winnipeg, June 17, aged 60, was, prior to 1905, for 14 years, Colonization Agent for the C.P.R. in London, Eng.

**Sir Thomas Tait**, President, Fredericton and Grand Lake Coal and Ry. Co., is spending the summer at St. Andrews, N.B., with Lady and Miss Tait.

**J. O. Apps**, General Baggage Agent, C.P.R., Montreal, was married at Westmount, Que., June 6, to Miss B. A. McAllen, and left for a trip to the Pacific coast.

**C. W. Fisher**, Chief Dispatcher, C.P.R., Lethbridge, Alta., attended the Train Dispatchers' Association of America's convention at Minneapolis, Minn., June 15.

**J. F. Chapman**, Manager, Thousand Islands Ry. and Oshawa Ry., Gananoque, Ont., has offered an island and cottage near Stave Island for wounded and sick soldiers.

**Sir Wm. Van Horne** returned from Cuba to Montreal recently, and with Lady and Miss Van Horne will spend most of the summer at Covenhoven, St. Andrews, N.B.

**Huntley Drummond**, a son of the late Sir George Drummond, director, C.P.R., has given \$100,000 to the Dominion Government to purchase machine guns for Canadian overseas troops.

**C. A. Cotterell**, Superintendent, District 2, British Columbia Division, C. P. R., Vancouver, was called to Fort William, Ont., early in June, on account of the death of his father.

**B. B. Kelliher**, who was, until recently, Chief Engineer, Grand Trunk Pacific Ry., Winnipeg, was married in London, England, early in June, to Miss C. O'Connor of Wexford, Ireland.

**J. H. Fulford**, who died at Brockville, Ont., June 8, was a former mayor of the city, and for a considerable period acted as city agent there for several steamboat and railway lines.

**W. Marshall**, Assistant Manager of Telegraphs, Western Lines, C. P. R., Winnipeg, was operated on for appendicitis, June 3, and is reported to be progressing satisfactorily.

**J. W. Stewart**, President, Pacific Great Eastern Ry., Vancouver, has contributed \$450 to the 47th Highlanders for the equipment of a pipe band of eight pipers and four drummers.

**Miss Margaret Armstrong**, daughter of L. O. Armstrong, of the Natural Resources Department, C.P.R., was married at Montreal recently to C. B. Amory, of Boston, a lieutenant in the U.S. army.

**C. C. Carr**, son of C. E. A. Carr, Railway Supplies, Toronto, who went to Europe with the first contingent, and was reported missing after the battle of Langemarck, has been

located in a German hospital, where he is reported to be recovering from wounds.

**F. N. McCrea**, M. P. for Sherbrooke, Que., formerly President, Lotbiniere & Megantic Ry., has been unanimously selected as the Liberal candidate for that constituency at the next general election.

**Thomas Cantley**, Vice President, Nova Scotia Steel and Coal Co., and Eastern Car Co., New Glasgow, N.S., has been elected First Vice President, Canadian Manufacturers Association, for the current year.

**F. L. Wanklyn**, General Executive Assistant, C. P. R., Montreal, who is honorary colonel of the Canadian Overseas Railway Construction Corps, entertained the officers to dinner at St. John, N. B., June 5.

**W. S. Ousman**, formerly of the Canadian Freight Association's Montreal office, has enlisted for overseas service with the 38th Battalion, Canadian Expeditionary Force, and is now at Barriefield Camp, Ont.

**R. S. Richardson**, Superintendent, District Three, National Transcontinental Railway.

**David Lyall**, who was Chief Engineer and Manager for C. J. Wills and Sons of London, Eng., during their contract on the Central Railway of Canada, a year or two ago, is now with the Royal Engineers in France.

**Mrs. E. W. Rathbun**, wife of the President, Oshawa Ry., who has gone to Europe with the Canadian overseas Expeditionary Forces, has offered their home at Deseronto, Ont., as a convalescent home for wounded and sick soldiers.

**James Dunsmuir, Jr.**, who lost his life through the torpedoing of the s.s. Lusitania by the enemy recently, was the third son of James Dunsmuir, director, C.P.R., and a former Lieutenant Governor of British Columbia.

**G. H. Stott**, City Passenger and Ticket Agent, G.T.R., Quebec, has received word that his son, Percy Stott, a member of the 8th Battalion, was taken prisoner by the Germans, after one of the engagements at Ypres, Belgium.

**Capt. A. T. Shaughnessy**, who is serving with the 60th Battalion, now recruiting for active service in Europe, is a son of Sir Thomas Shaughnessy, President, C.P.R.,

and a member of the Montreal Stock Exchange, as partner of C. Meredith and Co.

**Mrs. G. McLaren Brown**, wife of the European Manager, C.P.R., London, Eng., has received a letter by the Queen's command, asking her to convey to the ladies of the Canadian War Contingent Association, thanks and appreciation for clothing, etc., contributed.

**W. W. Butler**, Vice President, Canadian Car and Foundry Co., returned to Montreal at the end of June after having been in Europe for several months, a considerable portion of his time having been spent in Petrograd, where he secured large orders for shells.

**Rev. J. Gilbert Baylis**, D.D., Canon of Christ Church Cathedral, Montreal, who died there, June 21, aged 76, came to Canada about 60 years ago, entered G.T.R. service soon after his arrival, and spent several years in it prior to entering college to study for holy orders.

**H. R. Bullen**, who has been Soliciting Freight Agent, G.T. Pacific Ry., Regina, Sask., was made the recipient of a present by the local staffs there recently on his transfer to San Francisco, Cal., as Soliciting Freight and Passenger Agent, G.T.R. and G.T. Pacific Ry.

**Lieutenant W. E. B. Schreiber**, who was reported recently to have been killed in active service in France, was well known in Quebec, where he had lived for six years since coming from England. He was for some time engaged on survey work on the National Transcontinental Ry.

**J. K. L. Ross**, director, C.P.R., is reported to have purchased the steam yacht Winchester in New York. She was built at Glasgow, Scotland, in 1913, and is 405 ft. long, with a draught of 6 ft., and is screw driven, burning oil. She is said to be capable of a speed of 30 knots.

**H. D. Leach**, whose body was found in the lake near Whitby, Ont., June 8, was formerly in the Canadian Freight Association's service at Toronto as an inspector. He had not been in that service for several months, and was undergoing treatment for mental trouble.

**J. H. Kennedy**, M. Can. Soc. C. E., Assistant Chief Engineer, Vancouver, Victoria and Eastern Ry. and Navigation Co., Vancouver, B. C., has resigned after 14 years with the company, which is a subsidiary of the Great Northern Ry. He has been connected with the Canadian Society of Civil Engineers since 1887.

**Lieut. R. Falshaw Morkill**, Signal Engineer, G.T.R., Montreal, who went to Europe with the first Canadian Overseas Expeditionary Force, has been promoted to a captaincy in the Royal Engineers, and has been mentioned for the military cross in connection with engineering work done at the Ypres Canal.

**C. F. Dibblee**, who died at Woodstock, Ont., June 1, aged 75, was a well known railway engineer and contractor, having carried out several contracts on the National Transcontinental Ry. He was father of H. B. Dibblee, A.M. Can. Soc. C.E., formerly Superintendent, National Transcontinental Ry., Edmundston, N.B.

**Lieut. H. F. H. Hertzberg**, son of A. L. Hertzberg, M. Can. Soc. C.E., Division Engineer, Ontario Division, C.P.R., Toronto, who was wounded at Langemarck, as mentioned in our last issue, and who had been treated in one of the hospitals in England, was struck by a motor truck in London, Eng., during June, and sustained some painful

but not serious injuries. He has received the military cross for his work at the front.

**D. A. Thomas**, who has been appointed to continue the manufacture of munitions in Canada and the United States on behalf of the British Government, is President of the Pacific, Peace River and Athabasca Ry., and the Peace River Tramway and Navigation Co., which have charters for the building of certain railways in the Peace River district of Alberta.

**J. F. Richardson**, who resigned his position as Superintendent of Telegraphs, Saskatchewan Division, C.P.R., Moose Jaw, recently, did not leave for Montreal as stated in our June issue. After nearly 32 years of service with the C.P.R. Telegraph Department from coast to coast he will take a rest for the summer with his parents at Lanigan, Sask., before taking up other work.

**Angus Sinclair**, railway contractor, Toronto, has gone to England, where his son, Lieut. Ian M. R. Sinclair, who went through the battle of Langemarck safely, but was wounded in the left leg with shrapnel in the Orchard battle subsequently, is convalescing. Lieut. Sinclair was in the 48th Highlanders, Toronto, but was transferred to the 5th Royal Highlanders of Montreal. Mrs. Angus Sinclair and Miss Dorothy Sinclair have also gone to England.

**James Russell**, who has been appointed General Manager, Denver and Rio Grande Rd., Denver, Col., was from 1879 to 1882 in G.T.R. service as agent and operator at various points, and from 1883 to 1887, operator and dispatcher, Canada Southern Ry. and Michigan Central Rd., and from 1887 to 1903, dispatcher, Chief Dispatcher and Superintendent, consecutively, St. Paul, Minneapolis and Manitoba Ry., and Great Northern Ry.

**A. D. MacTier**, General Manager, Eastern Lines, C.P.R., Montreal, received word, June 20, of the death of his father, at St. Andrews, Scotland, June 19, aged 93. The late Mr. MacTier was formerly Surgeon-General in the British Army at Bengal, India, and served through several Indian campaigns. Major H. M. MacTier, of the 2nd Battalion, 39th Garwhal Rifles, one of the Indian regiments now fighting in Europe, who was killed in action in March, was a brother of A. D. MacTier.

**Colin D. MacKintosh**, who has been appointed Superintendent, District 1, Alberta Division, C.P.R., Medicine Hat, was born at Auckland, New Zealand, Sept. 24, 1882, and entered C.P.R. service, Sept., 1905, since when he has been, to 1906 in junior positions in the Engineering Department; 1906 to 1909, transit man on location survey; 1909 to 1910, Resident Engineer; 1910 to 1911, Locating Engineer; 1911 to 1913, Assistant Engineer on Construction; 1913 to June, 1915, Division Engineer.

**J. R. Bruce**, ex Traffic Auditor, Intercolonial Ry., Moncton, N.B., died at his home at Shediac Cape, N.B., June 21, following an attack of influenza. He was born at Portsoy, Scotland, Sept. 23, 1848, and came to Canada at the age of 21. He entered I.R.C. service in 1873 as clerk in the General Manager's office, and was later transferred to the Paymaster's office, and in 1876 became chief clerk to the General Manager. He was appointed Traffic Auditor in 1883, and was superannuated in 1909.

**J. McMillan**, who was appointed Manager, C.P.R. Telegraphs, Montreal, recently, was presented at Winnipeg, May 31, with an illuminated map, by members of the Western Associated Press, Ltd., showing the wire mileage of the newspaper territory served by it, with the names of the papers concerned. Prior to his promotion to Montreal, Mr. McMillan had been General Superintendent, Western Lines, C.P.R. Telegraphs, at Winnipeg, for several years.

**Leon Spoor Landers**, who has been appointed Resident Engineer, District 4, Intercolonial Ry., Truro, N.S., was born at Farnham, Que., Dec. 15, 1888, and entered railway service in May, 1910, since when he has been, to Feb., 1911, rod man, C.P.R., Farnham, Que.; Feb., 1911, to Mar., 1912, draughtsman, Resident Engineer's office, Eastern Division, C.P.R., Montreal; Mar., 1912, to Oct., 1913, transit man, C.P.R.; Oct., 1913, to May, 1915, transit man, District 4, Intercolonial Ry., New Glasgow, N.S.

**George Geoffrey Grundy**, General Manager, Temiscouata Ry., who died of heart disease, at Riviere du Loup, Que., June 9, was born at Brecon, Wales, June 12, 1877, and entered railway service in Oct., 1893, since when he has been in the Engineering Department, Quebec Central Ry., Sherbrooke, Que.; on construction of Western Lines, C.P.R., and from 1897 to Oct. 1, 1909, Superintendent, Temiscouata Ry., Riviere du Loup, Que.; and from Oct. 1, 1909, until his death, Secretary and General Manager, same road.

A. H. Kendall,  
Assistant Works Manager, Angus Locomotive  
Shops, Canadian Pacific Railway.

**W. C. Sealy**, whose appointment as Master Mechanic, Ontario Lines, G.T.R., Toronto, was announced in our last issue, was educated at Stratford, Ont., and entered G.T.R. service there as an apprentice in 1901, when the company had just inaugurated its apprenticeship educational system. He remained at Stratford for 7½ years, as apprentice, charge hand and General Foreman of the shop, after which he was appointed General Foreman at Toronto, and in 1913 Assistant Master Mechanic, Ontario Lines, which position he retained until his present appointment.

**Albert Henry Kendall**, who has been appointed Assistant Works Manager, Locomotive Department, Angus Shops, C. P. R., Montreal, was born at Aspatria, Cumberland, England, Apr. 4, 1878, and entered railway service in June 1901, since when he has been, to Jan. 1904, Locomotive Foreman, C. P. R., Nakusp and Revelstoke, B. C.; Jan. to Nov. 1904, Locomotive Foreman, G. T. R., London, Ont.; Nov. 1906 to July 1913, gang foreman, erecting shop foreman and General

Foreman, Angus Shops, C. P. R., Montreal; July to Dec. 1913, Locomotive Inspector, C. P. R., Kingston, Ont.; Dec. 1913 to Apr. 1915, General Foreman, C. P. R., North Bay, Ont.

**W. A. Fitch**, who has been appointed Assistant Superintendent, Intercolonial Ry., Moncton, N.B., was born at Kentville, N.S., Nov. 25, 1867, and entered I.R.C. service, Oct., 1880, since when he has been, to Jan., 1882, telegraph operator at Folley, N.S.; Jan., 1882, to Apr., 1883, telegraph operator at Maccan, N.S., Sackville, N.B., and St. John, N.B.; Apr., 1883, to July, 1885, agent at Folley, N.S.; July, 1885, to Aug. 25, 1886, dispatcher's operator at Truro, N.S.; Aug. 25, 1886, to Mar. 30, 1903, dispatcher at Truro, N.S., Campbellton, N.B., Moncton, N.B., and Truro, N.S.; Mar. 30, 1903, to June 1, 1912, Chief Dispatcher at Sydney, N.S.; June 1, 1912, to May 23, 1915, Assistant Superintendent, Sydney, N.S.

**Mathew Kelly**, who has been appointed Resident Engineer, District 4, Ontario Division, C. P. R., Toronto, was born at Thamesville, Ont., July 6, 1874, and entered railway service, Aug. 1900, since when he has been, to Apr. 1902, bridge man, G. T. R., London, Ont.; May 1902 to Apr. 1905, bridge man, C. P. R., London, Ont.; May to July 1905, chain man, C. P. R., London, Ont.; Aug. 1905 to Mar. 1906, rodman, C. P. R., London, Ont.; Apr. 1906 to Apr. 1910, transit man, C. P. R., London, Ont.; May 1910 to Apr. 1911, Resident Engineer, C. P. R., Toronto; May 1911 to May 1913, Resident Engineer, C. P. R., White River, Ont.; June 1913 to June 1915, Resident Engineer, C. P. R., Brownville Jct., Me.

**John N. Beckley**, President, Toronto, Hamilton and Buffalo Ry., who has also assumed the position of General Manager, was born at Clarendon, N. Y., Dec. 30, 1848, was educated at Genesee Wesleyan Seminary and Genesee College, and was admitted to the bar in New York in June 1875. He removed to Rochester, N. Y., in May 1877, and was City Attorney there from 1884 to 1888. From 1890 to 1891 he was Secretary, Rochester Ry.; 1891 to 1892, Vice President, and 1892 to 1900, President, Rochester Ry. Co., and also from 1891 to 1896, President, Taunton St. Ry. Co., Taunton, Mass., President, Globe St. Ry. Co., Fall River, Mass., and President, Lawrence St. Ry. Co., Lawrence, Mass. He was elected President, Toronto Hamilton and Buffalo Ry. in 1895.

**Archibald McTavish**, who has been appointed Locomotive Foreman, G. T. Pacific Ry., Biggar, Sask., was born at Palmyra, Ont., May 19, 1875, and entered railway service, Apr. 1896, since when he has been, to Aug. 1898, fireman, Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont.; Aug. 1898 to Aug. 1902, not in railway service; Sept. 1902 to Oct. 1903, fireman, C. P. R., Brandon, Man.; Oct. 1903 to May 1908, locomotive driver, C. P. R., Brandon, Man.; May 1908 to Nov. 1910, locomotive driver, G. T. Pacific Ry., Melville, Sask.; Nov. 1910 to Nov. 1911, Road Foreman of Locomotives, same road, Melville, Sask.; Nov. 1911 to Sept. 1913, Locomotive Foreman, same road, Melville, Sask.; Sept. 1913 to Feb. 1915, locomotive driver, same road, Melville, Sask.; Feb. to May 1915, Locomotive Inspector, same road, Transcona, Man.

**Oliver Charles Bishop**, whose appointment as Superintendent, Sleeping, Dining Cars and News Service, Canadian Northern Ry., Winnipeg, was announced in our last issue, was born at Escanaba, Mich., Dec. 10, 1876, and entered railway service Sept., 1893, since when he has been, to Apr., 1895, waiter and pantryman, Minneapolis, St. Paul and Sault Ste. Marie Ry., Manistiquie, Mich.; May, 1895, to May, 1900, waiter, C.P.R., Montreal and Winnipeg; May, 1900, to May, 1903, conductor of dining car, C.P.R.,

Montreal and Winnipeg; June, 1903, to Nov., 1904, waiter on dining car, Canadian Northern Ry., Winnipeg; Nov., 1904, to June, 1909, dining car conductor, C.N.R., Winnipeg; June, 1909, to Sept., 1910, dining car inspector, C.N.R., Winnipeg; Sept., 1910, to May, 1915, Assistant Superintendent of Sleeping and Dining Cars and News Service, C.N.R., Winnipeg.

**Hon. Samuel Barker, M.P.**, who died suddenly at Hamilton, Ont., June 26, was born at Kingston, Ont., May 25, 1839. He practised as a lawyer in London, Ont., for many years, and was, at one time mayor of that city. He was Solicitor and General Counsel of the Great Western Ry. of Canada from 1872 to 1882, and General Manager, Northern and Northwestern Ry., Toronto, from 1883 to 1888, both railways now forming part of the G.T.R. He was President of the St. Louis, Kansas and South Western Ry. in 1899, and was also President of Muskoka and Georgian Bay Navigation Co. at one time. He acted as an arbitrator between the Toronto St. Ry. Co. and the City of Toronto in 1890.

**Sir John S. Hendrie**, who was created a Knight Commander of the Order of St. Michael and St. George, on the King's birthday, is Lieutenant-Governor of Ontario, and was for some years Chairman of the Railway Committee of the Ontario Legislature, in the government of which Province he was a minister without portfolio. He is a son of the late Wm. Hendrie, with whom he was associated in his early days as a railway contractor, building several railways in Canada and the United States. He has also been a director of the Northern Navigation Co. and the Niagara Navigation Co. He has been connected with military affairs since 1883, and holds the rank of lieutenant-colonel in the Canadian Artillery. He commanded the Canadian Artillery at the Queen Victoria diamond jubilee celebrations in London, Eng., in 1897, and was then created a Companion of the Victorian Order.

**Frederick Fanning Backus**, who has been appointed Assistant to the President, Toronto, Hamilton and Buffalo Rv., Hamilton, Ont., was born at Rochester, N.Y., June 4, 1860, and entered transportation service, June 4, 1876, since when he has been, to 1887, with Merchants Despatch Transportation Co.; 1877 to 1881, clerk, Local Freight Office, New York Central and Hudson River Rd.; 1881 to 1883, chief clerk to General Northwestern Agent, Lehigh Valley Rd., Rochester, N.Y.; 1883 to 1885, Travelling Freight Agent, same road, Buffalo, N.Y.; 1885 to Oct., 1886, Assistant Claim Clerk, General Office, Blue Line (New York Central Fast Freight Line), Rochester, N.Y.; Oct., 1886, to Apr. 7, 1887, Assistant to General Agent, same line, Toronto; Apr. 7, 1887, to Dec., 1897, General Agent, same line and Canada Southern Ry., Toronto; Dec. 1, 1897, to July 1, 1912, General Freight and Passenger Agent, Toronto, Hamilton and Buffalo Rv., Hamilton, Ont.; July 1, 1912, to June 11, 1915, General Traffic Manager, same road, Hamilton, Ont.

**S. W. Foster**, who died at Knowlton, Que., May 31, after a short illness, was born in 1827, and was chiefly known as a railway organizer. He took an active part in securing the construction of the Stanstead, Shefford and Chambly Rv., and later, in association with his brother, was connected with the promotion and construction of the South Eastern Rv. He also obtained a charter for the Montreal and Champlain Jct. Ry. for a branch from the Victoria Bridge to the International boundary, and later was actively connected with the G.T.R. At various times he was director, Montreal and Champlain Jct. Rv., President and Managing Director, Orford Mountain Ry.,

and President, United States and Canada Ry. He was admitted to the bar in 1854, and acted as a judge of the sessions for Bedford, Que., from 1869 to 1877. The funeral, which took place at Knowlton, June 2, was attended by a number of representatives of various transportation interests in Montreal, etc.

**Reuben S. Richardson**, who has been appointed Superintendent, District 3, National Transcontinental Ry., Winnipeg, was born at Napanee, Ont., Apr. 9, 1865, and entered transportation service in 1878, since when, to 1884, he filled various positions from messenger to freight clerk, operator, ticket clerk, switchman and baggage master, Canadian Express Co. and G.T.R., at various points; 1884 to 1887, brakeman, conductor, station agent and Soliciting Freight and Passenger Agent, Bay of Quinte Ry., at various points; 1897 to 1901, brakeman, conductor and Terminal Yardmaster, Canada Atlantic Ry., Ottawa; 1901 to 1907, General Yardmaster and acting Trainmaster, C.P.R., Smith's Falls and North Bay, Ont.; 1907 to 1911, Assistant Superintendent, Canadian Northern Ry., Montreal, Quebec and Ottawa; 1911 to 1913, Superintendent of Operating and Construction, MacDonnell and O'Brien, contractors on the National Transcontinental Ry., La Tuque, Que.; 1913 to May 1915, General Yardmaster of Terminals and Assistant Superintendent, Intercolonial Ry., Halifax, N.S., Moncton and St. John, N.B.

**Sir Henry Lumley Drayton**, who was created a knight bachelor on the King's birthday, was born at Kingston, Ont., Apr. 27, 1869, and educated in England and Canada, commencing his legal career in 1886 as a law student at Toronto. He was admitted to the Ontario bar in 1891 and commenced practice in Toronto, being appointed Assistant City Solicitor in 1895, resigning in Sept. 1900 to re-engage in private practice. On Jan. 29, 1904, he was appointed Crown Attorney for the county of York, Ont., and resigned in Nov. 1909 to resume private practice. He was appointed a K.C., Jan. 20, 1908, and on Apr. 25, 1910, was appointed counsel for the City of Toronto, and subsequently was one of Toronto's representatives on the Ontario Hydro Electric Power Commission. In July 1912 he was appointed Chief Railway Commissioner, following the death of J. P. Mabey. On the outbreak of war he was in London, Eng., and under the acting High Commissioner rendered good service in connection with the aiding of Canadians who were stranded at various points on the continent on account of the war.

**William A. Cowan, A.M.Can.Soc.C.E.**, who has been appointed Division Engineer, National Transcontinental Ry., Cochrane, Ont., was born at Galt, Ont., Jan. 22, 1877, and commenced railway service July 23, 1899, as bridge carpenter, C.P.R., London, Ont., where he remained until Sept. 25, 1901. He graduated from the School of Practical Science, Toronto, Apr. 30, 1904, and from May 1, 1904 to Feb. 1, 1905, was transit man, C.P.R., London and Toronto; Feb. 1 to Oct. 15, 1905, Assistant Engineer of Terminals, C.P.R., Toronto; Apr. 15, 1905 to Feb. 14, 1908, Resident Engineer, District 3, Ontario Division, C.P.R., Toronto; Feb. 19, 1908 to Nov. 1, 1909, Resident Engineer, District 2, Ontario Division, C.P.R., London, Ont.; Nov. 1, 1909 to Oct. 1, 1911, Resident Engineer, District 1, Eastern Division, C.P.R., Farnham, Que.; Oct. 1, 1911 to Nov. 1, 1912, Assistant Engineer, C.P.R., Montreal; Nov. 1, 1912 to Jan. 9, 1914, Superintendent, District 1, Atlantic Division, C.P.R., Brownville Jct., Me.; Jan. 10 to Mar. 15, 1914, Engineer of Construction, Halifax Ocean Terminals, Intercolonial Ry., Halifax, N.S.; Mar. 15, 1914 to May 1, 1915, Resident

Engineer, District 3, Intercolonial Ry., Truro, N.S.

**Sir Percy Girouard**, who has been appointed the chief organizer of the new Department of Munitions in England was engaged from 1886 to 1888 on construction work on the C.P.R. He subsequently entered the Royal Engineers as 2nd Lieutenant and became Traffic Manager of the Royal Arsenal railways, Woolwich, England. He was appointed to attend the International Railway Congress in 1895, and was the author of a paper in 1891 on engineering, wherein he outlined a plan for the protection of the coast of England. In 1896 he became a member of the Dongola Expedition under Major General Sir Herbert Kitchener, now Earl Kitchener, as Director of Railways, and was in charge of the railway battalion during the campaign, with the rank of Bimbashi, or Major, in the Egyptian Army. He was also associated with Sir Herbert Kitchener in the last Boer war, his work relating mainly to railways, and was subsequently appointed Governor of Nigeria, West Africa, chiefly with the view of developing the Government railway system there. On the completion of his term in that position he became Vice President, Armstrong, Whitworth and Co., which position he resigned at the commencement of the war, on receiving an appointment in connection with the supply of munitions, under the War Office.

**John Murray Cameron**, who has been appointed General Superintendent, Alberta Division, C.P.R., Calgary, was born at Lochabar, N.S., Dec. 18, 1867, and entered railway service, July 1883, since when he has been, to Dec. 1883, laborer, C.P.R., Moose Jaw, Sask.; Dec. 1883, to Apr. 1884, wiper, C.P.R., Moose Jaw, Sask.; Apr. 1884 to Apr. 1885, bridge and building laborer, Western Division, C.P.R.; Apr. 1885 to Feb. 1886, pump man, Western Division, C.P.R.; Feb. 1886, to Oct. 1888, brakeman and train baggage man, C.P.R., Medicine Hat, Alta.; Nov. 1888 to June 1889, brakeman and conductor, Northern Pacific Ry., Tacoma, Wash.; June 1889 to Dec. 1890, brakeman and conductor, Oregon and Washington Territory Rd., Walla Walla, Wash.; Dec. 1890 to July 1892, conductor, Columbia and Puget Sound Rd., Seattle, Wash.; July 1892 to June 1893, brakeman and conductor on construction, Great Northern Ry., Seattle and Spokane, Wash.; June 1893 to Oct. 1895, conductor, G.N.R., Great Falls, Mont.; Oct. 1895 to Sept., 1899, conductor, Kaslo and Slocan Ry. (G.N.R.), Kaslo, B.C.; Sept., 1899 to May 1900, conductor and construction trainmaster, G.N.R., Bonners Ferry, Idaho; May 1900 to Aug. 1907, brakeman and conductor, C.P.R., Nelson, B.C.; Aug. 1907 to Oct. 1909, Trainmaster, C.P.R., Nelson, B.C.; Oct. 1909 to June 1910, Trainmaster, C.P.R., Vancouver, B.C.; June to Dec. 1910, Superintendent, C.P.R., Moose Jaw, Sask.; Jan. 1911 to Dec. 1914, Superintendent, C.P.R., Medicine Hat, Alta.; Jan. to June, 1915, Assistant General Superintendent, British Columbia Division, C.P.R., Vancouver.

**Wood Borers in Halifax Harbor**—In excavating for the new pier 2 of the Intercolonial Ry. at Halifax, N.S., a number of old pine stumps were found. They were the remains of piles which had been eaten through by limnoria below low water level. It was found that uncreosoted timber was eaten from extreme low water down to the mud level even when that was 30 ft. below. Several creosoted hard pine piles that had been in the water about 4 years were found to have been attacked to a depth of about 1/2 in. No signs of the teredo were found; apparently, all of the boring in this harbor is confined to limnoria.

## Railway Rolling Stock Notes.

The C.P.R., between Apr. 15 and June 15, received 1 steel mail car and 1 class D1 passenger car from its Angus shops, Montreal.

The National Steel Car Co., according to a 11-month report, has secured an order for 1,300 freight cars for the North Atlantic of France.

The Grand Trunk Pacific Ry. has received 34 express refrigerator cars, nos. 6013 to 6046, from Canadian Car and Foundry Co., making 47 delivered out of an order for 50.

The Russian Government has ordered 100 decapod (2-10-0) superheater locomotives, 5 ft. gauge, and of approximately 197,000 lbs. each, from American Locomotive Co., Schenectady, N.Y.

The Eastern Car Co., which has received an order for 2,000 box cars from the Russian Government, is reported to have received a large order for freight cars from the French Government.

The Intercolonial Ry. has received 15 box cars, 80,000 lbs. capacity, from Nova Scotia Car Works; 94 all steel general service cars, 100,000 lbs. capacity, from Eastern Car Co., and 2 switching locomotives from Canadian Allis Chalmers Ltd.

Aemilius Jarvis, President, Canadian Locomotive Co., Kingston, Ont., on his return from Europe recently announced that the Russian Government had given the company an order for 50 decapod (2-10-0) locomotives, at an approximate cost of \$1,250,000.

The Edmonton, Dunvegan & British Columbia Ry. has been ordered by the Board of Railway Commissioners to remove its locomotive no. 3 from service until it is put in a proper condition for safe operation to the satisfaction of one of the board's inspectors.

The Canadian Government Railways have ordered 650 box cars, 40 tons capacity, from Canadian Car and Foundry Co.; 350 box cars, 40 tons capacity, from National Steel Car Co., and 15 consolidation locomotives from the Canadian Locomotive Co. It is expected that these will be used principally on the National Transcontinental Ry.

In addition to the order from the Russian Government, to the Canadian Locomotive Co., for 50 locomotives, it is reported that the same government has ordered 250 locomotives from the Baldwin Locomotive Works, and 100 locomotives from the American Locomotive Co., while it is also stated that the Belgian Government has ordered 20 locomotives from the American Locomotive Co.

With reference to the orders for rolling stock placed by the Russian Government, it is stated that negotiations are still proceeding for such orders aggregating 22,000 cars. A small portion of the order has been placed, viz., that with the Eastern Car Co., for 2,000 cars, which we have already mentioned, but it is stated that no other contracts have actually been made for the balance owing to a difficulty regarding financing.

Press reports stated recently that Hon. F. Cochrane, Minister of Railways, and F. P. Gutelius, General Manager, Canadian Government Railways, were visiting the U.S. for the purpose of buying rolling stock to be used in connection with the Government operation of the National Transcontinental Ry. and the Grand Trunk Pacific Ry. Lake Superior Branch. Enquiry on our part elicits the information that the report was unfounded. As mentioned on this page, orders have been placed in Canada for 15 locomotives and 1,000 box cars.

Canadian Government Railways have ordered 650 box cars, 40 tons capacity, from Canadian Car and Foundry Co., 500 of which will be built at the Dominion and Turcot shops, Montreal, and 150 at the Amherst, N.S., shops. Delivery is required by Sept. 1. Following are some of the details:

Extreme width ..... 9 ft. 3½ ins.  
Width inside ..... 8 ft. 6½ ins.  
Length inside ..... 36 ft.  
Width of door opening ..... 5 ft.  
Height of door opening ..... 7 ft. 8 7-16 ins.  
Distance centre to centre of trucks, 26 ft. 10 ins.  
Height top of rail to top of brake mast ..... 13 ft. 10 ins.  
Height top of rail to top of floor ..... 4 ft. 0¼ ins.

The Alberta and Great Waterways Ry. has received one 10 wheel passenger locomotive equipped with superheater, from Canadian Locomotive Co. Following are the chief details,—

Weight on drivers ..... 102,000 lbs.  
Weight, total ..... 125,000 lbs.  
Wheel base, rigid ..... 11 ft. 10 ins.  
Wheel base, total engine ..... 21 ft. 7 ins.  
Wheel base, engine and tender ..... 49 ft. 4¼ ins.  
Heating surface, firebox ..... 123.5 sq. ft.  
Heating surface, tubes ..... 1,047.5 sq. ft.  
Heating surface, arch tubes ..... 15 sq. ft.  
Heating surface, total ..... 1,186 sq. ft.  
Driving wheels, diar. .... 63 ins.  
Driving wheel centres ..... Cast iron  
Driving journals, diar. and length. 8½ by 10 ins.  
Cylinders, diar. and stroke ..... 19 x 26 ins.  
Boiler, type ..... Radial stay  
Boiler pressure ..... 180 lbs.  
Tubes, no. and diar. .... 122, 2 ins.; 18, 5½ ins.  
Tubes, length ..... 11 ft. 10 ins.  
Injectors ..... Locomotive type  
Safety valves ..... 2, 3 in. locomotive pop.  
Brakes ..... Westinghouse American  
Packing ..... Metallic  
Superheater ..... Schmidt type A  
Weight of tender loaded ..... 116,500 lbs.  
Tank, type ..... U type  
Water capacity ..... 5,000 imp. gals.  
Coal capacity ..... 9 tons  
Truck, type ..... 4 wheel, arch bar  
Truck wheel diar. .... 30 ins.  
Truck wheel type. Steel tired, cast iron centre  
Journal, diar. and length ..... 5 x 9 ins.  
Brake beam ..... Simplex

**Railway Lands Patented.** Letters patent were issued during April, concerning Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry. ....	3,370.40
Canadian Northern Ry. ....	482.25
Canadian Pacific Ry. grants ..... 69.81	
Canadian Pacific Ry. roadbed and station grounds ..... 6.16	
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co. ....	1,485.70
<b>Total</b> .....	<b>5,414.32</b>

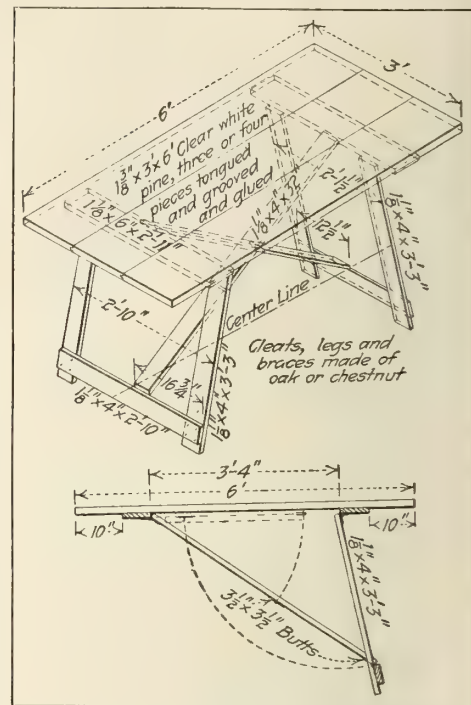

**C.N.R. Locomotive Men's Wages.**—A board of conciliation has been appointed to investigate complaints of the company's locomotive drivers and firemen on the eastern lines, who are asking for working conditions similar to those obtaining on the western lines. F. H. McGuigan, a former Vice President of the G.T.R., Toronto, will represent the company; D. Campbell, Winnipeg, the men, and Judge Coatsworth, Toronto, has been appointed Chairman.

**The Canadian Overseas Railway Construction Corps,** organized by the C.P.R., under command of its Engineer of Construction, Lt. Col. Ramsey, sailed from St. John, N.B., June 14, on the s.s. Herschel, and arrived safely at Davenport, Eng. Full particulars of this corps were given in Canadian Railway and Marine World for April and June, pgs. 129 and 219.

**The Imperial Privy Council** has decided in favor of the C.P.R., in an appeal against the judgment of the Quebec courts granting \$12,000 to a brakeman named Frechette for injuries. The Privy Council's judgment stating, "While sympathizing with the respondent, their Lordships are clearly of the opinion that he was the victim of his own negligence."

## A Field Draughting Table.

Engineering operations which require temporary offices require also portable draughting boards or tables. A draughting board resting on horses or trestles is unsatisfactory, since it lacks stability, and the trestles take up valuable space when packed in a vehicle. The accompanying illustration

shows a convenient draughting table patterned after a folding table of older design. This one, however, is steadier when open and more compact when closed. It has been tried out long enough to demonstrate its durability.—W. L. Webb, Philadelphia, Penn., in Engineering News.

## National Transcontinental Railway's Operation.

An Ottawa press report, June 23, says the negotiations between the Department of Railways and the Grand Trunk Pacific Ry. respecting the leasing of the latter's Lake Superior branch by the Government have been completed, and that a lease, in which the rental is fixed at \$600,000 a year, only awaits ratification by the Government. This amount is said to represent interest at the rate of 4½% upon the ascertained cost of the construction of the branch, and its terminal facilities at Fort William, Ont.

**The Canadian Northern Ry. Toronto Employees'** third annual picnic took place at Orillia, Ont., June 26, some 1,100 being present.

Arrangements have been made with the British Government whereby the C.P.R. will act in connection with the accumulation and shipping of munitions and war supplies in Canada. Sir Thomas Shaughnessy, who was in England in June making the necessary arrangements, is reported to have stated that the C.P.R. intended to reconstruct its manufacturing equipment so that it can make any and every sort of material that may be called for by the War Office, and the company's Purchasing Department had been placed at the British Government's disposal, and the officials would see to the shipping of all supplies.

## Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canada Southern Ry.**—F. D. POWELL has been appointed Commercial Agent, C. S.R., operating over Michigan Central Rd. via Buffalo, and the Pennsylvania Rd. and connections, vice L. S. Livingston transferred. Office, 635 La Salle Station, Chicago, Ill.

**Canadian Government Railways.**—W. R. DEVENISH, heretofore Division Engineer, I.R.C. and P.E.I.R., Moncton, N.B., has been appointed Principal Assistant Engineer, Canadian Government Railways. Office, Moncton, N.B.

A. M. HARVEY has been appointed Signal Supervisor. Office, Moncton, N.B.

See also Intercolonial Ry. and National Transcontinental Ry.

**Canadian Pacific Ry.**—G. HODGE, heretofore General Superintendent, Eastern Division, Montreal, has been appointed Assistant to General Manager, Eastern Lines. Office, Montreal.

L. C. ORD, heretofore Assistant Master Car Builder, Eastern Lines, Montreal, has been appointed Assistant Works Manager, Angus Car Shops, Montreal.

A. H. KENDALL, heretofore General Foreman, Locomotive Shops, North Bay, Ont., has been appointed Assistant Works Manager, Angus Locomotive Shops, Montreal, vice G. I. Evans, Superintendent Locomotive Shops, transferred.

W. TANSLEY, heretofore Assistant Superintendent, District 3, Eastern Division, Smith's Falls, Ont., has been appointed Acting Superintendent of Car Service, Eastern Lines, vice F. A. Gascoigne, commanding the 60th Battalion Canadian Expeditionary Force. Office, Montreal.

A. E. STEVENS, heretofore General Superintendent, Alberta Division, Calgary, has been appointed General Superintendent, Eastern Division, vice G. Hodge, promoted. Office, Montreal.

E. J. MELROSE, heretofore Assistant Superintendent, District 2, Eastern Division, Montreal, has been appointed Assistant Superintendent, District 3, Eastern Division, vice C. W. Lott, transferred. Office, Montreal.

R. G. EDWARDS, heretofore General Yardmaster, Smith's Falls, Ont., has been appointed Assistant Superintendent, District 2, Eastern Division, vice E. J. Melrose, transferred. Office, Montreal.

H. S. BARE, heretofore Resident Engineer, Angus Shops District, Montreal, has been appointed Resident Engineer, District 2, including the Angus Shops territory, which has been abolished as a separate district, vice N. E. Gutelius, transferred. Office, Montreal.

A. S. PIERS, heretofore Real Estate Agent, has been appointed Manager, Real Estate Department. Office, Montreal.

C. W. LOTT, heretofore Assistant Superintendent, District 3, Eastern Division, Montreal, has been appointed Assistant Superintendent, District 5, Eastern Division, vice W. Tansley, promoted. Office, Smith's Falls, Ont.

J. T. PEARSON, heretofore night yardmaster, has been appointed General Yardmaster, Smith's Falls, Ont., vice R. G. Edwards, promoted.

A. P. WALKER, heretofore Division Surveyor, Ontario Division, Toronto, has been appointed Assistant Division Engineer, vice G. H. Davis, transferred, and his former position has, for the present, been abolished. Office, Toronto.

J. A. IRVINE, heretofore Resident Engineer, District 4, Ontario Division, Toronto, has been appointed Resident Engineer, District 3, Ontario Division, vice D. M. Ewart, who has joined the 2nd Field Company, Canadian Engineers, for active service in Europe. Office, Toronto.

M. KELLY, heretofore Resident Engineer, Brownville Jct., Me., has been appointed Resident Engineer, District 4, Ontario Division, vice J. A. Irvine, transferred. Office, Toronto.

W. WELLS, heretofore General Foreman, McAdam, N.B., has been appointed General Foreman, North Bay, Ont., vice A. H. Kendall, promoted.

C. E. LEGG has resumed his position as General Agent, Fort William, Ont., and his former position of Trainmaster, Winnipeg Terminals, has been abolished.

O. GLEASON, heretofore General Agent, Fort William, Ont., has been appointed Agent, Union Stockyards, Winnipeg.

T. C. MACNABB, heretofore Resident Engineer, District 1, Saskatchewan Division, Regina, has been appointed Division Engineer, Saskatchewan Division, vice C. D. Mackintosh, promoted. Office, Regina.

G. A. DELACHEROIS, heretofore Resident Engineer, Saskatoon, Sask., has been appointed Resident Engineer, District 1, Saskatchewan Division, vice T. C. Macnabb, promoted. Office, Regina, Sask.

E. A. KELLY, heretofore Resident Engineer, Nelson, B.C., has been appointed Resident Engineer, Saskatoon, Sask., vice G. A. Delacherois, transferred.

J. M. CAMERON, heretofore Assistant General Superintendent, British Columbia Division, Vancouver, has been appointed General Superintendent, Alberta Division, vice A. E. Stevens, transferred. Office, Calgary.

M. E. THORNTON, heretofore District Representative, Land Department, Department of Natural Resources, Chicago, Ill., has been appointed Superintendent of Agencies, same department, Calgary, Alta.

C. D. MACKINTOSH, heretofore Division Engineer, Moose Jaw, Sask., has been appointed Superintendent, District 1, Alberta Division, vice W. A. Mather, promoted. Office, Medicine Hat.

A. DEHARNAIS has been appointed Roadmaster, Coutts, Cardston and Stirling Subdivisions, with head-quarters at Langton, Alta.

W. A. MATHER, heretofore Superintendent, District 1, Alberta Division, Medicine Hat, has been appointed Assistant General Superintendent, British Columbia Division, vice J. M. Cameron, promoted. Office, Vancouver.

R. G. THOMPSON, heretofore Assistant Colonization Agent, C.P.R., has been appointed District Representative, Land Branch, Department of Natural Resources, Chicago, Ill., vice M. E. Thornton, promoted.

**Central Vermont Ry.**—J. E. MAUN, heretofore Assistant Superintendent, Montpelier, Vt., has been appointed Superintendent, Northern Division, vice S. S. Russell, whose appointment as Special Agent was announced in our last issue. Office, St. Albans, Vt. The position of Assistant Superintendent at Montpelier has been abolished.

G. W. BROOM is reported to have been appointed Assistant to Superintendent, and Chief Dispatcher, Northern Division, St. Albans, Vt.

**Grand Trunk Pacific Ry.**—T. W. McDONAGH has been appointed Travelling Passenger Agent, Winnipeg, vice H. J. Lambkin, assigned to other duties.

J. A. MITCHELL, heretofore Locomotive

Foreman, Biggar, Sask., has been appointed General Foreman, Transcona Shops, Transcona, Man.

A. McTAVISH, heretofore Locomotive Inspector, Transcona, Man., has been appointed Locomotive Foreman, Biggar, Sask., vice J. A. Mitchell promoted.

N. C. HOOPER has been appointed Car Foreman, Smithers, B.C., vice A. McKinnon transferred.

A. McKINNON, heretofore Car Foreman, Smithers, B.C., has been appointed Car Foreman, McBride, B.C., vice W. B. McNiece transferred.

W. G. CONNOLLY, heretofore in the City Ticket Office, Vancouver, B.C., is reported to have been appointed City Passenger and Ticket Agent there.

W. B. McNIECE, heretofore Car Foreman, McBride, B.C., has been appointed Car Foreman, Prince Rupert, B.C., vice W. Thompson assigned to other duties.

H. R. BULLEN, heretofore Soliciting Freight Agent, Regina, Sask., is reported to have been appointed Soliciting Freight and Passenger Agent, G.T.R. and G.T.P.R., San Francisco, Cal.

The following station agents have been appointed: Graham, Ont., J. T. Hamlin; Mawer, Sask., W. G. Stimpson; Battleford, Sask., W. Willis. The stations at Uno, Man., and Griffin, Sask., have been closed.

**Grand Trunk Ry.**—A. E. CLARE has been appointed City Freight Agent, Montreal, vice H. A. Laird resigned to enter Canadian Government Railway's service.

H. R. BULLEN, heretofore Soliciting Freight Agent, G.T.P.R., Regina, Sask., is reported to have been appointed Soliciting Freight and Passenger Agent, G.T.R. and G.T.P.R., San Francisco, Cal.

The following station agents have been appointed: Elmvale, Ont., R. M. Black; Britton, Ont., passenger, Mrs. A. Hoag; Centralia, Ont., S. D. Bishop; outside agency, Clifton Hotel, Niagara Falls, Ont., G. J. McNamara. The outside agencies at Hemmingford, Que., and Perth, Ont., have been closed.

**Intercolonial Ry.**—C. W. PRICE, heretofore Chief Dispatcher, Moncton, N.B., has been appointed Assistant Superintendent, District 4, vice W. A. Fitch transferred. Office, Sydney, N.S.

L. S. LANDERS, heretofore transit man, District 4, Intercolonial Ry., New Glasgow, N.S., has been appointed Resident Engineer, District 3, vice W. A. Cowan transferred to National Transcontinental Ry. Office, Truro, N.S.

G. FEETHAM, heretofore locomotive driver, has been appointed acting Roundhouse Foreman, Truro, N.S., vice W. Davidson, who has left the service.

W. A. FITCH, heretofore Assistant Superintendent, District 4, Sydney, N.S., has been appointed Assistant Superintendent, District 3, vice R. S. Richardson, transferred to National Transcontinental Ry. Office, Moncton, N.B.

A. R. MACGOWAN has been appointed Division Engineer, I.R.C. and P.E.I.R., vice W. R. Devenish, promoted. Office, Moncton, N.B.

**London and Port Stanley Ry.**—W. M. GUY, heretofore chief clerk, Pere Marquette Rd., London, Ont., has been appointed General Traffic Manager, L. & P.S.R. Office, London, Ont.

**National Transcontinental Ry.**—As mentioned in Canadian Railway and Marine World for June, the National Transcontinental Ry. from Moncton, N.B., to Graham, Ont., is being operated as part of the Government railway system. F. P. Gutelius, General Manager, has announced that the jurisdiction of the following general officials has been extended over the N.T.R.: C. A. Hayes, General Traffic Manager; S. L.

Shannon, Comptroller and Treasurer; H. F. Alford, General Solicitor and General Claims Agent; R. W. Simpson, General Fuel and Tie Agent; H. H. Melanson, General Passenger Agent; G. E. Smart, Master Car Builder; L. Lavoie, Purchasing Agent; W. F. Taylor, General Storekeeper; W. N. Rippey, Superintendent Car Service; all with offices at Moncton, N.B.

C. A. Hayes, General Traffic Manager, has issued a circular, announcing the extension of the jurisdiction of the following officials of the Traffic Department over the N.T.R.: D. A. Story, General Freight Agent; H. H. Melanson, General Passenger Agent; A. T. Weldon, Assistant General Freight Agent; R. E. Perry, Assistant General Freight Agent; O. Cameron, Freight Claims Agent; G. C. Allen, General Baggage Agent; all with offices at Moncton, N.B.

We have been officially advised that the Grand Trunk Pacific Ry. Lake Superior Branch has not yet been taken over by the Government, and that therefore the jurisdiction of R. S. RICHARDSON, whose appointment as Superintendent, District 3, Armstrong to Winnipeg, and Superior Jct. to Fort William, with office at Armstrong, Ont., was announced in our last issue, is confined to the territory between Lake Superior Jct. and Armstrong, but it is expected that the Lake Superior Branch will shortly be taken over, when he will cover the whole territory, with office at Fort William, Ont.

C. WHITE has been appointed Roundhouse Foreman, National Transcontinental Ry., Edmundston, N.B.

A. BABIN, formerly Resident Engineer on Construction, La Tuque, Que., has been appointed Resident Engineer, Maintenance of Way, District 1, N.T.R., Quebec to O'Brien. Headquarters, Quebec, Que.

J. E. LePAGE has been appointed Division Freight Agent, N.T.R., west of Edmundston, N.B., to O'Brien, Que. Office, Quebec, Que.

A. BEAUSEIGLE has been appointed Roadmaster, District 1, N.T.R., at Parent, Que.

M. CASEY has been appointed Roadmaster, District 1, N.T.R., at Parent, Que.

S. G. TIFFIN, heretofore Division Freight Agent, Montreal, has been appointed Assistant General Freight Agent in immediate charge of traffic on the Intercolonial Ry. west of Campbellton, N.B., and on the N.T.R. west of Edmundston, N.B., to Graham, Ont. Office, Montreal.

L. G. ROBLIN, heretofore District Master Mechanic, District 1, Lake Superior Division, C.P.R., North Bay, Ont., has been appointed General Master Mechanic, N.T.R., Quebec to Winnipeg, and the Lake Superior Branch of the G.T. Pacific Ry., from Fort William to Superior Jct. Office, Cochrane, Ont.

W. A. COWAN, heretofore Resident Engineer, District 3, Intercolonial Ry., Truro, N.S., has been appointed Division Engineer, N.T.R., Cochrane, Ont.

A. H. WILLET has been appointed Assistant Division Engineer, N.T.R., Cochrane, Ont.

J. E. GIBAUT has been appointed Resident Engineer, District 2, N.T.R. Headquarters, Cochrane, Ont.

H. A. LAIRD, heretofore City Freight Agent, G.T.R., Montreal, has been appointed Division Freight Agent, N.T.R., O'Brien, Que., to Graham, Ont. Office, Cochrane, Ont.

W. J. CHISHOLM has been appointed Bridge and Building Master, N.T.R., Cochrane, Ont.

P. HOUSTON has been appointed Roadmaster, N.T.R., Cochrane, Ont.

J. WILSON has been appointed Roadmaster, N.T.R., Grant, Ont.

Pere Marquette Rd.—L. C. WHITE has been appointed General Car Foreman, St. Thomas, Ont., vice A. Ward, who has left the service.

R. W. YOUNG, Division Freight and Passenger Agent, Pere Marquette Rd., London, Ont., has had his office moved to St. Thomas, Ont., the office at London having been closed.

Quebec Central Ry.—J. T. REID, heretofore Assistant Superintendent, has been appointed Superintendent, vice J. Fortin, who has asked to be relieved of the responsibilities of the position, owing to impaired health. He has been assigned to special duties in the General Manager's office. Office, Quebec, Que.

Southern New England Rd.—J. E. O'DONNELL has been appointed Assistant Engineer, Providence, R.I.

Temiscouata Ry.—C. A. STEWART, Accountant, has been appointed acting Manager, vice G. G. Grundy, General Manager, deceased. Office, Riviere du Loup, Que.

Timiskaming and Northern Ontario Ry.—T. J. GRACEY has been appointed Accountant, vice H. F. Macdonald resigned. Office, Toronto.

D. HAMILTON has been appointed Assistant Accountant, Toronto.

R. H. MITCHELL, heretofore Traffic Accountant, North Bay, Ont., has been appointed Auditor and Car Accountant.

The Superintendent's Accountant's office at North Bay, Ont., has been abolished.

Toronto, Hamilton & Buffalo Ry.—J. N. BECKLEY, President, Rochester, N.Y., has assumed the duties of General Manager as far as necessary owing to the resignation of J. W. Eber, heretofore General Manager, on account of ill health.

F. F. BACKUS, heretofore General Traffic Manager, has been appointed Assistant to the President, and represents him at Hamilton in connection with the conduct of the company's business. All reports and correspondence from departments heretofore made to the General Manager are made to him. Office, Hamilton, Ont.

G. C. MARTIN, General Freight and Passenger Agent, now has charge of the Traffic Department, the position of General Traffic Manager having been abolished.

### Railway Finance, Meetings, Etc.

Canadian Northern Ry.—A supplementary trust deed made between the C.N.R. and the British Empire Trust Co., London, Eng., and the National Trust Co., Toronto, respecting the company's 5% income charge convertible debenture stock has been filed with the Secretary of State at Ottawa.

Canadian Pacific Ry.—The Board of Railway Commissioners is being asked to approve a lease of the Glengarry and Stormont Ry. to the C.P.R. The G. and S. R., which extends from the C.P.R. at St. Polycarpe, Que., to Cornwall, Ont., was opened for traffic, May 31.

Dominion Steel Corporation's Railways.—The President, J. H. Plummer, in his report at the annual meeting, June 24, said:—"I should include a few words about our important properties the Sydney and Louisburg Ry., and the Cumberland Ry. In addition to the carriage of the company's coal, which in itself constitutes a heavy traffic, these lines carried during the year 214,533 passengers, with passenger earnings of \$64,901.25. The freight earnings, apart from amounts charged to the Dominion Coal Co. were \$157,923.01. Their combined equipment consists of 33 locomotives, 13 passenger cars, 111 freight cars and 1,968 cars for the carriage of coal."

The Grand Trunk Ry. offered in England from June 2 to 5 an issue of £2,500,000 five-year 5½% secured notes dated July 1, 1915, due July 1, 1920, interest payable half yearly, the issue price being 99. The proceeds are to be applied in repayment of £2,000,000 of one year bills maturing July 15, 1915, and the balance to the company's general purposes. The prospectus stated that notwithstanding the far-reaching results of the war and the effect of two bad harvests the surplus net earnings in excess of fixed charges in 1914 were £425,000. As bills for £2,000,000 are to be paid out of the proceeds of this issue the increase in interest charges will amount to only £37,500 a year. A London cablegram of June 8 stated that the public subscriptions absorbed 56% of the offering, the underwriters taking the balance.

Montreal and Vermont Jct. Ry.—The officers and directors for the current year are: Chairman, E. J. Chamberlin; President, E. C. Smith; Vice President, J. G. Smith; Secretary and Treasurer, G. R. Hurlburt; Assistant Secretary and Treasurer, W. H. Chaffee; other directors, G. C. Jones and F. Smith; E. J. Chamberlin, E. C. Smith and J. G. Smith are Managing Directors.

Temiscouata Ry.—Net earnings for Feb., \$965, and for two months ended Feb. 28, \$4,991.

Toronto, Hamilton & Buffalo Ry.—In an extract from the Michigan Central Rd.'s report for the past fiscal year published in this department in June, it was stated that the M. C. R. had advanced to the T. H. & B. R. \$100,000,000 as its one-sixth proportion of the estimated cost of construction of the Erie & Ontario Ry. The amount advanced, it is almost needless to say, was \$100,000, the extra figures having been added by a typographical error.

The directors for the current year are: A. H. Smith, W. H. Newman, H. B. Ledyard, J. N. Beckley, Sir Thomas Shaughnessy, D. McNicoll, W. K. Vanderbilt, Jr., Sir Edmund Osler, D. W. Saunders, W. P. Torrance and W. L. Scott.

White Pass and Yukon Route.—Gross earnings from Jan. 1 to Apr. 21, \$57,976 against \$83,404 for same period 1914.

John Bertram & Sons Co., Ltd., machine tool manufacturers, Dundas, Ont., have offered to the Dominion Government the free use of the Wilson residence property in Dundas, which the company owns, as a home for convalescing soldiers for whatever time it may be required. The house, which has a broad verandah, is situated in about an acre of ground which is shaded by large elms and well supplied with fruit trees. It will accommodate from 30 to 40 men.

Smoke Prosecution.—The C. P. R. was fined \$25 in the Ottawa Police Court, June 8, for permitting black smoke to issue from the locomotive house chimneys on June 29. The smoke was described as being dense for 39 minutes in one hour and for 46 minutes in another hour. On the last occasion fence it appealed and the conviction was when the company was fined for a similar of quashed.

G. T. Pacific Ry. Hotel at Edmonton. The Hotel Macdonald, built by the G. T. Pacific Ry. at Edmonton, Alta., has been opened for business, with L. Low as Manager. There are six bedroom floors with 34 bedrooms on each, all with outside light. Of these, 22 on each floor have private baths, and the balance are equipped with running water. All have telephones.

A. McTavish, Locomotive Foreman, Grand Trunk Pacific Ry., Biggar, Sask., writes:—"I have taken Canadian Railway and Marine World for some 3 or 4 years and am pleased every time I get it."

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, Telegraph, and Railway and  
Canal Contractors' Interests.  
Official Organ of the various Canadian  
Transportation Associations.  
Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,  
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A.Can.Soc.C.E.,  
Managing Director and Editor-in-Chief.  
AUBREY ACTON BURROWS - Secretary and  
Business Manager.

Associate Editor - JOHN KEIR  
Associate Editor - DONALD F. KEIR  
Mechanical Editor - FREDERICK H. MOODY, B.A.Sc.

Canadian Business Representative - W. H. HEWITT  
70 Bond Street, Toronto

United States Business Representative, A. FENTON WALKER  
143 Liberty Street, New York, N.Y.

European Business Representative - J. MEREDITH MCKIM  
16 Regent St., London, S.W., Eng.

Authorized by the Postmaster General for  
Canada, for transmission as second class mat-  
ter.

Entered as second class matter, July 25, 1913,  
at the Postoffice at Buffalo, N.Y., under the  
Act of Congress of March 3, 1879.

SUBSCRIPTION PRICE, including postage  
anywhere, \$2 a year.

SINGLE COPIES, 20 cents each, including  
postage.

The best and safest way to remit is by express  
money order. Where one cannot be obtained, a  
post office money order, or bank draft, payable  
at par in Toronto, may be sent. Cheques or  
drafts not payable at par in Toronto cannot be  
accepted. Remittances should be made payable  
to Canadian Railway and Marine World.

## Sale of Alaska Northern Railway Ques- tioned.

Washington, D.C., press dispatch, June 15.—Questioning the right of some of the defendants to sell the Alaska Northern Ry. to the U. S. Government to form part of the government railway in Alaska, E. A. Shedd & Co., bankers, of Chicago, J. R. Thompson, City Treasurer, of Chicago, and others, to-day filed suit in the Supreme Court of the District of Columbia asking that a receiver be appointed to receive the purchase price. Some of the defendants are: F. K. Lane, Secretary of the Department of the Interior; W. G. McAdoo, Secretary of the Treasury; J. Burke, Treasurer of the United States; the American Surety and Trust Co., the Sovereign Bank of Canada, the International Assets, Limited, W. E. Stavert, F. G. Jemmett, W. J. Boland and G. T. Clarkson, of Toronto.

Associate Justice W. P. Stafford issued a rule for the defendant Government officials to show cause on June 18 why they should not be restrained by an order of the court "from paying defendants Stavert, Jemmett, Boland, G. T. Clarkson or the International Assets, Limited, \$1,150,000, or any part thereof, and the American Security & Trust Co. from surrendering possession of the stocks, bonds and securities, the subject of the contract mentioned in the bill."

Seward, Alaska, press dispatch, June 19: "Preparations by the Alaskan Engineering Commission to take over the Alaska Northern Ry. next month were practically completed to-day. The commissioners have gone ahead with their plans without regard to the suit brought in Washington, D.C., by the bondholders of the old Alaska Central Rd. to prevent the Government making payment to the Canadian bondholders of the reorganized Alaska Northern."

A locomotive failure for every 18,000 miles for a regularly assigned locomotive, as against 6,000 miles per failure with pooled locomotives, over a 6 months period, is the experience of the St. Louis and San Francisco Rd. Changing from the pool system has also brought about a decrease of 6% in the fuel used, with an increase of 2.33% in the tonnage handled.

## Transportation Members of Canadian Society of Civil Engineers Serving in the War.

Among the many members of the Canadian Society of Civil Engineers serving in the war are a number who are normally engaged in transportation service. Following is a list of these:

**Members**—H. S. Greenwood, Colonel, First Contingent; ex-Assistant Chief Engineer, Mackenzie, Mann and Co., Ltd., Toronto.

C. L. Hervey, Major, Superintendent of Construction, Canadian Overseas Railway Construction Corps; Civil Engineer, Montreal, formerly in charge of the Glengarry and Stormont Ry. construction.

J. C. Hesketh, First Contingent; Assistant Engineer, C.P.R., Winnipeg.

R. W. Leonard, Major, Corps of Guides, England; ex-Chairman, National Transcontinental Ry. Commission.

C. W. P. Ramsey, Lieut. Colonel, Canadian Railway Construction Corps; Engineer of Construction, C.P.R., Montreal.

F. A. Wilkin, First Contingent; C.P.R., Winnipeg.

**Associate Members**—J. C. Ball, Lieutenant, 7th Battery, 3rd Brigade, Canadian Field Artillery, First Contingent; Welland Ship Canal, Section 3.

H. L. Bodwell, Adjutant, 47th Battalion; Assistant Engineer, Grand Trunk Pacific Ry., South Fort George, B.C.

W. T. Daniel, Lieutenant, First Contingent; Assistant Engineer, C.P.R., Regina, Sask.

W. M. Everall, First Contingent; Government Inspecting Engineer, Canadian Northern Ry., Port Arthur, Ont.

G. B. Hughes, First Contingent; British Columbia Electric Ry., Victoria.

D. A. Livingston, 2nd Canadian Mounted Rifles, Second Contingent; C.P.R. Construction Department, Winnipeg.

A. deC. Meade, Royal Engineers; Regina Municipal Ry., Regina, Sask.

V. Michie, First Contingent; Assistant Engineer, C.P.R., Winnipeg.

T. Muirhead; British Columbia Electric Ry., Victoria.

A. Stewart, 29th Battalion; Engineering Department, Esquimalt and Nanaimo Ry., Victoria.

R. A. Stirling, 12th Battalion, First Contingent; National Transcontinental Ry., Quebec.

J. A. Symes, Lieutenant, 56th Battalion, C.P.R. Irrigation Department, Calgary.

**Junior**—L. E. Allen, Divisional Engineers, First Contingent; National Transcontinental Ry., Hearst, Ont.

S. R. Lamb; C.P.R. Construction Department, Winnipeg.

J. A. Mackenzie, Captain, 26th Battalion, Second Contingent; National Transcontinental Ry., La Tuque, Que.

L. F. Merryvees; Board of Engineers, Quebec Bridge, Nelsonville, Que.

G. H. N. Monkman, Canadian Railway Construction Corps; C.P.R. Construction Department, Winnipeg.

H. K. Morrison, Divisional Engineers, Second Contingent; Canadian Northern Ontario Ry., North Bay, Ont.

S. W. Shackell, Lance Corporal, Divisional Engineers; C.P.R., Smiths Falls, Ont.

**Railway Lands Patented.**—Letters patent were issued during May in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres.
Calgary and Edmonton Ry. ....	1,760.00
Canadian Pacific Ry. ....	1,273.387
Qu' Appelle, Long Lake and Saskat- chewan Rd. and Steamboat Co. ...	2,483.22

# Electric Railway Department

## Electrification of the London and Port Stanley Railway.

The electrification of the L. and P. S. R. is nearing completion, and the official opening is to occur at an early date, possibly during this month. The line is 23.66 miles long, connecting London, Ont., with Port Stanley, on Lake Erie, passing through St. Thomas. This line was one of the earliest built in this country, and since its inception in the early fifties, has had an interesting history, passing through several different managements in an attempt on the part of the municipal owners to secure better operation.

The line had its inception in a public meeting held in London in Jan. 1853, to consider the building of a line from London to Port Stanley, the movers being Murray Anderson, for many years President of the line,

ever, reports from 1860 to 1870 showed that in no year did the gross earnings fall below the operating expenses. In 1870, 14 years after the line had been placed in operation, the revenue was \$43,002.44, and the working expenses \$30,293.00, leaving a net profit of \$12,709.44. This was obtained with a total train mileage of 48,418, of which over 90% was revenue traffic. The total operating cost, including repairs, etc., was 62 cts. per train-mile.

The building of the line was commenced with a view to the general advantage and improvement of the country interested, rather than from any expectations of profits to be directly derived from revenue. It is said that in the early days the amount of

20 years. As the leasing company had the standard gauge, the L. & P. S. R. gauge was changed to conform to it. The L. & P. S. R. had another change when on Aug. 12, 1882, the G. T. R. absorbed the Great Western Ry., and operated the line until the completion of the lease in 1894. Prior to the expiration of the lease, the city of London acquired the stock held by the city of St. Thomas, in 1893.

On Dec. 1, 1893, an agreement was made between the L. & P. S. R. and the Lake Erie and Detroit River Ry., for the lease by the latter of the L. & P. S. R. for 20 years from Jan. 1, 1894 for \$10,000 a year rental, and in addition 10% on all gross earnings and receipts exceeding \$80,000 a year, which was

Fig. 1.—London and Port Stanley Railway, showing Connections.

and John Carling. The company was incorporated under its present name in 1853, under chap. 133, statutes of Canada. In August of that year the city of London de-

traffic anticipated was not realized by the projectors, but by bringing into competition the then existing trunk lines, a reduction in freight rates on farm produce and merchan-

confirmed by the Ontario Legislature in 1894. This lease was transferred to the Pere Marquette Rd. about 1906, when the latter leased the Lake Erie and Detroit River Ry. On the expiration of the L. & P. S. R. lease on Jan. 1, 1914, a temporary arrangement for the operation of the line was entered into with the Pere Marquette Rd., pending the electrification of the line, which was then in contemplation.

By the City of London Act, 1913, the corp-

Fig. 2.—Profile of London and Port Stanley Railway.

cided to take £25,000 stock in the company, which was later increased, so that in 1885 it was stated before the London railway committee that the corporation had £162,850 in the venture. On Jan. 27, 1857, £30,000 more was granted by London to the railway. A book on Canadian railways, published in 1870, states that at that time the stock subscribed by the different municipalities, was as follows: London, \$220,000; Middlesex county, \$80,000; Elgin county, \$80,000; St. Thomas, \$8,500; total, \$388,500. It was also stated that the railway was then indebted to London as follows: 1st mortgage bonds, \$175,000; stock, \$220,000; loans on 1st and 2nd mortgage bonds, \$220,000; interest, etc., \$502,126; total, \$1,342,248. The amount of private stock held at that time was only \$27,750. The line was opened Oct. 2, 1856.

From the first the line labored under financial difficulties from the fact that the cost of construction, which amounted to \$1,027,928.24, exceeded the estimate by about \$400,000, owing to the heavy cuttings, long embankments, and expensive bridges. How-

dise of as much as 50% was realized, which fulfilled the object for which the line had been built.

As originally constructed, the line had a 5½ ft. gauge, and was laid with 56 lb. iron rails. The bridges and all buildings were of wood. The rolling stock in 1860 consisted of 2 locomotives, 3 passenger cars, 42 freight cars and 2 baggage cars. This had been increased in 1870 by the addition of 3 more passenger cars and 2 freight cars. Between 1860 and 1870, the passengers carried had increased from 21,919 to 44,427, more than double, and the freight tonnage from 16,780 to 23,831, about 30%. The original gauge of 5½ ft. received early consideration with regard to changing to the standard 4 ft. 8½ in. gauge, as all the connections with the exception of the G. T. R. were adopting that gauge.

On Apr. 25, 1870, the Great Western Ry. entered into an agreement with the L. & P. S. R. for a 99 year lease for the station and connection at Waterloo St., London, in consideration of the building of shops, and on Mar. 24, 1874, it leased the L. & P. S. R. for

operation was given power to lease the L. & P. S. R. from the L. & P. S. R. Co., to construct and equip the line as a steam or electric road, and to raise not exceeding \$700,000 to construct, equip and operate it. The act also provided that the city might, by passing a bylaw, form a commission to be called The London Railway Commission, which would have the whole management and control of the construction, equipment, maintenance and operation of the line, the commission to have a membership of five, including the mayor ex officio, the other four to be elected for periods of two years, two to be elected annually. The implementing bylaw was passed by the London City Council, Nov. 29, 1913. The commission now consists of Sir Adam Beck, M.L.A., Chairman, P. Pocock, Vice Chairman, W. Spittal, Secretary (pro tem), M. D. Fraser, K.C., and H.

A. Stevenson, Mayor. This commission decided on the electrification of the line.

**Traffic.** As mentioned earlier the line was originally projected as a means of developing the country it traversed, and at the same time to provide an outlet for the populated centres along it to visit the pleasure grounds at Port Stanley, where the company acquired an area on the shore for that purpose. From the earliest days a heavy excursion traffic has been developed, for the encouragement of which rates less than  $\frac{1}{2}$

handled one mile amounted to 10,322,663, the average distance hauled is about 16 miles, showing that the bulk of the traffic is through, making for good operating conditions. The total freight revenue was \$84,692.88; total freight earnings, \$93,373.65; freight earnings, per train mile, \$1.6146; proportion of total freight earnings to total earnings, 68.73.

For the year ended June, 30, 1914, maintenance of way and structures cost \$25,008.89; maintenance of equipment, \$31,257.03; traffic

the London Railway Commission that the existing traffic interchange agreements will terminate July 1, 1915. Negotiations are now in process with both this line and the other three for new interchange arrangements, and it is expected that an early settlement of the question will be made.

The L. & P.S.R. has been using the G.T.R. station in London, but arrangements are being made for a separate terminal to the south of the G.T.R. station, on Richmond St., where the line will stub end. To permit

Fig. 3.—Sixty Inch Concrete Culvert replacing Wooden Box.

Fig. 5.—St. Thomas Yard, Looking North from Southerly Approach.

ct. a mile were given. This traffic has ever since remained the principal passenger business handled, large numbers travelling by the line from both London and St. Thomas during the summer, a good service at attractive rates having been maintained by the successive operating companies. For the year ended June 30, 1914 the passengers carried were 132,669, at a rate of 1.574 cts. a mile. The mileage of passenger trains was 64,551, and of mixed trains 14,739. The

expenses, \$6,777.00; general expenses, \$8,230.15; total operating expenses, \$180,915.11. This gave a ratio of operating expenses to operating revenue of 133.18, a deficit of \$45,073.37.

In addition to the traffic handled by the lessee, the Pere Marquette Rd., the Michigan Central Rd. runs all its trains to London over the line from St. Thomas. The freight traffic of this line in London is very high. Likewise, the Pere Marquette traffic from

the entry of its line to this new point, the Board of Railway Commissioners for Canada issued orders 23,752 and 23,753, May 28 and 27 respectively, granting the railway power to construct a track on the north side of Bathurst St. between Wellington and Richmond Sts., and to take possession of certain G.T.R. lands as follows: A 40 ft. strip between Wellington and Clarence Sts., a 50 ft. strip from Clarence St. westerly, immediately north of Bath-

Fig. 4.—Overhead Construction on a Curve.

Fig. 6.—Overhead Construction at Glanworth Siding.

Fig. 7.—Overhead Construction on Bridge south of St. Thomas.

revenue per passenger train mile was \$0.51563. The total passenger earnings were \$40,884.22, or 30.09% of the total earnings.

Freight is of course the principal part of the traffic handled, consisting primarily of coal brought across Lake Erie from the Pennsylvania coal fields to Port Stanley by car ferry. Of the total freight tonnage of 637,869 tons carried by the line in the above mentioned period, 552,182 tons, or 86%, was coal, of which 482,807 tons was bituminous and 69,375 tons anthracite. As the freight

the west, coming into St. Thomas over its leased Lake Erie and Detroit River Ry., is interchanged there for passage easterly by the Michigan Central Rd., over the section of the L. & P. S. R. connecting the two lines in St. Thomas, a distance of nearly a mile.

Agreements exist for the interchanging of G. T. R., Michigan Central Rd., Pere Marquette Rd. and Wabash Rd. traffic, the first at both London and St. Thomas, and the latter three at St. Thomas only. The Michigan Central Rd. has served notice on

the west of the foregoing for approximately the same distance to the easterly limits of Richmond St., immediately north of Bathurst St. It is also authorized to construct its tracks and erect poles, fixtures and wires along Bathurst St., between its present track at Burwell St. to connect with the authorized property on Wellington St., and is authorized to use the existing track of the Michigan Central Rd. between Burwell and Wellington Sts.

It is proposed to erect a new station on

the west side of the line in St. Thomas on Talbot St. to replace the existing station about two blocks further north, which will then be removed. No immediate changes are in contemplation for the terminals at Port Stanley.

**Rehabilitation of the Line.** When the line was taken over by the London Railway Commission it was physically in a very bad condition, and required complete rehabilitation of the track, and structures, with the exception of the bridges, to place it in good operating condition. The renovating was handled through the Pere Marquette forces, which

All the bridges were in good condition and required no repairs of consequence, but the culverts had for the most part fallen into disrepair, and required either replacement or reinforcing. Two new reinforced concrete culverts were built at mileage 3.2 and 12.4, replacing in one instance a broken masonry one, and in the other, a wooden box culvert. These two culverts are 8 x 6 ft., made of reinforced concrete, with wing walls on each side. Seven old masonry culverts were reinforced with a 6 in. lining of reinforced concrete, the mud sills being also removed and replaced with from 6 to 12 ins.

28 in. centres. The cross arm, 26 ft. clear above the rail, is a 4 in. 5½ lb. channel, bolted to two of the vertical arms, and is braced in front with light angles. The pole legs have a slight batter, 28 ins. from corner to corner of the angles at the base, and 12 ins. at the top of the pole. The poles are placed at 180 ft. centres on tangents, and at from 140 to 160 ft. on curves. They call for a strength to resist a strain of 2,000 lbs. at the top, failing at from 2,500 to 2,700 lbs. The tension will seldom exceed from 500 to 1,000 lbs. In yards, either wooden poles alone, or the steel poles with intermediate wooden

Fig. 8.—Hydro Electric Power Commission Sub Station at St. Thomas.

Fig. 9.—Method of Stringing Trolley and Feeder Wires.

was still looking after the line on the short term agreement made on the expiration of the 20 year lease. As mentioned in Canadian Railway and Marine World, Sept. 1914, contracts were let as follows: Algoma Steel Co., 3,000 tons of steel rails and angle bars and 30,000 tie plates; J. J. Gartshore, 380,000 spikes; Canadian Ramapo Iron Works, 52 sets of switches and frogs; Steel Co. of Canada, 34,000 track bolts and 65,000 tie plates; and Canadian Concrete Products Co., 1,100 ft. of concrete piping of various sizes. The rails are 80 lb. Canadian Northern section,

of concrete. About 15 concrete pipe culverts were put in, replacing for the most part broken down wooden box culverts. These varied in size from 24 to 72 ins., one of the 60 in. ones being shown in the accompanying fig. 3.

**Electrification.** For the electrification of the line, 1,500 volt d.c. was selected after a study of the single and three phase a. c. system, and the high and low d.c. systems, the 1,500 volt d.c. offering what appeared to be the best power for the conditions to be contended with, most of the more recent

poles, are employed, all at 90 ft. spacing. The wooden poles used are from 35 to 40 ft. long, with an 8 in. top.

Catenary suspension is employed on all main line work, with direct suspension in yards with wooden poles. The trolley wire is 4-0 grooved copper, suspended by clips at 20 ft. centres from a 300,000 c.m. copper catenary wire. The trolley wire is 23 ft. 3 ins. above the rail, giving a suspension at the poles of about 3 ft. The suspension consists of single and double pull-offs, depending on location.

Fig. 10.—Bonding Rails with the Oxy-acetylene Torch.

Fig. 11.—Port Stanley Yards, showing Car Ferry Wharf in Distance.

and with the exception of the tracks in London, St. Thomas and Port Stanley, and certain sidings, were laid during 1914. All other rail laying, with the exception of a few of the sidings now under discussion with the Pere Marquette Rd. with regard to transferring to the Commission, have since been laid, most of the ties being replaced by new untreated cedar throughout the whole length of the line, and all the track reballasted with gravel taken from a gravel pit adjoining the line just south of St. Thomas, near Whites, so that today the track is in excellent condition.

interurban electrification projects in Canada and the United States having adopted this voltage. The overhead work is supported on steel poles, which also carry the feeders, and dispatching wires. The poles are made of galvanized structural steel shapes, and weigh complete about 800 lbs. They are of triangular form, 35 ft. 0¼ in. high, bedded in a triangular concrete base to give a 4 in. casing of concrete outside of the corners. The bases are 7 ft. deep, and are imbedded 6 ft. in the earth. They consist of three 60 deg. angles, 3-16 in. thick flanges, tied together with 3-16 x 4½ in. batten plates about

The line is anchored every ¼ mile by steel poles placed on the opposite side of the track, with an anchoring wire between it and the next adjoining pole, to which the catenary is tied. Dead ends are inserted at every 4 miles, arranged for in a somewhat similar manner to the anchoring, with a pole on the opposite side, the dead ended wires paralleling each other a short distance, and then swinging off to the dead end poles. An anchor pole is shown in fig. 4.

Deflectors are provided at all switches, and in the larger yards the overhead work is direct suspended from cross spans from

the wooden poles, as in the St. Thomas yard, as shown in fig. 5, where the poles and cross suspension wires are shown prior to the trolley wire suspension. At minor sidings, such as that at Glanworth, fig. 6, the steel poles are carried through, with wooden poles on the siding side of the track, with suspension wires across from the adjoining steel poles to the wooden ones. On bridges the catenary construction is carried through by suspending the wires from a light steel overhead bridge as shown in fig. 7. All the insulators are tested to 3,000 volts. The sectionalizing is manually operated. Lightning protection is of the circuit breaker type and is provided at every fifth pole.

The bracket on the off side of the pole will carry 4 signal wires and a 500,000 c.m. aluminum feeder from the St. Thomas substation to Port Stanley. There are substations at London and St. Thomas, each equipped with two 500 k.w. 1,500 volt d.c. rotary converters, the one at London being located in the municipal electric plant, and the other at St. Thomas, in the Hydro Electric Power Commission of Ontario's substation, shown in fig. 8.

The method of erecting the overhead work is shown in fig. 9. The tops of two box cars were fitted with wooden frames, between which boards were placed on longitudinal members. The side railing above this floor was collapsible, swinging down on the floor when travelling on the line. The two cars, with a cable car, were moved along the line by a locomotive.

The process of bonding is shown in fig. 10. Ohio Brass Co. 4-0 copper bonds are used, welded to the outer side of the rail heads. The outfit employed consisted of a light four wheel car on the rails, carrying two cylinders, one of oxygen, and one of acetylene, behind which were supported a number of strands of copper wire for brazing. The process makes a good union very quickly.

**Electric Locomotives.** As mentioned, the freight traffic consists chiefly in hauling loaded coal cars from Port Stanley to St. Thomas and London, a car ferry, operating over 10 months in the year, delivering the

ing to the line 30 loaded cars, and taking away 30 empties, each trip. The Port Stanley switching yard is practically level, and is approximately 1,000 ft. long. It is shown in fig. 11, which also shows the ferry dock in the distance.

These were the conditions to be met in designing the electric locomotives. For the purpose of specifying their capacity it was assumed that the traffic would be handled in 800 ton trains, and that certain periods of

sidings, and a train made up for the return trip, consuming possibly an hour.

Three electric locomotives, preliminary descriptions of which appeared in Canadian Railway and Marine World, Nov. and Dec. 1914, have been built. They are of the 4-0-4 type and are carried on two swivel trucks bringing all the weight on the drivers, while the equipment is housed in a steel box type cab extending over practically the entire length of the locomotive. Each one is pro-

Locomotive (Temporarily Equipped with One Light Trolley).

time would be desirable in handling the switching and interchange at points along the line. For instance, immediately after unloading and reloading the ferry, the locomotive would be required to classify the cars and make up the train in an approximate time of 45 mins., the maximum train to be moved being assumed at 15 loaded cars of 70 tons each. After this Port Stanley yard switching, the locomotive would haul the assumed loading of 800 tons up grade to

vided with four GE-251, 750-1500-volt motors designed for 750 volts across each armature and insulated for 1500 volts. Two motors are connected permanently in series and the two-motor groups thus formed are capable of connection in series or parallel for speed control. The cab is divided into three compartments, one at each end for accommodating the operator, and an intervening compartment where the control equipment and accessories are located. The operating compartments are provided with 1500 volt electric heaters. Each of the GE-251 motors has an hourly rating of 245 h.p. with 1500 volts on the trolley. At this rating the locomotives exert a tractive effort of 21,500 lbs. Control is effected by a double end, type M, standard equipment, a master controller at each operating position actuating the main 1500-volt contactors by means of a 600-volt circuit supplied from a dynamotor. Multiple unit train operation is arranged for so that the simultaneous control of three locomotives coupled together can be accomplished from any master controller. The equipment is also so designed that a locomotive may haul a train of 8 or 10 passenger trailer cars and provide 600 volt lighting energy for them. The current collectors consist of pantograph slider trolleys having two contact pans pressing against the trolley conductor. Two of these devices are furnished on each locomotive. They are electro-pneumatically controlled from any operating position with one, two or three locomotives hauling a train. The pantograph is shown in fig. 12. It is novel in design, the legs crossing each other in lazy-tong fashion, the reason for this arrangement being the requirement of a vertical range of 9 ft., without unduly lengthening the length depressed. The specifications call for a maximum safe speed of 45 m.p.h., and a capacity for accelerating an 800 ton train on a 1% grade with a clean, dry rail, and to be able to develop a drawbar pull for a 5 min. period corresponding to a 35% adhesion. They

Fig. 12. Pantograph Slider Trolley.

cars to the line from the Pennsylvania coal fields across Lake Erie. Some additional traffic, consisting principally of loaded coal and merchandise cars, is delivered to the line at St. Thomas for London. The traffic from London to St. Thomas consists of loaded merchandise cars, and empty coal cars, while between St. Thomas and Port Stanley it consists almost entirely of returning empty coal cars for delivery to the car ferry. This ferry has a capacity of 30 cars on its four tracks, the two central tracks holding 8 cars each, and the outer two 7 cars each. It can make two round trips a day, deliver-

St. Thomas, with power to stop and start again at Whites, where a car might be passed. In St. Thomas the switching service, consisting of picking up and setting off cars to interchange lines and sidings, might take about 30 mins. The assumption is made that the trainload before reaching and after leaving St. Thomas would be approximately the same, on account of the balance between the freight dropped off and the London interchange from the connecting railways. Stops might be required at Glanworth and Westminster, and on arriving in London the cars would be distributed to the various

were delivered last week by the Canadian General Electric Co.

**Cars.** The original intention in ordering the car equipment was to provide 5 motor cars and 4 trailers, of all steel construction, the design of which was given in detail in Canadian Railway and Marine World, Jan. 1915. A plan and elevation of this all steel car is shown in fig. 13. It was subsequently decided to proceed as at first intended with the 5 steel motor cars, and to change the other cars to wooden construction. These include an express car, 3 trailer cars and a box car. The motor cars are of a design approaching that in use for heavy steam railway service, and have been developed as the result of extensive study of existing equipment, profiting by the experience of lines that have had steel equipment in use for years. The general dimensions of the bodies are as follows:—

Length over all .....	59 ft.
Length over end vestibules .....	58 ft.
Length over end of car body .....	48 ft.
Width over all .....	9 ft. 6 ins.
Width over sheathing .....	9 ft. 6 ins.
Width over platform floor, including trapdoors .....	9 ft. 5 ins.

ments, and the hinges, etc. The basket racks are continuous, removable in sections, running the full length of the car, and of a bronze finish. The seats are of a high back design, finished in plush for the main compartments, and in pantasote for the smoking compartments. They are 40 ins. wide overall, with the back rising to a height of 42 ins. The aisle width is 26 ins.

Each car has two lavatories, finished in white, with a sheet steel ceiling, giving a tile effect, and equipped with water closet, washstand, 5 gallon water cooler, and all requisites. The water is provided from a 50 gal. tank over top of the lavatory, under the roof. Each side of the roof contains 10 ventilators of the deflector type, automatic in their operation. The lavatories contain special lavatory room ventilators.

Four of the motor cars have the three compartment layout, while the other one has the two compartment layout. In the three compartment layout, the car end is slightly changed so as to incorporate the vestibule into the baggage compartment, 8 ft. 11 ins. long. Adjoining is the smoking compartment, 13 ft. 8 ins. long, with the main com-

also for simultaneous sanding, by electro pneumatic valves, of all cars from any operating position. The pantograph trolleys are identical with those on the locomotives.

Each car carries a combined straight and automatic air brake outfit of the variable release type, with the air supply furnished by 1500-volt compressors. The compressor governors are all equalized on a special wire running throughout the train in the auxiliary train cable.

The original intention was to have the heaters of the hot air type, situated at one end of the car, delivering air through a 3 x 8 in. duct of  $\frac{1}{4}$  in. steel along the floor line of the wall. This has been changed to individual seat 1500 volt electric heaters, 28 heaters under the seats, 2 in the vestibule, and 3 in the baggage compartment. As the trailers are to be used for summer traffic only, they have no heaters, but air ducts are provided so that hot air heating may be installed, if found necessary. The baggage car has 12 electric heaters; the box car will have none. The steel motor cars were built by the Jewett Car Co., Newark, Ohio.

The trailer cars are of wooden construc-

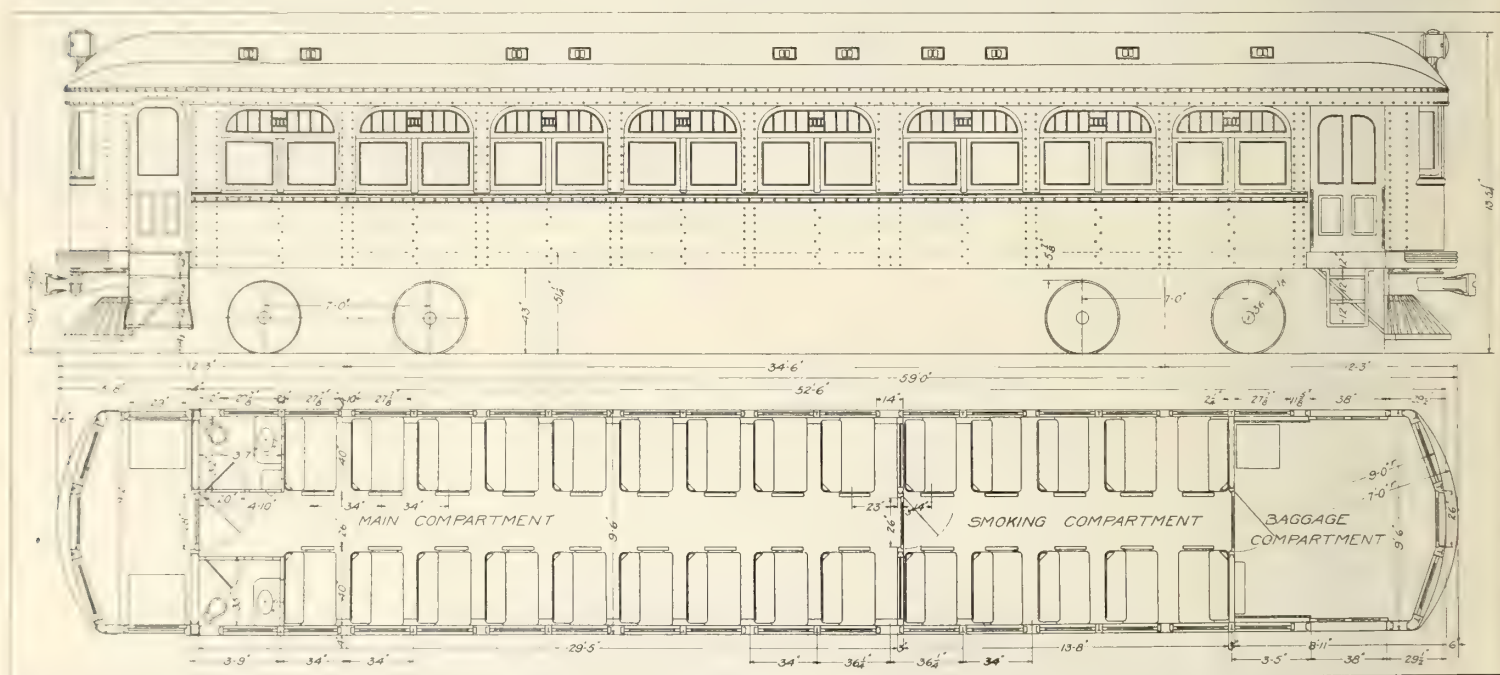

Fig. 13. Plan and Elevation of All Steel Motor Cars for London & Port Stanley Railway.

Height from rail to top of roof, car light .....	13 ft. 5 1/4 ins.
Height from under side of sills to top of roof, car light .....	9 ft. 10 1/4 ins.
Height from top of rail to top of platform .....	4 ft. 3 1/4 ins.

The weight of the car body, including heating equipment, seats, light foundations, brake rigging, draught gear, including supports, ready for the installation of the control equipment and air brakes, has been estimated as follows:—

Car body, complete as above .....	38,320
Control equipment .....	9,500
Air brake equipment .....	2,220
Four motors complete at 4,000 lbs. ....	16,000
Two 7 ft. wheel base trucks with 36 in. steel wheels .....	26,880

Total weight in lbs. .... 92,920

The entire frame of the cars is of structural steel shapes and plates, with the centre and side sills continuous. The inside finish is of the best selected inlaid mahogany, natural sanitary finish, including the doors, linings and mouldings, and the trimmings are of solid bronze, and include grab handles on the body corner posts and vestibule corner posts, match scratchers between the seats in the smoking compart-

partment 29 ft. 5 ins. long to the other vestibule. The two compartment car has the two vestibules, with the main and smoking compartments dividing the length into two compartments.

Each motor passenger car is driven by four GE-225-750/1500-volt fully ventilated commutating pole motors connected two groups of two in series. The one hour rating is 125 h. p. with 1500 volts on the trolley. Each motor car has sufficient capacity to haul one trailer car and provision is made for the motor and trailer cars to be operated in trains up to a total of three motor and three trailer cars. All trailer cars are equipped with master controllers at each end so that multiple unit train operation is possible from either end of any motor or trailer car.

Control energy for a motor and trailer is derived from a 1500/600-volt dynamotor on each motor car. The dynamotor will also supply energy for lighting one motor and one trailer car. Main and auxiliary train cables run continuously through a train, provision being made for the simultaneous raising and lowering of all pantographs and

tion, steel underframe, of almost the same general dimensions as the steel motor cars. They have two 8 in. channel centre sills, and side sills made up of a 12 x  $\frac{3}{8}$  in. plate and a 3 x 5 x  $\frac{3}{8}$  in. angle, trussed on the under side with a 1 1/2 in. truss rod having a 24 in. drop. End intermediate sills of 8 in. channels run back as far as the body bolsters, which are made up of angles and a 14 x  $\frac{3}{8}$  in. top plate and 14 x  $\frac{5}{8}$  in. bottom plate. The trucks are lighter than the motor car trucks, with 33 in. wheels and a 6 ft. wheel base. They are of the two compartment layout, as in some of the motor cars.

The express car is of wooden construction, steel underframe, the same as the trailer cars, only 64 ft. long, with the same motor equipment as the steel motor cars. It is slightly narrower than the passenger cars, 9 ft. 2 1/4 ins. wide, and has two 6 ft. doors on each side. It is equipped for double end operation.

A standard 30 ton box car, finished outside the same as the passenger cars, will be used for light freight service. It is of wooden construction throughout. The underframe consists of six sills, two side and

two centre of 4 x 6 in. section, and two intermediate of 3 x 6 in. section. It is 36 ft. 9 3/4 ins. long over the end sills, and 9 ft. wide. It has a 6 ft. centre door, an end door and windows each side of it, and side doors at the end. It uses standard freight equipment trucks. The trailer cars, baggage car and box car have been built by the Preston Car and Coach Co.

At June 30, 1914, the line had 1 passenger locomotive, 2 freight locomotives, 2 second class passenger cars and 1 combination passenger car.

### The Toronto and York Radial Railway Franchise on Yonge Street, Toronto.

The section of the Metropolitan Ry., owned and operated by the Toronto and York Radial Ry., from Shaftesbury Ave., about 100 ft. north of the C.P.R. tracks on Yonge St., northerly to Farnham Ave., approximately 1,220 ft., under franchise from the City of Toronto, was cut off at the latter point by order of the City Council at midnight, June 25, on the expiration of the franchise. Earlier on that day, the Toronto Board of Control received a letter from R. J. Fleming, General Manager, Toronto Ry., advising that the latter company had by agreement with the Toronto and York Radial Ry., taken over the portion of the latter's railway from Shaftesbury Ave. to Farnham Ave., including all rails, ties and overhead equipment, and that the Toronto Ry. would henceforth operate the section under its franchise from the City of Toronto, and as soon as the subway under the C.P.R. was completed, it would continue its Yonge St. double track through the subway and up to Farnham Ave., and give a continuous service.

A meeting of the Board of Control was immediately called, and it was urged that if the company was allowed to give such service it might be considered an extension of the franchise just expired, and therefore it was decided that the rails be disconnected at Farnham Ave. to prevent the continuance of service. On June 28, the balance of the rails were removed by the city, and the Mayor announced that the poles and overhead equipment would also be removed forthwith, and the material handed over to the T. & Y.R.R.

On June 17, 1913, the Ontario Railway and Municipal Board authorized the Metropolitan Ry. to deviate its line from Yonge St. to a private right of way from Farnham Ave. to a terminal to be built 800 ft. west and north of the C.P.R. This terminal was to take the place of the old Metropolitan Ry. station, which had been abandoned on account of the grade separation work being undertaken by the C.P.R. At that time the terminus of the line was located at Shaftesbury Ave., the continuation from that point to the C.P.R. track, or the old station, being abandoned. The city took the matter to the Ontario Court of Appeal, which decided against the company making the proposed deviation, and the company appealed to the Imperial Privy Council, which confirmed the Ontario Court's decision.

The franchise under which the Toronto Ry. operates gives the company the right to operate street railway lines on any of the streets within the city limits as at 1891, which included the section of Yonge St. north of the C.P.R. tracks to Farnham Ave., but it was specifically provided for this section, that the right of the Toronto Ry. there was subject to the existing right of the Metropolitan Ry., then operating there. The Toronto Ry. applied to the Ontario Railway and Municipal Board, June 29, for mentioned. The city opposed, claiming that the Board had no jurisdiction, and judgment was reserved.

### Electric Railway Finance, Meetings, Etc.

**Brantford Municipal Ry.** The earnings of the Brantford St. Ry., a part of the Brantford Municipal Ry., for April were \$3,263.62, and for May \$3,032.50, against \$2,728.85 for April, and \$2,833.22 for May, 1914. The difference in the earnings for May 1915 as compared with the previous month is accounted for by the fact that traffic was suspended for a portion of the time owing to the construction of the Eagle Place loop.

**British Columbia Electric Ry., and allied companies.**

	July 1, 1914 to Apr. 1915	July 1, 1913 to Apr. 1914	July 1, 1913 to Apr. 30, 1915	July 1, 1913 to Apr. 30, 1914
Gross earnings	\$540,861	\$698,508	\$6,295,902	\$7,450,590
Expenses	485,553	502,546	5,011,043	5,425,769
Net earnings	55,308	195,962	1,284,859	2,024,821

#### Cape Breton Electric Co.

	Apr. 1915	Apr. 1914	Jan. 1 to Apr. 30, 1915	Jan. 1 to Apr. 30, 1914
Gross earnings	\$25,164.46	\$26,505.11	\$101,153.46	\$108,139.10
Expenses	15,336.62	16,694.57	63,844.35	67,313.35
Net earnings	9,827.84	9,810.54	37,309.11	40,825.65

**Dominion Power and Transmission Co.**—The directors have declared a dividend of 2% on the limited preferred stock, payable July 15, to shareholders of record June 18. This leaves a further 1/2 of 1% to be paid on this stock, after which it becomes common stock, and will probably be placed on a 4% dividend basis. The directors also declared the regular semi-annual dividend of 3 1/2% on the 7% preferred stock, also payable July 15 to shareholders of record June 18.

**Hamilton St. Ry.** The receipts for the first three months of this year were \$132,536, against \$148,292 for the same period in 1914. The city percentage was \$10,602.

#### London St. Ry.

	Apr. 1915	Apr. 1914	Jan. 1 to Apr. 30, 1915	Jan. 1 to Apr. 30, 1914
Gross earnings	\$29,449.35	\$30,041.54	\$121,523.85	\$113,256.16
Expenses	23,057.25	22,631.45	87,668.22	82,747.65
Net earnings	6,392.10	7,410.09	33,855.63	30,508.58

	May 1915	May 1914	May 31, 1915	May 31, 1914
Gross earnings	\$31,435.55	\$31,116.89	\$152,959.40	\$144,373.05
Expenses	23,471.33	22,676.40	111,139.55	105,424.05
Net earnings	7,964.22	8,440.49	41,819.85	38,948.87

**Morrisburg and Ottawa Ry.**—The Ontario Court of Appeal has dismissed the appeal of 11 shareholders against county court judgments directing them to pay the balance due on shares subscribed for in the company.

**Toronto Ry., Toronto and York Radial Ry., and allied companies.**

	Apr. 1915	Apr. 1914	Jan. 1 to Apr. 30, 1915	Jan. 1 to Apr. 30, 1914
Gross earnings	\$795,816	\$830,299	\$3,227,243	\$3,292,255
Expenses	422,757	443,103	1,731,845	1,719,482
Net earnings	373,059	387,196	1,495,398	1,572,773

The receipts of the Toronto Ry. from Jan. 1, and the percentages paid to the city, for 1915, compared with those for 1914, are as follows:

	1915	City percentage	1914	City percentage
Jan.	\$ 471,226.33	70.486.33	\$ 501,843.70	75.276.56
Feb.	440,313.05	67.047.09	461,274.45	72.059.90
Mar.	489,468.30	93.141.32	530,751.18	102.150.24
Apr.	467,701.62	93.540.32	501,435.10	100.287.02
May	468,953.00	93.790.00	534,465.00	106.893.00
	\$3,336,663.20	\$117,005.00	\$3,509,709.43	\$460,044.72

**Windsor, Essex & Lake Shore Rapid Ry.**—The Canadian Dominion Traction & Lighting Co., which has taken over the Windsor, Essex & Lake Shore Rapid Ry. bonds held by the Independent Order of Foresters and the Union Trust Co., Toronto, has filed a certificate showing a decrease in common stock from \$10,000,000 to \$8,000,000. The authorized issue remains at \$2,500,000.

#### Winnipeg Electric Ry.

	Apr. 1915	Apr. 1914	Jan. 1 to Apr. 30, 1915	Jan. 1 to Apr. 30, 1914
Gross earnings	\$264,856	\$337,414	\$1,233,405	\$1,418,875
Expenses	177,336	190,815	783,156	836,489
Net earnings	87,520	146,599	450,249	582,386

The regular quarterly dividend of 2 1/2% for the quarter ended June 30 has been declared, payable July 2 to shareholders of record June 28.

### Proposed Motor Bus Service for Toronto.

The Toronto Board of Control has been approached by representatives of a projected company with an application for the right to operate motor busses on about 13 routes in various parts of the city. It was stated that the company would only use high grade vehicles and would spend about \$250,000 in starting the service. Before dealing with the application, the Board decided to consult with the City Solicitor as to the city's standing in regard to the Toronto Ry. Co.'s franchise, and other points. In a joint report by the Chief Constable, the City Solicitor and the Works Commissioner, it is stated that the application seems to contemplate an agreement extending over a period of years for an exclusive franchise for the operation of motor busses, which the city is not in a position to give except as a matter of public policy and subject to certain restrictions as to the submission of the question to the ratepayers, etc., and if anyone chooses to inaugurate a system of transit by motor busses properly licensed there is nothing to prevent them, but the city cannot enter into an agreement for protection either as to length of franchise or freedom from opposition, except as mentioned. A. D. McBride and J. W. Bain are interested in the proposal.

### Essex County Hydro Radial Railway Association.

The above mentioned association has been organized in Essex County, Ont., with the following officers: Honorary Vice Presidents, O. J. Wilcox, M.P.; A. H. Clark, M.P.; Honorary Vice Presidents, J. C. Tolmie, M.L.A., S. Ducharme, M.L.A., and L. Wigle; President, Mayor A. W. Jackson, Windsor; 1st Vice President, Reeve C. J. Montueul, Ford; 2nd Vice President, M. H. Swatnam, Leamington; 3rd Vice President, Reeve E. J. O'Neil, Paquette; 4th Vice President, Reeve J. Ducharme, Belle River; Treasurer, W. R. Woollatt, Walkerville; Secretary, H. R. Hatcher, Walkerville. The executive is composed of the above mentioned officers and the mayors and reeves of all the municipalities in the county.

It is announced that the association has been organized to promote adequate transportation facilities within the county, to extend a plan of education throughout the county favorable to the idea of public ownership of public utilities, more particularly electric power, lighting and railway systems, and to prevent the renewals of charters or franchises for electric railways or power companies by the Province of Ontario or municipalities, or the granting of new charters or franchises to private promoters where electric railway or power facilities can be furnished by the Hydro Electric Power Commission of Ontario.

**The London & Port Stanley Ry.,** as electrified, will be officially opened July 22, and members of the Hydro Electric Railway Association of Ontario throughout the province and many others have been invited to attend. The delegates will be taken from London to Port Stanley on special cars, and on returning to London will be entertained at dinner as the guests of the city.

**St. Thomas Street Ry.**—It has been suggested that this line which is owned and operated by the City of St. Thomas, Ont., be taken over by the London & Lake Erie Railway & Transportation Co., which operates a line from London through St. Thomas to Port Stanley and which runs over the St. Thomas Street Ry. track for a short distance.

## Answers to Questions on Electric Railway Topics.

Following are questions submitted to the Association Electric Railway Association's question box, with replies thereto by Canadian electric railway officials:

**Boiler Capacity and Efficiency.**—Have any of the member companies, (a) installed vertical baffle plates in Heine type boilers? (b) installed an additional horizontal baffle plate in Heine type boilers without taking out tubes? (c) What methods have been successfully adopted with Heine type boilers to increase capacity considerably over rated capacity and still maintain fair efficiency?

A. J. MacDougall, Toronto Ry., Toronto.—(a) We have not installed vertical baffle plates in Heine type boilers. (b) We have changed vertical baffling to horizontal baffling on top and bottom rows of tubes but did not put an additional row of baffles on top and middle row of tubes. An additional baffling on top of middle row of tubes gives no benefit which may not be obtained by regulating the flow of gases by proper operation of the dampers. An additional horizontal baffling where there is a poor draught will reduce the capacity of the boiler, as with the additional baffling the same volume of gases have to pass through half the area and travel twice the distance. (c) To obtain considerable capacity over rated capacity of boiler, more coal must be burned. This may be done, either by means of better coal, increased grate area, mechanical draught, or mechanical stokers. The best method is to install mechanical stokers, preferably of the inclined underfeed type, with forced draught. By this means 300% of rating may be obtained with but little loss of efficiency.

**Flats on Commutator.**—One of our substations is equipped with two 300 k.w. 6-phase rotary converters which are connected to the secondaries on the same bank of transformers. We have had considerable commutation trouble. These rotaries are operated alternately. Four flat spots 90 deg. apart developed on the commutator on each rotary. Have any member companies experienced similar trouble, and if so, what was found to be the cause?

Wm. Volkmann, Toronto Ry., Toronto.—We have had somewhat similar trouble on our 1,000 k.w. 600-volt railway rotaries, developing either 6 or 12 spots. Your machines are apparently four or eight pole with a black spot for each pole or every other pole. This can be caused by high commutator bars in one spot gradually causing the four spots, high mica, by poor connection in armature, by poor equalizer connections in armature, by poor connections from collector ring to armature, by high resistance short between armature turns caused by dirt, etc. After having repaired or eliminated all or any of the faults noted above, it may be found advisable to undercut the mica in the commutator, so as to eliminate any future trouble from this point.

**Diameter of Car Wheels.**—We are investigating the matter of placing 36 in. rolled steel wheels under our passenger cars in place of the 34 in. wheels. We have four W. H. 93A motors, 50 h.p. each, one K14 controller, pinion 25 teeth, gear 62 teeth, Baldwin interurban trucks, 34 in. rolled steel wheels with 5½ in. axles. (a) What benefit would the change be to us? (b) Would it enable us to keep our cars on schedule time better than at present? (c) Would it take more or less power, and be harder or easier on our power plant and substation? (d) What are the objections to changing from 34 to 36 in. wheels, and also what are the advantages?

G. Gordon Gale, General Manager, Hull

Electric Co., Hull, Que.—(a) Better motor clearance when treads have worn to minimum thickness. (b) If motors are not now working at full load cars would maintain better schedule. (c) It would take more power. (d) Objections are, increased height from ground to first step, increased cost of wheel, increased weight of wheel. The 36 in. wheel would have a longer life.

**Conductors and Refunds.**—What are general instructions to conductors in cases where passengers pay fare twice? For example, passenger tenders 25c. and same is registered and then only three passengers board car; or if five passengers board the car the first pays the fares, and one of the following pays also. In each case a refund is requested.

G. Gordon Gale, General Manager, Hull Electric Co., Hull, Que.—On request of passenger, refunds are made through the office on receipt of full report from conductor. These refunds are of rare occurrence.

**Radius of Curves.**—Very short radius curves are guarded inside and out; (a) What is the minimum radius where the guard on the inside only is necessary? (b) What is the minimum radius where no guard is required at all?

J. G. Smith, Track Superintendent, Toronto Ry.—(a) 40 ft. radius in city practice, 8 ft. to 8½ ft. wheel base. (b) 100 ft. radius in city practice, 8 ft. to 8½ ft. wheel base.

**Special Track Work.**—Under your practice, both from the physical and accounting standpoint, what is the definition of the term "track special work," and what forms of track structure are included thereunder? What are the reasons for such practice?

J. G. Smith, Track Superintendent, Toronto Ry.—Any portion of track wherein two rails cross each other, whether curved or straight, or where two rails meet each other and have to be machined or planed so as to form a junction, and requiring to be bolted, cast, or welded together, may be termed "special track work." This would include turnouts, crossings, single, or any number of curves that required switches, mates, frogs, etc., for the make up of an intersection. The reasons for this practice are: First, for defining exact locations; Second, excessive cost above straight track; Third, enquiry to manufacturers being common practice to denote the above as special track work; Fourth, Accounting Department maintenance charges which are under account numbers.

**Track Tenders' Reports.**—Do curve greasers and track sanders report to the Way or Transportation Department?

J. G. Smith, Track Superintendent, Toronto Ry.—To the Way Department.

**Railway Spike Heads.**—Standard hook head railway spikes, have an angle of 103° made by the body of the spike with the underside of the head. This provides for their use with A. S. C. E. and other rails having a "base angle" of 13°. Most electric railway rails of the girder type have a "base angle of 10°". The following questions then arise: (a) Would there be any gain in the holding power of the spikes if the angle of their heads were changed to 10° to suit the rail angle? (b) If there is an object in making these angles the same for standard T rail work, is it not logical to assume that they should agree in girder rail work, even at the inconvenience of carrying the two styles of spikes in stock?

W. F. Graves, Chief Engineer, Montreal Tramways Co.—(a) Owing to the inaccuracy of driving spikes, the change in the angle of the body of the spike with head of 3° would not, in my opinion, affect the holding power of spike. (b) In theory this is logical, but

in practice the inconvenience of carrying two styles of spikes is very great.

**Rail Corrugations.**—(a) What type of rail and section, whether T or girder, 7, 8, or 9 ins. in depth, have shown least effects from corrugation? (b) What type of substructure is used: Stone, gravel, or cinder ballast; solid concrete; concrete slab; ballast under ties, with concrete between ties? (c) Type of paving?

W. F. Graves, Chief Engineer, Montreal Tramways Co.—(a) T rail of the 7 in. type. (b) Stone, gravel or cinder ballast under the ties with concrete between ties for paving foundation. (c) Brick and granite.

**Tie Rod Construction.**—Is it advisable to use tie rods with the following construction? 7 in. 70 lb. T rail, steel ties weighing 9½ lbs. per foot, 3 ins. high, 7 ft. long, spaced 5 in. centres, concrete base 5 ins.; concrete under ties 6 ins. deep, 18 ins. wide, 1 ft. 6 ins. long; brick pavement between rails and 1½ ft. outside of each rail; single truck cars weighing 20,000 lbs. operated?

W. F. Graves, Chief Engineer, Montreal Tramways Co.—Yes.

**Soliciting Business.** What do you find to be the best method of soliciting passenger, freight and express business, so as to increase earnings? A brief outline of such systems as have been found in practice to be profitable, will be appreciated. C. L. Wilson, Assistant Manager, Toronto & York Radial Ry., Toronto.—By carefully following the possible routes of shipment, and ascertaining from the consignees in the district where your railway serves, the business they are doing and where it originates, and following it up. Our best results, we feel, have been obtained by systematically calling on the consignees along the railway and listening to the complaints and suggestions which they have to offer.

**Fares on Interurban Railways.** Should a larger cash than ticket fare be charged on interurban railways; how should the system be handled? C. L. Wilson, Assistant Manager, Toronto & York Radial Ry., Toronto.—From our experience we feel that the cash fare should be higher than the straight line tickets sold by agents and offices, and as far as possible the greater percentage of the fares collected should be covered by agent and station tickets. Arrangements with storekeepers along the road can be made for a small amount per annum to act as agents for the company.

**Packing of Package Freight.** (a) Are strawboard, fibreboard, or pulpboard boxes, as specified in the official classification, of sufficient strength for goods handled by electric railways, when the diversified character of the load, necessary in single unit distributing cars is considered? (b) Do any member companies publish exceptions covering the handling of glass and glassware when so packed? C. L. Wilson, Assistant Manager, Toronto & York Radial Ry., Toronto.—(a) We do not think they are of sufficient strength or proper. (b) We handle this class of material under the Canadian Freight Classification, which permits of refusal by the railway company if the packing is not considered sufficient, and further, glassware is shipped entirely at owner's risk.

**Advertising Expenses.** What percentage of gross earnings should be appropriated for advertising? C. L. Wilson, Assistant Manager, Toronto & York Radial Ry., Toronto.—The amount which should be set aside for advertising should depend entirely on the class of business and district served. Last year we did not expend one-tenth of 1% of gross earnings on advertising.

**Folding Steps on Old Cars.** Considered from an accident standpoint, does it pay to equip old cars with folding steps? C. L.

Wilson, Assistant Manager, Toronto & York Radial Ry., Toronto.—Providing the old cars could be so altered as to have the steps fold in combination with the doors closing, would consider it advisable.

### Edmonton Property Owners' Association and the Radial Railway.

The Edmonton, Alta., Property Owners' Association has received a report from a committee of five of its members, P. E. Butchart being chairman and F. R. Coutant, Secretary, which was appointed to investigate the operations of the Edmonton Radial Ry., to find out the reasons for the losses sustained, and to offer suggestions as to how these losses might be remedied.

The committee finds that the system consists of 53 miles of line, on which 86 cars are being operated. It is capitalized at something over \$3,000,000. This capitalization is about \$1,000,000 in excess of the capital expenditure on the 71 mile system in Calgary, and about the same amount in excess of the Ottawa system, which has approximately the same mileage and requires 199 cars for its operation. The interest charges amount to \$143,000 and in addition \$170,000 is being provided to bring the capitalization down to a point more closely corresponding to the physical value, for depreciation, etc. No suggestion can be offered on this point, as the expenditures have been incurred, and the charges must be met. One point, however, is referred to, viz., the Highlands extension. This was built under an agreement with Magrath and Holgate and it is claimed that it has resulted in a loss of \$6,000 to the city, partly on capital and partly on operation account. The loss on capital account appears to be due to a lack of definiteness in the agreement, and the loss on operating account appears to be "absurdly low in comparison with the loss per mile shown by the other mileage of the utility."

"It is, however, in matters of maintenance and operation that great savings can and will eventually be made," the committee reports, and observes that apart altogether from charges upon an excessive capitalization "sufficient value is not received" for the expenditure on operation and maintenance. Independently of the depreciation charges the system shows a loss. The total deficit (including capital charges, depreciation, operation and maintenance) in 1914, was \$30,000 in excess of that of 1913, notwithstanding considerable reductions in operating expenses. The committee estimates that the deficit should not have been increased by more than \$3,000 in that period, and adds "We are at a loss to understand the heavy increase."

After reviewing the operation charges under the several headings:—Power, maintenance of ways, structures and equipment, transportation charges and equipment—the committee points out that it costs 24.8 cts. a car mile to operate the line, of which 2,500 is "dead" mileage per month, an increase of 2,400 a month in a year. The expenditures in most departments have increased, and it is shown that during 1914 it cost \$3,065.26 to handle freight from which \$3,012.47 was received, while in 1913, three times as much revenue was received from this source, at the same cost, and in the first three months of 1915, freight receipts were \$1,257.45, while the cost of handling the freight is given as \$55.70.

The committee is of opinion that the amount of power used for the operation of cars is excessive, and could be considerably reduced by more careful instruction of the motormen. It is suggested that by the use of one-man cars on six lines, about \$50 a day could be saved in wages. The car

schedule could be improved in the public interest; the 5c. fare system with transfers is considered inelastic, and it is suggested that consideration be given to the zone system. Some improvements are suggested in connection with the cars, notably a lowering of the high step, which prevents ladies and children boarding them readily; and the use of safety appliances, particularly on the high level bridge, would give people greater confidence and induce more travel.

The committee is of opinion that the system has not been over extended, and concludes by observing that while the March statement shows that considerable economies have been made, further savings could still be made, in the administration and other departments without impairing the efficiency of the system.

Following are the earnings and expenditures for the four months ended April 30, compared with the corresponding period of 1914:—

	1914.	1915.
Passengers carried .....	4,897,008	3,724,023
Gross earnings .....	\$207,397.54	\$185,888.93
Gross expense .....	298,533.95	236,164.93
Surplus on operation ....	18,289.11	48,489.58
Total deficit including fixed charges and depreciation .....	91,136.41	50,275.90

### Jitney Regulation Required in Toronto.

The Toronto Mail and Empire says:—"In most American cities where the jitney has appeared it has been found necessary to regulate it. In this city the jitney is not only competing against the street railway company and the taxicabs, but it is competing against the citizens. Since the city of Toronto receives one dollar out of every five that the Toronto Railway collects the city is losing one dollar out of every five that the jitney service wins from the company's service. In other words, out of every five jitneys one is engaged exclusively in depriving the city of Toronto of revenue, and is doing its share to increase the rate of taxation. Should the industry grow to sufficient proportions it might materially reduce not only the gross amount that the Toronto Ry. Co. is obliged to pay to the city of Toronto, but the percentage as well. On this account the citizens have a special reason for regulating the jitneys, which, while they are no doubt supplying a public demand for cheap and rapid transportation, are doing so to some extent at the expense of the taxpayer.

"Another reason for their strict regulation lies in the fact that some of the drivers are persons from whom an action at law for damages might fall to obtain redress. A jitney driver who ran down and injured a pedestrian might be sent to jail if criminal negligence could be proved, but how many of them are men of sufficient substance to financially indemnify those whom they might injure? Since so many of the jitney cars are old ones, it is all the more necessary that they should not be unduly crowded, and that passengers should not be permitted to sit on the doors, and thus run the risk of serious harm. The jitney driver depends upon proceeding at a high rate of speed for his living. The faster he goes the more money he makes. It will be seen, therefore, that his interest is not exactly identical with the interest of the great majority of citizens who do not patronize the jitneys and who may be imperiled by their operations."

The first convention of the Brotherhood of Railway Signalmen of America to be held in Canada took place at St. Thomas, Ont., June 17, where the only lodge of the order is located. W. J. Pettit, La Salle, Ont., was elected Grand Chief Signalman for the current year.

### Proposed Absorption of Halifax Electric Tramway Company.

Halifax, N.S., press dispatch, June 16.—The Nova Scotia Tramways and Power Co. took the first step today to carry into effect the legislation enabling the company to take over the Halifax Electric Tramway Co.'s properties and the Nova Scotia Light and Power Co.'s hydraulic powers on the Gaspereau. The granting of the charter was strongly opposed by the City of Halifax. The step now taken comes in the form of a petition to the Board of Public Utilities Commissioners, which was filed today, asking for permission to proceed. The Legislature provided, in granting the charter, that before anything was done the consent of the Public Utilities Commissioners must be obtained. A public hearing on this petition will be held on July 7th.

The petition asks that the capital of the company be increased to \$10,000,000; that \$5,000,000 first mortgage 30-year gold bonds be issued at 5%, \$3,000,000 to be presently issued, and the balance of the future requirements only to be issued against 80% of expenditures on capital account when the earnings of the company for the fiscal year preceding any proposed issue have been at least one and three quarters times the net charges on the bonds already issued and on those proposed to be issued, and when such issue is approved by the Public Utilities Commissioners. The petition also asks the board to approve of \$3,000,000 par value of said bonds, 32,500 shares of preferred stock and 62,500 shares of ordinary or common stock, to the order of the Nova Scotia Light and Power Co. The petition is followed by schedules giving a description of the Halifax Electric Tramway Co.'s property and plant, of the power sites, lands and privileges on the Gaspereau River, a description of the equipment of the cost of development of the Gaspereau made by J. G. White and Co. of New York, which is placed at \$1,534,960.

The offer of the Nova Scotia Tramways and Power Co. states that the net earnings will be sufficient to pay between 5 and 6% on \$12,500,000.

### Interurban Cars for Toronto Suburban Railway.

The Toronto Suburban Ry. has ordered 6 interurban cars for its new Toronto-Guelph line that will be a novel departure in interurban rolling stock in this country. They will be of the centre entrance type, of steel frame construction throughout, it having been decided that this type offers distinct advantages for interurban service. The principal point of advantage lies in separating the baggage compartment entirely from the main passenger section of the car, at the front or motorman's end, it not being necessary for passengers to pass through or around this section as is usual in the end entrance type of car.

The cars will be about 59 ft. long, with seating accommodation for about 70, according to the present tentative plans, although it is possible that these dimensions will be altered, as it is desired that the maximum weight of car be limited to 75,000 lbs. They will be designed for single end operation, with the baggage compartment just back of the motorman. Between that point and the centre of the car will be the smoking compartment, with the rear half of the car for the main passenger section. The rear of the car will be rounded, forming a kind of observation end. They will be equipped with four 80 h.p. motors, but the type of truck has not been determined. The car bodies will be built by the Preston Car and Coach Co.

## Canadian Electric Railway Association's Annual Meeting.

The annual meeting held at the Chateau Laurier, Quebec, June 21 and 22, was attended by officials of member companies throughout the Dominion and was very successful in every way. The chair was occupied by the President, C. B. King, Manager, London St. Ry., who opened the meeting with an address.

The Secretary-Treasurer, Acton Burrows, Managing Director, Canadian Railway and Marine World, presented a very comprehensive report dealing with the Association's work during the past year and covering a wide range of other subjects including the following: Membership; representation at American Electric Railway Association's convention; representation of electric railways on Government maps; compensation for transportation of postmen; customs duty on continuous rail joints; workmen's compensation acts; Ontario legislation respecting electric railways; hydro electric railways for Ontario; responsibility for watchmen at steam railway crossings; Toronto Suburban Ry. Co.'s appeal granted by British Privy Council; judgment in the Vancouver bridges case; speed of cars in cities; automobiles passing standing electric cars; public utilities commission for Alberta; Manitoba's Public Utility Commissioner tells why electric railways cannot be extended or fares reduced; standard specifications for steel rails; inquiries for information from non member companies; transportation of postal mail; transportation of baggage, parcels, etc.; transportation of newspaper representatives; transportation of soldiers on electric railway cars; comparative gross earnings of electric railways; data respecting street railway traffic; percentage payments to cities; contracts for advertising in cars; wages of employees; accident liability, insurance and workmen's compensation acts; use of pilots on cars on city streets; use of trolley rope retrievers or catchers; lavatory arrangements on interurban cars and at stations; jitney automobiles. The whole of the first morning session was devoted to the reading of the report and its discussion.

The question of the requirements of the Ontario Government in regard to returns for taxation purposes was introduced by J. D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Ry., and fully discussed.

W. F. Graves, Chief Engineer, Montreal Tramways Co., as chairman of the special committee on the proposed standardization of steel rails for electric railways, presented a very comprehensive report which was referred to the incoming executive committee and will be again taken up by the Association with a view of securing uniformity of practice.

The following copyrighted papers were read: "Development of tourist traffic on observation cars," by R. M. Reade, Superintendent, City Division, Quebec Railway, Light, Heat & Power Co.; "A proper accident department," by C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.; "Jitney competition," by E. P. Coleman, General Manager, Dominion Power & Transmission Co.; "Coasting," by A. Gaboury, Superintendent, Montreal Tramways Co.; "Economy in the electric railway repair shop," by E. A. W. Turbett, Mechanical Superintendent, Quebec Railway, Light, Heat & Power Co.; "Methods to minimize fire risks and secure reductions of premiums," by J. H. Ryan, New York. As above mentioned these papers are copyrighted and will be printed in the Association's annual proceedings and distributed to officials of member companies.

Officers, etc., were unanimously elected as

follows: President, James D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Ry.; Vice President, E. P. Coleman, General Manager, Dominion Power & Transmission Co.; Honorary Secretary-Treasurer,

**James D. Fraser,**  
Director and Secretary-Treasurer, Ottawa Electric Ry. Co., and President, Canadian Electric Railway Association.

**E. P. Coleman,**  
General Manager, Dominion Power and Transmission Co. Ltd., and Vice President, Canadian Electric Railway Association.

Acton Burrows, Managing Director, Canadian Railway and Marine World, re-elected for the ninth consecutive year; Executive committee: A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; A. Gaboury, Superintendent, Montreal Tramways Co.; H. G. Matthews, General Manager, Quebec Railway,

Light, Heat & Power Co.; M. N. Todd, President, Galt, Preston & Hespeler St. Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.; Assistant Secretary, Aubrey Acton Burrows, Business Manager, Canadian Railway and Marine World.

The officials of member companies attending the meeting were given every opportunity of thoroughly inspecting the Quebec Railway, Light, Heat & Power Co.'s unique system. On the afternoon of the first day they were taken by special car over the suburban line to Ste. Anne de Beaupre, which is operated by both electricity and steam, and which last year carried over 2,000,000 pilgrims to the shrine. On the return journey one of the company's power houses at Montmorency Falls was inspected. On the afternoon of the second day they were taken over the company's city division in a special observation car and had every opportunity of carefully studying the successful operation of a line handicapped by narrow streets and heavy gradients, and inspection was made of the St. Malo car barns. The officials of the Quebec Railway, Light, Heat & Power Co., especially H. G. Matthews, General Manager; R. M. Reade and J. A. Everell, Superintendents; W. J. Lynch, Treasurer and Comptroller; L. Burran, Chief Electrical Engineer; P. Hamel, Secretary, and C. J. Pigot, Maintenance of Way Engineer, were very attentive to the visitors, furnishing all information in their power and doing everything possible to make the meeting a most successful one.

## The Electric Railway Situation in Toronto.

R. C. Harris, Commissioner of Works, has reported to the Committee on Works that it is expected to lay the report of a special investigation into the proposals for rapid transit in Toronto before the City Council, by Nov. 1, and until this is done he considers it would be unwise to project additional civic street railway lines.

The particular matter calling forth this report was the projected lines on Annette St., and Pacific Ave., West Toronto, within the area over which the Toronto Suburban Ry. holds the franchise. The construction of these lines was ordered by the Ontario Railway and Municipal Board, and the company expressed its willingness to abandon its franchise over these streets if the city would not require the enforcement of the order. This matter is being considered by the City Counsel's department and deputations have waited upon the Commissioner to argue both for and against the building of the lines. The Commissioner expressed the opinion that the governing consideration as related to conditions in West Toronto is that of rapid transit rather than local accommodation. This question of rapid transit is being considered by the Chief Engineers of the Hydro Electric Power Commission of Ontario, and of the Harbor Commission and the Commissioner of Works, with a view of co-ordinating the electrical railway projects for which Ontario Hydro Electric Power Commission is responsible, with the requirements of the Harbor Commission, and the needs of the city, having in mind the acquisition by the city of the Toronto Ry., when its franchise expires in 1921. The report upon this matter is that to which the Commissioner of Works refers.

**Canadian Society of Civil Engineers.**—A branch has been organized at Regina, Sask. The officers for the current year are,—Chairman, O. W. Smith; Secretary, L. W. Wynne-Roberts; executive committee, A. J. McPherson, F. McArthur and I. N. DeStein.

## The Jitney Automobile Situation.

The jitney situation on the United States Pacific Coast is stated to be having a hard fight for its existence and to be slowly but surely on the decline. The reason for this is stated to be the new type of motor bus which is being put on in many cities and which is reported to be more economical in its operation than automobiles. Another reason for the decline of the jitney is the regulations which have been put in force all over the country which have resulted in the elimination of irresponsible drivers, and the poorer class of vehicles, and are regulating the routes operated and the number of passengers carried. The New York State Legislature has passed a law authorizing the regulation of the traffic, and under it the cities of Syracuse, Utica and Schenectady have passed bylaws. The putting in force of these regulations has brought about the removal from the streets of all unlicensed cars, in Schenectady. In Syracuse the license rates run from \$75 for a five passenger car, to \$200 for a 16-passenger car, while the bonds required run from \$10,000 for the five passenger cars to \$20,000 for the 16-passenger cars.

In Canada, while there was an increase during June in the total number of jitney cars being operated in the different centres, there are indications that with the strict enforcement of the regulations, which have been passed in some places, considerable numbers of jitneys are being taken off the service on the better travelled routes, and are being used in an endeavor to open up new routes. There does not appear to be any extension of the traffic in Quebec and other eastern provinces, while in Ontario the area within which the jitneys are operating is increasing, although in Toronto, the jitney traffic, particularly along Yonge St., is not so dense as it was a month ago. A larger number of routes are being operated, and there are also a number of irregular jitneys operating without any regular schedule. The City Treasurer is reported to have said that the loss of revenue to the Toronto Ry., and consequently to the city, is not entirely due to the jitney traffic, an opinion in which the Toronto Ry. management agrees. City officials have had men engaged in collecting statistics of the jitney traffic, but these are not yet available for publication. The information, however, has been given to the Police Commission, which regulates the traffic. As a result a bylaw has been drafted which was given two readings at the meeting of the City Council, June 14. The license fee was fixed at one dollar a month and the other regulations require that a seat be provided for each passenger carried; that no one shall sit on the sides of, or stand up in the cars; that drivers shall be prohibited from smoking when carrying passengers; that the jitney shall be kept clean and in good condition; that the council shall set apart stands at the terminal points of the jitney routes, and that a bond of \$1,000 shall be put up by each owner.

On June 15 application was made to the Toronto Board of Control on behalf of A. B. McBride for permission to operate motor buses in the city. A list of 13 routes was given, and an agreement was asked for. The Chief Constable saw no objection to the operation of the buses, but a joint report from the City Solicitor, the Chief Constable, and the Commissioner of Works said:—"The application seems to contemplate an agreement extending over a period of years, and practically an exclusive franchise or right to operate motor buses. In other words, the company wishes an agreement as to time, and also to prevent opposition. This, we think, the city is not in a position to give.

If anyone chooses to inaugurate a system of transit by means of motor buses, properly licensed and regulated, there is nothing to prevent this being done at any time; but the city cannot enter into an agreement and afford protection either as to the length of the franchise or freedom from opposition without complying with the restrictions above quoted." The Board decided to adjourn the consideration of the matter.

The Toronto Jitney Association has been incorporated under the Ontario Companies Act, with an authorized capital of \$40,000 to deal in automobiles and to operate the same in the transportation of passengers and freight, the provisional directors being:—G. Gregory, A. Trowther and J. W. Bicknell.

In the vicinity of Toronto, in addition to the routes mentioned in our last issue as being served by jitneys, a service is being given along the Lake Shore Road to Long Branch, paralleling the Toronto and York Radial Ry., and from West Toronto to Weston, competing with the Toronto Suburban Ry. The Toronto Jitney Association has started a route to Balmy Beach.

In Belleville, Ont., Belleville Jitneys, Limited, with S. E. Carman, S. R. Burrows and C. R. Burrows as provisional directors, has been organized, and some cars are being operated. A jitney service is being operated between Oakville town and the G.T.R. station there, which is a convenience to "commuters." At a recent meeting of the Hamilton City Council's Legislative Committee arrangements were made with the local jitney association for the further regulation of the traffic. In the course of the discussion it was stated that the most profitable routes for jitney traffic are King and Barton Streets, while no profit is made on the route on Main St., and that the running expenses are 7½c. a mile. A jitney service was started in London, Ont., Jan. 5, under the management of C. Swayzie, which is catering principally for the military traffic. A suggestion at the city council, June 15, to draw up a bylaw to regulate the traffic was not favorably received.

At the Brantford City Council, July 14, the suggestion was made that the city should operate jitneys to and from West Brantford, and other points not reached by the municipal railway.

Up to May 31, the Manitoba Government had issued licenses for 6,700 automobiles, and there are also about 700 motor cycles in the Province. The increase in the number of auto licenses issued is stated to be almost entirely due to the jitney traffic, owners having sold their old cars to chauffeurs for use as jitneys and to have bought new cars. The working of the new traffic bylaws has been watched by the police, and some minor amendments were decided upon, June 9, the most important of which is that autos not being used for hire may stand within a certain restricted area, from which they were excluded under the bylaw. Recent reports state that there are 572 cars being operated in Winnipeg, of which 428 have been licensed under the jitney bylaw.

The Trade and Labor Council at Saskatoon, Sask., while of opinion that the city's electric railway could give better service to the public, has called upon all union men to patronize it rather than the jitneys; while the Trades and Labor Council at Regina, Sask., has expressed the opinion that the coming of the jitney there will have done some good if it brings about an improvement of service upon the municipal railway.

At Calgary, Alta., a bylaw has been drafted fixing \$5 a year per 18-in. seat as the license fee, and \$2,500 for three cars, and \$5,000 for more than three cars, as the

amount of the bond to be entered into before a license can be issued. It also authorizes the commissioners to name the streets on which jitneys may or may not be operated, to define the routes to be followed, and to generally regulate the traffic. At present the only jitney traffic is from the end of the municipal railway to the military camp at the Sarcee Reserve.

Prior to the putting in operation of the "tango" 8 for 25c. no transfer tickets by the British Columbia Electric Ry. there were 664 cars operating under jitney licenses in Vancouver. With this and the putting in force of the city bylaw necessitating the filing of bonds, this number has been reduced to about 250 cars, of which about one half are operating independently of the association. The motor traffic in the city has heretofore been regulated under bylaw 952, which has been amended and extended by the passing of bylaw 1218, since the new legislation respecting jitney traffic was passed. The two bylaws as consolidated, have been published in pamphlet form. There are 60 regulations. The schedule fixes the license fee at \$25 for a seven passenger car, \$50 for larger cars, and \$2 for the driver. Drivers are to be examined and cars are to be inspected before licensing by the Inspector of Motor Vehicles, who may appoint assistants to see that the cars used for hire shall be kept clean, dry and in good repair. The regulations also provide for the conduct of drivers when in charge of motors, the number of persons to be carried, the point on the streets where they may be stopped, the sign to be carried on the cars, and for the closing of the right hand doors, so that passengers must enter and alight by the left hand door. Provision is made for the hearing of complaints for breach of regulations for which the council may suspend licenses. The bond required to be filed is to the extent of \$1,000 for an individual claim, and of \$5,000 for a group of claims arising out of any one accident.

A jitney service has been organized at Vernon, B.C., in connection with the military camp there.

## The Montreal Tramways Franchise Question.

The Montreal Board of Control decided, on June 8, to write to the company asking whether it would build the various lines necessary to provide increased accommodation on the city guaranteeing the cost of the lines, and to provide for the cost of their operation. This resolution was passed on motion of Controller Duncan McDonald, ex-General Manager of the Montreal Tramways Co., who argued that as the company could not build the lines owing to the difficulty of raising money in the face of the short life of the present franchise, it might possibly do so if the city guaranteed the money. President Robert replied, June 10, that the proposal submitted could not be entertained by the company, etc. The matter came up again for consideration by the Board of Control, June 11, but was adjourned. (June, pg. 229.)

**A Jitney Decision in Illinois:**—The Illinois Public Utilities Commission held jitney busses to be public utilities. Ruling in the case of the Jacksonville St. Ry., against the L. F. O'Donnell Transportation Co., Commissioner O. P. Thompson held that jitneys render a public service such as to bring them under the intent of the utilities law and that they must incorporate and seek certificates before operating. The commissioner also ruled jitneys may not operate along streets where they become a parallel competition to a railway.

### Electrification of Schomberg and Aurora Railway.

The Schomberg and Aurora Ry., a subsidiary of the Toronto and York Radial Ry., is being electrified. It is 15 miles long, extending from Schomberg, Ont., to a junction with the T. & Y.R.R. at Yonge St., near Bond Lake, about 4 miles south of Aurora, and has been operated by steam power. The rolling stock consists of a steam locomotive, 2 passenger cars and 15 flat cars.

The S. & A.R. Co. was incorporated by the Dominion Government in 1896 to build and operate a line from a point on the G.T.R. Toronto-North Bay line, between King and Newmarket, to or near Schomberg. This power was exercised shortly after and the line constructed. The Dominion Parliament in 1900 further empowered the company to extend its line southeasterly to Oshawa, and northwesterly through Shelburne to Durham, but this was never proceeded with. The latter act also gave the company power to enter into an agreement with the T. & Y.R.R. (then the Metropolitan Ry.), to convey or lease its line. In 1904 the T. & Y.R.R. purchased the line.

The electrification will be similar to that of the T. & Y.R.R., for which it will form a feeder. The trolley will be a 4-0 round copper wire, with a 4-0 feeder. Power will be delivered to the line at the line voltage of 600 volts from the Bond Lake substation. T. & Y.R.R. rolling stock will be used. The work is being done by the T. & Y.R.R. line crew in its spare time, no extra forces being employed on the work.

### Jitney Regulation in New York State.

The New York State Legislature has passed an act to amend the transportation corporations law, in respect to stage routes, bus lines and motor vehicles carrying passengers for hire in cities.

"The laws of 1909, chap 219, sec. 25, are amended to read as follows:

25. Additional persons and corporations subject to the public service commissions law. Any person or any corporation who or which owns or operates a stage route, bus line or motor vehicle line or route or vehicles described in the next succeeding section of this act wholly or partly upon and along any street, avenue or public place in any city shall be deemed to be included within the meaning of the term 'common carrier' as used in the public service commissions law, and shall be required to obtain a certificate of convenience and necessity for the operation of the route or vehicles proposed to be operated, and shall be subject to all the provisions of the said law applicable to common carriers."

The following section is added to article 4 of said chapter as follows:

"26. Consent required. No bus line, stage route nor motor vehicle line or route, nor any vehicle in connection therewith, nor any vehicles carrying passengers at a rate of fare of 15 cts. or less for each passenger within the limits of a city or in competition with another common carrier which is required by law to obtain the consent of the local authorities of said city to operate over the streets thereof shall be operated wholly or partly upon or along any street, avenue or public place in any city, nor receive a certificate of public convenience and necessity until the owner or owners thereof shall have procured, after public notice and a hearing, the consent of the local authorities of said city, as defined by the railroad law, to such operation, upon such terms and conditions as said local authorities may prescribe, which may include provisions covering description of route, rate of speed,

compensation for wear and tear of pavement, improvements and bridges, safeguarding passengers and other persons using such streets, and no such operation upon the streets of any such city shall be permitted until the owner or operator of such vehicles or proposed line or route shall if required by such local authorities have executed and delivered a bond to such city in an amount fixed by said local authorities and in the form prescribed by the chief law officer of said city with sureties satisfactory to the chief fiscal officer of said city, which bond may be required to provide adequate security for the prompt payment of any sum accruing to said city, and the performance of any other obligations, under the terms and conditions of such consent, as well as adequate security for the payment by such owner of any damages occurring to, or judgments recoverable by, any person on account of the operation of such line or route, or any fault in respect thereto."

### Winnipeg Electric Railway Protests Against Jitney Competition.

Wilford Phillips, Manager and acting Secretary, Winnipeg Electric Ry. wrote the City Clerk of Winnipeg recently as follows: "I am instructed by the directors to inform the city council of the position taken by this company with reference to the attitude of the council towards the jitneys as a means of transporting passengers along the streets and highways of the city in competition with this company. In the first place, we contend that the attitude of the council is a violation of the contract entered into with us in pursuance of city bylaw 543, whereby we were given for valuable consideration exclusive rights for our transportation system on the city streets. In the next place, the competition is extremely unfair. The money invested in this undertaking was so invested on the faith of the contract we have referred to and many onerous terms were imposed, in the way of paying 5% of our gross revenues to the city, an annual car tax on rolling stock, cost of pavements and taxes upon property. The city is now permitting competition by parties who have practically no capital invested, and whose only object is to make a little ready money temporarily. There is no doubt that this competition is being allowed by the city. Naturally the British capitalists who have their money locked up in Canada look to the local authorities for protection. Considerably more than half the capital invested in the street railway system here is British money. One of the problems the city has to face at the present time is that there is no British capital coming in for investment. When conditions change, unless during this strenuous period the capital already in the country has been protected, it will be very difficult indeed to get more in. If this competition is allowed to continue the company will necessarily be compelled to cease making further extensions, and indeed will find it difficult to obtain capital. This would not be a good thing for the city at large. I do not suppose it is necessary to point out also the interest the city has in the success of our undertaking. No doubt it fully appreciates that without comment upon our part. The same remarks I suppose would apply to the council's duty to the public to protect them against the dangers occasioned in the operation of cars by irresponsible and unfit persons. If the city expects this company to maintain adequate service (and prevent still further reduction of the present service) the city will be obliged to do its part and eliminate unfair competition."

### Canadian Autobus Company's Offer to City of Montreal.

The Canadian Autobus Co. advised the Montreal Board of Control, June 22, through its Secretary, G. Renaud, that it had been experimenting with various types of busses and had finally approved of one tested in the city recently. It proposes to build these cars in Montreal and place them in service if an arrangement can be made under which the city will guarantee the company's bonds for \$3,000,000, upon the understanding that the service is to be inaugurated within 12 months, and half the profits paid into the city treasury.

The company's estimated income is shown in a table presented in the letter. The daily run of an autobus is placed at 150 miles, and the service, which would be operated by 300 busses, would therefore cover 45,000 miles a day. Allowing five passengers to the mile, this would mean 225,000 passengers a day. At 5c. each the passengers would contribute \$11,250 daily. Allowing 21c. a mile for expenses, the daily cost of operation would be \$9,450, leaving a net profit of \$1,800 daily, or \$3,375,000 for a year of 300 days. The net profit works out at \$540,000, of which the city's share, one-half, would be \$270,000.

Under the contract between the city and the company dated Aug. 22, 1912, the city was to receive shares in the company, and the present proposition is made with a view of getting out of any legal entanglements which might ensue between the city and the Montreal Tramways Co., through the city holding shares in the Autobus Co. The letter concludes: "It is understood, of course, that this proposition is made without prejudice to our contract still in existence with the city, but we desire you to notice that the acceptance of our offer would place the city in a position to give almost immediately a satisfactory service to distant wards such as Emard, Cote des Neiges, Ahuntsic and Bordeaux and others, which are to-day compelled to pay higher fares than other sections of the city."

### Wages on the Toronto Railway.

The employees are negotiating with the company in connection with a new agreement to take the place of the one signed in 1912 for three years, and which expired June 16. At a meeting of the men it was decided to ask for an all round increase of 1/2c an hour, and some other requests were made for a change of certain conditions, which the men claimed would not affect the company in any way financially. Eventually it was decided to drop these requests, and intimate to the company that the men were willing to accept the old agreement for a further two years. In response to this the Toronto Ry. management stated that it was thought the agreement might be renewed for three years. At the time of writing (June 25) no decision appears to have been reached, but the men's agent is reported to have stated that if the two year extension is not accepted by the company, an application will be made for a board of conciliation to settle matters on the original proposition for an increase of 1/2c an hour. The present rates of wages are: Motor-men and conductors first year 23 1/2c, second year 25 1/2c, third year 27 1/2c; shed men, foreman 27 1/2c, assistant foreman 24 1/2c, motor and truck repair men, first year 23 1/2c, second year 25 1/2c, third year 27 1/2c, and 4c an hour extra for Sunday work. The men pay for their uniforms the first year, pay half the second year, and thereafter are supplied free.

## Electric Railway Projects, Construction, Betterments, Etc.

**Brantford Municipal Ry.** The building which was utilized as a power house by the Brantford St. Ry. Co., immediately east of the G. T. R. Colborne St. Station, has been entirely refitted and is now being used as the general office of the Brantford Railway Commission and the City's Hydro Electric Commission, jointly under the management of L. G. Ireland.

The Eagle Place loop line has been completed and cars are being operated over it. (May, pg. 190.)

**Calgary Municipal Ry.**—The city commissioners of Calgary, Alta., have under consideration the building of a temporary line, 1.50 miles, towards the military camp on the Sarcee Indian Reserve. The material is on hand, and the labor cost is estimated at \$800. A motor bus line is being operated to the camp, but is not sufficient to cope with the traffic. The construction of the temporary line would also enable the city to handle the traffic more expeditiously than at present. It is estimated by T. H. McCauley, Superintendent, that the revenue from the line would average \$50 five days a week, and \$100 a day on Wednesdays and Sundays. (April, pg. 147.)

**Hydro Electric Power Commission of Ontario's Electric Railways.**—At a meeting of the Essex Hydro Electric Radial Association, recently, a resolution was passed pledging the association to use all legal means to prevent extension of franchises and charters to electric railway companies, and making this one of the principles of the association's constitution. Each municipality pays a fee of 50c per 1,000 of population and sends two delegates to the annual meeting. Officers for the current year are:—President, A. W. Jackson, Mayor of Windsor; First Vice President, C. H. Montreuil, Reeve of Ford City; Second Vice President, M. Swartman, Leamington; Third Vice President, G. J. O'Neill, Sandwich South; Fourth Vice President, J. B. Ducharme, Belle River; Secretary, H. R. Hatcher, Walkerville; Treasurer, W. R. Woollatt, Walkerville. (June, pg. 227.)

**London St. Ry.**—We are officially advised that the company is rebuilding its single track on Ridout St., from Horton St. to Garfield St., 4,000 ft., and repaving the track allowance. The track will be relaid with 80 lb. A. S. C. T rail, supplied by the Algoma Steel Co., and a single track Y, of 108 lb. rail. Some other track renewal work will be undertaken if the city council decides upon paving the streets. C. B. King, London, Ont., is Manager. (Mar., pg. 108.)

**Moncton Tramways Electricity and Gas Co.**—We are officially advised that it is expected to build about a mile of track from Main St. on Bonaccord St. to John St., to Union to Church St. extension at an early date, for which rails and ties will be required. Orders have been given Canadian Steel Foundries, Montreal, for switches, frogs, etc., for the double track work at the Main St. subway under the Intercolonial Ry. (June, pg. 229.)

**Montreal and Southern Counties Ry.**—The company is proceeding with the construction of its extension from St. Cesaire to Granby, Que., 16 miles. It is proposed to build a substation and car barn at Granby. Tenders have been invited for all necessary overhead material and bonds, and also for a 400 k. w. motor generator set, and other equipment for the substation. (May, pg. 190.)

**Montreal Tramways Co.**—We are officially advised that the company is building 1.1 mile of new track, and reconstructing a like

mileage on Notre Dame St., between First Ave., and Dominion Park, changing the location, so that when the new road is established by the city, the track will be in the centre of the road, instead of on the north side as at present; and is also reconstructing and extending the line between Dominion Park and Bernard Ave., approximately 4.3 miles of single track. The company has just completed the work of extending about one mile of single track from the Y at Bernard Ave. to the westerly limits of Montreal East, which work was started towards the end of 1914. During 1914 the company constructed approximately eight miles of single track in the municipalities of Montreal East and Pointe aux Trembles. All this track is of the company's no. 1 standard type, with the exception that the rails being used at present in the reconstruction and extension work are no. 87 L-399 section, while that used in the extensions in Montreal East and Pointe aux Trembles was no. 80 A.S.C.E. section. J. E. Hutcheson is General Manager. (June, pg. 229.)

**Niagara, St. Catharines and Toronto Ry.**—We are officially advised that the company proposes to build a station at Niagara-on-the-Lake, Ont., the terminus of its line from St. Catharines to the mouth of the Niagara River. E. F. Seixas, St. Catharines, Ont., is General Manager.

The new station at Niagara-on-the-Lake will consist of a station building 47 x 25 ft., with an open shed 48 x 20 ft., making a total length of 95 ft. by 20 ft. wide, with an overhanging roof 4 ft. The exterior of the building will be stone up to 5 ft., the balance being shingle construction, while the open shed will be carried on pillars resting on stone pedestals 5 ft. high. The interior of the station building will be finished with oak wainscoting 4½ ft. high, with metallic sidewalls and ceiling. This portion of the building will be divided into three apartments, waiting room, 20 x 25 ft.; ticket office, 20 x 15 ft.; and baggage room, 20 x 12 ft. The building is expected to be completed early in July.

**Ottawa and St. Lawrence Electric Ry.**—An order for the winding up of the Ontario and St. Lawrence Construction Co., which was formed for the building of the O. and St. L. E. R., was made at Osgoode Hall, Toronto, June 2, on the application of J. H. Rogers. G. T. Clarkson, Toronto, was appointed interim liquidator.

**Ottawa Electric Ry.**—Work was started June 6 on the pavement renewal work on Bank St., Ottawa, the Somerset and Britannia cars being temporarily rerouted. Particulars of the track work to be done were given in our last issue. (June, pg. 229.)

**Peterborough Radial Ry.**—We are officially advised that the Peterborough, Ont., City Council contemplates doing some new paving work which will necessitate certain changes in track. Nothing definite has been settled about the work, its extent or when it will be undertaken by the city. (Dec., 1914, pg. 558.)

**Regina Municipal Ry.**—The extension proposed to be built on Young St., Regina, Sask., is for freight service only, and connects the track leading to the city's new electric light and power plant with the C. P. R., in order to enable the city to handle cars of coal and other materials to and from the power house. The piece of track will be 3,500 ft. long, and will be laid on Young St., from 16th Avenue to Arcola St. The freight will be moved on the line by the city's motor haulage car. The estimated cost of the line and other work proposed to be done in connection with

the system is \$75,000. D. W. Houston is Superintendent. (June, pg. 229.)

**Sandwich, Windsor and Amherstburg Ry.**—We are officially advised that the company is constructing a second track on 0.66 mile of track in Sandwich, Ont.; and is paving and renewing a mile of track in Sandwich, and 0.25 mile of track in Amherstburg. Jas. Anderson, Windsor, Ont., is Manager. (June, pg. 229.)

**Sarnia St. Ry.**—We are officially advised that the company expects to start work at an early date with an extension of track from the corner of Christiania and St. Clair Sts., to Clifford St., and west along Clifford St., 0.5 mile. For this work the company is in the market for half a mile of rails, trolley wire, ties, etc. G. E. Wadland, Sarnia, Ont., is Manager and Secretary Treasurer. (Sept. 1914, pg. 554.)

**St. John Ry.**—In connection with the track renewal work at the corner of Princess and Sydney streets, St. John, N. B., some differences arose recently between the company and the city respecting the use of T rails, and it was subsequently agreed that the T rail might be used instead of the grooved rail, if concrete were used between the rails.

**Transcona, Man.**—The agreement with J. H. Kern for the building of an electric railway in the town having been disposed of, the Town Council is now in a position to consider the applications of W. J. Christie, and H. W. Adcock of Winnipeg for franchises, to negotiate with the Winnipeg Electric Ry., or to consider the building of a municipal railway, which is being advocated. (June, pg. 234.)

**The Transcona, Man., Town Council,** on June 10, expressed an opinion favorable to the proposition of H. W. Adcock, Winnipeg, for the building of a line from Winnipeg to Transcona. A 25-year franchise is being asked; the line to be built to Transcona by October and extended to the south side of the town by the spring of 1916. Gasoline is the motive power proposed. Cars similar to those in use at present between Lac du Bonnet and Point du Bois to be used. (June, pg. 234.)

**Toronto and York Radial Ry.**—We are officially advised that it is proposed to electrify the Schomberg and Aurora Ry., which extends from near Bond Lake, on the company's Metropolitan Ry., to near Lldoytown, Ont. Part of the material necessary for the purpose has been ordered.

**Windsor, Essex and Lake Shore Rapid Ry.**—We are officially advised that paving on the company's line in Windsor and Essex, Ont., is being done, and that in connection with this there will be some track renewals. Orders have been placed for a supply of oak ties. A. Eastman, Kingsville, Ont., is Vice President and General Manager.

**Winnipeg Electric Ry.**—We are officially advised that the company is making a one mile extension of its tracks on Marion St., St. Boniface, Man., for the purpose of giving a service to the Union Stock Yards, and has under consideration the renewing of half a mile of track on Osborne St., from Kylemore Ave. to River Park. Wilford Phillips is Manager. (June, pg. 229.)

**The Dorchester Electric Co.'s plant and franchises** were advertised for sale by auction, June 30, by the Royal Trust Co., on behalf of the bondholders. The Shawinigan Water and Power Co. is reported to be the owner of the majority of the bonds, and the sale is being made in order to simplify the reorganization of the company's affairs.

The London St. Ry. is having a number of its old cars remodelled at Preston, Ont., for p.a.y.e service.

## Electric Railway Notes.

The Regina Municipal Ry. ordered 28 headlights recently.

The Sandwich, Windsor & Amherstburg Ry. is in the market for 2 single truck p.a. y.e. cars.

The Halifax Electric Tramway Co. has ordered 6 closed city cars, 21 ft. long, from the Nova Scotia Car Works, for delivery by the end of September.

The Port Arthur, Ont., Electric Ry.'s north belt line was started on June 14 to be operated in either direction instead of one way only as formerly.

The British Columbia Electric Ry. started its observation car service in Vancouver, June 17, putting in operation a 25c fare instead of the 50c one charged in previous years.

A conference was held at Brantford, Ont., June 15, between G.T.R. and Brantford Municipal Ry. officials respecting the interchange of traffic at Blue Lake on the B. M. R.'s Grand Valley section.

The Halifax Electric Tramway Co. has ordered 6 closed street cars from the Nova Scotia Car Works. They will be 21 ft. long inside, 30 ft. long over all, mounted on single trucks with 8 ft. wheel base.

The Hamilton St. Ry. has inaugurated a special car service on Sundays to connect with the Canada Steamship Lines steamboats, which now run between Toronto and Hamilton on Sundays.

The Winnipeg Electric Ry. proposes to substitute a 5c. fare on its line in West Kildonan, in place of the 2c. a mile rate now in force. The municipal council is protesting to the Manitoba Public Utilities Commission.

The Windsor, Essex & Lake Shore Rapid Ry. has been authorised by the Board of Railway Commissioners to refund to C. M. Sinclair, of Bridgeburg, Ont., 98c. overcharge on a shipment of household effects from Kingsville, Ont., to Bridgeburg.

In the Lake Erie and Northern Ry.'s electrification it is said to be the intention to use a steel trolley wire, catenary suspension, the same as is used on the Pacific Electric Co.'s lines. The transmission wires and feeders will be aluminum.

The Toronto City Council has approved recommendations of the Works Commissioner for equipment for the Toronto Civic Ry.'s Gerrard St. car line, consisting of 4 heaters from the C. E. A. Carr Co., at \$175 each and 16 walkover rattan seats from the Preston Car & Coach Co. at \$15 each.

A delegate at a meeting of the Regina, Sask., Trades and Labor Council, May 24, is reported to have stated that "the city aldermen were deliberately attempting to make the municipal railway system as unsatisfactory as possible so that it will eventually have to be taken over by a private firm."

The Toronto Board of Control invited tenders recently for the machine shop equipment of the Toronto Civic Ry.'s new Danforth Ave. car barns, consisting of a 14 in. lathe, 150 ton wheel press, shaper, radial drill, vertical drill, 3,000 lb. portable crane, double emery stand, vice, hack saw, and a 35 h.p. induction motor.

The Vancouver City Council passed a resolution, May 25, instructing the City Solicitor to inform the British Columbia Electric Ry. that it was violating its agreement by issuing the so-called "tango" tickets without transfer privileges, and to advise the council as to the steps necessary to be taken to enforce the agreement.

It is stated that the Toronto Commissioner of Works will assemble the cars to be used on the Lansdowne Ave. line of the

Toronto Civic Ry. at the local car barns. He expects to do this and have the cars completed at a total cost of \$4,750 each, the lowest tender received for the cars complete being \$5,200 each. A full description of these cars was given in Canadian Railway and Marine World for May, pg. 187.

The Hamilton St. Ry. is using a new transfer ticket, white on even numbered days, and yellow on odd numbered days of the month. The route from which the passenger seeks a transfer, and the one to which he is going must be punched out by the conductor. With the old form the passenger simply stated he wanted a transfer north, south, east or west, and received it accordingly.

The Saskatoon and Sutherland Construction Co., and its members personally, gave a note for \$3,800 with interest at 8%, to Longergan and Haresford, in connection with the building of the electric railway from Saskatoon to Sutherland, Sask. The note was made Dec. 19, 1913, and became due April 18, 1914. Since maturity \$700 has been paid, and the holders sued to recover the balance, which with interest, amounts to \$3,421.95. Judgment was reserved.

The Toronto Ry. recently brought the parents of a number of small children before the police magistrate, for refusing to pay fares for their children on the company's cars. No fines were asked for or inflicted, the magistrate informing the parents, that for children who were able to walk and occupied seats in the cars, the half fare demanded by law must be paid, and being seated on passengers' knees does not make children free passengers.

The Hamilton, Grimsby and Beamsville Electric Ry. has been granted leave to appeal against the order of the Ontario Railway and Municipal Board respecting the provision of sanitary accommodation on its cars and at stations. The question at issue is one of jurisdiction, the company claiming that its railway is subject to the jurisdiction of the Board of Railway Commissioners. The order was given in full in Canadian Railway and Marine World for June, pg. 226.

H. G. Matthews, General Manager, Quebec Ry. Light, Heat and Power Co., is reported to have stated, June 3, that it is hoped by the end of the year to have the welding of the joints throughout the whole track in the city completed. A section of this work has been completed, producing a smoother running of the cars. Six double truck cars were placed in service on the extension to Limoilou towards the end of June, and it is stated that by the autumn only double truck cars will be run on Crown St.

Twenty-five Brantford citizens are speculating as to what responsibility transportation companies assume when they issue combination tickets, particularly on public holidays. They purchased tickets from the Brantford and Hamilton Ry., entitling them to make the trip to Toronto and return by electric railway and steamboat on May 24. The return steamer was late and did not arrive in Hamilton until 2.30 on the morning of the 25th at a time when there were no cars being operated. Some of the passengers expressed the opinion that the company should have put on a special car, or that they should have been provided for at an hotel. The company points out that the combination ticket is only issued for the convenience of the passenger, to relieve him of the necessity of buying tickets from each company affected, and unless special travelling facilities are offered, does not impose any obligation on any of the companies concerned to do more than operate its regular service.

## Mainly About Electric Railway People.

Norman Coryell has been appointed Master Mechanic, Moncton Tramways, Electricity & Gas Co., Ltd., succeeding R. A. McCharles.

R. J. Fleming, General Manager, Toronto Ry., is importing 19 Jersey cattle from the Rothschild herd in England, for his farm at Pickering, Ont.

E. A. W. Turbett, Mechanical Superintendent, Quebec Railway, Light, Heat & Power Co., has joined the Canadian Overseas Railway Construction Corps.

H. A. Robson, Public Utilities Commissioner for Manitoba, has been appointed one of a commission of three to investigate charges of a political saw off having been made in Manitoba recently.

Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co., Hamilton, Ont., spent the latter part of June in Cape Breton with Mrs. Hawkins on a fishing trip.

W. L. Wright, C.P.R. general offices, Montreal, has been appointed Secretary-Treasurer, Hull Electric Co., succeeding A. E. Robertson, who was acting Secretary Treasurer.

A. B. Colville, Vice President, Electric Power Co., Ltd., of which the Peterborough Radial Ry. Co. is a subsidiary, is going on overseas service as a lieutenant in the 39th battalion.

L. G. Ireland, Manager of the city's hydro electric plant at Brantford, Ont., has, as foreshadowed in our last issue, also been appointed Manager of the Brantford Municipal Ry.

E. A. Evans, M. Can. Soc. C.E., Quebec, formerly General Manager, Quebec Railway, Light, Heat & Power Co., and a former President of the Canadian Electric Railway Association, is convalescent after a severe attack of pleuro-pneumonia.

W. G. Ferguson, Manager, Otonabee Power Co., has also been appointed acting Manager, Peterborough Radial Ry., Peterborough, Ont., during the absence of W. H. Munro, Local Manager, who has received a commission in the Motor Transport Branch, Canadian Overseas Expeditionary Force.

A. J. Mitchell, Comptroller, Mackenzie, Mann & Co., Ltd., and Assistant to the Vice President, Canadian Northern Ry., Toronto, has been elected Vice President of the Chatham, Wallaceburg & Lake Erie Ry., succeeding J. D. Morton, Assistant Comptroller, Canadian Northern Ry., Toronto.

Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., who is second in command of the Montreal Home Guard, a body 2,000 strong, is giving a trophy for the aggregate of the best three scores to be made during the season with the Savage rifle at the Pointe Aux Trembles range.

A. L. Farquharson, Manager of Public Utilities, Fort William, Ont., has taken over the management of the municipal electric railway there, succeeding M. O. Robinson, formerly Manager of both the Fort William and Port Arthur Municipal Electric Railways, who continues to manage the Port Arthur Electric Ry.

Clark V. Wood, who has been elected President, Springfield St. Ry., Springfield, Mass., and also Vice President of several smaller electric railways forming part of the Springfield system, vice J. T. Harmer, resigned, entered G.T.R. service in 1881, and served as operator at various points between Montreal and Portland, Me. He subsequently served with other railways in the U. S., and prior to his election as President, was Vice President, Springfield St. Ry.

**Capt. C. E. McGee**, Accountant, Moose Jaw Electric Ry., Moose Jaw, Sask., who has been killed in action in Belgium, was a son of J. J. McGee, ex Clerk of the Privy Council of Canada, and nephew of the late Hon. Thos. D'Arcy McGee, M.P., who was assassinated in Ottawa shortly after Confederation. He served in the South African war in the 1st Canadian Mounted Rifles and was at the side of Trooper Mulloy when the latter was blinded, the same explosion tearing a rifle out of McGee's hands. After the South African war he was appointed by the British Government as Customs Inspector at Lorenzo Marquis. Some 3 years ago he returned to Ottawa and about 2 years ago went to Moose Jaw.

**James Dewar Fraser**, who has been elected President, Canadian Electric Railway Association for the current year, and whose portrait appears in this issue, was born at St. Andrews, Que., Mar. 26, 1851. From 1871 to 1882 he was accountant and telegraph operator, W. McClymont and Co., Ottawa; 1882 to 1891, Secretary-Treasurer, Ottawa City Passenger Ry.; in 1891 he was appointed Secretary-Treasurer, Ottawa Electric Ry., which position he still holds. In 1893 he was also appointed Secretary-Treasurer, Ottawa Car Co., now Ottawa Car Manufacturing Co., and in 1906 he was elected a director. In 1913 he was elected a director, Ottawa Electric Ry. Co., and in 1914 also a director, Ottawa Traction Co. In addition to these positions, he is a director and Secretary-Treasurer, Wallace Realty Co.

**E. P. Coleman**, who has been elected Vice President, Canadian Electric Railway Association, and whose portrait appears in this issue, was born at Taunton, Mass., June 14, 1867, and educated at the public schools there. He was, from Feb. 9, 1885, to Feb. 9, 1896, in the draughting room of Hube Printing Press, at the shops of the Taunton Locomotive Manufacturing Co., with which his father and grandfather had been associated for many years; Jan. 1, 1896, to Sept. 1, 1900, Treasurer and General Manager, Attleboro Steam and Electric Co., Attleboro, Mass.; May 5, 1898, to Mar. 31, 1899, in United States service during the Spanish war as Second Lieutenant and Battalion Adjutant, 5th Massachusetts Infantry; July 1, 1899, to Sept. 1, 1900, General Manager, Plymouth Electric Light Co., Plymouth, Mass.; Sept. 1, 1900, to June 1, 1905, Vice President and General Manager, Consolidated Lighting Co., Montpelier, Vt.; June 1, 1905, to Mar. 1, 1907, in practice as consulting engineer, general, electric light, power, railway and quarry work, and Treasurer and Manager, Wetmore and Morse Granite Co., Montpelier, Vt.; Mar. 1, 1907, to Jan. 1, 1909, General Manager, Great Northern Power Co., Duluth, Minn.; Mar. 1, 1909, to Oct., 1912, Manager of Railways, and since Oct., 1912, General Manager, Dominion Power and Transmission Co., Ltd., Hamilton, Ont.

**Detroit Freight Contract.**—The Detroit (Mich.) United Railway freight department reports closing a contract to handle 18,000 tons of sand, gravel and cement from the Grand Trunk Ry. connection between Birmingham and Royal Oak, Mich., a distance of approximately 5 miles. This material will be set on team trucks and will be used in constructing good roads. The freight department of this road has also closed a contract to transport 25,000 automobile touring bodies between Detroit and Flint, Mich. These shipments will include sedan and couplet bodies manufactured by the Fisher Body Company, Detroit, and will be delivered to the Buick Motor Car Company, at Flint, Mich. The total haul will be approximately 68 miles, and it will take four months to handle the 1050 cars required for this contract.—Electric Railway Journal.

### Calgary Municipal Railway Earnings, Etc.

The results of operation for May, compared with those for May, 1914, are as follows:			
	1915.	1914.	
Earnings .....	\$15,745.75	\$61,596.15	
Expenditure.			
Maintenance of Way and Structures .....	907.08	620.74	
Maintenance of Equipment .....	2,824.43	4,810.01	
Transportation .....	23,497.73	34,610.99	
General Expenses .....	1,954.51	2,961.91	
Total operating expenses .....	29,183.75	43,003.65	
Balance revenue over same .....	16,562.00	18,592.50	
Fixed charges .....	16,725.31	15,125.67	
Deficit for month, 1915.	163.31		
Surplus for month, 1914		3,466.83	

Statistics.			
Cars operated, regular .....	38	48	
Cars operated, extra .....	22	12	
Miles operated .....	226,172	267,468	
Passengers carried .....	1,099,604	1,490,319	
Revenue per car mile .....	20.226 Cents.	23.029 Cents.

Cost of power per car mile .....	2.892 "	3.518 "	
Average fare collected .....	4.060 "	59.8% "	
Proportion operating expenses to gross revenue .....	63.8% "	4.011 "	

### London and Port Stanley Railway Traffic Matters.

It is said that the passenger fares upon the newly electrified London and Port Stanley Ry., will be at 2c. a mile with a 30c. fare from London to Port Stanley at least one day in the week. Books of tickets for commuters will, it is said, be issued at \$5. The rate charged on this railway heretofore between London and Port Stanley, under steam operation, has been 30c., but notwithstanding this, passengers have preferred to travel by the London and Lake Erie Ry. and Transportation Co.'s electric line at a 50c. fare, the proportion being, it is reported, at the rate of four to one in favor of the L.E.R. & T. Co.'s line. A 40 minute service will, it is said, be given between the termini, and it is expected that the trip will be made in 45 minutes. In an interview, June 11, Vice Chairman Pocock of the London Railway Commission is reported to have said: "The advantage of a properly managed public utility is that the price of the commodity will be reduced as conditions demand. We have had continual reductions in the price of hydro, because the public use the commodity and we are able to cut the price, because of the increase in business. The same will follow with respect to fares on the London & Port Stanley line. We are going to serve the public at the lowest possible rate. We will have the best equipment in Canada, and the passenger traffic will be handled in the most efficient and speediest manner possible."

The Michigan Central Rd. has terminal facilities in London, partly laid out on land owned by a local company which still preserves its separate corporate existence. The M.C.R. lease of this property is about to expire and in connection with its future plans for serving London negotiations were opened June 5, with the London Railway Commission. It was also reported, June 11, that the Wabash Rd. was about to submit a proposition to the Commission for running rights, either over the whole line or the section between St. Thomas and London. The Vice Chairman of the Commission is reported to have said, June 11, that Pere Marquette traffic between London and St. Thomas would be handled by the Commission.

Another question, viz., that of the G.T.R. traffic, is under discussion. The G.T.R., which is the minority stockholder in the L. and P.S.R., operated the line for about 20 years and then abandoned it. A local paper says the City Corporation subsequently

asked the G.T.R. "to operate the line at a rental of one cent a year, and met with a refusal." According to a statement made on behalf of the G.T.R. during the electrification campaign, that company provides or controls 80% of the traffic going over the line, and "in the event of electrification we would be forced to provide such a channel for freight as we would feel assured would be necessary to protect our own interests in the regulation and prompt handling of supply coal." The G.T.R. holds a charter and has had surveys made for the building of a line from Port Burwell into London, which it was proposed to build, and to transfer to Port Burwell, the car ferry traffic heretofore being operated to Port Stanley. Nothing has been done in the way of arranging

for construction on this line, but the Pere Marquette Rd., which through its Canadian end, the Lake Erie and Detroit River Ry., has been operating the L. and P.S.R., has started work on the enlargement of its coal dock facilities at Rondeau, south of Chatham. Press reports state that the G.T.R. proposes to route its coal traffic to Rondeau instead of Port Stanley, and carry it to London by way of Chatham. (June, pg. 229.)

### Regina Municipal Railway Earnings, Etc.

The operating results for April, compared with those for April, 1914, are as follows:

	1915.	1914.	
Revenue .....	\$12,946.92	\$18,124.24	
Expenses .....	14,245.67	20,404.43	
Capital charges .....	9,137.58	7,476.52	
Operating deficit .....	1,298.75	2,280.19	
Expenses per car mile without power .....	13.63c	14.59c	
Expenses per car mile with power .....	18.03c	19.48c	
Power per k.w.h. ....	2.04c	2.00c	
Platform wages per car mile .....	74.06c	73.91c	
Expenses, percentage of earnings, less capital charges .....	110.03%		
Expenses, percentage of earnings, with capital charges .....	180.61%		

**Grand Valley Ry.**—The City of Brantford, Ont., which owns the Grand Valley Ry. from Paris to Galt, has offered to sell the line to the Lake Erie and Northern Ry., which is leased to the C.P.R. for 99 years, and which will, on completion be operated as part of the Galt, Preston and Hespeler St. Ry., of which Martin N. Todd is President, and which is also controlled by the C.P.R. The city's offer is stated to be the sale of the G.V.R. from Paris to Galt, for \$30,000, the city to retain the portion to Blue Lake siding, and the L.E. & N.R. to electrify its line from Port Dover to Brantford. The L.E. & N.R. makes a counter proposal, which is stated to be \$26,000 for the G.V.R., the city to retain the transformer house at Galt, and to agree to the electrification of the L.E. & N.R. from Galt to Brantford only.

**The Cobourg Steel Co.** has been incorporated under the Ontario Companies Act, with an authorized capital of \$400,000 and office at Cobourg, Ont., to carry on a general manufacturing business in steel goods.

**The partially decarburized faces of a rail ingot**, leaves a thin layer of soft metal on the surfaces of the finished rail, to which is attributed the sloughing off of the rail head under the cold rolling action of the wheels.

# Marine Department

## The United States and Railway Ownership of Lake Steamship Lines.

The Panama Canal Act, which came into force in the United States when that Government completed and opened for traffic the Panama Canal, provides, among other things, that any railway company owning or controlling and operating vessels on any waters under U. S. jurisdiction, shall divorce such interests, so that the two means of transportation shall be under separate control. By a decision of the Interstate Commerce Commission of May 15, several railway companies owning or controlling, either wholly or in part, steamship lines on the Great Lakes were ordered to divest themselves of their holdings. The Commission has, however, the right to permit the continuation of such operation under certain conditions, and applications concerning the operation of steamships by Canadian railway companies with U. S. connections have been dealt with, those of the C.P.R. in connection with the Pennsylvania-Ontario Transportation Co., the G.T.R. in connection with the Ontario Car Ferry Co., and the Grand Trunk Western Ry. in connection with the Grand Trunk Milwaukee Car Ferry Co., being granted, and one of the G.T.R. in connection with the Canada Atlantic Transit Co. being denied as from Dec. 1, 1915. Following are the Commission's decisions summarised:—

### **Pennsylvania-Ontario Transportation Co.**

This case involves applications of the Pennsylvania Co. and the C.P.R. under the provisions of sec. 5 of the Act to Regulate Commerce, as amended by the Panama Canal Act, to continue their interest in and joint operation of the Pennsylvania-Ontario Transportation Co., and were heard together. The Pennsylvania Co. owns and operates a railway from points in Pennsylvania to Ashtabula Harbor, Ohio. The C. P.R. owns and operates a railway in Canada with a line running from Woodstock to Port Burwell, Ont. The Pennsylvania-Ontario Transportation Co. owns and operates a car ferry plying on Lake Erie between Ashtabula, Ohio, and Port Burwell, Ont. The capital stock of this company, \$375,000, is held jointly, one-third by the Pennsylvania Co., one-third by the C.P.R., and one-third by J. W. Ellsworth & Co. It has no bonds outstanding and no obligations of any kind other than those for current expenses. Under its organization it has a board of directors, each one-third interest being represented by two directors. It appears that there is some sort of an operating agreement between the several parties interested in this car ferry by which the two petitioners alone share all expenses and profits. The Pennsylvania-Ontario Transportation Co. owns and operates between Ashtabula Harbor, Ohio, and Port Burwell, Ont., one steam vessel, the Ashtabula, having a registered tonnage of 125 tons, with ferry capacity of 32 cars. It is not equipped to carry passengers and files no tariffs with the Commission publishing passenger fares. The boat makes two trips a day. It does not appear that either of the petitioners owns a line of railway operating between the ports served by their boat, nor is either petitioner an integral part of any railway system owning such paralleling rails. It appears, however, that each of the petitioners is a party to through routes via the Buffalo gateway to and from the ports served by their boat, by which it is possible for them to compete with their boat for

traffic within the meaning of the act to regulate commerce. The car ferry primarily provides a short route for the transportation of coal to Canada and serves practically as a bridge over Lake Erie, by which there is a saving in rail haul of some 200 miles.

From a consideration of all the conditions and circumstances of record, the Commission is of opinion and finds that the existing specified service by water is being operated in the interest of the public and is of advantage to the convenience and commerce of the people, and that a continuance thereof will neither exclude, prevent, nor reduce competition on the route by water under consideration. It is therefore ordered that the applications herein for an extension of time beyond July 1, 1914, within which petitioners may continue their interest in and joint operation of the existing specified service by water herein concerned be granted, subject to further orders by the Commission, and that the rates, fares, schedules and regulations applicable to the transportation by water concerned be filed with the Commission and posted to the public as acquired by the Commission's regulations, effective July, 1, 1915.

### **Ontario Car Ferry Co.**

The application of the G.T.R. involves its interest in and joint operation of the Ontario Car Ferry Co., and its interest in and joint operation of the Canada Atlantic Transit Co. of the United States. This report concerns only this railway's interest in and joint operation of the Ontario Car Ferry Co., which is a Canadian corporation, with a capital stock of \$500,000, divided into 5,000 shares of \$100 each. The G.T.R. owns 2,497 shares, and the Buffalo, Rochester & Pittsburgh Ry. owns a like number, the 6 remaining shares are held by the 6 directors of the ferry company, 3 of whom represent the G.T.R. interests, and the other 3 the B. R. & P. R. interests. The Ontario Car Ferry Co. owns one steel vessel, Ontario No. 1, of Canadian register, of car ferry type, with a capacity on main deck of 28 loaded coal cars, and is equipped with passenger accommodations sufficient for 900 passengers, in addition to the crew, which plies between Genesee Dock, about 2½ miles south of Charlotte, N.Y., and Cobourg, Ont., about 60 miles, connecting the Buffalo, Rochester & Pittsburgh Ry. at Genesee Dock with the G.T.R. at Cobourg, Ont. The company is building a sister ship, known as Ontario No. 2, of similar design and capacity to Ontario No. 1. The G.T.R. operates a railway in Canada and in the U.S., serving territory contiguous to the northern shore of Lake Ontario, reaching several ports on the lake, among others Cobourg, and the Buffalo, Rochester & Pittsburgh Ry. operates in Pennsylvania and New York States reaching the southern shore of Lake Ontario at Genesee Dock, N.Y.

It does not appear that the petitioner owns rails paralleling the water route of the Ontario Car Ferry Co. or that it is interested in a system of railway owning such paralleling rails. From tariffs on file with the Commission it appears that the petitioner herein makes joint through rates all rail via the Niagara gateway from Cobourg, Ont., to Genesee Dock, N.Y. By reason of the existence of these through route arrangements it is possible for the

petitioner herein to compete for traffic with the ferry boats in which it is interested within the meaning of the act. It appears from the record that this ferry line was primarily established to transport coal to Cobourg, Ont., for G.T.R. use. In addition to this coal traffic, however, the ferry company has developed a carload business in other freight. No less-than-carload freight is carried. During the summer many tourist passengers are hauled to the Muskoka Lakes, Kawartha Lakes, and other Ontario resorts. The Ontario Car Ferry Co. is in competition for passenger business with the Canada Steamship Lines Ltd. The passenger fares via the ferry line are the same as the fares via the other boat lines, and the freight rates via the ferry line are the same as the all-rail rates. It appears, however, that the ferry line is somewhat of a transportation convenience in that it relieves the congestion incident to all-rail movement via the Niagara transfer and in that it provides a quicker transportation route between the two ports which it serves.

From a consideration of all the circumstances and conditions the Commission is of opinion and finds that the existing specified service by water is being operated in the interest of the public and is of advantage to the convenience and commerce of the people, and that an extension thereof will neither exclude, prevent, nor reduce competition on the route by water here under consideration. It is therefore ordered that the application for an extension of time beyond July 1, 1914, during which petitioner may continue its interest in and operation of the existing specified service by water be granted subject to such future orders of the Commission, and it is further ordered that the rates, fares, schedules and regulations applicable to the service be filed with the Commission and posted to the public according to the Commission's rules, effective July 1, 1915.

A similar order was issued concerning the joint operation of the Ontario Car Ferry Co. by the Buffalo, Rochester & Pittsburgh Ry. on the latter's application.

### **Grand Trunk Milwaukee Car Ferry Co.**

The Grand Trunk Western Ry. Co. operates an interstate railway between Port Huron, Mich., and Chicago, Ill., via Durand, Lansing, and Battle Creek, Mich., and South Bend and Valparaiso, Ind. It owns no capital stock in any boat or line of boats operating on the great lakes or tributary waters. A large majority of its capital stock, however, is held by individuals as trustees for the G.T.R. Co. of Canada, and that company through trustees controls and owns the capital stock of the Detroit, Grand Haven & Milwaukee Ry., operated from Detroit, Mich., westerly to Grand Haven, Mich., intersecting the line of the petitioning railway at Durand, Mich. From Grand Haven, Mich., the D., G. H. & M. R. reaches Milwaukee, Wis., by car ferry boats owned by the Grand Trunk Milwaukee Car Ferry Co., which is organized under the laws of Wisconsin, having an identity in ownership with the G.T.R. Co. of Canada, the D., G. H. & M. Ry. Co., and the petitioning railway. It does not appear in the record how or by whom the stock of the car ferry company is held, but it does appear that these four companies have stockholders, directors, and officers in common,

and are integral parts of the G.T.R. system. It does not appear that the rails of the petitioning railway or those of the G.T.R. system reach Milwaukee. It appears, however, from the record that the petitioning railway makes joint rates from points on its line via Chicago to points beyond in the general territory west of Lake Michigan, to which rates are also made by the D., G. H. & M. R. via Grand Haven and the car ferry through Milwaukee. It also appears from a tariff published by the petitioning railway, G.T.W.L.I.C.C. no. A-1630, that the petitioner makes joint through all-rail class rates via Chicago to Milwaukee. It appearing that the petitioner has in effect through joint rates, all rail, to the port served by boats belonging to the same system of which it forms a part, it can but result that by reason of such through routes and joint all-rail rates the petitioner may compete with the boats in which it has an interest and that a possibility of competition exists between such all-rail route and the route by water. It should be borne in mind that the all-rail route would be very indirect, and the probability of active competition between the two routes is remote.

It is contended on behalf of the petitioner that the purpose of the act with respect to waters "elsewhere" is necessarily controlled by the purpose of Congress with respect to the water routes through the Panama Canal, and that the purpose of the act with respect to the water routes through the Panama Canal was to prevent any railway having an all-rail transcontinental route from owning a boat line operating via such water route which it could use to eliminate independent water lines operating through the canal, and thus dominate and control the business by reason of monopoly of the water route. It should be noted, however, that when Congress enacted this law there was no single railway company nor any system of railway owning or operating rails reaching from the Atlantic coast to the Pacific coast, but that the only transcontinental all-rail routes existed only under through route arrangements over which joint rates were made applicable, and that, therefore, if it was not in the mind of Congress that the existence of joint through route arrangements constituted such an all-rail line as brought about a condition of potential competition between a railway participating in such through route arrangements and a boat line which it intended to operate through the Panama Canal, this part of the act is so many meaningless words and is of no avail. It appears that the Grand Trunk Milwaukee Car Ferry Co. owns and operates two car ferry boats, known as the Grand Haven and the Milwaukee, the former having a freight capacity of 28 cars and a licensed passenger capacity of 1,500, equipped with sleeping accommodations for about 100 passengers, while the latter has a freight capacity of 30 cars and a licensed passenger capacity of 3,000, equipped with sleeping accommodations for about 100 passengers. The distance across Lake Michigan traversed by these boats from Grand Haven to Milwaukee is about 85 miles, and this ferry line serves practically as a bridge by means of which the D., G. H. & M. Ry. may reach Milwaukee. It appears that the idea of a car ferry between these two points was conceived and inaugurated as a private independent enterprise, but that under its former operation it was a failure and was taken over by G.T.R. interests and has been maintained without view to the cost of the service but rather to the character of the service possible through its maintenance. It appears that at times the Chicago gateway on all-rail movements of traffic is greatly congested so that serious delays result, which delays are overcome by routing

traffic over this car ferry. The car ferry is operated regularly, without regard to the amount of traffic offered per trip, and furnishes an all-season service. It appears also that in addition to the G.T. Milwaukee Car Ferry there is a car ferry operated by the Pere Marquette Rd., from Ludington to Milwaukee; also a car ferry operated by the Ann Arbor Rd. from Frankfort to Menominee, Mich., and Kewaunee and Manitowoc, Wis.; also an independent break-bulk steamship line operated by the Goodrich Transportation Co. on regular sailings from Grand Haven to Milwaukee via Chicago. It appears further that rates via this car ferry are the same as rates applicable to the all-rail movement, and that rates since the car ferry came into the port there has been no lowering or increase of session of the G.T.R. in 1906. It is contended that if the joint ownership and operation were discontinued the car ferry company would necessarily go out of business because of expensive operation and resulting loss that would accrue to the company. It appears that the profit accruing to the car ferry company, as shown by its statement for the half year ended Dec. 31, 1913, was \$58,300.41, which was turned over to the D., G. H. & M. R. to discharge indebtedness to that company.

From a consideration of all the circumstances and conditions, the Commission is of opinion and finds that the existing specified service by water is being operated in the interest of the public and is of advantage to the convenience and commerce of the people, and that a continuance thereof will neither exclude, prevent, nor reduce competition on the route by water under consideration. It is therefore ordered that the application for an extension of the time beyond July 1, 1914, during which petitioner may continue its interest in and operation of existing specified service by water be granted subject to such future orders of the Commission, and that rates, fares, schedules and regulations applicable to such service be filed with the Commission and posted to the public according to the Commission's rules, effective July 1, 1915.

#### Canada Atlantic Transit Co.

The Canada Atlantic Transit Co. is owned by the G.T.R. Co. of Canada and operates three steamships between Depot Harbor, Georgian Bay, Ont., and Chicago and Milwaukee. The G.T.R. reaches Depot Harbor, which is the only port served in common with its transit line, but by reason of its ownership through stock control, of the Grand Trunk Western Ry., it reaches Chicago and Port Huron over that line. The first controlling question under this application, is whether or not, within the meaning of the Panama Canal Act, there is or may be competition for traffic between the vessels operated and the railway interested in them. The physical situation would itself establish the case if the ports of call were served in common by the boats and the paralleling railway, but no such case is made out in the records. It is a fact, however, that the G.T.R., the owning entity, has an interest in other railways whose paralleling rails do serve ports of call in common with the boats. It is urged that this does not establish a case within the meaning of the act, and that the act only applies to cases where there is competition, actual or potential, between the boats and the rails actually operated by the owning entity. The section of the act referred to reads as follows,—

"From and after July 1, 1914, it shall be unlawful for any railroad company or other common carrier subject to the act to regulate commerce, to own, lease, operate, control, or have any interest whatsoever (by stock ownership or otherwise, either directly or indirectly, through any holding company, or by stockholders, or directors in common, or in any

other manner) in any common carrier by water operating through the Panama Canal or elsewhere with which said railroad or other carrier aforesaid does or may compete for traffic or any vessel carrying freight or passengers upon said water route or elsewhere with which said railroad or other carrier aforesaid does or may compete for traffic; and in case of the violation of this provision each day in which such violation continues shall be deemed a separate offence."

The unsoundness of the contention is at once manifest when it is seen how the act could be evaded by a reorganization incorporating the parallel rails which reach the port of call into an entity distinct from the entity owning the boats, with the real ownership, through stock control, remaining as before. From a consideration of all the circumstances and conditions disclosed in the records, the Commission is of opinion and finds that the specified service by water concerned is not operated in the interest of the public or is of advantage to the convenience or commerce of the people within the meaning of the act, and that an extension and continuance thereof will prevent, exclude and reduce competition on the Great Lakes. It is therefore ordered that the application be denied, effective Dec. 1, 1915.

#### Marquette and Bessemer Dock and Navigation Co.

In the application of the Pere Marquette Rd., and the Bessemer and Lake Erie Rd., concerning their joint operation of the Marquette and Bessemer Dock and Navigation Co., the record shows that the P.M.R. extends from Buffalo, N.Y., through Ontario to Windsor, Ont., where it is intersected by the Detroit River, and thence to Chicago, Ill., with a branch in Canada to Sarnia, Ont., where it is intersected by the St. Clair River, and then extends from Port Huron to Ludington, Mich. Where it is intersected by the two rivers named, the P.M.R. operates car ferries uniting its rails in Ontario and Michigan. The boat operating on the Detroit River between Windsor and Detroit is Pere Marquette No. 14, with capacity of 26 cars, and the one operating on the St. Clair River, between Sarnia and Port Huron is International, with capacity of 15 cars. It does not appear that the P.M.R. owns any paralleling rails reaching the ports served by either of these ferries, nor is it a part of a railway owning such parallel rails, nor does it appear that the P.M.R. is a party to any paralleling through all-rail routes between such ports, and therefore it cannot compete for traffic with its ferries within the meaning of the act. The P.M.R. alone, also operates five ferry boats on Lake Michigan connecting its lines at various points, but in these cases it appears that the P.M.R. is a party to paralleling through all rail routes by means of which it may compete for traffic with its ferry boats within the meaning of the act. These boats are an essential part of the system and enable the P.M.R. to participate in through transportation to the north west from which it would be otherwise excluded, and that independent operation of the ferries would be impracticable, since it appears that no one would be able to operate them independently for what the company could afford to pay an independent ferry for getting its cars across Lake Michigan in competition with all rail routes. They are operated on a fixed schedule to expediate the through movement of freight.

From a consideration of all the circumstances and conditions, the Commission is of opinion and finds that the existing specified service by water on Lake Michigan is being operated in the interest of the public and is of advantage to the convenience and commerce of the people, and that a continuance thereof will neither exclude, prevent nor reduce competition on the routes by water under consideration.

The P.M.R. through operating rights over the London and Port Stanley Ry. from St. Catharines, Ont., reaches Port Stanley. The Bessemer and Lake Erie Rd. operates a line of railway from Pittsburg to Erie, Pa., with a branch to Conneaut, Ohio. The Marquette and Bessemer Dock and Navigation Co. has a capital stock of \$50,000, half of which is owned by the P.M.R. and half by the B. & L.E.R. It owns and operates a steel car ferry with capacity of 30 cars, on Lake Erie, between Port Stanley, Ont., and Conneaut, Ohio. Neither of the petitioners owns paralleling lines reaching the ports named, nor is either an integral part of a railway system owning such paralleling lines. Each of the petitioners, however, is a party to through all rail routes via the Buffalo gateway to these ports, and it therefore results that each may compete for traffic with their boats within the meaning of the act. The chief traffic hauled on the ferry is coal for railway use in Canada, originating on the B. & L.E.R., and by means of the ferry they are enabled to furnish an expedited service for this traffic which would otherwise have to move through the Niagara frontier and be subject to delays due to congestion. From a consideration of all the conditions and circumstances, the Commission is of opinion and finds that the existing specified service by water on Lake Erie, operated by the petitions jointly, and the service on Lake Michigan operated by the Pere Marquette Rd., is in the public interest, and of advantage to the convenience and commerce of the people, and it is ordered that the application for an extension of time beyond July 1, 1914, within which they may continue such service is granted, the rates, schedules and regulations concerning such service to be filed with the Commission and posted to the public according to the Commission's rules, effective July 1, 1915.

The Commission has denied the applications of the Pennsylvania Rd. and Northern Central Ry. regarding the Erie and Western Transportation Co.; the Lehigh Valley Rd., concerning the Lehigh Valley Transportation Co.'s lake line; New York Central and Hudson River Rd., concerning the Mutual Transit Co., and the Western Transit Co.; the Rutland Rd., concerning the Rutland Transit Co., the Erie Rd., concerning the Erie Rd. lake line, and the Mutual Transit Co.

Canada Steamship Lines, Ltd., commenced a Sunday service between Toronto and Hamilton, June 12, four trips being made.

### Fishery Patrol Boat for Lake Winnipeg.

The Marine and Fisheries Department's patrol steamboat for the fisheries service, which has been under construction for some time at Selkirk, Man., was launched there at the end of May, and christened George H. Bradbury, the ceremony being performed by Mrs. R. Rogers, wife of the Minister of Public Works.

The vessel was specially designed for this particular service, and in addition to performing general patrol duties, will carry large quantities of spawn in connection with the fish hatchery at Lake Winnipegosis, and also install and handle buoys on Lake Winnipeg. She is of steel throughout, and built to Lloyd's 100 A1, lake service class, with a raked stem and cruiser stern. The hull is divided by five main transverse watertight bulkheads, and two longitudinal bunker bulkheads, also watertight. At the fore end special strengthening has been introduced for working in light ice. The underwater portion of the vessel is sheathed with wood. The deck auxiliaries include the usual windlass, capstan and steering gear, the steering engine being located in the engine casing and connected to the rudder head by chains and quadrants, and controlled from the wheel house on the navigating bridge. Complete systems of steam heating, ventilation, pumping and draining, fresh water and sanitary services are provided, the last mentioned being on the pressure system supplied from a duplex pump situated in the engine room. The electric generating set consists of a steam turbo-generator of 14 k.w. capacity, capable of supplying at the same time the ordinary ship's lighting and the searchlight. The searchlight is located on top of the wheel house and is of 16,000 c.p. The equipment is in accordance with Lloyd's rules and the Canadian steamboat regulations, and includes the usual lifeboat accommodation, sufficient for all on board, and also a motor launch with a speed of eight miles an hour. Accommodation is provided for a crew of 17, including officers, men and fish crew. The propelling machinery consists of two sets of inverted, vertical, direct acting, triple expansion, jet condensing engines with cylinders 11, 18 and 30 ins. diam., by 20 ins. stroke, capable of developing 900 i.h.p. when running at 180 r.p.m. with 180 lbs. of steam. Steam is supplied from two cylindrical, single ended boilers 11 by 10½ ft. fitted with Morison's furnaces and worked under forced draught.

The dimensions are, length overall 149½ ft., length between perpendiculars 140 ft.,

breadth moulded 26½ ft., breadth extreme 27 ft. ¾ in., depth moulded 13½ ft., draught mean 7½ ft., speed 12 knots an hour.

She was designed by, and built under the superintendence of C. F. M. Duguid, Naval Constructor to the Marine and Fisheries Department, and was fully described in Canadian Railway and Marine World for July, 1913.

### Montreal Harbor Improvement Programme for 1915.

After the Harbor Commissioners' annual inspection of the harbor, towards the end of May, W. G. Ross, Chairman, outlined the programme of improvements to be undertaken this year, for which \$2,000,000 has been provided. This includes another addition to no. 1 elevator, increasing the capacity from 2,500,000 to 4,000,000 bush., making it the largest elevator at any Atlantic seaport. On the completion of this addition the port of Montreal will have a storage capacity of 11,250,000 bush. A large amount of dredging will be undertaken this summer in different parts of the harbor, particularly in the channel between St. Helens Island and the south shore. The dredging of the south shore channel to 20 ft. is to be pushed forward as rapidly as possible, the material dredged being used for filling in where the wharves are being built. Two dredges are working behind St. Helens Island, where last year they dredged an area of about 1,000 by 335 ft. The extension of the Jacques Cartier pier is also to be undertaken, and it is proposed to make additions to two of the high level piers, of about 250 ft. for carrying steel freight sheds. The work of enlarging the Victoria pier is to be continued, providing accommodation for two additional ocean going vessels and for smaller vessels. Several new wharves will be built and the harbor railway will be extended to high level from Racine pier to the Vulcan wharf at Longue Pointe. The industrial wharf commenced last year at Pointe aux Trembles will be completed, and work will be commenced on a 400 ft. extension southerly at the Bickerdike pier, for additional coal handling facilities.

The American Line management granted increases of \$5 a month to engineers on its s.s. Philadelphia, which sailed from New York, June 6, with the privilege of leaving the vessel at Liverpool. The men are said to have at first demanded an increase of 100%.

## Shipbuilding and Repairing Plant at Prince Rupert.

The Grand Trunk Pacific Ry.'s drydock and its surrounding plant, foundry, machine shops, etc., is expected to be ready for business early in August. Prince Rupert will then have on its harbor front the finest drydock plant along the Pacific coast, either in Canada or the United States. It has been undertaken at a cost of about \$1,500,000. The dock consists of three units, with a total capacity of 20,000 tons. There will be two end sections of 5,000 tons each, and a middle section capable of holding a boat of 10,000 tons. All the units are interchangeable, and each dock is complete in itself, with pumps and air compressors. If necessary all three sections, or units, could be joined to hold a boat 600 ft. long and weighing 20,000 tons.

In addition to the actual dock, there are four other parts to the plant, namely: the foundry, which will be able to make castings as heavy as 12 tons; a boiler shop for marine repairs as well as for the construction of boilers; a machine shop, which is equipped amongst other things with a lathe having a 72-in. head; a ship shed and carpenter shop, 160 x 300 ft., and a power house equipped with two large turbo-generators and a 15,000 ft. air compressor.

Construction work in connection with the drydock and its accompanying plant has been under way since the beginning of 1912, and the builders will soon be replaced by a staff of operators. Prince Rupert correspondence Toronto Globe, by Norman Lambert.

## Steel Tank Vessel for Imperial Oil Co.

The Imperial Oil Co., Ltd., Toronto and Sarnia, Ont., has ordered a steel oil tank vessel, to be 258 ft. long, 43 ft. beam, and 18 ft. deep to main deck, with an expansion trunk 7½ ft. above the deck running fore and aft. The vessel is to be classed with Lloyd's for highest classification for ocean going steamers, and will be used either on the lakes or ocean as may be required.

A great many closely spaced bulkheads will be fitted 'thwartships, and a continuous longitudinal bulkhead to divide the hold spaces up into 10 tanks for crude or refined oil, and four tanks for carrying lubricating oils. A cross bunker for carrying oil fuel will be fitted forward of the boiler room. The pump room will be located at the fore end of the foremost tank, in which will be placed the large pumps for handling oil cargoes. She will have a speed of eight knots loaded.

The order has been given to Collingwood Shipbuilding Co., Collingwood, Ont., delivery to be made at the opening of navigation next year. The Imperial Oil Co. has heretofore had its vessels built in Scotland.

**German Vessels after the War.** The British Solicitor-General, in conducting a case in London, Eng., recently, made the statement that detained German steamships in British ports would only be handed back to their German owners at the conclusion of the war, if the German Government observed the rules of the Hague Convention and agreed to return British vessels detained at German ports.

A Montreal press dispatch states that the Postmaster General has entered action in the Admiralty Court against the owners of the s. s. Storstad, claiming \$375,360 for loss of registered mail matter dispatched by the C. P. R. s. s. Empress of Ireland, which was sunk by the Storstad in the St. Lawrence early in 1914.

## Dominion Steel Corporation's Fleet and the Admiralty.

The Dominion Steel Corporation's President, J. H. Plummer, in his report at the annual meeting, June 24, said:—"The prospects of the Dominion Coal Co. for the coming year are good. The efficiency of the company's arrangements for transportation has been maintained as fully as possible, but we have suffered severely through the requisition by the Admiralty of some of our best colliers. The company has lost in this way the services of the Twickenham, 8,100 tons dead weight capacity; Kendal Castle, 6,750 tons; Lord Strathcona, 11,000 tons; Kamouraska, 7,400 tons; Wabana, 7,400 tons and Maskinonge, 7,400 tons; a total carrying capacity of 48,050 tons. The completion of the Dagbild has been indefinitely postponed by the Admiralty requirements. These losses interfere seriously with the delivery of coal by water, and while we have been able to secure a number of smaller steamships, chiefly from the upper lakes, the lost tonnage has not been fully replaced, and in any case the cost of transportation must be much increased over last year.

## Steamboat for Testing and Sweeping St. Lawrence Ship Channel.

The Dominion Parliament at its last session voted \$30,000 for a steamboat for testing and sweeping the St. Lawrence ship channel. The vessel, which is being built at the Dominion Government shipyard, Sorel, Que., under W. S. Jackson, Superintendent of Shipyard, and which was launched May 24, has the following dimensions, etc.: Length between perpendiculars, 140 ft.; breadth moulded, 35 ft.; depth moulded, 15 ft.; coal capacity (bunkers), 100 tons; speed, 11 miles.

It is being built of steel throughout, with 6 watertight bulkheads and double bottom for water ballast under the engines and boilers and in the fore peak for trimming purposes. The vessel has been specially designed for sweeping and sounding the St. Lawrence deep water channel for obstructions. This work is carried out most effectively by the use of a bar 40 ft. long, made of steel tube 12 ins. dia. x ¾ in. thick, suspended amidships on each side of the vessel, with steel wire ropes carried up to

the navigating bridge with gauges marking the depth of water. There will be steadying wire ropes carried forward and aft to keep the bar in position, the whole being operated from a specially designed steam winch, made at the shipyard. When working or sounding, the vessel will travel slowly against the current with the bar lowered to the testing depth. The smallest obstruction in the channel, or a variation in depth will be at once detected by the gauges (hence the name of the vessel Detector).

The vessel will be propelled by twin screws having two sets of compound surface condensing engines with cylinders 14 and 28 x 18 in. stroke, supplied by steam from a Scotch marine return tube boiler 15 ft. diam. by 11 ft. long, with 3 corrugated furnaces and having a working pressure of 130 lbs. a sq. in. The boiler is being built at the shipyard. Powerful steam steering gear, steam windlass, and boat hoisting winch will be fitted on board. One mast with a powerful derrick for handling buoys will be provided. There will be good accommodation for the staff, captain, officers and crew. Electric light will be fitted throughout.

**Toronto Harbor Navigation.**—During this year dredging operations will be carried on in connection with the Toronto harbor improvements, in the lake east of the eastern channel, and platforms placed on piles are to be erected at various points. These platforms will be lighted at night and will be quite visible during the day but will frequently be connected by heavy cables which will be invisible. All classes of vessel should keep at least 2,400 ft. from the shore between Woodbine Ave. and the eastern channel so as to clear the outside line of the platforms. From the western channel to the Humber River vessels should keep at least 1,200 ft. from the shore, as cribwork is being built between these two points approximately 1,100 ft. from the shore. Large sections of the cribs are submerged, and while every effort will be made to keep these lighted at night, safety can only be assured by avoiding the danger area. Other works are being built in the water east of a line from Parliament St. to the east pier of the Eastern channel, where there are several submerged walls. Vessels should keep west of the line indicated.

## Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during May

ARTICLES		CANADIAN CANAL	U. S. CANAL	TOTAL
Eastbound	Copper	1,351	21,018	22,369
	Grain	3,107,921	2,389,150	5,497,071
	Building stone			
	Flour	206,500	872,423	1,168,983
	Iron ore	29,120	4,877,668	4,906,788
	Pig iron			
	Lumber	7,527	44,191	51,718
	Silver ore			
	Wheat	2,747,811	10,519,686	13,267,497
	General merchandise	56,920	15,651	42,580
Westbound	Passengers	60	577	637
	Coal, hard		98,416	248,110
	Coal, soft	44,675	1,203,772	1,248,447
	Flour		100	100
	Grain		1,950	31,250
	Manufactured iron	1,801	36,450	38,251
	Iron ore			
	Salt		95,944	96,364
	General merchandise	33,101	80,088	123,189
	Passengers	471	0	471
Summary.				
Vessel passages		400	1,000	1,400
Registered tonnage		649,600	5,405,580	6,045,240
Freight—Eastbound		928,714	4,008,574	4,937,288
—Westbound		70,727	1,503,302	1,673,029
Total freight		318,440	7,030,126	7,348,566

## Shipping Letters From the Head of the Lakes.

F. & W. Jones, brokers, Fort William, Ont., have issued weekly letters as follows:

**June 5.**—The coal business has been fairly active during the week, 6 cargoes having been unloaded, 4 anthracite and 2 bituminous, three carried in Canadian steamships and three in United States steamships. The outlook for the coming week is not over bright, with only two cargoes in sight, one for the C.P.R. and one for the Canadian Northern dock. It is anticipated that business in coal during June will be very light. Western car shipments were practically nil during the week.

There have been no shipments of ore during the week and no charters are in sight. Ore is arriving at the dock at the rate of about 400 tons a day, and there is still about 40,000 tons to come down.

The opening of June brought a big decrease in grain shipments, there being a drop of 1,335,060 bush., compared with the last week of May. No U.S. steamships cleared, but one is loading at present. One cargo of barley was taken to Toledo in a Canadian vessel. Receipts also dropped off, but only very slightly, about 100,000 bush. Owing to the big falling off in shipments and only small drop in receipts, stock in store this week are nearly 500,000 bush. greater than last week. Weather in the west continues favorable. There was general rain in Manitoba, Saskatchewan and Alberta during the week, and it appears, too, judging from recent reports, that the cutworm peril has now passed. Leading grain experts stated this week that, with a reasonable amount of rain and other satisfactory weather conditions, the present prospects are that Canada will harvest the largest crop in 15 years.

Stocks in store at date, receipts and shipments during the week are:

	Stocks.	Receipts.	Shipments.
Wheat .....	3,235,921	1,161,289	664,860
Oats .....	1,364,023	162,527	180,681
Barley .....	248,937	23,382	128,328
Flax .....	1,451,552	21,279	5,460

**June 12.**—Coal receipts have fallen off this week, with only four cargoes arriving, 2 anthracite and 2 bituminous—three were carried in Canadian bottoms and one in an U.S. bottom. There are three steamships reported en route, one for the C.P.R. dock and two for the Canadian Northern dock. For the balance of this month the coal business will be very light, only sufficient coal to fill actual requirements is being shipped west, and there is no inclination on the part of shippers to increase their stocks at the present time. One small cargo, about 5,600 tons, was unloaded at Jackfish this week, and was carried in a Canadian bottom. This makes a total of about 25,000 tons, all bituminous, shipped to Jackfish this season, with nothing more in sight at present.

No ore has been shipped this week and no steamships are reported as chartered. There is now from 10,000 to 12,000 tons on the dock, and cars from the mines continue to arrive, so that stocks are rapidly increasing.

There was a slight increase in grain shipments this week over last, approximately 132,569 bush., eight cargoes having been shipped, all in Canadian vessels consigned to Canadian ports. Receipts show a decrease of about 372,296 bush. and stocks show a decrease of about 113,720 bush. below last week. The statement of Canadian visible supply handed out on June 4 showed 11,741,843 bush. of all kinds of grain, excepting flax, in store, as compared with 31,056,133 bush. this date last year. Of this, 4,847,881 is in the terminals at Fort William and Port Arthur, 4,265,517 in store

at Montreal, 1,382,701 in store at Port Colborne, and the balance distributed in various terminals at eastern ports. By the foregoing figures it will be easily seen that very little movement can be expected until the new crop is harvested. Weather conditions in the west continue favorable, there has been general rain in the western provinces, which will be beneficial not only because of the moisture it brought to the soil as a nutriment, but also because of its probable killing of the cutworms that have caused damage in some localities. The reports are altogether optimistic, and satisfactory progress in the growth of crops is reported from all the prairie provinces. It is now finally estimated that the increased acreage in both barley and flax is very small, but in wheat it is about 14.5%, and in oats about 10.2%. Basing an estimate on these figures and assuming favorable weather conditions continue, there should be available for lake shipments from 200,000,000 to 260,000,000 bush. of all grains. It is still considered that harvesting will commence at least three weeks earlier than in previous seasons.

Stocks in store at date, with receipts and shipments, are:

	Stocks.	Receipts.	Shipments.
Wheat .....	3,087,070	785,351	934,200
Oats .....	1,438,297	155,869	81,595
Barley .....	194,050	23,763	78,651
Flax .....	1,467,296	32,196	16,452

**June 19.**—Coal receipts this week were about the same as last week, four cargoes arriving, three bituminous and one anthracite, one carried in U.S. bottom and three in Canadian bottoms. There are three cargoes reported en route, two for the C.P.R. dock, one anthracite and one bituminous, and one for the C.N.R. dock with bituminous. Shipments to the west remain very light, and the prospects for any immediate increase in the coal trade are poor, in fact no great movement is expected until well into August. One cargo of ore (about 3,000 tons) was shipped this week. There is still considerable ore on the dock, but no further charters are reported. Grain shipments during the past week have continued to show slight increase in volume, the total moved by lake transit being 1,489,340 bush., against 997,181 during the previous week, an increase of 493,159. There were eight vessels cleared with grain during this period, only one of which was U.S. register, two cargoes only going to U.S. ports. Receipts from the west have shown a decline of 125,000 bush., compared with last week, thus elevator stocks, after allowing for an increase in lake movement and decline in western receipts, naturally show considerable decrease, 5,492,736 bush. of all grains, against 6,315,177 a week ago. Reports of crop conditions still continue favorable, although somewhat modified in tone. Heavy rain storms have been general throughout the western provinces, with several degrees of frost in Saskatchewan. The frost, however, is not reported as being sufficient to cause serious damage being counteracted by the rain. In result it is expected that the present wet will probably lower the grades and cause some delay in date of harvesting, but will not affect volume. The total acreage under cultivation in the western provinces is reported by the Government as being: Wheat, 12,896,000 acres; this is 2,602,000 acres in excess of that harvested in 1914, and is the largest ever sown in Canada; oats, 11,427,000 acres, an increase of 1,365,500 over 1914; other grains approximately 2,500,000 acres. Prospects, therefore, of a record crop still remain good, but harvesting will probably not be quite as early as previously forecasted. Stocks in

store at date, with receipts and shipments, are:	Stocks.	Receipts.	Shipments.
Wheat .....	2,731,487	679,580	1,035,163
Oats .....	1,135,213	138,608	441,691
Barley .....	168,874	24,082	49,257
Flax .....	1,457,161	30,039	40,174

## Car Ferry Facilities at Rondeau.

In connection with the operations of the Pere Marquette Rd. in Ontario, the company in 1902 built a car ferry slip at Rondeau, Ont., and for about two years subsequently operated a car ferry service across Lake Erie to Conneant, Ohio, after which coal shipments were handled in bulk. It was decided recently to resume the Rondeau-Conneant car ferry service, and as, since the Rondeau dock was last in use larger car ferries have been built, it was found necessary to enlarge the slip proper and also the apron, from three to four tracks, necessitating new steel for the apron. The cost of reconstruction and remodelling is estimated at \$10,000. The entire construction is of wood, excepting the girders, which form a movable apron and counterweight apparatus. The construction is of the usual form for car ferry slips, consisting of a double row of sheet piling with suitable sheeting on both sides for a length of 100 ft. on the east and 40 ft. on the west side of the slip, this sheet piling being for the purpose of guiding the boat into position and holding it in place so that the ends of the rails on the boat will come exactly in line with those on the apron. The so-called apron consists of a movable piece of track, carried on four steel plate girders about 55 ft. long, on which four tracks, corresponding to those on the car ferry, are laid. The shore end of this apron rests on suitable fixed pile foundation, while the free end rests on and is attached to the boat when in position, thus making continuous track from the land to the deck of the ferry. An adjustable leaf of the apron is required to meet the varying stages of the water and the load on the car ferry. The car ferry has four tracks, with a capacity of seven cars each, or a total of 28 cars. It is said that the G.T.R. is contemplating having its coal brought in via Rondeau in future, instead of to Port Stanley and thence over the London and Port Stanley Ry. to London.

## A Staff Captain for the Northern Navigation Company.

The Northern Navigation Co., as a continuance of the progressive movements which have marked this company for several years, has instituted a new position on its s.s. Noronic, the last addition to its fleet. A staff captain has been appointed, whose duties are personally to see that the life saving apparatus on the vessel are in good shape, that the crew is practised in boat drill constantly, make a complete inspection of the vessel each day in company with the chief steward, purser and chief engineer, visiting all departments, including the kitchen, dining room, state rooms, etc., and in a general way to look after the comfort of the passengers. His duties will be subordinate to those of the captain, who will be able to devote his entire attention to the navigation of the vessel. Capt. Jas. Harrison, formerly in the service of Canadian Northern Steamships, Ltd., has been appointed to the position. He has had a wide experience on ocean vessels, and although the Northern Navigation Co. has always prided itself on the high state of discipline on its vessels, the new departure is looked to achieve results making for additional safety and comfort for those travelling on the company's vessels.

### The Loss of the s.s. A. W. Perry.

An enquiry into the stranding and subsequent loss of the Canada Atlantic and Plant Line Steamship Co.'s s.s. A. W. Perry, at Chebucto Head, Halifax harbor, on June 8, was held at Halifax, N.S., June 17, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. John Fleming and D. Stewart as nautical assessors. In his evidence the master of the vessel, A. Ellis, stated that he was on the bridge from midnight, and had experienced thick weather from leaving Boston, and soundings were taken continually, being in charge of the boatswain, who simply let out the line and did not apply the tube, and with certain deductions the approximate depth was found. He heard two blasts of a horn, and was under the impression it was the lightship; although he had nothing to base himself upon in that assumption, having no nautical books on board which would show that. Assuming that it was the lightship he shaped a course n.w. by w. and then n., going half speed, at about 5 or 6 miles, though he did not know the exact speed. The scrap log demonstrates the distance shown on the log, and at certain times the approximate depth of water. At about 4.45 a.m., feeling slightly in doubt, he slowed his vessel down, and almost immediately after put her full speed astern; but she touched bottom within a minute or so, still carrying a little headway. The weather at the time was very thick, with a light easterly breeze blowing, although there was no swell. He had not seen any lull of the land nor heard any sea breaking on the beach, nor any echo of his whistle, which was being sounded in accordance with the rules of the road. On the bridge with him, were the first officer and lookout. The engines were put full speed astern just previous to and subsequent to the grounding, and finding she would not float off a wireless call for assistance was sent, and within 10 minutes the s.s. Atlantic was alongside and the passengers were put aboard, and about 10 o'clock a salvage vessel came alongside and began to unload the cargo in the forward holds, the crew having been engaged in jettisoning empty crates previous to its arrival. The proper instructions were issued, although that fact was not elicited from the master's examination, to the engineer, who stated that he was ordered to pump water out of no. 2 tank, so that the vessel might be lightened; but it was of no avail. The mate, Michael Kane, corroborated the master's evidence, stating that he was very careful to see that the soundings were taken every 5 minutes, and due entry made in the scrap log, which was the only log kept on board, pertaining to the navigation of the vessel. The official log was lost, having been left in the purser's office. The second officer, G. A. Smith, who holds a license as master of a tug, claims he had nothing to do with the navigation of the vessel, and could not throw any light on the courses during his watch, from 12 to 4. The first and second engineers produced their scrap log, showing the movements of the engines prior to and at the time of the grounding, which corroborated the master's statements, while the lookout testified that he heard two blasts blown on a fog horn, and reported same to the master, and the quartermaster stated that the ship steered well, and the courses given that night and morning were properly steered. C. Brister, salvor, testified to the fact that he rendered assistance in salving the cargo; but owing to the peculiar construction of the vessel it was impossible to get close enough at low tide to land a pump in order to relieve the flow of water which began to make in the forward hold shortly after ten o'clock.

The court finds that the master certainly neglected to take the ordinary precautions or use sound judgment in the navigation of the vessel, especially in view of the fact that he had encountered thick weather from the time of leaving Boston. The scrap log shows very great differences exist between the measurements of the line on which he based himself to ascertain the depth of water, indicating by the course he followed that he found himself pretty near Pennant Point, and steered south for 5 or 6 miles; but in the course of his soundings, numerous as they were, there was no actual indication of the exact depth of the water, as they were purely approximate. In the court's view, Capt. Ellis, upon finding himself in shoal water, as his measurements indicate, should have stopped his vessel and adopted the proper measures of ascertaining the soundings which were necessary in order to find his position. Moreover, finding himself in a position which appeared very doubtful, he should have stopped his ship and found out the nature of the bottom, by throwing over an iron lead, which he neglected to do. It does not seem that observations were taken by solar or lunar methods to ascertain the deviation of his compass, it apparently being taken for granted that the compass was only an eighth of a point out on certain courses, and in view of this it seems that more care should have been taken by the master to see that no iron which might be included in the cargo was stowed where it might have affected the compass, whereas it seems he was in total ignorance of the fact that there was some iron on board. This sounds very strange. The master does not appear to have realized the grave responsibility which rested on his shoulders, in having the care of the lives of the 45 passengers and 138 of a crew in his charge, and it is providential that no lives were lost, as had the wind been at all boisterous at the time it is difficult to say what might have happened. In view of the circumstances, and the methods adopted by the master, which cannot be said to be otherwise than extremely negligent and careless, the court suspends his certificate for 5 months, from June 18 to Dec. 18, without the option of a lower grade certificate being issued. The other officers of the vessel are relieved of all responsibility in connection with this accident, as they had nothing to do with the navigation, unless their services were requisitioned by the master, who was in sole charge of the navigation from midnight to the time of the casualty.

### Mainly About Marine People.

**James Carruthers**, President, Canada Steamship Lines, Ltd., Montreal, has given \$100,000 to provide machine guns for overseas service.

**Miss E. M. Ross**, daughter of W. G. Ross, Chairman, Montreal Harbor Commissioners, was married at Woodlands, Que., June 3, to H. McD. Brown.

**Sir E. L. Fletcher**, who was knighted by the King, June 1, for his services in connection with the transport of troops, is one of the Managers of the White Star Line in England.

**Albert Ballin**, Director General of the Hamburg American Line, who was reported to have been removed to a neurological institute at Frankfurt, Germany, denies the report, so apparently it is at least premature.

**Miss M. L. Weller**, daughter of J. L. Weller, M. Can. Soc. C.E., Engineer in Charge, Welland Ship Canal, was married at St. Catharines, Ont., June 23, to E. P. Muntz, one of the Resident Engineers on the Welland Ship Canal.

**Sir Edgar Bowring**, who was created a knight bachelor on the occasion of the King's birthday, June 3, is a member of the shipowning firm of Bowring and Co., St. John's, Nfld., and Liverpool, Eng., and has been for many years a member of the Newfoundland Legislative Council.

**Sir Archibald Denny**, of W. Denny and Bros., shipbuilders, Dumbarton, Scotland, has been re-elected President of the Institute of Marine Engineers, for the current year. He is the third member of the family of the present generation to occupy the position, and a son of the President of 1901-02.

**Capt. Alex. Milligan**, who died of paralysis at St. Catharines, Ont., May 30, aged 57, was well known on the Great Lakes, having been a master since 19 years of age. Prior to his retirement six years ago through ill health, he had been in Montreal Transportation Co.'s service for several years.

**R. M. T. Stephens**, who was created a Companion of the Order of St. Michael and St. George on the King's birthday, is Chief of the Canadian Naval Service headquarters staff. He came to Canada in 1909, and was appointed to that position in Aug. 1914, prior to which he had been Director of Gunnery. He is a Commander in the British Navy.

**Capt. J. L. Newman**, master of Canada Steamships Lines s.s. C. A. Jaques, was killed by falling into the hold of his vessel at Ashtabula, Ohio, June 9. He was formerly in Dominion Coal Co.'s service as master of the s.s. Cacouna. He was a brother of A. H. Newman, agent, Canadian Express Co., Moncton, N.B. The funeral took place at Shediac, N.B., June 14.

**Hon. J. D. Hazen, M.P.**, Minister of Marine and Fisheries, who underwent an operation for throat trouble in the Royal Victoria Hospital, Montreal, May 4, spent some little time at Lake Placid, N.Y., as soon as he was able to leave the hospital and returned to his office in Ottawa on June 5, after which he made a short visit to St. John, N.B.

**Captain Hailey**, who was in command of the C.P.R. s.s. Empress of India when she was operating on the Pacific Ocean, and subsequently when she was being utilized by the British Government as a hospital vessel, has, since the sale of the vessel to the Maharajah Scindia of Gwalior, been appointed to the command of the C.P.R. s.s. Lake Manitoba in the Atlantic service.

**Green's Marine Directory of the Great Lakes.** The seventh edition of this directory, which was formerly issued by Mitchell and Co., contains complete information regarding the construction of United States and Canadian vessels, with their owners, etc., and also has lists of the steamship companies operating on the Great Lakes, with information concerning grain elevators, harbors, coal and ore docks, etc. An interesting feature is the collection of historical facts concerning the Great Lakes and the canals and other connecting waters, with details of early navigation. The book consists of 458 pages, 9 by 6 ins., bound in cloth, and is issued by F. W. Green, Rockefeller Building, Cleveland, Ohio, at \$5.

**Marine Losses.** Lloyd's returns for three months ended Dec. 31, 1914, show that 212 steamships and sailing vessels, of 320,030 gross tons, were lost, condemned, etc. Of these, 74 vessels of 165,196 tons were sunk by warships or mines. The British percentage of lost vessels, was 0.86, and of the other owning countries, Denmark 1.16, France 0.91, Germany 0.60, Norway 0.87, Russia 0.73, and Sweden 1.43.

### Atlantic and Pacific Ocean Marine.

The crew of the s.s. *Voltaire*, who struck work at Montreal, June 8, for increase of pay, on account of the increased danger of the trip, were granted an increase of \$5 a month.

The C.P.R. has contributed £250 to the fund which is being raised in England for the relief of those dependent on persons who lost their lives in the destruction of the s.s. *Tunisiana* by the Germans.

The Thomson Line s.s. *Iona*, while bound from Middlesbrough, England, to Montreal, was torpedoed by the Germans, in the North Sea, June 3. There were no passengers aboard. The captain and crew were landed safely at Kirkwall, Scotland.

The s.s. *Cheltonian*, which struck a rock off Cape Ray, Nfld., May 24, was under charter to the Cunard Line. She put in at Sydney, N.S., where some temporary repairs were made, and then proceeded to Halifax, where she drydocked for complete overhaul and repairs.

The British steamship *Carisbrook*, under charter to McLean, Kennedy and Co., Montreal, and en route from Montreal to Leith, Scotland, was sunk by gun fire from a German submarine, in the North Sea about June 20. Reports state that 13 of the crew of 24 are unaccounted for.

The British steamship *Tunisiana*, owned by Furness Withy and Co., en route from Montreal to Hull, Eng., was torpedoed in the North Sea about June 20. She was kept afloat and was subsequently beached. She carried about 240,000 bush. of wheat and a general cargo.

The s.s. *Leuctra*, formerly owned by the Thomson Line, and operating in the Canadian trade, was torpedoed by Germans in the North Sea, June 2. She was one of a number of vessels of small tonnage, all named to commemorate Greek battles, and formed what was familiarly known as the Battle Line.

At the annual meeting of shareholders of the International Mercantile Marine Co., the retiring directors were re-elected for the current year. No annual report was presented owing to the difficulty in getting the accounts closed owing to war conditions generally. A receiver was recently appointed to safeguard the company's interests.

One of the features of the early portion of the St. Lawrence navigation season, is the number of tramp vessels coming up to Montreal. Owing to the demands for space for war materials, etc., it has been difficult to arrange for the shipping of anything but Government orders, but with the continued arrival of tramp vessels these difficulties will be minimized and gradually disappear.

A number of claims have been entered against the C.P.R. and the owners of the s.s. *Storstad* in connection with the loss of life in the running down of the s.s. *Empress of Ireland* by the *Storstad* in 1914. The time limit for the receipt of claims expired at the end of May, and it is stated that a writ of attachment has been made against the \$175,000, which was paid into court as the result of the sale of the s.s. *Storstad*, on behalf of the various claimants.

The Pacific Mail Steamship Co., a U.S. corporation, incorporated in New York in 1848, will, it is stated, dissolve during this year. The reason for this step is stated to be the recently enacted Government Seamen's Act, which goes into effect Nov. 4, and which is designed to replace cheap Oriental labor by United States union labor. It is stated that the last sailing of the company's vessel will be made from San Fran-

cisco for far eastern ports, Nov. 2, after which all of the vessels will be for sale in the open market.

The report of the British Empire Steam Navigation Co., (Furness Withy and Co.) for the year ended Apr. 30, shows trading profits of £49,902 18s. 7d. After deducting all interest and expenses, there is a balance of £32,367 13s. 2d. Of this amount £25,000 was absorbed on account of flotation expenses, leaving £7,367 13s. 2d., out of which a dividend of 10% was paid to ordinary shareholders, absorbing £6,790 8s. 3d., and the balance was carried forward. This company, which was formed Feb. 17, 1914, has vessels, including some under construction, with a deadweight capacity of 74,590 tons.

The report of the Oceanic Steam Navigation Co. (White Star Line), for 1914 shows a profit of £795,955 11s. 6d., which with interest on investments makes a total of £887,584 11s. 4d. After deducting debenture and general interest, directors' fees and income tax, and writing off £398,967 18s. 3d. for depreciation on vessels and buildings, and also half the expenses of the new debenture issue, there is a balance of £233,429 13s. 11d., which with £90,669 16s. 11d. brought forward makes a total at the credit of profit and loss account of £324,099 10s. 10d. During the year dividends were paid absorbing £262,500, leaving the balance to be carried forward.

The Russian Volunteer Fleet, which commenced a steamship service last year between Vladivostock, Russia, and Vancouver and Puget Sound ports, but which service was somewhat disorganized by the war, is completing arrangements for the re-establishment of the service on a more elaborate basis. The Russian Government has made agreements with the C.P.R., which is acting as agent for the Russian Volunteer Fleet and the Eastern Asiatic Steamship Co., providing for a through freight service, which, it is stated, grants importers and exporters facilities hitherto unobtainable, and which will enable merchants to negotiate international trade documents through banks.

Two members of a firm in Glasgow, Scotland, acting as agents for the Nova Scotia Steel and Coal Co., New Glasgow, N.S., have been sentenced to six months imprisonment for trading with the enemy. The case was considered a bad one and the sentence light for the nature of the offence. The Nova Scotia Steel and Coal Co. has issued a statement to the effect that three cargoes of ore were shipped to Germany in July last, before the war broke out, and instructions were given to divert all three vessels to Great Britain. The company succeeded in diverting two of the three, the remaining one entered Rotterdam, Holland, a few days after war was declared, when the purchasers exercised their right under the law, to possession.

In order to ensure that the requirements of the British Home Office are observed, it has become necessary for steamship companies booking passengers across the Atlantic, to examine all passengers' credentials before allowing them to board vessels on this side. The Government order is interpreted that all eastbound passengers will require to have passports, those who are friendly aliens complying with the regulations, and those who are not aliens, to prove that they are not. Photographs attached to passports or other documents should be certified by respective consuls to avoid possibility of substitution. Booking agents are instructed before issuing tickets to see that passengers are able to comply with the regulations, as those who do not comply will not be allowed on board, and the companies assume no responsibility.

### Maritime Provinces and Newfoundland.

The channel to the Government wharf at Whycocomagh, N.S., has been dredged to a width of 100 ft. and a depth of 13 ft. for about 1,100 ft., and a basin 300 x 300 ft. has been dredged in front of the wharf to the same depth. The position of the channel is marked by wooden spar buoys.

The Reid Newfoundland Co. has purchased the s.s. *Sagona* from the Newfoundland Produce Co., St. John's, for its mail and passenger service. The price paid is reported as £23,000. The *Sagona* was built at Dundee, Scotland, in 1912, and is 808 tons gross and 420 tons register.

The contract awarded some time ago by the Dominion Government to Norton Griffiths and Co., for the harbor improvements and dry dock at Courtenay Bay, St. John, N.B., has been cancelled. It is stated that the contractors were unable to proceed to the satisfaction of the Government owing to the difficulties of financing due to war conditions. Reports are current that the contract will be taken over by another concern, under arrangement with the Government.

The Canada Atlantic and Plant Line Steamship Co.'s s.s. A. W. Perry, en route from Boston, Mass., to Halifax, N.S., ran ashore at Chebucto Head, 8½ miles from Halifax, during a fog, June 8. There was about 40 passengers on board, all of whom, together with the crew, were removed safely. There was also considerable cargo. On the following day she slipped from the rocks and sank in deep water. She was built at Belfast, Ireland, in 1897, and named *Beverly*. Her dimensions were,—length 225 ft., breadth 34 ft., depth 22 ft.; tonnage, 1,601 gross, 957 register. She was screw driven by engine of 370 n.h.p.

The Dominion Coal Co.'s s.s. *Morwenna*, under charter to the Red Cross Line, was torpedoed by a German submarine, at the end of May, while bound from Cardiff, Wales, to Sydney, N.S. During last year she was operated by the Black Diamond Steamship Co., another subsidiary of the Dominion Steel Corporation, in the passenger and freight trade, between Montreal and St. John's, Nfld., and owing to the discontinuance of that business by the Black Diamond Steamship Co., for the present, she had just been chartered to Bowring and Co., for operation by the Red Cross Line in the trans-Atlantic trade. One of the crew was killed and a number injured, the latter being rescued by a Belgian trawler and landed at Cardiff. She was built at Dundee, Scotland, in 1904, and was 260 ft. long.

### Province of Quebec Marine.

The Marine Department has placed a gas buoy above St. Jean wharf in the St. Lawrence River below Quebec, to mark the wreck of the steamboat *Christine*. The light is placed 250 ft. south of the wreck and is white, automatically occulted at short intervals.

The Marine Department has issued a notice to mariners navigating the Lachine Canal, stating that at nights the lights shown on the C.P.R. swing bridge over the Canal, stating that at night the lights swing protection and a red light at both ends of the swing span when the passage is closed, and green light when open.

It is announced that the Dominion Government has settled its claim against the owners of the s.s. *Lingan* in connection with the sinking of the Government s.s. *Montmagny*, which was rammed and sunk in the St. Lawrence below Quebec, Sept. 18,

1914. An action was entered in the Exchequer Court, and \$400,000 was claimed. The amount accepted by the Government in settlement is stated to be \$100,000.

The s.s. Prefontaine, registered in Montreal, in the name of Jos. Malo, is reported to have been sold to a new company, for operation twice weekly between Montreal and Quebec, with J. O. Read as master. She is being repaired and overhauled at Montreal. She was built at Sorel, Que., in 1896, her dimensions being, length 202 ft., breadth 30.6 ft., depth 8 ft.; tonnage 899 gross, 533 register, and she is screw driven by engine of 56 n.h.p.

The Montreal City Council has abolished the fares for the ferry between the city and St. Helens Island, and has arranged with Canada Steamship Lines, Ltd., for the operation of the company's s.s. Longueuil on the route for the summer. The vessel has accommodation for about 800 passengers, and the service will cost the city \$17,730. The Mayor is reported to have outlined a proposal "to saddle the Montreal Tramways Co. with the cost when a new contract for street car service is made."

The Marine Department is carrying out a series of works with the view of raising the water levels in the St. Lawrence between Montreal and Lake St. Peter. The ship channel is to be dredged to a uniform depth of 35 ft., and compensating works are to be built near Lake St. Peter. The dredging of the channel through Lake St. Peter to 35 ft. will, it is expected, be finished by the end of the year, while the whole work will take a few years to complete. The compensating works include the erection of a dyke about 4,800 ft. long opposite Pointe du Lac, the closing of five channels through the group of islands at the head of Lake St. Peter, and the construction of a dyke about 3,500 ft. long between Ile a Bague and Ile Bellegarde.

The two parallel locks which are to be built in the St. Charles River at Quebec will be 450 x 65 ft., and will be of concrete. The dam which is under construction there is expected to be finished this year. The whole work of improving the lock accommodation, which includes dredging, the building of the new locks and the erection of a new railway and passenger bridge will, it is expected, take two years. A suction dredge has just been completed and placed in operation. Other machinery in operation on the site include a four yard dipper dredge, a gasoline launch for towing, a number of scows, 17 hoisting engines and a 30 ton crane. Quinlan and Robertson are the contractors.

Mariners are warned that owing to the construction of a dam and locks in the River St. Charles near the Canadian Northern Ry. bridge, the river channel is partly obstructed. A row of piles will be erected from about 140 ft. inside of the Quebec gap of the swing bridge, to the Quebec shore, extending about 600 ft. down the river at right angles to the bridge, the lower part being marked by a pier covered at high water, from which a fixed white light erected on a pole will be exhibited. The channel is on the right hand side of the light when going up. A caisson is being sunk on the north or Limoilou side, obstructing the northern channel through the bridge. Vessels should pass towards the Quebec side of the swing bridge within a line from the pier with light to the shore end of the Quebec side gap in the swing bridge.

The Quebec Board of Trade sent a deputation to the Government, June 2, asking for extensive improvements in the harbor, and for a 10c rate on wheat carried over the National Transcontinental Ry. from Winnipeg to Quebec, with a proportionate

rate on the eastern section to St. John and Halifax. In the improvements asked for are a 10,000,000 bush. grain elevator and additional docking accommodation for 15 ocean going vessels. Sir Robert Borden stated, in replying to the arguments, that such improvements were, for the present, restricted by the difficulty in raising the necessary money, and any such must be confined to the actual present needs. A large sum would have to be spent for the equipment of the N.T.R., and the volume of traffic both east and west would help to fix the rate to be charged. He also stated that the Government had spent over \$25,000,000 in and around Quebec in the last four years.

### Ontario and the Great Lakes.

A hopper barge, No. 3, was launched at Collingwood, June 19, for the Dominion Government.

The Public Works Department is having built at Collingwood, a steel steam hopper scow for use in connection with the dredging operations in the St. Lawrence River.

Canada Steamship Lines s.s. Turbinia, is undergoing overhaul and repairs at Kingston, after which, it is stated that she is to be sent to the Atlantic coast under charter.

The United States War Department has awarded the contract for cement masonry on lock 4 of the Sault Ste. Marie canal to O. Daniel, Chicago, Ill., for \$1,010,048.

Canada Steamship Lines motor vessel Fordonian broke her crank shaft above Whitefish Point, June 17, and was taken to Port Huron. She was eventually taken to Port Colborne, where repairs were made.

Forwarders, Ltd., Kingston, have chartered their steamships Port Colborne, Port Dalhousie and W. H. Dwyer to the International Paper Co., and these vessels will run into Portland, Me., during the summer.

Gas buoy no. 9 at Round Island, Lake Huron, has been moved to the end of the shoal north of the island, and placed in 19 ft. of water. It is spar shaped with an occulting white light of 120 c.p., 13 ft. above water.

The Reid Wrecking Co. is renewing its attempts to raise the United States lightship 82, which was lost off Point Abino, in Lake Erie, in Nov., 1913. The work, which was taken in hand last autumn, had to be abandoned owing to the storms.

Work was started on the drilling of the undredgable material at the bottom of Lake Ontario at the Port Weller entrance to the Welland Ship Canal. It is stated that the work will take three years. J. Manley, Merriton, Ont., has the sub contract.

The Great Lakes Transportation Co. commenced a direct trans-Atlantic service from the head of the lakes recently, when its s.s. Glenfoyle left Fort William with 122,000 bush. of grain for Manchester, Eng. It is interesting to note that neither port can be considered an ocean one.

The underwriters received tenders, June 15, for the raising of the s.s. Charles S. Price, one of the United States vessels lost in the great storm on the Great Lakes in Nov., 1913. It is believed that it is possible to raise the vessel, but tenders which were invited on two previous occasions were all considered unsatisfactory.

The Department of Trade and Commerce has asked carriers by the lake route from the head of the lakes to Montreal to quote prices for the transportation of 1,000,000 bush. of wheat between the points named. This grain has been purchased by the Dominion Government for New Zealand, and it is hoped to ship it from Montreal.

The Department of Marine is reported to

have chartered the steamships La Salle, Athene and Thyra for fisheries patrol service on the Great Lakes. It is stated that the La Salle will be confined to Lake Erie, the Athene to Lake Ontario and the St. Lawrence River, and the Thyra in the Thunder Bay district from Otter Head Point to the International boundary.

A large steel tug was launched at Grand Haven, Mich., June 19, for the Canadian Stewart Co., for towing barges in connection with the development work in Toronto harbor. The tug is 82 ft. long, 20 ft. beam and 10 ft. deep, equipped with a fore and aft compound engine with cylinders 16 and 34 by 26 ins., supplied with steam by a Scotch boiler 10¼ ft. diam. by 11 ft. long.

The s.s. Trevisa, which was launched at Londonderry, Ireland, in May, was specially designed and built for service on the Canadian Lakes, but owing to the demand for tonnage in British waters, she has been chartered for special services in connection with the supply of stores for war purposes. Her dimensions are, length 250 ft., breadth extreme 42½ ft., depth moulded 20 ft.

The Marine Department is building a new lighthouse on the southwest point of Battle Island, Lake Superior, consisting of a white reinforced concrete tower surmounted by a red octagonal lantern, 43 ft. high. The light is of the catoptric order of 20,000 c.p., showing three flashes at 4 second intervals every 24 seconds. It is at an elevation of 118 ft. and visible for 16 miles.

A special meeting of shareholders of Canada Steamship Lines Ltd. was held at Montreal, June 19, to authorize the directors to apply for supplementary letters patent extending the company's powers to allow it to take advantage of certain amendments to the Companies Act, made in 1914, and issue its bonds and debentures in other sums than authorized by its act of incorporation, viz., \$100 and £20.

The Duluth, South Shore and Atlantic Ry., a subsidiary of the C.P.R., the Grand Rapids and Indiana Ry. and the Michigan Central Rd., have been allowed by the Interstate Commerce Commission, to continue the joint ownership of the ferry boats operated under the name of the Mackinac Transportation Co., between St. Ignace and Mackinac City, Mich., which, otherwise, under the Panama Canal Act, they would not be entitled to do.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for May, as follows,—Superior 601.65; Michigan and Huron 579.64; Erie 571.69; Ontario 245.15. Compared with the average May levels for the past ten years, Superior was 0.30 ft. below; Michigan and Huron 1.07 ft. below, Erie 1.12 ft. below and Ontario 1.76 ft. below. It was anticipated that during June, Superior, Michigan and Huron would rise 0.3 ft., Erie 0.2 ft., and Ontario 0.1 ft.

Canada Steamship Lines' s.s. Rochester has been libelled at Buffalo, N.Y., on claims totalling \$265,000, by residents of the State of Rhode Island, who allege that during an excursion in 1913, impure water was supplied on the vessel, causing an outbreak of typhoid fever. A Canada Steamship Lines official at Montreal is reported to have stated in connection with the case, that at the time mentioned there were outbreaks of typhoid fever in several of the U. S. cities visited by the vessel, and that a number of U. S. soldiers on the vessel were taken ill, and as a result of an enquiry by the U. S. Government, the company was entirely exonerated from all blame.

The British Government and the Dominion Flour Mills Ltd., have libelled the s.s. Valcartier, owned by Lake Commerce Ltd., Toronto, for loss of cargo, as a result of a

Julius, with the s.s. F. M. Osborne in Lake Huron recently. Lake Commerce Ltd. is applying in the Federal Court at Detroit, Mich., for a limitation of liability, and denies any fault for the collision, stating that those in charge of the F. M. Osborne were incompetent and that an efficient lookout was not maintained, that she altered her course to starboard without having a passing agreement to pass port to port, and that she so passed despite a warning signal from the Valcartier. It is estimated that repairs to the vessel will cost about \$20,000, and that the total loss to the company owing to the vessel being out of business will be \$41,000.

Turret Chief, Ltd., has been incorporated under the Ontario Companies Act, with \$40,000 capital and office at Hamilton, to carry on a navigation and transportation business. The provisional directors are, A. B. MacKay, J. G. Gauld and C. V. Langs, Hamilton. The Turret Chief was owned by the Canadian Lake and Ocean Navigation Co., Toronto, and was wrecked in Lake Superior in Nov., 1913, when she was abandoned to the underwriters. She was eventually sold, salvaged and repaired and again sold to A. B. MacKay, who it is reported has chartered her for trans-Atlantic service. She was built at Sunderland, Eng., in 1896, and is of steel construction with double bottom for water ballast. She is equipped with triple expansion engines with cylinders 20, 34 and 57 ins. diam. by 39 ins. stroke, of 1,100 i.h.p., supplied with steam by two water tube boilers 12½ by 10 ft. by Babcock and Wilcox. Her dimensions are, length 253 ft., breadth 44 ft., depth 19 ft. 7 ins.; tonnage, 1,881 gross, 1,197 register.

### Manitoba, Saskatchewan and Alberta.

The Governor General in council has approved the Winnipeg and St. Boniface Harbor Commissioners' bylaws.

A gasoline boat service is being operated on Lesser Slave Lake, in the passenger service, between Grouard and Indiana, Alta., on the Edmonton, Dunvegan and British Columbia Ry. The boats, which are named Northwest and Dreadnought, have capacity for 30 passengers each, and are operated by the Northwest Transportation Co., of which J. A. Powers is Manager.

### British Columbia and Pacific Coast.

The name of the Marine Department's s.s. Falcon, registered at Victoria, B. C., has been changed to Berquist. This vessel was built at Port Moody, B. C., in 1902, and was formerly named Ruth.

The s.s. Wellington, owned by Canadian Collieries (Dunsmuir) Ltd., which has not been used for some years, is reported to have been chartered for a trip to New York with a cargo of B. C. fir.

The British Yukon Navigation Co.'s s.s. Nasutlin sailed from Dawson, Yukon, May 27, for Whitehorse, opening navigation on the Yukon River. The first vessel sailed from Whitehorse, June 1, on the regular schedule.

The All Red Line, Ltd., Vancouver, has made the following appointments on its two vessels for this year: Santa Maria, S. G. Mortimer captain, T. M. Stephens chief engineer; Selma, H. E. Lawrey captain, H. Hunter chief engineer.

H. E. Kemp, a former Secretary-Treasurer, North Vancouver Ferry Co., is taking action against the company, claiming \$2,000 for wrongful dismissal. The company alleges that he had falsified books and made wrong reports.

The Grand Trunk Pacific Coast Steamship

Co. has reduced the time taken by its steamships on the route between Vancouver and Prince Rupert, from 33 to 30½ hours. The distance is 482 nautical miles, the average run being 16 miles an hour.

Tenders are under consideration by the liquidators of the Canadian Northern Pacific Fisheries Ltd., for the purchase of the company's fleet of whaling and fishing vessels. At the time of writing, it was not known how the business would be disposed of, but it was stated that if the bids for the entire fleet were not considered satisfactory, the property would be divided and disposed of in small lots.

During May, work proceeded rapidly on the construction of the breakwater at Victoria, which is under contract to Grant, Smith and Macdonnell. During the month 7,253 tons of granite were laid and 19,022 tons of rubble were placed on the foundations extending seaward, and 1,334 cubic yards of concrete were also laid. The third crib is under construction at Rosebank, and steel is being placed on the ways for the building of the fourth crib.

A San Francisco press report of June 26 states that the Robert Dollar Steamship Co. is arranging to change five of its steamships from U.S. registry to British registry, on account of the Seamen's Act, which becomes effective Jan. 1, 1916. It is also stated that it is probable the headquarters of the company will be moved to Vancouver, B.C. Some of this company's vessels have been on the British register (Canadian) for several years, and were transferred just recently to the U.S. register, when the regulations respecting foreign built vessels came into force in the U.S.

A. Johnston, Deputy Minister of Marine, returned to Ottawa at the end of May, after a trip to the Pacific coast, when, accompanied by Col. W. P. Anderson, Chief Engineer of the Department, he inspected the port and navigation facilities there, as far north as Prince Rupert. A number of questions were dealt with on local complaints, covering additional aids to navigation, pilotage charges, the operation of gasoline boats by uncertificated men, etc., and these will be subjects for report to the Department, with recommendations.

The British Columbia Indian Commission, which reported recently on the question of the disposition of the Kitsilano Indian Reserve, has recommended that the property be handed over to the Vancouver Harbor Commission, for development along with other lands covered by the general harbor improvements in progress there. Plans have been prepared by A. D. Swan, M. Can. Soc. C.E., Chief Engineer to the Commission, and it is stated that these provide for the accommodation of the largest vessels operating on the Pacific Ocean, with ample warehouse space and railway facilities.

The C.P.R. s.s. Princess Irene, which was requisitioned by the British Admiralty at the commencement of the war, was blown up in Sheerness harbor, England, May 26, it is stated, as the result of an accident. At the time of the disaster she was undergoing an overhaul, and all the members of the crew, with the exception of one, lost their lives. She was built at Dumbarton, Scotland, was launched in July, 1914, and she was intended for the company's British Columbia Coast Service, but was taken over by the Admiralty before she was out of the builders' hands. Her dimensions were: length, 395 ft.; breadth, 54 ft.; depth 28¼ ft. A full description of the vessel and her sister, Princess Margaret, launched just previously, and also taken over by the Admiralty, was given in Canadian Railway and Marine World for Aug., 1914.

### Stranding of the s.s. Cheltonian.

An investigation into the causes of the stranding of the British s.s. Cheltonian near Cape Ray, Nfld., May 23, was held at Halifax, N.S., June 18, by Capt. L. A. Demers, Dominion Wreck Commissioner, and the following judgment, concurred in by Capt. John Fleming and D. Stewart, as nautical assessors, was delivered: The court, having carefully reviewed the evidence submitted by the master, which was very intelligently set forth, finds that up to the moment of and prior to the stranding the vessel was navigated in a proper and seamanlike way; but we are of opinion that when Bird Rock was not seen, nor the whistle there heard, it was the duty of the master to have taken frequent soundings, and make absolutely certain, by the various means at his disposal, of the exact position of his vessel, which he failed to do. We regret to say that he took too much for granted, and omitted the minor details which prudence and good navigation required. Therefore, owing to these omissions, which we cannot overlook, we censure the master, Richard Jones, for this error of judgment; but under the circumstances the court must say that it is very much impressed by the fact that he brought his vessel, which had a valuable cargo on board, back to Sydney, and subsequently to Halifax for repairs, under very adverse conditions, as the engines and boilers were out of alignment, and the holds were not free from water. This was indeed a gigantic task and the captain, engineer and assistants deserve unstinted praise for their successful efforts in this connection. In view of these circumstances we have pleasure in complimenting the master upon his actions in saving the vessel and her valuable cargo; and we also compliment the chief engineer for the marvellous work which he performed in nursing the engines so that they answered the demands and trials to which they were subjected.

**Beeson's Marine Directory.** The 29th issue of this publication maintains the high standard of previous years regarding the classification of the Canadian and United States vessels operating on the Great Lakes, and also the collection of interesting information connected therewith. There are included in the volume descriptive details of Canadian harbors on the Upper St. Lawrence, the Great Lakes, Georgian Bay, etc., which are published under the authority of the Minister of Marine. The book consists of 288 pages, 10 by 7 ins., bound in cloth, and is published by Harvey C. Beeson, 732 South Sherman St., Chicago, Ill., at \$5.

**The Erie Rd.,** in pursuance of the order of the Interstate Commerce Commission and of the Panama Canal Act, is taking steps to divest itself of its lake steamship holdings, and has sold four of its eight lake steamships to W. G. Davidson, New York. It is stated that the vessels sold cost on an average, \$200,000, and that the price realized is \$600,000 for the four. It is announced that the vessels will be taken to New York, two being placed in the coast trade and two being used for trans-Atlantic routes. They will have to be cut in two in order to pass the locks of the Welland Canal.

**The Great Lakes Red Book,** 4¼ by 3 ins. published by the Marine Review, Cleveland, Ohio, at \$1, is a handy vest pocket reference book containing a list of over 1,000 vessels operating on the Great Lakes, with the names of owners, captains and engineers. The vessels are classified in a unique manner whereby quick reference can be made for the information desired.

### Additional Steamship for Canadian Pacific Railway Atlantic Service.

The Canadian Pacific Ry. has purchased the s.s. Frankmount from the Palace Shipping Co., Liverpool, Eng., and has changed her name to Medora. She is being thoroughly overhauled at Belfast, Ireland, and we are advised that she is very similar in type to the C.P.R. steamships Missanabie and Metagama, which have been put into service recently on the C.P.R. Montreal and Liverpool freight and passenger service. A full description of these latter vessels was given in Canadian Railway and Marine World for Aug. 1914, pg. 388.

The s.s. Medora was built at Port Glasgow, Scotland, in 1912, and has steel hull, two steel decks, is classed 100 A1 at Lloyd's, and is equipped with triple expansion engines with cylinder 25, 42 and 70 ins. diam., by 48 ins. stroke, 477 n.h.p. She is an up to date vessel, with electric lighting equipment and all the modern life saving and other appliances.

### Telegraph, Telephone and Cable Matters.

The Association of Railway Telegraph Superintendents held its annual convention at Rochester, N. Y., June 22 to 25, when a number of papers on a variety of subjects concerning the construction and operation of railway telegraph systems were read and discussed.

The U. S. Circuit Court of Appeals has confirmed the judgment of the lower courts in granting a preliminary injunction against the DeForest Radio Telephone and Telegraph Co., the Standard Oil Co. of New York and L. DeForest, restraining them from infringing the fundamental Marconi and Lodge patents.

The Great North Western Telegraph Co. has opened offices at Bala Park, Lake Joseph, Niagara Military Camp, Port Cockburn, Queens Royal Hotel, Niagara on the Lake, Rosseau, Sparrow Lake, Ont., Richmond and Valcartier Camp, Que.; and has closed its offices at Rosebank, Man., Allanburg, Banning and Teeswater, Ont., St. Cesaire Station, Que., and Mikado, Sask.

R. N. Young, Superintendent, C. P. R. Telegraphs, British Columbia Division, returned to Vancouver recently after an inspection trip through the Kootenay District. He stated that telegraph communication would soon be opened along the Kettle Valley lines between Midway and Merritt, thus practically completing the company's service in the interior. There is now a direct wire from Vancouver to Penticton and Kelowna, connecting up the lower Okanagan district.

The New Brunswick Telephone Co.'s earnings for the year ended Mar 31 were \$455,066.53, against \$422,700.45 for the previous year. During the year dividends totalling 6% were paid, and a 1% bonus for the year was paid Apr. 15. The board for the current year is,—President, S. H. White; First Vice President, Hon. F. P. Thompson; Second Vice President, Lieut.-Col. Black; A. W. Bennett, H. P. Robinson, F. B. Carvell, M.P., F. W. Sumner, E. O'Leary, Lieut.-Col. J. L. McAvity, R. B. Emerson, J. M. Robinson, G. W. Ganong, L. B. McFarlane, A. R. Slipp and W. B. Snowball.

**Western Crops.** The C. P. R. estimates the acreage under crop in the prairie provinces this year as follows,—Wheat 12,809,000, an increase of 22%; oats 6,963,000 an increase of 12%; barley 2,224,000 an increase of 15%; flax 864,000 a decrease of 14%; total acreage 22,860,000 an increase of 16%.

### Among the Express Companies.

O. E. Ford, formerly agent, Western Ex. Co., Spokane, Wash., has been appointed route agent, Dominion Ex. Co.'s Pacific Division.

F. H. Hill, heretofore messenger, has been appointed agent, Dominion Ex. Co., at Kelowna, B. C., vice C. E. McIntyre resigned.

The Dominion Ex. Co. has opened offices at Little Bras D'Or, N. S., Iona, Ont., Horizon, Eastend, Raycraft, Regina Beach, Sask., Hayter and Waldo, Alta.

The Canadian Ex. Co. having placed its service on the St. John and Quebec Ry., now being operated as part of the Canadian Government Railways, has opened offices at Centreville, Lakeville, Meductic, Roseborough and Woodstock, N. B.

### Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

**The West Disinfecting Co.,** New York, announces that it will erect a manufacturing plant at Montreal to be in operation early in the autumn.

**The International Nickel Co.** 43 Exchange Place, New York, N. Y., has issued a booklet "Monel Metal" describing its properties, uses, etc.

**Independent Pneumatic Tool Co.,** Chicago, has appointed G. C. Wilson Manager of its Atlanta, Georgia, Branch, vice F. H. Charbono, transferred to Boston, Mass.

**Franklin Railway Supply Co.,** 30 Church St., New York, N.Y., has issued a catalogue describing and illustrating its automatic driving box lubricator for lubricating driving journals with grease instead of oil.

**The Rail Joint Co.,** New York, N.Y., announces that it has received the only medal of honor awarded by the Panama-Pacific International Exposition at San Francisco for rail joint products in the transportation department.

**The Dominion Iron & Steel Co.'s** order from the South African Government Railways for rails, referred to in Canadian Railway and Marine World for June, is for about 25,000 tons of 80 lb. sections and about 10,000 tons of 60 lb. sections. The rails will be shipped from Sydney, N.S., during the next few months.

**B. J. Coghlin Co., Limited,** manufacturers of railway supplies, Montreal, have issued an 85 pg. catalogue covering a wide range of railway accessories including springs for locomotives, tenders, passenger and freight cars, and electric railway cars, waggons,

trucks, cranks, etc., also a full line of track tools, including guy rods, ground anchors, tie plates, rail braces, and wrecking chain.

**M. Beatty & Sons, Ltd.** received an order on May 29 from the War Purchasing Commission at Ottawa for 5 carloads of material handling machinery, consisting of hoisting engines, derrick irons, turn tables, centrifugal pumps and clam-shell buckets for use by the Canadian Overseas Railway Construction Corps in Europe. The goods went forward, June 1, knocked down and packed for ocean shipment.

**John Bertram & Sons Co., Ltd.,** machine tool manufacturers, Dundas, Ont., have offered to the Dominion Government the free use of the Wilson residence property in Dundas, which the company owns, as a home for convalescing soldiers for whatever time it may be required. The house, which has a broad verandah, is situated in about an acre of ground which is shaded by large elms and well supplied with fruit trees. It will accommodate from 30 to 40 men.

**American Steel Foundries, McCormick Building, Chicago,** has issued a unique calendar for 12 months commencing June, 1915. Each sheet contains a calendar for three months, viz., the current month in the centre of the sheet and the previous and coming months above and below it respectively. At the end of each month the entire sheet can be torn off with the result that the ensuing current month will have the centre position on the sheet with the past and coming months in plain view.

### Transportation Conventions in 1915-16.

July 13-16.—International Railway General Foremen's Association, Chicago, Ill.

July 13-16.—American Railroad Master Tinner's, Coppersmiths and Pipefitters Association, Chicago, Ill.

July 19-21.—American Railway Tool Foremen's Association, Chicago, Ill.

July 21.—American Association of Demurrage Officers, Milwaukee, Wis.

Aug. 17.—International Railroad Master Blacksmiths' Association, Philadelphia, Pa.

Aug. 19, 20.—American Association of Railroad Superintendents, San Francisco, Cal.

Sept. 14-16.—Roadmasters' and Maintenance of Way Association, Chicago, Ill.

Sept. 14-16.—Master Car and Locomotive Painters' Association of the United States and Canada, Detroit, Mich.

Sept. 14-17.—Railway Signal Association, Salt Lake City, Utah.

October.—American Association of Dining Car Superintendents.

Oct. 4, 5.—American Association of Traveling Passenger Agents, Boston, Mass.

Oct. 4-8.—American Electric Railway Association, San Francisco, Cal.

Oct. 5-7.—Railway Fire Protection Association, Chicago, Ill.

Oct. 13-15.—American Association of Railway Surgeons, Chicago, Ill.

Oct. 19-21.—Maintenance of Way and Master Painters' Association of the United States and Canada, St. Louis, Mo.

Oct. 19-21.—American Railway Bridge and Building Association, Detroit, Mich.

Dec. 7-10.—American Society of Mechanical Engineers, New York, N.Y.

Jan. 18-20, 1916.—American Wood Preservers' Association, Chicago, Ill.

March 21-23, 1916.—American Railway Engineering Association, Atlantic City, N.J.

May 2-5, 1916.—Air Brake Association, Atlantic City.

June 28, 1916.—Association of American Railway Accounting Officers, Detroit, Mich.

## DEPARTMENT OF THE NAVAL SERVICE.

### TENDERS FOR LIFE SAVING STATION.

SEALED TENDERS, addressed to the undersigned and endorsed "Tender for Life Saving Station," and accompanied by cheque for 10 per cent. of the amount of the tender, will be received up to noon on Friday, July 9th, 1915, for the construction of new buildings for the Life Saving Station at Point Pelee, on Lake Erie, Ontario.

Forms of tender, with plans and specifications, may be obtained on application to the undersigned.

The plans and specifications will also be exhibited in the offices of the District Engineers, Department of Public Works, Toronto and Windsor, and at the present Life Saving Station, Point Pelee.

G. J. DESBARATS,

Deputy Minister of the Naval Service,  
Department of the Naval Service,  
Ottawa, June 15th, 1915.

Unauthorized publication of this advertisement will not be paid for.

# Stop!

HERE is danger ahead if you do not exercise the most careful judgment in the selection of the wire to operate your train signals.

The more carefully you analyze your requirements—the more exhaustively you compare qualities of wire claimed to meet those requirements—the more certain will you be to adopt as Standard the products of Northern Electric.

For in equipment, skill and experience this Company has unequalled advantages to offer you.

Write us to-day for prices and samples of our Railway Signal Wire.

We can also supply

Rubber Covered Wire,  
Armature Wire,  
Weatherproof Feeder Cable,  
Bonding Cable,  
Trolley Wire,  
Car Wire.

The service of our experts are always at your disposal—without obligation.

## Money paid for these Brake Shoes was largely money wasted

Why?

Because these unreinforced brake shoes did not give equivalent service for their cost, having broken in service before their life had barely commenced.

And the remedy?

Use only Steel Back Brake Shoes—then you will get your brake shoe money's worth in long and safe service.

Manufactured in Canada.

## Where the Trained Man Wins—

"Last year one of the country's largest railway systems carried one hundred and ninety million passengers without a fatality."

The *Trained* man wins. In railroading especially it is absolutely necessary that the responsible positions be filled with none but the highest trained men.

Whether you are in the engineering, operating, maintenance or clerical departments, your advancement will depend largely on the thoroughness of your training. And whether you are going to be a trained man—whether you are going to advance or stand still—is a matter for you to decide.

If you really want a better job and are willing to devote a little of your spare time to getting ready, the *International Correspondence Schools* can help you. Over two hundred of the railroad systems of the United States and Canada have approved of the I.C.S. method of instruction and recommended it to their employes.

You're ambitious. You want to get ahead. Then don't turn this page until you have clipped the coupon, marked the line of work you want, and mailed it to the I.C.S. for full particulars.

Marking the coupon is simply the act of investigation—in justice to yourself you can't afford to do less—and it doesn't obligate you in the least. **Mark the Coupon NOW.**

All lessons for Canadian students are corrected at the Canadian Instruction Department in Toronto by instructors who are thoroughly familiar with conditions in Canada.

## Your Summer Holiday!

### This Year The Maritime Provinces

#### LA BAIE DE CHALEUR

An arm of the Gulf of St. Lawrence. The estuary of the Restigouche, is one of the most fascinating and superb panoramic views in America. Smooth, sandy beaches tempt the bather. Many coves and harbors where boating is alluring and shorn of its risks.

#### CAPE BRETON

An island wherein are other isles innumerable. Bras d'Or Lakes, an inland sea dividing the island in twain, provides a spacious waterway through the interior. Nature has made Cape Breton an ideal land for a summer holiday.

#### ABEGWEIT (Cradled on the Waves)

#### Prince Edward Island

Sweet pastoral scenery, fragrant groves, almost tropical foliage, health-giving breezes, atmosphere marvellously clear. Sky as blue as sunny Italy.

#### Summer Excur- sion Fares

gives in comprehensive form summer fares from important centres to the numerous resorts reached by Canadian Government Railways, circular tours, list of hotels and summer homes and their rates.

# SAFETY FIRST

The best way to educate your employes to the safety habit is by signs.

The "SAFETY FIRST" sign will be before them many times each day and warn them of the constant danger they are subject to in the course of their duties.

Enamelled iron signs, on account of the brilliancy of their colors, attract immediate attention. They never fade and are as good in ten years' time as the day they are put up.

We make to order in any colors, with any lettering or design.

We will be pleased to quote you prices and submit sketches on request.

# New Detroit Automatic Flange Lubricators, *Pendulum Type*

In this new Detroit device are incorporated the very latest developments and features that make for greater efficiency in flange lubrication.

It is the result of thorough investigation and careful observation under actual working conditions.

The Detroit Automatic Flange Lubricator, Pendulum Type, gives efficient lubrication in exact accordance with the requirements of the service—and does it automatically. It requires no manipulation by the engineer—takes up no room in the cab—requires no steam.

The oil is applied just when and where it is needed—there is no spattering, no waste.

The Detroit Pendulum Type Flange Lubricator is made in two sizes—two feed and four feed.

The illustrations herewith show a sectional view of a four feed tank, also a four feed lubricator, installed on a switching engine which shows the device complete, and location of regulating valve and check valve.

The Pendulum Type Lubricator actually **pumps** the oil to the feed nozzle on the flange and operates in the following manner:

Any swinging motion or rolling on curves or lateral motion of any kind causes the "pendulum" to swing; as the "pendulum" is pinned to shaft "R" this swinging motion results in alternating strokes of the two "plungers."

On the up stroke of a "plunger" oil is drawn up past the ball check "A"; on the down stroke the ball check "A" closes the passage into the "suction tube" and oil is forced past the ball check "B" and into the pipe leading to the "feed nozzle."

The "regulating valves" installed in the pipe line control the flow of oil to the flanges, and are regulated by the operator to meet the requirements of the service.

Once the regulating valve is set to suit local conditions, the lubricator does not need the daily adjustment as required by lubricators in the cab.

The new booklet just issued completely describing this new Detroit Automatic Flange Lubricator, Pendulum Type, gladly sent on request. Ask for FO-81.

# Meeting One Financial Obstacle to Adequate Signal Protection

There is little doubt that there would be a tremendously greater amount of mileage protected by automatic block if first cost were the only difficulty to be encountered. The great difficulty, however, in the universal use of fixed automatic block signals is found in the continuous cost of maintenance.

The advantage in this respect of

## Simmen Automatic Block Cab Signals

is shown by the fact that none of the four roads which are operating the Simmen System have found it necessary to provide any special organization or additional labor for inspection purposes.

The reason for this is that the track and overhead installation of the Simmen System is so simple (involving no apparatus along the track except standard telephone overhead construction and simple signal rails) that the regular track and line maintenance labor is ample to care for these elements.

All operating electrical apparatus is either in the cab or in the dispatcher's office.

The cab apparatus is easily inspected when the car is in for regular inspection.

The apparatus in the dispatcher's office is readily inspected and cared for by the dispatcher, with the occasional assistance of a lineman.

This enormous comparative saving in maintenance costs is proved by the experience of the four roads on which the **Simmen System** is now, and has for some time been, standardized.

The importance of this fact in any signal installation is obvious.

When you are depending upon a locomotive crane for handling your coal you realize that it must be a **good** crane. You cannot have the crane continually breaking down, as it means a big loss in time.

## BROWNHOIST Locomotive Cranes

are being used to-day by railroad men because they realize that these cranes will do their work as it should be done. One road uses thirty of them. These cranes are built for hard, continuous service. And records prove that they will stand up under the severe working conditions. Ask the owners—they will tell you what Brownhoist cranes will do.

Write for our Catalog K, which shows how and where the Brownhoist Locomotive Crane is used.

HEAD OFFICE  
**MONTREAL**

**The Effect—**

Always a tight joint at "A"  
when installed.

**The Cause—**

O-B Lock Hanger. Note  
spring washer inside shell.

## A Simple Solution

To get a tight joint between trolley hanger and ear at "A" some linemen have put a spring washer around the stud outside the hanger.

This method reduced the number of threads engaging the ear, increased the bending leverage on the stud and necessitated handling loose washers.

## O-B Lock Hanger

Has the same spring washer but inside the shell.

All the advantages but none of the faults of the old method.

PAGES 117-118 OF CATALOG No. 14 GIVE DETAILS.

## The Science of Water Treatment

The Dearborn Company was organized because of the conviction on part of its founders that a scientific handling of the water treatment question was the only solution for the steam user of the troubles constantly arising as a result of scale formation, foaming, corrosion and pitting of boiler tubes, with all the attendant injury to the boilers, loss of heating efficiency, and waste of fuel.

Periodical removal of scale is unsatisfactory since there is a constantly increasing ratio of heat loss and fuel waste—as the scale gradually forms—aside from the injury to the boilers.

The Practical Method is Prevention and this can be effectively done only by attacking the mineral ingredients in the water with the proper reagents, changing their nature and character and eliminating their harmful qualities.

The application of scientific knowledge is most important in the choosing of reagents. Provision must be made for the various minerals present in the water, determined by analysis, as well as for the by-products that will be formed as a result of reactions brought about. Failure to give this phase due consideration may result in more serious trouble than the first condition of the water produced.

Unscientific "dope" compounds, ineffective and often harmful, have caused steam users endless annoyance and trouble.

We'd like an opportunity to demonstrate results by our methods. Gallon samples of the water supplies for analysis constitute the first step. May we have them?

Hamilton, Ontario

Consolidated Type Locomotive Built for Freight Service on the Grand Trunk Pacific Railway.

# LOCOMOTIVES

Long experience, new equipment, efficient management and expert workmen, are guarantees that our Locomotives will give record service. Over 1,200 Locomotives have been built at our Works since the erection of the plant. We are builders of Simple and Compound Locomotives adapted to every variety of service, for Railway Contractors, for Industrial Purposes, Mines, all classes of Railway Work, etc.

We are also builders of stationary boilers, suitable for contractors and industrial plants. Grey iron castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped. We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

**CANADIAN LOCOMOTIVE CO., Limited, Kingston, Ontario**

## The No. 25 McLain Pressed Steel Headlight

is equipped with triple nickel-plated polished reflector of special parabolic design which centralizes the rays of a concentrated filament Mazda bulb perfectly focused, throwing a straight, strong beam of light down the track, far ahead of the car.

Extremely light—weighing three pounds less than any other Headlight.

No sacrifice has been made to attain this lightness of weight for the McLAIN No. 25 is as strong as any Headlight made, and has an illuminating power in excess of other Headlights employing an incandescent globe.

Has extended dash—Dust and waterproof.

Guaranteed to give good service.

Write for booklet and prices.

**The Trolley Supply Co.**

# Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

## MONTREAL LOCOMOTIVE WORKS, LIMITED,

## 450 Railroad Shops in the United States and Canada Use Thermit

*Let us send you this pamphlet.*

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No. 2144, which contains full information on Thermit in Railroad Shops.

All Thermit materials and appliances are manufactured in the United States and Canada

## Berry Brothers' Varnishes

**Are the Result of Years of Experience**

The man who has always lived in one small community talks only of those things pertaining to that community; is not the type of man the government would select to be admiral of a fleet or general in the army, or minister to some foreign court. The man who has been everywhere and seen life in its innumerable phases is as broad as his experience.

All the experience of those who make, sell and use varnishes have been embodied in the progress of BERRY BROTHERS' VARNISHES. These varnishes are the result of world-wide and time-tested experience, and therefore meet needs better.

*Let us send you some interesting literature on varnish problems*

# Algoma Steel Corporation, Limited

Manufacturers of

Steel Rails, Splice Bars, Tie Plates, Forging Billets, etc.

We would be pleased to have your enquiries for 1915 deliveries.

Works and Sales Department: Sault Ste. Marie, Ontario, Canada

These Steel Back Brake Shoes weighed approximately twenty pounds each when put in service. When ready for the scrap heap, after long and satisfactory use, they weighed about six pounds each.

Just compare this record with that of ordinary unreinforced brake shoes. Almost invariably they go to pieces before being half worn out, and their average scrap weight is about fifteen pounds.

No argument for ordinary shoes can meet the demonstrated facts that stand behind Steel Back Brake Shoes.

Manufactured in Canada.

## The Light of Day on the Right of Way

### HEADLIGHTS

Commercial Acetylene furnishes a strong, penetrating light without being blinding. Nothing to get out of order. Economical to maintain. Small gas cylinder supplies several weeks' lighting.

### CAR LIGHTING

Commercial Acetylene furnishes an ideal system for all kinds of passenger cars. It combines efficiency and economy. Standard cylinder supplies from one to two months' lighting of the average car.

### SIGNALS

Commercial Acetylene furnishes an absolutely reliable light. Failures eliminated and cost of maintenance reduced. Cylinder placed at foot of pole supplies several months' lighting without attention.

20 in.	2 $\frac{1}{2}$	$\frac{3}{4}$ , 1, 1 $\frac{1}{4}$ , 1 $\frac{1}{2}$ , 2 in.	7.50	2.50	$\frac{3}{4}$ , 1, 1 $\frac{1}{4}$ in. 1.00
25 in.	3 $\frac{3}{4}$	1 $\frac{1}{2}$ , 2, 2 $\frac{1}{2}$ , 3 in.	7.50	3.00	1 $\frac{1}{2}$ , 2, 2 $\frac{1}{2}$ , 3 in. 1.25

Prices on larger sizes furnished upon application.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 $\frac{1}{2}$  wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

August, 1915.

## Single Track Automatic Signals, Toronto, Hamilton and Buffalo Railway.

During the summer of 1911 the T.H. & B.R. began its first automatic block signal installation on 9 miles of track, from Kinross to Vinemount, Ont. In 1913 the automatic signaling was extended from Vinemount eastward to Welland, 26 miles, and in 1914 signals were installed on the west end from Hamilton to Brantford 25 miles. There remains approximately 16 miles of single track between Hamilton and Brantford which is not equipped with automatic block signals.

As shown in the accompanying map, fig. 1, the T.H. & B.R. forms a connection between the Canadian Pacific on the north and the New York Central Lines on the south. The track and signal arrangement of the Hamilton terminals, also the profile and alignment, are shown in fig. 2. Traffic is heavy, the average being 32 trains a day,

sidings into adjoining blocks, as signals 4, 5, 12 and 13, figs. 3 and 4, are in all cases absolute, and when in the stop position must not be passed, as the block may be occupied by an opposing train. Signals governing trains approaching the siding, as signals 3, 6, 11 and 14, figs. 3 and 4, are permissive, and when in the stop position may be passed after a stop has been made in accordance with the rules. Intermediate signals, as signals 7, 8, 9 and 10, figs. 3 and 4, also are permissive. Ordinarily there are two or three pairs of intermediate signals between passing sidings, but in some cases there is only one pair, in which case the intermediate signals are staggered so as to provide an adequate margin of safety if a train should disregard an absolute stop indication and enter a block occupied by an opposing train. In fig. 4 train 2 has

and serve as a reminder that a meet is to be made at this point.

In fig. 9 train 1 is about to meet trains 2 and 4 at siding B. Train 1 enters the siding and proceeds into the next block under authority of a clear indication at signal 11. Signal 10 goes to clear as soon as train 1 enters the siding and switch is restored to normal position, and train 2 proceeds toward siding C.

Fig. 10 shows the trains proceeding in their respective directions. When train 2 passes signal 8, signal 10 goes to caution and train 4 can advance on this indication.

Intermediate switches are, in most cases, equipped with push-button indicators of the semaphore type, and normally indicate block is not clear. Before opening the main line switch trainmen are required by rule to press the push button; if conditions are

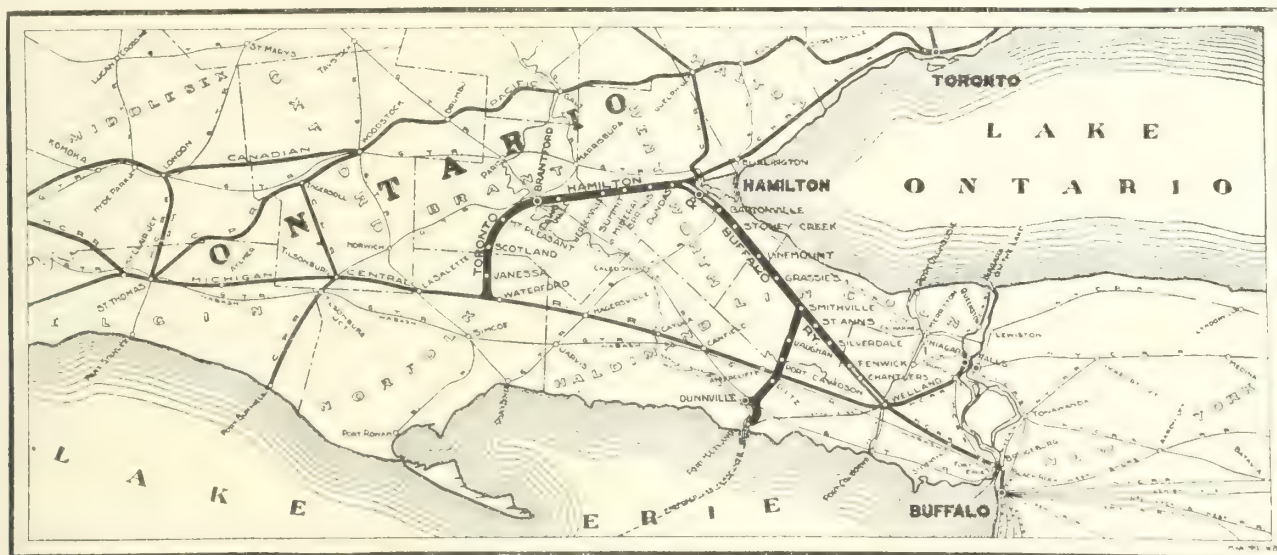

Fig. 1. Toronto, Hamilton and Buffalo Railway Lines.

and the maximum 52 trains a day, as follows:

Freight, westward .. Aver. 6 Maximum 10  
Passenger, westward Aver. 10 Maximum 16  
Freight, eastward .. Aver. 6 Maximum 10  
Passenger, eastward Aver. 10 Maximum 16

Formerly trains were operated by the telegraph block or time interval system in connection with train order boards, and in some cases by standard semaphore train order signals. Trains following a passenger train were held at train order stations until passenger train was clear of the block, and a time interval of five minutes was maintained at train order stations between following freight trains. Train orders and instructions regarding train movements are transmitted by telephone, and there is a telephone at each passing siding so that trainmen can communicate direct with the dispatcher when occasion requires.

The system of signalling is the General Railway Signal Co.'s absolute permissive block system, in which the block for opposing trains is from siding to siding, and for following trains the block is from signal to signal as in double track signaling. Signals governing movements from passing

entered the block between sidings A and B, and is protected against opposing train 1 by absolute signal 5, which is in the stop position.

Fig. 5 shows the minimum spacing of following trains running under caution signals, and fig. 6 the minimum spacing of following trains running under clear signals. In both cases absolute signal 5 protects against opposing trains. There is also a caution indication for each stop indication.

Fig. 7 shows opposing trains 1 and 2 approaching meeting point at siding B, and illustrates one of the important features of the absolute permissive block system—the double distant or caution indication, signals 7 and 9, and signals 12 and 14, which affords maximum safety at meeting points, and insures proper signal indications. Owing to the arrangement of the control circuits it would be practically impossible for train 1 to pass signal 7 at clear and then find signal 9 at stop, or for train 2 to pass signal 14 at clear and then find signal 12 at stop. Absolute signals 10 and 11 protect against opposing trains.

Fig. 8 shows trains 1 and 2 at siding B. Permissive signals 9 and 12 are at stop

such that it would be safe to enter the main track, the indicator blade operates to the vertical position and indicates block is clear. If the block is not clear, the indicator blade remains in the normal position. This arrangement of de-energized switch indicators reduces to a minimum the chance of false clear indications. The push button operates two contacts, which make and break both sides of the energizing circuit. The resistance of indicators is 690 ohms.

Main line switches are equipped with model 5 switch circuit controllers through which, in some cases, the control circuits are broken, and in other cases the track circuits are shunted.

**Track Circuits.**—The length of track circuits varies considerably, according to the distance between successive signals; the average length is approximately 2,000 ft. and the maximum length about 4,000 ft. Ballast is rock and gravel, affording good drainage; ties are untreated oak and cedar; rail is A.S.C.E. 80 lb. and 100 lb.; all rail joints, including insulated joints, are of the continuous type; two 44 in. E.R.B. bond wires connect adjoining rails at each joint.

The track battery consists of two cells of

Columbia 600 ampere-hour, high internal resistance type, housed in 8 ft. cast iron battery cases. Track relays have a resistance of 4 ohms; front contacts are platinum to graphite, and back contacts platinum to platinum. These relays are housed in a cast iron relay box, which is mounted on the signal mast or on a cable post, depending upon the particular location. Wire used for track circuit connections is no. 9 B. & S. gauge, rubber covered. All connections may be identified by means of fiber tags on which appear the proper letters and figures.

the characters shown in the circuit plans.

The Signals conform to Railway Signal Association specifications; signal mechanisms are G.R.S. model 2 A top of mast type, operating in 3 positions in the upper right hand quadrant, and are equipped with 10 volt direct current motors. Absolute signals are distinguished by a square end red blade and by a red marker light below and in the same vertical plane as the active light. Permissive signals are distinguished by a pointed end red blade and by a red marker light below and to the left of the active light. Roundels are R.S.A. standard;

by means of a derrick, which was also used in setting the concrete battery wells. R. L. Latham, Chief Engineer, T.H. & B.R., had general charge of the installation, which was performed under the immediate supervision of A. A. Hurst, Supervisor of Signals. A. C. Holden was engineer in charge for General Railway Signal Co.

**Instruction of Trainmen.**—Rules governing use of the automatic signals were adopted by the railway officers, and were printed in the back part of the time table with the operating rules. About the time the signals were ready for service, the rail-

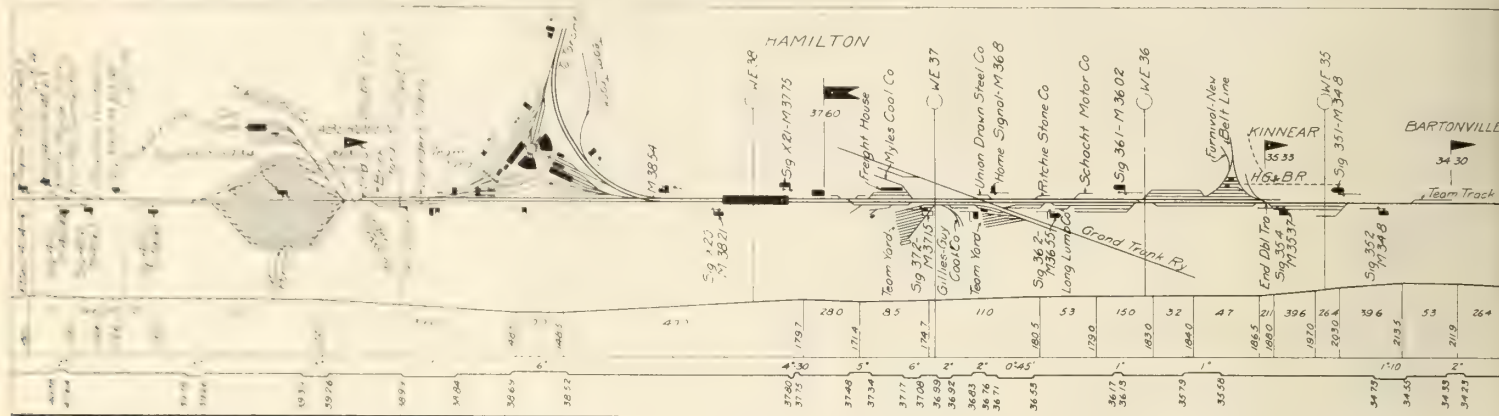

Fig. 2. Diagram showing Signals, Track, Profile and Alignment at Hamilton Terminals, T. H. & B. R.

**Line Circuits.**—The signal control wires are no. 9 B. & S. gauge, weatherproof, copper clad, and are supported on a separate cross arm below the telegraph line, which was practically reconstructed before the signal wires were strung. Wires extending from line to function are no. 14 rubber covered, and are formed into a cable, held together with marline, and supported by messenger wire. Line circuits are operated under the polarized line control system, which requires one less line wire than a similar neutral control system. Ordinarily there are 3 line wires extending from

the colors are red for stop, yellow for caution, and green for clear. The automatic signals are numbered according to their respective mile post locations; odd numbers are assigned to signals governing west bound trains, and even numbers to signals governing east bound trains. The figures are arranged horizontally on the number plate as shown in the accompanying illustrations. The top and bottom parts of the signal masts and fittings are painted black, and the intermediate part white, making a conspicuous signal, which stands out clearly against the usual backgrounds.

way officers held at the company's headquarters at Hamilton several meetings for instruction of the trainmen concerning the signal aspects and indications, and the rules governing their use. At these meetings the automatic signal system was thoroughly explained and discussed in connection with lantern slides of the signal aspects and indications which were thrown on a screen. A model 2 A signal mounted on a short mast, an indicator, a switch circuit controller and other signaling appliances, which were operated as under service conditions, afforded a practical demon-

Fig. 3. Trains at Adjacent Sidings. Fig. 4. One Train in Block. Fig. 5. Minimum Spacing under Caution Signals. Fig. 6. Minimum Spacing under Clear Signals. Fig. 7. Trains Approaching Meeting Point. Fig. 8. Trains at Meeting Point following Eastward Train. Fig. 9. Trains Meeting. Fig. 10. Trains Proceeding from Meeting Point.

sidings and 5 line wires extending through sidings. Line and local relays have a resistance of 670 ohms; front contacts are platinum to graphite, and back contacts platinum to platinum. These relays are ordinarily housed in a cast iron relay box mounted on the signal mast. All relays and other mechanisms likely to be affected are protected by G.R.S. model 1 B lightning arresters, to which are attached suitable connections to ground. All connections in the relay boxes are conveniently arranged and attached to R.S.A. terminals, which are properly tagged and marked according to

Semaphore lamps are R.S.A. standard, and are equipped with long-time oil burners. Each signal is operated by 16 cells of Schoenmehl R.S.A. standard potash battery, which is housed in a Potter Winslow no. 36 concrete battery well.

**Installation.**—The railway company furnished and installed in place all insulated joints, insulated switch rods and connections, also all line wire supports. The General Railway Signal Co. manufactured and installed in place all signals and signal appliances. Most of the material was delivered by work train. Signals were erected

stratum of the signal system and fixed firmly in the minds of employees the essential features of the system. The practice of instructing trainmen concerning rules and other matters pertaining to their duties is a subject of the greatest importance, and not only increases the general efficiency of employees, but reduces to a minimum the chance of accident.

**Maintenance** is in charge of a signal supervisor, whose force consists of 2 maintainers, 4 battery men and 2 lampmen, who make a daily inspection of the signals and appliances on their respective districts.

Each man is provided with a velocipede car on which he carries the maintenance supplies and a kit of tools. Any improper operations of the signal system are reported by the maintainer by joint wire to the Chief Engineer, Superintendent and Signal Supervisor. Copies of report are forwarded by train mail to Signal Supervisor and Chief Engineer, with full explanations of cause. The Signal Supervisor investigates each case personally and works up a record which shows the performance of the entire signal system for a given period. The Sig-

nal line, as one train can follow another as soon as the first train passes the first signal in advance, which is accomplished in considerably less time than the prescribed time interval of the telegraph block. 4. The signals afford maximum protection at meeting and passing points, serving as a check on dispatchers' orders, also as a reminder to trainmen at scheduled meeting and passing points. 5. The signals more than double the safety factor in connection with flagging, as an approaching train would, in most cases, meet a caution or

## Reclamation of Hose Couplings.

By E. J. McVeigh, General Storekeeper, Grand Trunk Railway.

We are all interested as never before in the reclamation question, and while the ground has been pretty well covered lately, there is always room for something more, if it is to the point, and there is one small item that I would like to call attention to.

I presume every road on this continent has a hospital track on which stands locomotives waiting repairs. Some of these machines will never go through the shop,

Absolute-Permissive Block System, Toronto, Hamilton and Buffalo Railway.

nal Supervisor also keeps a record of all labor and material chargeable to signal maintenance, so that maintenance costs can be determined for the entire system or any part thereof. The cost of maintenance per mile per month is about \$16. Ordinary maintenance supplies are carried in stock at the general storehouse at Hamilton, and a few emergency supplies are kept on hand at maintainers' headquarters.

**What the Signals are Accomplishing.**—The officers of the T.H. & B.R. state that they are well satisfied with the results

stop indication before the flagman could go out far enough to insure adequate protection. 6. Owing to the high degree of protection which the automatic signals afford, "19" orders may be used in many cases where "31" orders would otherwise be used. These features and others combine to accomplish the desired end—safe and economical operation.

"Gasol," a semi-natural gas, is being introduced as a substitute for acetylene and hydrogen for autogenous welding. It is ob-

and many of them will not be taken in for a considerable time.

I have for years been particularly interested in the care of steam heat hose and couplings, and a few days ago, while walking along the hospital track at a certain railway shop, I counted the number of steam heat and air hose that were still attached to a line of disabled locomotives. Counting them all as good useable parts, there was in that line \$80 worth of material that was rapidly going to waste.

Now, no matter what the condition of these parts when the locomotives go into the shop, they are removed, and may or may not be properly reclaimed. But one thing we can be sure of that they will not be re-applied to that locomotive when it comes out.

Supposing that all of these hose and couplings were in good order when the locomotives were placed on a repair siding, as they would very likely be. If they had been removed at that time, and it would only take a few minutes to do this, they could have been at once put into service and the purchase of new ones saved. But granting that the rubber was of an age that would make it advisable to remove it, you still have the couplings and nipples to put into service, and if these are left on the locomotive, a fair proportion of them will be so damaged that they can never be put in use again.

What I have said here about locomotives applies also to a greater or less extent to cars, and while this may be comparatively a small thing, I consider it is worth while, and if there are any who have not given this attention, I would suggest that they take the first opportunity of examining their hospital tracks to see what they find. If we cannot save \$100 every day, that is no good reason why we should not make the effort to save \$10.—Railway Storekeeper.

The elimination of dense black smoke by locomotives requires the supplying of sufficient air to the fire, the thorough mixing of the air and combustible gases and the maintenance in the firebox of a temperature that will cause the combustible gases and oxygen of the air to unite.

Absolute-Permissive Block System, Toronto, Hamilton and Buffalo Railway.

obtained by the automatic signals, which may be briefly summarized as follows: 1. Under proper observance of the indications, the signals provide for opposing as well as following movements, a definite space interval which practically eliminates the liability of collisions. 2. Misplaced switches, broken rails, or any breaks in the continuity of the track cause the display of a stop indication at the signal governing entrance to the block, and thus greatly reduces the liability of derailments. 3. The signals increase the traffic capacity of the

tained from the waste gas from oil wells, and is said to cost only 0.1 ct. per cu. ft., a material reduction on the other gases.

What is said to be a record in loading rails was accomplished recently by the Lehigh Valley Rd., when 171,988 ft. of 90-lb. relaying rail was loaded from alongside the main line in a day by the use of a locomotive crane and ditching machine. This amount of work equals over 2,300 tons, or over 16 track miles.

Interlocked milling cutters are said to give better results than plain cutters.

# Railway Mechanical Methods and Devices.

## Tool in Intercolonial Railway Shops.

Fig. 1. General Foreman Blacksmith, Frog and Switch Shop.

The accompanying illustration shows a tool used in a drill press, to turn and mill the cast steel journals of the walking beams of hand cars, in the Intercolonial Ry. frog and switch shop, Moncton, N.B. The cutter at a turns off the journal of the walking beam at a. Cutter b, shown in the inset, turns off the journal at b. Milling cutter c in the inset mills off the end of journal at c to make it the right length. In the inset the ring that holds the cutter a has been removed to show the milling cutter d, which faces off the beam at the shoulder of journal at d. This is all done at one operation. The beam is then turned over, and the journals first machined are placed in a jig, which fits the centre hole of the drill press, thereby properly aligning. The journals on this side are then machined in the same manner as described. This tool has proved a very efficient one.

## Making High Speed Twist Drills in Michigan Central Railroad Shops.

The high speed twist drills used in the M. C. R.'s shops at St. Thomas, Ont., are made in the shop tool room there. The equipment for making the drills is shown in the accompanying illustration, which also shows a drill blank, twisted drill blank and a completed drill.

The base casting a, which is shown tilted back on a side, is bored out through the top to receive the shell b, which is bored out with a wall about  $\frac{1}{4}$  in. thick. A number of sleeves of an inside diameter slightly greater than that of the finished drill are

the shell b grips the upper end of the blank. A wrench applied to the upper end is given  $1\frac{1}{2}$  turns, causing the drill blank to twist the required amount, the inner sleeve c guiding the blank while twisting, so that it is perfectly concentric when removed after

Tool for Finishing Hand Car Walking Beam Journals in the Drill.

## Making Superheater Tube Nesting Clips in Stratford Shops, G. T. R.

The sets of four superheater tubes in each of the superheater flues of a locomotive are held together both front and rear by three piece nesting clips, assuming the form shown to the right in fig. 1. The lower member of the three pieces is of heavier sheet stock than the other two, as it supports the weight of the tubes on the two bottom flanges, which in the superheater flue bear at two points, centring the four superheater tubes in the flue. The G.T.R. shops at Stratford, Ont., have developed an interesting process of making these clip components, and drilling and assembling them on the tubes.

All three clips are made in an air operated bulldozer, the stationary and movable elements of which are shown in fig. 2. This view also shows the dies in the act of forming the top or straddling part of the clip, the part before and after forming being shown at a and b. To the stop rest c, there is secured a channel casting 'd, between the walls of which there are pivotted two bell crank arms, normally kept open by springs f. At the outer ends of the arms e, there are sheet metal clips, which when the arms are wide open, are just of the correct width to take in the pressing blank a, centring it in line with the male element of the punch, g, which is attached to the ram of the machine. The short inner arms of the bell cranks e, when swung in as far as they go, just meet. The punch g, as it travels forward carries in the centre of the blank until the latter strikes the inner arms of the bell cranks e, when the outer arms of the latter commence to fold in, pressing the blank around the formed die g, the in-

Tools for Making High Speed Steel Twist Drills.

made to slip into the shell. One of these sleeves is shown at c. The upper end of the shell b is squared, to take a wrench.

The operation is shown by following blank d through the process of twisting. It is first of all heated to the correct working heat for high speed steel. Then it is slipped into the central hole of the base casting a, fitting into the slot in the base, which is shown whitened in the illustration. Over top of it is slipped the shell b, inside of which there is the sleeve c, the inner diameter of which is the same as the width of the drill blank. The cross slot in

the twisting. This leaves the blank as at e.

A special soft steel shank is used for the high speed steel drills made in this manner, and which is shown at f. The upper end of the drill is turned down slightly, fitting up into a hole in the body of the shank. A slot across the lower face of the shank fits over the upper end of the full size of the drill, and transmits the power from the shank to the drill body.

In factory boiler firing it has been shown conclusively that 25% of the coal bill depends on the skill of the fireman.

Fig. 1.—Jig for Drilling Superheater Tube Clips, With an Assembled Clip.

ner faces of the arms e corresponding in shape. The part comes out as at b. A row of the finished parts is shown in the right background.

The dies for making the base or lower part of the clip are shown to the left in fig. 3. The female part of the die a, is secured to the stationary head of the bulldozer, and the male part b, to the ram. The blank from which the part is made is the same width as the die part a, against which it is placed, the punch b on its stroke forcing the blank to the shape of the die contour.

The forming of the centre or separating

section of the clip is the most intricate part of the operation, requiring three strokes of the punch, forming the part around a central die of the inner shape of this part. The dies used for this operation are double, parts c and d, on a base e, being stationary on the punch. The movable parts f and g are secured to the ram head. The middle

they were drilled from marks. A slight error in laying out would result in either the holes not mating, or else a loose fit. A good tight fit in the completed set is most essential. The parts are secured together with small screws, the several parts being held together during the assembly by a special clamp.

throwing the lathe jig in which they were held to be turned 1-16 in. out of centre in a plane at right angles to the faces of the tools, first in one direction and then in the other. Made in this way, the life of the cutters was quite satisfactory. One of the side cutters is 5-32 in. wider than the other, and referring to the cross-sectional view of

Fig. 2.—Forming Straddle Member of Superheater Tube Clips.

Fig. 3.—Dies for Forming Inner and Bottom Members of Superheater Tube Clips.

fold of the part is formed between dies c and f, which take the blank and form the centre fold and upper two quadrants, leaving the ends of the blank parallel and projecting along the side of die c. The part thus formed is placed around die h, which is of the inside size of the finished member. The faces of dies d and g correspond to that of the partially finished part, which is slipped in place around the centre die h as shown. The right half of die d is not secured to the base e, but is located on it by guide pins, which permit of its motion within short bounds in line with the path of the ram. Behind this part, there is a hinged block, about 1/2 in. thick. Similarly, at right angles to it in die g, there is another hinged block set into the die under the spring clip shown. This hinged block is swung up for the first operation, the near arm of the blank being folded down along the side of die h. Lowering the hinge in g and raising that in d for the second pass,

Fig. 1.—Special Boring Tool for Removing Staybolts.

causes the other arm of the blank to be folded down over the first one, completing the forming operation.

The several holes in the three parts are then drilled in the jig on the left in fig. 1, the four pins in which represent the four superheater tubes. The inner member of the clip is lipped in between the four pins, and the two holes drilled through the drill holes in the upper central pin, the lower central pin taking the drill thrust. The central holes of the lower part of the clip are drilled by placing the part on the upper round pins, with the centre under the central drill block. The end holes in both the bottom and straddling sections of the clip are drilled by slipping in between the upper and lower round pins on either side, with the end bearing on the lower squared pin, holding the part against one of the round pins to locate. This jig was first made to overcome the trouble experienced early with the drilling of these clips when

### Staybolt Boring Tool.

The tool described in this article was designed by the writer to rapidly bore out old staybolts from locomotive boilers. The need for a tool of this kind was due to the fact that we were replacing the old-style bolts by the improved flexible type with which most locomotive shop men are familiar. The boring tool is driven by an air motor and the size of the holes bored

the boiler plates, fig. 2, it will be seen that the smaller cutter works 1-16 in. in advance of its fellow. The purpose of this is to overcome the tendency of the chips to crowd at the point of the tool and fracture it. This boring tool gave very satisfactory results, producing clean-cut holes of exactly the required size; and its cutting capacity may be judged from the fact that chips up to 38 ins. long were produced.—W. Hall, Fort William, Ont., in Machinery, N. Y.

Fig. 2.—Section Through Boiler Plates, Showing Section Removed by Each Cutter.

is 1 5/8 in. diam. Men who have had experience boring out staybolts with a twist drill used in connection with a ratchet and "old man," will readily understand the value of a tool of the form illustrated. An attempt was made to bore the holes with an ordinary twist drill driven by an air motor, but the result was unsatisfactory.

The cutters were made of Novo steel, which was annealed to provide for turning them to the required size, after which they were alternately backed off on the inside and outside to afford the required clearance. This backing off was performed by

### Machinery Protection in the Grand Trunk Railway Shops at London.

The safety first policy on the G. T. R. has been extended very rapidly throughout the system, all conditions that tend towards unsafe practices being investigated from time to time, and remedies applied as required to eliminate or reduce the risks. In no place has the campaign been more successful than in the shops, as the conditions that there exist are naturally more amenable to improvement than on the road, as the conditions to be contended with are more or less constant factors.

Saw Guard with Adjustable Hood.

A number of the machines in the G. T. R. car shops, at London, Ont., have been studied and safeguards for each separate condition recommended. These are ingenious for the most part for their simplicity, requiring no complications that are liable to reduce the effectiveness of the device by making it easier to perform the operation without the guard than with it. The saw guard shown herewith is of the simple type in use on most of the machines. It will be noticed at a glance that while the device should prove most effective, it offers no inconveniences to the operator that are at all commensurate with its value as a guard.

It will be observed that it consists of a hood, shaped to fit over the saw, and made of three pieces of sheet iron rivetted together. It is supported at the back on a hinged connection from the table, in line with the saw, the support being a thin member, lighter in thickness than the saw, and fits in the saw cut in the board, so that the board does not interfere. It can be adjusted by a thumb screw for any thickness of wood to be cut.

### Ballast Trimmer for Intercolonial Railway.

The work of the ballast trimmer is to follow the ballast train, or in other words, as the ballast train is at work along the line it leaves the ballast in heaps and this has to be trimmed down to the standard, which is from the top of the tie to bottom of slope 18 ins., and from bottom of slope to centre of track 8 ft., making the standard for the main line 16 ft. overall. This is where the trimmer is of advantage and with one cut it will leave the slope with the exact contour of the standard road ballast template, which has a radius of 6 ft. 10¼ ins., and also bring the ballast up to within 1 in. of the top of the sleeper. The ballast trimmer can either be pushed or hauled by a locomotive, as it is fitted with two

## A Permanent Railway Track Maintenance Force.

The employment of a permanent force for track maintenance work is an exceptional feature of the Long Island Railroad's maintenance of way department. In the early part of 1913, when there was a great demand for labor, contractors and others whose work was pressing in the summer were paying \$2 per 8-hr. day. The railway was paying only \$1.50 per 10-hr. day, and consequently got labor mainly of inferior quality. Many of the men obtained proved incompetent, and such good men as were obtained would not stay. To meet this condition, the railway established a permanent track force system in May, 1913. The sections average 5½ miles of main track and 4¼ miles of sidings, with an average force of five men (including subforemen). The sections are divided into five classes, the first class covering important terminals and yards and being allowed eight men. In each successive class the number is reduced by one man, the fifth class having only four men. Under this plan the force averages 15% less than under the old system. Rates were increased to 17½c. an hour for laborers and 18c. for subforemen (allowed on about 70% of the sections), while a material increase was made in the wages of the foremen.

Before putting the plan into effect, the

emergency cases, and in such cases it must be promptly oiled by the section gangs, which are provided with oil and hand sprinklers for this purpose.

Throughout the three summer months, while traffic is heavy, work on the main track is practically suspended. During this period all necessary repairs are made on side tracks (including tie renewals), the right of way is mowed for the first time (the state law making it compulsory to mow twice a year, between June 20 and July 10, and during the latter part of August), the necessary frog, switch and guard rail renewals are made, and switch timbers installed. The period from Sept. 1 to about Oct. 15 is devoted to the improvement of the line and surface of main track, cleaning ditches, trimming ballast and preparing for the annual inspection, which takes place about the middle of October.

Immediately after the track inspection, the renewal of ties in main track is taken up and prosecuted vigorously until stopped by unfavorable weather. The renewal of ties in the autumn is a necessity to avoid heavy work in the spring. Experience has proved that where there is a sufficient quantity of clean ballast and the subsoil is of a nature that does not readily retain moisture, this work can be done safely in

Fig 1. Ballast Trimmer with Knives Fastened up and Ready to go out on Line.

Fig. 2. Ballast Trimmer with Knives Dropped down but not in working position as the trimmer was in the yard.

knives that will cut each way at the rate of 7 miles an hour.

The ballast trimmer illustrated herewith, which has been built at the I.R.C. shops at Moncton, can be operated by two men without any trouble, as the only time the knives have to be raised is when coming to railway crossings, etc., and the knives are hung so that when raised they will always swing in towards the car, and just as soon as they are lowered they cut right out to their proper place.

The ballast trimmer is applied to an old 20 ton flat car, which is obsolete as far as main line service is concerned, but is very easily fitted up with two uprights braced with a vertical shaft secured at top and bottom for the knife to work on and to raise and lower same. The knife can be raised and lowered by means of a chain from a pulley on uprights with shaft, pawl, pawl weight and brake wheel, which works on the same principle as applying the brake on a car.

After the first trial trip it was discovered that we would have to have additional weight on the knife when in operation, as it would not stay down in place when it struck a heavy cut of ballast. This was done by riveting two pieces of angle iron with a filler between and held in place with two brackets, one fastened on intermediate sill and other fastened on side sill, and a double coil spring placed on top of angle irons which takes a pressure of 1,000 lbs. to compress spring 1 in. This is worked by a lever on top of car deck and is applied when knife is in operation.

foremen were fully instructed as to what was expected of them. They were to weed out gradually the inferior men and replace them with good men, giving preference to married men and those experienced in track work. The foremen were instructed to make each man understand that he would be given permanent employment if his work was satisfactory, and in case of dismissal by the foreman he would have the right to appeal to the supervisor. The foremen were made to understand that they would be held strictly accountable for the quality of their men, and must show no favoritism, this latter being a marked tendency among the Italians, who constitute the majority of the force. Further, it was impressed upon each foreman that he was being given great advantages and that the railway would demand the best results from him.

The Long Island Rd. has an extremely heavy traffic during June, July and August, averaging about 150,000 passengers daily. The greater part of the line has cinder ballast, with some fine gravel and sand, and only a small amount of stone. For the comfort of the passengers in hot, dry weather, the ballast is coated annually with heavy oil.

As early as practicable in the spring, the force on each section completes the main track tie renewal work left over from the previous year, and then levels up any rough spots. This work must be completed by June 10, at which time the main track roadbed is oiled. After the oiling the roadbed must not be disturbed except in

the fall, if care is taken to see that the ties are properly put in and securely tamped.

As soon as the ground freezes up, and throughout the winter, the time of the section gang is devoted to cleaning culvert and drain openings, repairing right of way fences, renewal of frogs, switches and guard rails, and such minor parts of switches as may be necessary; repairs and renewals of crossing plank and track signs; track gauging, placing tie plates, and distributing ties for spring renewals, practically in the order named. In addition to this, there are the usual snow and ice troubles, together with many incidental jobs that can be taken care of during the winter. It is aimed to have the work advanced so far when the weather moderates that spring work will not be delayed beyond the allotted time, always keeping in mind the limited force. Bolts are tightened, out of face, at the same time the track is surfaced in the spring and fall. Practically all relaying and new track construction is done by extra gangs.

As a result of this system, with the assurance of permanent employment at fair wages, the force has now 95% of the men who were employed at the time of the reorganization. At the inspection last autumn the track was found to be in far better condition than ever before. The conclusion is that the retention of men in service for long periods results in the acquirement of such experience and skill as to promote efficiency, and that there is a consequent reduction in expense. Such men may be classed as skilled labor rather than common labor. At each track inspection the com-

pany gives first and second prizes to the division supervisors, and also to the section foremen on each division. This is well repaid by the quality and quantity of the work done, and the friendly rivalry throughout the entire force, from the laborers upward.

The men are mainly Italians, as noted above, some of whom cannot read or write, while others can read and write Italian only. As these men form the source from which future foremen must be drawn, the railway company has established a free correspondence course in English and simple arithmetic, furnishing pamphlets printed in both languages. After some proficiency

has been obtained, the lessons cover track work, the safety first subject, and suggestions as to good citizenship, naturalization, etc. For the most illiterate, it is proposed to organize a class that can be assembled for personal instruction one or two nights a week, until the men are competent to take up the regular course. This educational system has been taken up eagerly by the men, and induces them to stay with the railway rather than go where no such advantages are offered.

The foregoing is based on information from Coleman King, Supervisor, Long Island Rd.

## Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the orders were drawn.

23678. May 12.—Authorizing Toronto Civic Ry. and G.T.R. to operate over crossing on Danforth Ave., Toronto, the former without first stopping cars, signals to be set normally clear for T.C.R. and at stop for G.T.R.; half interlocking plant be operated by G.T.R. train crew when operating cars on siding, as required by order 21422, Feb. 26, 1914.

23679. May 14.—Relieving C.P.R. from providing further protection at crossing of Metcalfe Road (Bank St.), mileage 1.26 from Ottawa, at junction of Gloucester and Gore Tps., Ont., speed of trains limited to 10 miles an hour.

23680. May 15.—Amending order 5228, Aug. 27, 1908, re Saskatchewan Government highway crossing of C.P.R. near Qu'Appelle Station.

23681. May 14.—Dismissing Steel Co. of Canada's complaint against switching rates charged by Toronto, Hamilton & Buffalo Ry. at its Hamilton Terminals, under Tariff C.R.C. 858, as amended by Supplement 4, effective May 5, 1913.

23682. May 14.—Authorizing Canadian Northern Ry. to open for traffic its North Battleford northwesterly line from Edam to Turtleford, Sask., mileage 38 to 57, speed of trains limited to 15 miles an hour.

23683. May 12.—Approving C.P.R. plans X-5-71 and X-5-72 showing arrangement of navigation lights on swing bridge over Lachine Canal, Farnham Subdivision, Que.

23684. May 14.—Authorizing G.T. Pacific Branch Lines Co. pending further order, to remove regular agent at Griffin station, Sask., caretaker to be appointed.

23685. May 14.—Authorizing C.N. Alberta Ry. to build across Government road allowance between n.w. 1-4 Sec. 18-54-4, and n.e. 1-4 Sec. 13-54-5, w. 5 m., Darwall, Alta.

23686. May 15.—Rescinding order 23482, Apr. 6, upon coming into effect of Canadian Northern Ry. service between Hawkesbury and Ottawa.

23687. May 14.—Ordering G.T. Pacific Ry. to replace apparatus required for safe operation of interlocking plant at crossing of Canadian Northern Ry. by spur to Union Stock Yards, St. Boniface, Man., so that same shall conform with plan approved by Board's engineer under order 16930.

23688, 23689. May 4.—Ordering Great North Western Telegraph Co. to raise its wires at crossings of London & Port Stanley Ry. at Bridge St. and at Lot 3, Con. 7, of Yarmouth Tp., Ont.; work to be done at expense of L. & P.S.R.

23690. May 17.—Ordering C.P.R. to build transfer track to connect with Canadian Northern Ry. at Trenton, Ont.; to be installed within 30 days from date, cost of work and maintenance to be paid by C.P.R.

23691, 23692. May 14.—Approving Bell Telephone Co.'s agreements with Lennox Telephone Co., Apr. 26, and Mount Albert Telephone Co., Ltd., Apr. 29.

23693. May 14.—Authorizing C.N. Alberta Ry. to extend siding across road in s.e. 1-4 Sec. 32-54-1, w. 5 m.

23694. May 15.—Extending to Aug. 1 time within which G.T.R. shall complete highway in Tay Tp., Ont., as required by order 22344, Aug. 5, 1914.

23695. May 17.—Authorizing G.T.R. to take certain additional lands in Callander, Ont., to widen Main St., and rescinding order 22990, Dec. 16, 1914.

23696. May 17.—Relieving C.P.R. from speed limitation of 15 miles an hour over its line between Shebo, mileage 12.2, and Leduc, mileage 66.8, Sask.

23697. May 17.—Rescinding order 23227, Feb. 1, re stopping of G.T.R. train No. 1 at Kerwood, Ont.

23698. May 17.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur for Bird & Son, Hamilton Ont.

23699. May 17.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to build across certain highways between mileage 305 and 331.77, Alberta.

23700, 23701. May 12.—Relieving Midland Ry. of Manitoba (G.N.R.) and C.P.R. from maintaining night signalman at Elm Creek and Plum Coulee, Man.

23702. May 12.—Relieving Brandon, Saskatchewan & Hudson Bay Ry. (G.N.R.) and C.P.R. from maintaining night signalman near Carroll, Man.

23703. May 12.—Relieving Midland Ry. of Manitoba (G.N.R.) and C.P.R. from maintaining night signalman at Morden, Man.

23704. May 12.—Relieving Brandon, Saskatchewan & Hudson Bay Ry. (G.N.R.) and C.P.R. from maintaining night signalman at Boissevain, Man.

23705. May 18.—Authorizing Toronto, Hamilton & Buffalo Ry. and G.T.R. to build spur for Dominion Sheet Metal Co., Hamilton, Ont.

23706. May 17.—Authorizing London Railway Commission to move north derailed on London & Port Stanley Ry. main line at St. Thomas, 200 ft. from Michigan Central Rd. north track.

23707. May 18.—Authorizing G.T.R. to build siding and spurs for Hamilton Bridge Works Co., Hamilton, Ont.

23708.—May 20.—Suspending, until further order, the following tariffs: C.P.R., C.R.C. No. E-2999; G.T.R., C.R.C. No. E-3157; G.T.R., C.R.C. No. P-115; C.N.R., C.R.C. No. E-641; and O. & N.Y.R., C.R.C. No. 1103.

23709 to 23711. May 19.—Approving Glengarry & Stormont Ry. (C.P.R.) Standard Freight Tariff, C.R.C.; Standard Passenger Tariff, C.R.C. 1, applying rate of 3c a mile; and approving its bylaw re preparing and issuing tariffs of tolls.

23712. May 20.—Authorizing C.P.R. to build branch connecting its lines near Sharbot Lake station, Lot 11, Con. 1, Oso Tp.

23713. May 20.—Authorizing C.P.R. to build extension to siding for Christie, Henderson & Co., in Lot 4, Con. 5, and Lot 4, Con. 6, Nassagaweya Tp., Ont.

23714. May 19.—Ordering C.P.R. to fill in depression near Goodfellow Brothers' property at Tichborne, Ont.; work to be done by June 15.

23715. May 20.—Authorizing C.P.R. to take certain lands for diverting a highway in Bethany, Ont.

23716. May 19.—Authorizing Glengarry & Stormont Ry. (C.P.R.) to open for traffic portion of its line from St. Polycarpe Jct., to Cornwall, Ont., 27.5 miles.

23717. May 19.—Relieving Canadian Northern Ry. from providing further protection at crossing of first public highway west of Rideau Canal, at Smiths Falls, Ont.

23718. May 19.—Amending order 23625, Apr. 29, re operation of C.P.R. Arbog Subdivision, Man., mileage 46.5 to 47.7.

23719. May 19.—Amending order 23496, Apr. 9, re C.P.R. clearances at mileage 68.4, Port McNicoll Subdivision, Ont.

23720. May 19.—Approving G.T.R. clearances, for six months from date at Canada Forge Co.'s sidings, Welland, Ont.

23721. May 19.—Amending order 23569, Apr. 16, re C.P.R. clearance at mileage 100.10, Ottawa Subdivision, Ont.

23722. May 19.—Ordering Edmonton, Dunvegan & British Columbia Ry. to remove its locomotive No. 3 from service until it is put in a proper condition for safe operation, to satisfaction of an inspector of the Board.

23723. May 19.—Ordering Pere Marquette Rd. to raise the station and signal at Kingsville; put in new telegraph signal, at West Lorne, placed higher than present one; raise present signals on buildings at Dutton, Rodney and Blenheim; put in new high signal on

opposite side of track from depot at Ridgetown; new high telegraph signal at Wallaceburg, Ont.; and paint highway crossing signs; work to be completed by July 31.

23724. May 20.—Authorizing Canadian Northern Ry. until further order to build and use level crossing over public road between Cons. B and 2, Westmeath Tp., Ont.

23725, 23726. May 20.—Rescinding orders 21913 and 21931, May 29, 1914, on condition that C.P.R. shall install, within 60 days from date, improved automatic bell at crossing of Hurontario St., Toronto Tp., Ont., 20 per cent. of cost to be paid out of the railway grade crossing fund.

23727. May 22.—Authorizing Lake Erie & Northern Ry. to operate for six months from date over crossing of Toronto, Hamilton & Buffalo Ry. in Brantford, Ont.; crossing to be protected by watchman appointed by T.H. & B.R. and paid by L.E. & N.R.

23728. May 20.—Relieving Campbellford, Lake Ontario and Western Ry. (C.P.R.) pending further order, from installing interlocking plant at crossing of G.T.R. on Pinnacle St., Belleville, Ont.; and authorizing it to continue present protection by semaphores.

23729. May 21.—Approving location of Peace River Tramway and Navigation Co.'s line at Peace River Chutes, for 5 miles along north bank of river, and from Smith Landing to Fort Smith, 15 miles, Alberta.

23730. May 20.—Authorizing Vancouver, Victoria and Eastern Ry. and Nav. Co. (G.N.R.) to join its tracks with Kettle Valley Ry. at Brookmere, B.C.; and to build highway crossing over its tracks for obtaining access to its depot, at Fourth Ave., Brookmere, B.C.

23731. May 21.—Rescinding order 13917, June 10, 1911, re crossing of Montreal Terminal Ry. and C.N. Quebec Ry. by St. Cyr Ave, Montreal East.

23732. May 22.—Rescinding order 22760, Oct. 26, 1914, and ordering that crossing of Kingston Road by C.N. Ontario Ry. and Campbellford, Lake Ontario and Western Ry. (C.P.R.) be protected by day and night watchmen; wages to be paid half by C.N.O.R. and half by C.L.O. & W. Ry.

23733. May 22.—Ordering C.P.R. to build emergency crossing for flood times at bridge 6.3, Teeswater Subdivision, Amaranth Tp., Ont., crossing to have grade of 1 in 20, work to be completed by Oct. 1.

23734. May 20.—Ordering C.P.R., within 60 days, to install bell at crossing of St. Lawrence St., Winchester, Ont.; 20% of cost to be paid out of railway grade crossing fund; cut-out and bonding to be in front of platform, on eastbound track.

23735. May 21.—Relieving C.P.R. from speed limit of 15 miles an hour between Weyburn and Stoughton, Sask.

23736. May 25.—Approving G.T.R. plan, Oct. 7, 1914, showing position of gates installed at Wellington St., London, Ont.

23737. May 25.—Approving revised location Kootenay Central Ry. (C.P.R.), from Lot 3947 to Lot 272, East Kootenay District, B.C., mileage 100.89 to 101.4.

23738. May 25.—Amending order 23657, May 4, re Ottawa and New York Ry. and C.P.R. service at Finch, Ont.

23739. May 25.—Authorizing J. W. Warner, Hinton, Alta., to build irrigation ditch under G.T. Pacific Ry. trestle at Hardisty Creek, Alta.

23740. May 26.—Authorizing C.P.R. to build crossing over its line to station at Okanagan Landing, B.C.

23741. May 21.—Approving plans and specifications of Malahide Tp., Ont., showing work to be done on Teeple Drain where it crosses G.T.R. between Lots 15 and 16.

23742. May 25.—Authorizing G.T.R. to use bridge 10; mileage 8.72, between Cons. 7 and 8, North Dumfries Tp., Ont.

23743. May 26.—Authorizing Vancouver, Victoria and Eastern Ry. and Nav. Co. (G.N.R.) to join its tracks with C.P.R. near Granby Smelter, B.C.

23744. May 26.—Amending order 23505, Apr. 8, re City of Toronto's subway under G.T.R. at Wilton Ave.

23745. May 28.—Authorizing G. M. Macdonnell, Kingston, Ont., to work his mica mine in north half, Lot 8, Con. 14, Storrington Tp., Ont.

23746. May 26.—Approving plans and specifications of Teeple drain, to be built under Michigan Central Rd. on Lot 8, Con. 9, Malahide Tp., Ont.

23747. May 26.—Approving plan and specifications of Malahide Tp., Ont., of Argyle drain, to be built under Michigan Central Rd.

23748. May 27.—Authorizing municipalities of South Crosby and Bastard Tps., Ont., to build highway crossings over C.N. Ontario Ry. and Brockville, Westport and Northwestern Ry., near Brockville Jct.

23749. May 26.—Authorizing G.T.R. to build extension of siding for Canadian Explosives, Ltd., on Lot 4, Con. 1, Chambly West Parish, Que.

23750. May 25.—Ordering Canadian Northern Ry. forthwith to file with Board, plan and profile of its line where it crosses highway between lots 15 and 16, Nerburg Tp., and within

to build highway as

23751. May 1.—Dismissing Winnipeg Sandstone Brick Co.'s application for approval of plan for crossing St. J. Winnipeg, from Canadian Northern Ry. siding to opposite side of

23890. June 22.—Ordering City of Edmonton, Alta., to raise sidewalk approaching Canadian Northern Ry. on both sides Ottawa Ave., and both sides of tracks, to rail level, and erect railing on each side of sidewalks on north side of tracks; approach of street on north side to be raised to give easy slope towards track; work to be done at City's expense, within one month; within 3 months C.N.R. and G.T. Pacific Ry. to install improved types of automatic bells at crossings of respective railways, 20% of cost to be paid out of railway grade crossing fund.

23891. June 22.—Ordering C.P.R. to erect gates at farm crossing on property of J. F. Huneault, Monte Bello, Que., within 15 days.

23892. June 22.—Approving revised location of C.P.R. Bassano Easterly Branch from Sec. 20-23-29, to Sec. 22-23-28, w. 3 m., mileage 119.43 to 128.95.

23893. June 22.—Authorizing Saskatchewan Board Highway Commissioners to build highway over C.P.R. at Dunelm.

23894. June 22.—Changing conditions respecting shipment of flax seed in bulk, effective Oct. 12, 1914, Supplement 3 to C.P.R. Special Tariff, C.R.C. no. W-1962; Supplement 1 to C.N.R. Tariff C.R.C. no. W-803; and Supplement 1 to G.T. Pacific Ry. Tariff, C.R.C. 30. This order is given in full under Traffic Orders by Board of Railway Commissioners.

23895. June 23.—Extending, for 30 days from date, time within which Canadian Northern Ry. shall install half interlocking plant at crossing of Suburban Rapid Transit Co. on Portage Ave., Winnipeg.

23896. June 24.—Authorizing G.T. Pacific Ry. to remove regular agent at Elie, Man., until further order.

23897. June 22.—Authorizing C.P.R. to build two additional lines overhead on existing bridge across Greene Ave., Que.

23898. June 25.—Ordering G.T.R. to give World Newspaper Co. of Toronto a newspaper service on Flying Post train from Toronto to Hamilton, at \$22 a round trip.

23899. June 24.—Ordering Campbellford, Lake Ontario and Western Ry. (C.P.R.) and G.T.R. forthwith to commence erection of gates at crossings of Cobourg and Grafton Road, to be operated by day and night watchmen; gates to be installed by Aug. 1st, and pending installation day and night watchmen to be appointed at each crossing by July 1, 20% of cost of installing gates at crossing of G.T.R. to be paid out of railway grade crossing fund, cost of installing gates at crossing of C.L.O. and W. R. to be paid by C.L.O. and W. R.; maintenance of gates to be divided equally between the two companies.

23900. June 26.—Approving London and Port Stanley Ry. Standard Passenger Tariff, C.R.C. 1, on basis of 2½¢ a mile, and its Standard Freight Tariff, C.R.C. 1.

23901. June 23.—Approving agreement between Bell Telephone Co. and Hogg & Little, Ltd., June 15.

23902. June 25.—Authorizing C.N. Ontario Ry. to build branch for Marshay Lumber Co., mileage 321.78, Algoma District, Ont.

23903. June 25.—Authorizing G.T.R. to build extension to siding for Provincial Hospital for Insane, Whitby, Ont.

23904. June 25.—Authorizing C.P.R. to build spur for D. E. Adams Coal Co., Winnipeg.

23905. June 25.—Authorizing Kettle Valley Ry. to build bridge over Boston Bar Creek, mileage 16.82, B.C.

23906. June 25.—Amending order 23823, June 15, re crossing of Ontario St., Cobourg, Ont., by Campbellford, Lake Ontario and Western Ry. (C.P.R.) and G.T.R..

23907. June 25.—Ordering St. Thomas Street Ry. to raise its wires at crossing of London and Port Stanley Ry. at Elm St., St. Thomas, Ont., and authorizing L. & P.S.R. to erect its wires there.

23908 to 23911. June 28.—Ordering Michigan Central Rd., St. Thomas Street Ry. and London St. Ry., respectively, to raise their wires at crossings of London and Port Stanley Ry. at Central Ave., Wellington St., and Talbot St., St. Thomas, and Horton St., London, Ont., and authorizing L. & P.S.R. to erect its wires there.

23912. June 25.—Authorizing London & Port Stanley Ry. to erect its wires, temporarily, over G.T.R. at St. Thomas, Ont.

23913. June 25.—Ordering London St. Ry. to raise its wires at crossing of London and Port Stanley Ry. at South St., and authorizing L. & P.S.R. to erect its wires there.

23914. June 28.—Extending to Dec. 1, time for approval of Great North Western Telegraph Co.'s tolls.

23915. June 29.—Authorizing London Railway Commission to open for traffic the London and Port Stanley Ry., 24 miles.

23916. June 28.—Extending to Dec. 1, time for approval of C.P.R. telegraph tolls.

23917. June 26.—Authorizing C.P.R. to use bridge 91.7 over Snake River, Ont.

23918 and 23919. June 28.—Extending to Dec. 1, time for approval of G.T. Pacific Ry. and White Pass and Yukon Route telegraph tolls.

23920 and 23921. June 28.—Approving Bell Telephone Co. agreements with La Compagnie de Telephone de Beauce and The People's Mutual Telephone Co.

23922. June 29.—Ordering G.T.R. to remove northerly diamond crossing of track leading to carpenter shops and storage sheds, from east leg of Y which joins Wabash yard, near Manitoba Street, St. Thomas, Ont.

23923, 23924. June 28.—Ordering C.P.R. to build farm crossings for M. Lacelle and A. Brosseau, Balfour Tp., Ont.

23925. June 30.—Authorizing Lake Erie and Northern Ry. to operate crossing of G.T.R. at station 7+23, Brantford, Ont., for construction purposes only, until Sept. 30.

23926. June 30.—Authorizing London Railway Commission to remove siding on west side to east side of London and Port Stanley Ry. at Talbot St., St. Thomas, and to throw off transfer track with M.C.R. from it. St. Thomas Street Ry. to be properly protected.

23927. July 2.—Suspending certain tariffs for cleaning and disinfecting stock or box cars. This order is given in full under Traffic Orders by the Board of Railway Commissioners.

23928. June 30.—Authorizing G.T.R. to operate siding for W. H. Banfield & Sons, Toronto.

23929. June 29.—Authorizing Ontario Hydro Electric Power Commission to erect wires across Michigan Central Rd. on Edgeware Road, Southwold Tp., Ont.

23930. July 2.—Approving revision at mileage 40.4, C.P.R. Boundary Subdivision, B.C.

23931. July 2.—Authorizing G.T.R. to build siding for A. Dore, Montreal.

23932. July 2.—Approving revised location of G.T. Pacific Branch Lines Co.'s Biggar-Calgary Branch at Loverna, Sask.

23933. July 2.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to build across 25 highways in Alberta.

23934. July 2.—Approving agreement between Bell Telephone Co. and Chinguacousy Tp., Ont., June 21.

23935. June 29.—Ordering C.P.R. to submit plan for approval showing clearances of country grain elevators of not less than 4 ft. 7¼ ins. from gauge side of rail, with grain spout outlet not closer than 3 ft. 7¼ ins. from gauge side of rail, at an elevation of 13 ft. above rail, and grain loading platforms up to 4 ft. 10 ins. high and 3 ft. 7¼ ins. from gauge side of nearest rail.

23936. July 2.—Extending to Aug. 1, 1916, time within which Campbellford, Lake Ontario and Western Ry. (C.P.R.) may use crossing by its ballast pit spur under Canadian Northern Ry. in e. ½ Lot 12, Con. 4, Scarborough Tp., Ont.

23937. July 3.—Approving Edmonton, Dunvegan and British Columbia Ry. location through Tp. 78, R. 21 to 23, w. 5 m., mileage 269.85 to 286.65, Alta.

23938. July 3.—Authorizing City of Fort William, Ont., to build Walsh St. across Canadian Northern Ry.; and dismissing application to open up Isabella St.

23939. July 3.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to build across highway between n.w. ¼ Sec. 30-78-6, and Tp. 78, R. 7, w. 6 m., Alta.

23940. July 2.—Authorizing Canadian Northern Ry. to carry traffic over its line south of Melfort, from Melfort to St. Brieux, Sask., 22 miles; speed of trains limited to 18 miles an hour.

23941. July 2.—Ordering C.P.R., within 30 days, to complete transfer track at Frobisher, Sask., as required by order 22244; G.T. Pacific Ry. to furnish switches; work on G.T.P.R. to be done under supervision of its engineer, and reserving apportionment of cost.

## North Toronto Station, Canadian Pacific Railway.

A short preliminary description of the station which the C.P.R. is building in the north end of Toronto for joint use with the Canadian Northern Ry., appeared in *Canadian Railway and Marine World* for July. For some time work has been progressing on track elevation across the north end of the city, the new station forming a part of the whole general scheme, which involves the raising of the tracks for about 3 miles, with the elimination of all grade crossings. This line has been used by the C.P.R. principally as a freight cut off between Leaside Jct. and West Toronto, from which points the main line runs down to the union station in the lower part of the city. Origin-

work has been started, the excavations and foundations being nearly completed. This station has been designed on a larger scale than would be required for C.P.R. traffic alone, as the Canadian Northern in planning a permanent entrance into Toronto decided on the northerly entrance, arrangements being made with the C.P.R. to build the station, the C.N.R. to use it jointly as tenants. It is the Canadian Northern's intention to use this station for most, if not all, of its Toronto passenger service, but the C.P.R. will retain its connection with the present union station near the waterfront, only using the North Toronto station for certain trains.

by two lower sections containing the station facilities. On the Yonge St. side there will be a 140 ft. clock tower, the 30 ft. spire of which will be of terra cotta. The station building will be 114 x 76 ft., the broader side facing south, with the tracks on the north side passing it at an angle of about 15 degrees. The central or high section of the station will be the main waiting room, 70 x 51 ft., with a centrally located entrance from the driveway on the south side. Flanking this waiting room on the west will be the ticket offices and telegraph offices. Flanking the east side of the waiting room will be the women's room, smoking room, lavatory facilities, and telephone booths. Adjoining the waiting room in the north-east corner will be the news stand and staff lavatory. Directly opposite the main

Fig. 1.—New North Toronto Station for Joint Use of Canadian Pacific and Canadian Northern Railways.

ally the Leaside-West Toronto line was the only entrance into Toronto of the Ontario and Quebec Ry., which was absorbed by the C.P.R. in its early days, and subsequently a connection was built from Leaside Jct. to connect with the union station, and all passenger trains from the east were run over it. For several years a connecting stub line service was operated both ways between Leaside Jct. and West Toronto, and about three years ago the C.P.R. decided to make use of the line from North Toronto to Leaside Jct. for passenger traffic, starting therefrom one of its Toronto-Montreal night trains, and running one of the Montreal-Toronto night trains into it. This proved such a success that a further development of the northern entrance was decided on. The smallness of the existing station made necessary further accommodation, the result of which is the new station on which

A perspective of the new station is shown in fig. 1; a ground floor plan in fig. 2; and the trackage arrangement in the station vicinity, with its relation to the city transportation conveniences, in fig. 3. The station is being built on the east side of Yonge St., at the present end of the Toronto Ry.'s Yonge St. line, which passes down through the centre of the city. With this convenient and through street car line, the new station will be very easily reached from the business centre of the city. The rapid growth of the city northward makes the North Toronto location particularly available for that section of the city, the new location being more centrally located with regard to the centre of population than the present down town union station.

The new station will be a single storey brick and stone structure, the central section of which will have a high roof, flanked

entrance will be the entrance to the midway under the tracks. The vestibule under the tower will lead into the concourse along the north side of the west end of the waiting room, connecting at its east end with the midway. The south and west sides of the station will have a sidewalk, so that passengers may either alight at the main entrance centrally on the south side, or at the tower vestibule, the expectation being that the latter entrance will be used by the majority of passengers who have already secured their tickets, and only require to pass directly to the trains, relieving the main waiting room of much of the congestion that might otherwise occur. Along the west side of the station there will be a 28 ft. driveway, so that vehicles may drive up to either station entrance, and pass through under the tracks through this driveway and out on Yonge St. to the north of the station.

The midway will be a passage 20 ft. wide passing from the rear of the station to the far side of the tracks, under the latter. The elevation of the tracks makes a difference in grade between the track platforms and the station level of  $15\frac{1}{2}$  ft., giving a headway in the midway of about 14 ft. Passing over the midway will be 6 through tracks, the two southerly for eastbound passenger

provided with umbrella roofs, and provision has been made for their future extension to 1,100 ft. These platforms will be reached from the midway by two 6 ft. stairways on the east side. The plans provide for future stairways opposite the present proposed stairways, and another to a platform contemplated for the south side of the tracks.

The baggage room, 137 x 62 ft., will oc-

cupy all the section beneath the tracks between the midway and Yonge St. driveway. From the latter the baggage is to be received through 5 doorways, and will be raised on trucks to the platform level by two  $15 \times 5\frac{1}{2}$  ft. elevators. Provision is made for a future elevator to the contemplated southerly platform. From the south-west corner of the baggage room a spiral

stairway will ascend to the track level, where the station master's office will be located in the tower above the vestibule. Passenger communication with the baggage room will be through the concourse.

The building will be of brick construction, faced with Tyndale stone, while the section under the tracks will be of steel and concrete construction. Around the sidewalk

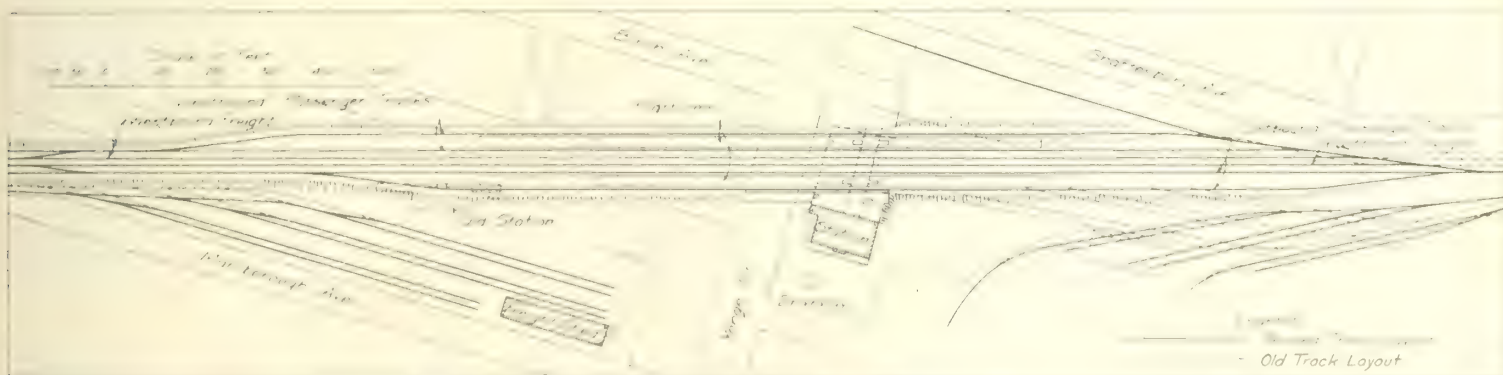

Fig. 3.—Track Arrangement in Vicinity of New North Toronto Station.

service and the two northerly for westbound passenger service, at 31 ft. centre, with an 800 ft. platform 20 ft. wide between each pair. The central pair of tracks, at 13 ft. centres from each other and from the adjoining passenger ones, will be for through freight, the southerly one for eastbound, and the northerly for westbound freight. The passenger platforms will be

occupy all the section beneath the tracks between the midway and Yonge St. driveway. From the latter the baggage is to be received through 5 doorways, and will be raised on trucks to the platform level by two  $15 \times 5\frac{1}{2}$  ft. elevators. Provision is made for a future elevator to the contemplated southerly platform. From the south-west corner of the baggage room a spiral

section there will be a metal canopy. The whole will be of a fireproof construction.

Darling and Pearson, Toronto, prepared the plans, under J. M. R. Fairbairn, Assistant Chief Engineer, and D. H. Mapes, Engineer of Building Construction, C.P.R.

The excavations and the foundations have been done by P. Lyall and Sons, on a percentage basis.

## Birthdays of Transportation Men in August.

Many happy returns of the day to—

V. T. Harrison, ex-Purchasing Agent, Timmanning and Northern Ontario Ry., now of Toronto, born at Ottawa, Aug. 2, 1880.

J. C. Beckwith, Engineer of Construction, Canadian Government Railways, Moncton, N.B., born at Fredericton, N.B., Aug. 1, 1875.

C. B. Brown, A.M. Can. Soc. C.E., Chief Engineer, Canadian Government Railways, Moncton, N.B., born at Ithaca, N.Y., Aug. 27, 1878.

J. S. Carter, District Passenger Agent, C.P.R., Nelson, B.C., born at Aurora, Ill., Aug. 11, 1879.

A. M. C. Fletcher, General Accountant, Canadian Atlantic Ry., Kennebunk, N.S., born near Annapolis Royal, N.S., Aug. 27, 1877.

A. B. Chown, Travelling Passenger Agent, G.T.R., Pittsburg, Pa., born at Belleville, Ont., Aug. 4, 1887.

C. H. N. Connell, Engineer Maintenance of Way, Quebec Grand Division, Canadian Northern Ry., Montreal, born at Woodstock, N.B., Aug. 26, 1876.

E. L. Desjardins, Assistant Superintendent, Montreal and Ste. Flavie District, Intercolonial Ry., Riviere du Loup, Que., born at St. Jean Port Joli, Que., Aug. 1, 1859.

L. C. Fritch, Assistant to President, Canadian Northern Ry., Toronto, born at Springfield, Ill., Aug. 11, 1869.

G. H. Ham, Head Office Department, C.P.R., Montreal, born at Trenton, Ont., Aug. 23, 1847.

A. F. Hawkins, Trainmaster, Moose Jaw Terminals, C.P.R., Moose Jaw, Sask., born in Kent, Eng., Aug. 9, 1884.

W. P. Hinton, Assistant Passenger Traffic Manager, G.T.R. and G.T. Pacific Ry., Montreal, born at Hintonburg, Ont., Aug. 30, 1871.

R. Kerr, ex-Passenger Traffic Manager, C.P.R., born at Toronto, Aug., 1845.

J. D. McDonald, Assistant General Passenger Agent, G.T.R., Chicago, Ill., born at Toronto, Aug. 27, 1855.

T. McHattie, Master Mechanic, Eastern Lines, G.T.R., Montreal, born at Dufftown, Banffshire, Scotland, Aug. 8, 1854.

M. K. McQuarrie, Resident Engineer, District 1, British Columbia Division, C.P.R., Revelstoke, born at Sault Ste. Marie, Ont., Aug. 17, 1884.

J. A. Marsh, Trainmaster, British Columbia Electric R., Vancouver, B.C., born at Dresden, Ont., Aug. 16, 1876.

W. J. Meakin, Locomotive Foreman, C.P.R., Coronation, Alta., born at Toronto, Aug. 22, 1869.

C. Montgomery, Master Mechanic, Pere Marquette Rd., St. Thomas, Ont., born near London, Ont., Aug. 29, 1860.

W. E. Mullins, General Manager, Costa Rica Division, United Fruit Co., San Jose, Costa Rica, born at Stratford, Ont., Aug. 13, 1870.

H. R. Naylor, Division Car Foreman, Eastern Division, C.P.R., Montreal, born at Hull, Eng., Aug. 30, 1885.

F. H. Phippen, K.C., General Counsel, C.N.R., Toronto, born at Belleville, Ont., Aug. 26, 1862.

W. M. Porteous, District Freight Agent, C.P.R., St. Louis, Mo., born at Edinburgh, Scotland, Aug. 3, 1857.

J. F. Richardson, ex-Superintendent Telegraphs, Saskatchewan Division C.P.R., born at Granby, Que., Aug. 23, 1861.

W. G. Ross, chairman, National Harbor Commissioners, born at Montreal, Aug. 6, 1873.

W. Le B. Ross, Local Treasurer, G.T. Pacific Ry., Winnipeg, born at Ottawa, Ont., Aug. 9, 1868.

F. C. Salter, European Traffic Manager, G.T.R., and Canadian Ex. Co., London, Eng., born at Sarnia, Ont., Aug. 31, 1863.

C. R. Scoles, General Manager, Quebec

Oriental Ry., New Carlisle, Que., born at Grantham, Lincoln, Eng., Aug. 27, 1856.

A. O. Seymour, General Tourist Agent, C.P.R., Montreal, born at Ogdensburg, N.Y., Aug. 14, 1887.

J. F. Sweeting, Industrial Agent, Natural Resources Department, C.P.R., Calgary, Alta., born at Worthing, Eng., Aug. 20, 1872.

W. F. Taylor, General Storekeeper, Intercolonial Ry., Moncton, N.B., born at Hillsboro, N.B., Aug. 20, 1855.

F. E. Warren, General Car Foreman, C.P.R., Winnipeg, born at Chelsea, Que., Aug. 29, 1872.

W. B. Way, Superintendent, District 2, National Transcontinental Ry., Cochrane, Ont., born at Bowmanville, Ont., Aug. 22, 1867.

E. H. Williams, Locomotive Foreman, Canadian Northern Ry., Brandon, Man., born at West Toronto, Ont., Aug. 26, 1844.

## Railway Building in Saskatchewan.

The Saskatchewan Railways Department's report, submitted at the Legislature's recent session, shows that there were in the province, on Dec. 31, 1914, 5,980.58 miles of railways, as follows: Canadian Pacific, 2,762.75 miles; Canadian Northern, 2,099.32 miles; Grand Trunk Pacific, 1,118.51 miles. At the end of 1913 the mileage owned by the several companies was: C.P.R., 2,479.34 miles; Canadian Northern, 2,087.63 miles; G.T.P.R., 1,087.56 miles; total, 5,654.53 miles.

The development of the province resulting from the increase in railway mileage from 551.97 at the end of 1905, is shown by the following figures: In 1905 there were in the province 3 cities, 16 towns, 63 villages and 2 rural municipalities, whereas at the end of 1914, there were 7 cities, 72 towns, 296 villages and 297 rural municipalities. In 1905 there were 307 elevators, and the total grain production was 46,612,136 bush., whereas in 1914 there were 1,465 elevators, and the total grain production was 243,513,384 bush.

Notwithstanding the large increase in railway mileage within the period referred to, the report states that there are still extensive districts with considerable population where settlers have to travel from 50 to 60 miles to market. "This is true of a large part of the area between the Weyburn-Lethbridge line and the International Boundary, of a district north of Maple Creek; of a district north of Battleford; and of still another district north and east of Melfort. There are as well many other districts suffering in a less degree. This it is that makes it to be regretted that the capital required to continue the building of branch lines is not at present available."

The Government policy of aiding the construction of branch lines by guaranteeing bonds is governed by the following conditions: 1. Approval of route by the Government. 2. Provision of proper facilities and a sufficient supply of rolling stock. 3. Payment of adequate wages to the men employed upon construction. 4. Construction so far as possible within the province. 5. Sub contractors to be bound by conditions 3 and 4. 6. Provision to be made for protection against forest and prairie fires along the lines under construction.

**Suspicious Character at C.P.R. Angus Shops.**—A man of Austrian nationality with explosives and incriminating documents in his possession, was arrested while measuring some of the buildings at the C.P.R. Angus shops, Montreal, July 19.

## Traffic Orders by the Board of Railway Commissioners.

### Leakage in Flax Shipments.

23894. June 22.—Re complaint of Northwest Grain Dealers' Association against provisions of Supplement 3 to C.P.R. Special Tariff, C.R.C. no. W-1962; Supplement 1 to Canadian Northern Ry. Tariff, C.R.C. no. W-803; and Supplement 1 to Grand Trunk Pacific Ry. Tariff, C.R.C. 30, being special tariffs on grain and its products to those companies' terminal ports on Lake Superior: It is ordered that the conditions with respect to the shipment of flax seed in bulk, effective Oct. 12, 1914, as set out in the said supplements be disallowed, and the following substituted therefor: "Flax seed will be accepted for shipment in bulk only at owner's risk of leakage, in accordance with Canadian Freight Classification; except that if shippers make written request for cars suitably lined at their expense, such cars will be furnished with the least necessary delay, in which case this company will assume the risk of leakage."

### Quebec and Lake St. John Railway Fares.

23877. June 19.—The application of W. H. Brown, of Quebec, under sec. 284, 331, 332, 339 and 395 of the Railway Act, for an order directing the Quebec and Lake St. John Ry. to sell 10-trip series of tickets from Quebec to St. Catharines station, at a rate of 40 cts. each: It is ordered that the application be refused.

### London and Port Stanley Ry. Tariffs.

23900. June 26.—The application of London and Port Stanley Ry., under sec. 327 and 331 of the Railway Act, for approval of its Standard Passenger Tariff, C.R.C. 1, and its Standard Freight Tariff, C.R.C. 1: It is ordered that the said Standard Passenger Tariff, C.R.C. 1, on the basis of 2½ cts. a mile, and the Standard Freight Tariff, C.R.C. 1, be approved.

### Cleaning and Disinfecting Stock Cars.

23927. Re application of Toronto Livestock Exchange, the Livestock Shippers' Association of Ontario, and others for an order disallowing charge to be made by railway companies for cleaning and disinfecting livestock cars: Upon reading what is alleged, and pending a hearing at Toronto on a date to be fixed by the Board, it is ordered that the regulation making a charge of \$2.50 a car for cleaning and disinfecting single deck stock or box cars, and \$4 for double deck stock cars, as contained in the following schedules, be suspended—Pere Marquette, C.R.C. 1962; Grand Trunk, C.R.C. 3174; Canadian Northern, C.R.C. E-668; Canadian Northern, Supplement 7 to C.R.C. W-810; Canadian Pacific, C.R.C. E-3011; Canadian Pacific, C.R.C. W-2050; Esquimalt & Nanaimo, C.R.C. 297; Grand Trunk Pacific, Supplement 1 to C.R.C. 84; Great Northern, Supplement 46 to C.R.C. 869; and it is further ordered that the following schedules in effect on the dates shown, and containing the same regulation, be disallowed, pending the hearing aforesaid—Toronto, Hamilton & Buffalo, C.R.C. 1050, effective April 1, 1915; Ottawa & New York, C.R.C. 1109, effective June 15, 1915; New York Central, C.R.C. 454, effective June 5, 1915.

**C.P.R. Employees' Medical Association for British Columbia Division.**—The first year's operations of this association are reported to have been successful and to have demonstrated the necessity for its existence. The officers for the current year are:—President, F. W. Peters, Vancouver; Vice President, G. R. Thompson, Smelter; Secretary, A. M. Innes, Vancouver; Executive Committee: D. A. Munro, Dr. Proctor, Vancouver; R. H. Urquhart, Revelstoke; F. R. McCharles, Nelson.

## Toronto, Hamilton and Buffalo Railway Annual Report.

Following is a summary of the annual report for the calendar year 1914: The company operates 79.88 miles of main line, 7.39 miles of branches and over 4.36 miles of other companies' lines under trackage rights. It has 9.79 miles of second track; 65.10 miles of yard tracks and sidings, and leases to the C.P.R. 1.50 miles of its double track.

The total operating revenue for the year was \$1,313,562.21, of which \$810,734.81 was from freight and \$385,744.71 from passengers. This was a decrease from 1913 of \$434,353.20, the freight revenue decreasing \$361,843.11 and the passenger revenue \$42,939.71. The operating expenses were \$954,177.39, a decrease of \$216,009.81, and amounted to 72.64% of operating revenue, an increase of 5.62% over 1913.

After payment of a dividend of 3% on the outstanding capital stock, a surplus of \$116,292.30 was carried to profit and loss account, to the credit of which there is now \$948,920.24. Of the \$5,000,000 of capital

age number per train mile, 55.77; average number per car mile, 17.98; average number of cars per train mile, 4.67; average amount received from each passenger, 63 cts.; average revenue per passenger per mile, 2.17 cts.; average passenger service train revenue per train mile, \$1.33.

The rolling stock at Dec. 31, 1914, consisted of 30 locomotives, 23½ passenger cars (this includes 34.23% of 19 cars in joint services); 228 freight cars, and 23 cars in company's service, owned, and 4 locomotives, and 1,299 cars leased under equipment trusts.

During the year the company entered into an agreement with the Erie and Ontario Ry., whereby a line from Smithville to Dunnville, practically 15 miles, was built and opened for traffic Dec. 22. This line is to be extended to Port Maitland, a further distance of five miles. The total cost of construction, together with lands acquired in connection with the extension to Port

## The Freight Claim Association Elects a Canadian President.

The Freight Claim Association, which is composed of freight claim agents of the various railways in Canada, the United States and Mexico, at its annual meeting in Chicago recently, elected as President Edward Arnold, Freight Claim Agent, G. T. R., Montreal. He was born at Kingston, Ont., Aug. 26, 1864. He entered G. T. R. service in 1880, serving as operator, ticket agent and relieving agent between Montreal and Toronto. He was employed at Chicago for a number of years handling claim correspondence, and was Travelling Freight Claim Agent at Battle Creek, Mich., for a number of years. In April, 1908, he was appointed Freight Claim Agent with office at Montreal. He has served on all the important committees of the Freight Claim Association since 1908, was Arbitrator for a number of years, and on resigning that position in June 1913, was elected 2nd Vice-President of the As-

The Quebec Bridge, showing Progress of Construction to June 18.

stock authorized there was outstanding Dec. 31, 1914, \$3,500,000; the funded indebtedness was \$5,555,000, there being a reduction of \$150,000 during the year on account of the repayment of equipment trust bonds.

Statistics—Revenue train mileage, 446,617; non revenue train mileage, 11,393; revenue locomotive mileage, 731,234; non revenue locomotive mileage, 39,706 (these latter two sets of figures include other companies locomotives in joint service); revenue car mileage, 6,147,358; non revenue car mileage, 185,370; revenue freight carried, 1,919,251 tons; non revenue freight, 7,116 tons; total tons of freight carried one mile, 72,947,390; total tons of freight carried one mile per mile of road, 796,108; average distance haul of one ton, 38 miles; average number of tons of freight per train mile, 576; average amount received for each ton of freight, \$0.42; average revenue per train mile, \$6.40; average revenue per mile of road, \$8,847.92; average revenue per ton, per mile, 1.113 cts. Passengers carried, 615,151; total carried one mile, 17,764,890; total carried one mile per mile of road, 210,884; average distance carried, 28.88; aver-

age number per train mile, 55.77; average number per car mile, 17.98; average number of cars per train mile, 4.67; average amount received from each passenger, 63 cts.; average revenue per passenger per mile, 2.17 cts.; average passenger service train revenue per train mile, \$1.33.

The report refers to the project for the elimination of grade crossings in Hamilton, and after reviewing what was done during the year adds: "The matter is now pending under the original application (to the Board of Railway Commissioners), and it is believed that this company will succeed in having the plans (for the elevation of the tracks for a distance of half a mile and the carrying of the intersecting highways underneath) adopted and approved. The expense will be, under the Railway Act, apportioned by the Commission among the various interests affected, such interests being the City of Hamilton, the County of Wentworth, the Hamilton Street Ry. Co. and this company."

The Grand Trunk Pacific Ry. Hotel, the Macdonald, Edmonton, Alberta, was opened July 6.

sociation. In May 1914 he was elected 1st Vice-President.

Until 1913, the object of the Association was stated to be the prompt and proper settlement of freight claims with claimants and between carriers. Recently, the General Managers' Association decided that the Freight Claim Association should also study the causes of claims and application of preventative measures. The Freight Claim Association responded at Galveston in 1914 by broadening its constitution and electing a committee of five on cause and prevention. This committee was added to, and now comprises nine members, whose duties are to make an exhaustive study of the causes of loss and damage claims, and proper application of preventative measures. It is expected that good results will be accomplished along these lines during the coming year, and that recommendations to be made to the General Managers' Association, if approved by that body, will have a tendency to cause a large reduction in the enormous amounts paid out in loss and damage claims, the amount disbursed for the year 1914 being about \$35,000,000.

### Transportation Routes to Northern Alberta.

The accompanying sketch map shows the principal points in the northern part of Alberta which is the gateway for the railway lines and the water routes available.

The Canadian Northern Ry. has a train leaving Edmonton 9 a.m. Mondays, Wednesdays and Fridays, and arriving Athabasca Landing (now called Athabasca) 95 miles distant, at 4.10 p.m.

The Edmonton, Dunvegan and British Columbia Ry. is in operation to McLennan, 262 miles northwest of Edmonton, passing through Smith and Sawridge. Train leaves Edmonton 7.30 a.m. Tuesdays and Fridays, and is due at McLennan 3.40 a.m. Wednesdays and Saturdays. Stage runs from McLennan to Peace River Crossing, 11 miles, and connects with the train. The line is under construction to Peace River Crossing and to Spirit River (southwest of Dunvegan), and is expected to be into Grand Prairie next spring. The E.D. & B.C. station at Edmonton is outside the city, on the St. Albert trail, some five miles distant from the C.P.R. station.

The Hudson's Bay Co. advise that the only way of getting from Athabasca (Landing) to Lake Athabasca is by scow or canoe, and that no one should go without employing expert river men—the safest way to travel is by a scow weighing about seven tons and requiring a steersman and at least three other men—the trip would take, under best conditions, 20 days. Fond du Lac, where silver and nickel are reported to have been found, is at the east end of Lake Athabasca and 587 miles from Athabasca (Landing). It would be impossible to proceed across Lake Athabasca to Fond du Lac by scow unless arrangements could be made to have the scow towed by either of the tugs which are on the lake. The Hudson's Bay Co. during the summer season operates steamboats between Peace River Crossing and Hudson's Hope on the west and Ft. Vermilion and Vermilion Chutes on the east, leaving Peace River Crossing whenever sufficient cargo has been secured—also the steamboat Fort McMurray between Peace River Crossing, the Chutes and Smiths Landing and between Smiths Landing and Fort McMurray, leaving Vermilion Chutes and Fort McMurray whenever sufficient cargo has been secured.

The Peace River Navigation Co., Ltd., has during the summer a steamboat leave Peace River Crossing on the 1st and 15th of each month for Fort Vermilion, connecting with Hudson's Bay Co.'s steamers for Fort Chipewyan and the Mackenzie River; Fort Chipewyan being at the western end of Lake Athabasca, the Lake and Fond du Lac may be reached this way also. The P.R.N. Co. also has a steamboat leave Peace River Crossing the 8th and 23rd of each month for Dunvegan, Fort St. John and Hudson's Hope. The P.R.N. Co. may also place a steamboat in service on the Athabasca River, but nothing is decided.

People for Grand Prairie and the Peace River Block travel via Peace River Crossing

### Railway Rolling Stock Notes.

The Asbestos and Asbestic Co., Asbestos, Que., has ordered one 6 wheel switching locomotive from Canadian Locomotive Co.

The Grand Trunk Pacific Ry. has received an express refrigerator car, no. 6047, making 48 received on an order of 50, from Canadian Car and Foundry Co.

The Intercolonial Ry. built in its Moncton shops recently, a tank car for dealing with forest fires. It is not a new car, but has been arranged by placing a tank of about 10,000 gals. capacity on a flat car. It is equipped with a pump, which can be connected to the locomotive, thus securing a pressure of at least 60 lbs.

The Imperial Oil Co. has ordered 75 steel underframes, trucks and tank trimmings, for tank cars of 10,000 gallons capacity, from Canadian Car and Foundry Co. The trucks are of 40 tons capacity, standard gauge, length over buffers 36 ft. 3 ins., truck centres 26 ft. The tanks will be applied to the cars by the Imperial Oil Co., at Sarnia, Ont.

Toronto Mail and Empire:—"It sounds like 'good old times' to hear of large orders for cars and locomotives being placed with the railway rolling stock companies of this country. After the freight moving equipment has been procured for the National Transcontinental the requirements of the Hudson Bay Ry. will have to be looked after. It is a queer year in this young country when railway equipment business does not spring up from somewhere."

Canadian Explosives, Ltd., has ordered 3 wooden box cars, each of 2 tons capacity, from Canadian Car and Foundry Co. Following are the chief measurements,—

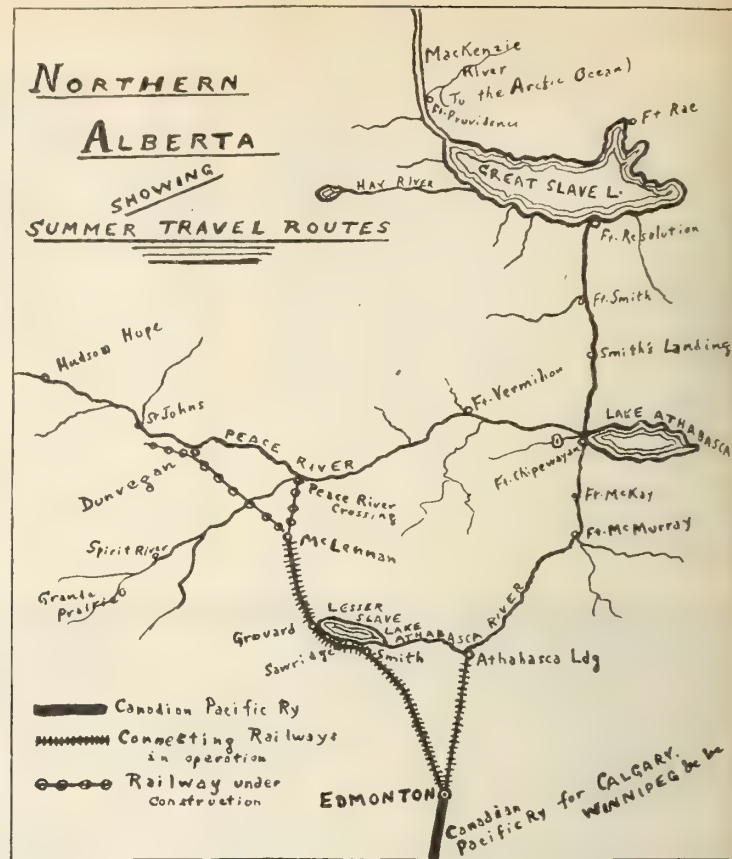

Length inside ..... 15 ft. 6 ins.  
Length over buffers ..... 19 ft. 10½ ins.  
Width over side posts ..... 5 ft. 4¾ ins.  
Height top of rail to top of roof ..... 9 ft. 0¼ ins.  
Height top of floor to roof ..... 6 ft. 7¾ ins.  
Gauge of track ..... 3 ft.  
Wheels ..... 24 ins. cast iron  
Wheel base ..... 6 ft.

Following are some details of the 50 decapod (2-10-0) locomotives which the Russian Government has ordered from Canadian Locomotive Co., as mentioned in our last issue,—

Gauge ..... 5 ft.  
Cylinder ..... 25 x 28 ins.  
Drivers ..... 52 ins.  
Weight in running order, engine ..... 198,000 lbs.  
Weight in running order, tender ..... 132,000 lbs.  
Boiler pressure ..... 180 lbs.  
Heating surface ..... 2,623 sq. ft.  
Grate area ..... 64.5 sq. ft.  
Superheating surface ..... 541 sq. ft.

The British War Office has ordered 1,200 box cars from Canadian Car and Foundry Co., each equipped with two side buffers on each end, and wooden steps at each side door. They are to be of the Belgian type, delivery to commence in 60 days from date of contract. Following are the chief details,—

Capacity ..... 15 metric tons  
Style ..... Steel frame inside sheathed  
Trucks ..... Single  
Wheels ..... Rolled steel, 33 ins. diar.  
Length over end sills ..... 24 ft. 1¾ ins.  
Couplings ..... Screw arrangement  
Side lining ..... 1 in.

End lining ..... 1 3-16 ins.  
Side posts ..... 3 in. channels  
End posts ..... 4 in. I. beams  
Brakes ..... Hand only, Stillmant type  
Roof ..... 13-16 in. wood with canvas covering  
Doors ..... Two side doors with bottom rollers  
Draft rigging—Continuous in connection with volute springs.

Carlines ..... Channel type, flooring 1¾ ins.

Following are chief details of the 15 consolidation (2-8-0) locomotives which the Canadian Government Railways ordered from Canadian Locomotive Co., as mentioned in our last issue,—

Weight on drivers ..... 208,000 lbs.  
Weight in working order, total ..... 236,000 lbs.  
Wheel base, rigid ..... 16 ft. 6 ins.  
Wheel base, total ..... 25 ft. 5 ins.  
Wheel base, engine and tender ..... 69 ft. 11 ins.  
Heating surface, firebox ..... 207 sq. ft.  
Heating surface, tubes ..... 1,885 sq. ft.  
Heating surface, total ..... 2,092 sq. ft.  
Driving wheels, diar. ..... 63 ins.  
Driving wheels, material ..... Cast steel  
Driving journals ..... 10 by 14 ins.  
Cylinders, diar. and stroke ..... 24 by 32 ins.  
Boiler, type ..... Straight top, radial stay  
Boiler pressure ..... 180 lbs.  
Tubes, no. and diar ..... 227 2 ins.; 30 5½ ins.  
Tubes, length ..... 15 ft. 2¾ ins.  
Injectors and safety valves ..... Locomotive type  
Brakes ..... Westinghouse American  
Packing ..... Metallic  
Superheater ..... Schmidt type A.  
Superheater ..... Schmidt type A  
Weight of tender loaded ..... 140,000 lbs.  
Tank capacity ..... 6,500 imp. gals.  
Coal capacity ..... 10 tons  
Tender truck ..... Outside equalized  
Tender wheels ..... 34 ins. diar.  
Wheel, type ..... W. I. centre steel tued.  
Truck journals ..... 5½ by 10 ins.  
Brake beam ..... Steel I section

Following are the details of the 50 decapod (2-10-0) locomotives which the Russian Government has ordered from Canadian Locomotive Co., as mentioned in our last issue,—

Gauge ..... 5 ft.  
Weight on drivers ..... 176,000 lbs.  
Weight, total ..... 198,000 lbs.  
Wheel base, rigid ..... 18 ft. 8 ins.  
Wheel base, total ..... 27 ft. 10 ins.  
Wheel base, engine and tender ..... 60 ft. 1½ ins.  
Heating surface, firebox ..... 196 sq. ft.  
Heating surface, tubes ..... 2,428 sq. ft.  
Heating surface, total ..... 2,624 sq. ft.  
Driving wheels, diar. ..... 52 ins.  
Driving wheel centres ..... Cast steel  
Driving journals ..... 10½ by 12 ins., and 8½ by 12 ins.

Cylinders, diar. and stroke .....	25 by 28 ins.
Boiler, type .....	Straight top, radial stays
Boiler pressure .....	180 lbs.
Tubes, no. and diar. ....	195 2 ins.; 28 5/8 ins.
Tubes, length .....	17 ft.
Injectors .....	Two on back head
Safety valves .....	Two on main dome
Brakes .....	Westinghouse
Packing .....	Metallic
Superheater .....	Schmidt double loop
Firebox plate .....	Copper
Fire door .....	Franklin
Reverse gear, Rushton screw type with air motor	
Radial buffer, Economy device, Corporation type	
Arch brick .....	Security arch
Weight of tender loaded .....	132,000 lbs.
Tank capacity .....	6,200 imp. gals.
Coal capacity .....	9 to 10 tons
Tender truck, type, Arch bar with C.S. bolsters	
Wheels, diar. ....	36 ins.
Wheels, type .....	Solid forged steel
Journals .....	7 1/2 by 16 ins.
Brake beam .....	High speed type

### Canadian Pacific Railway Construction, Betterments, Etc.

**Quebec Terminals.**—A contract for the erection of the new passenger station near the old Palais station has been let to the Downing-Cook Co., Ltd., which completed the freight terminal buildings there recently.

**Montreal Terminus.**—The Board of Railway Commissioners has authorized the building of two additional tracks across Greene Ave., Westmount.

**Eastern Division.**—The Glengarry & Stormont Ry., which was opened recently, is being operated as the Cornwall Subdivision, Eastern Division. Starting from St. Poly-carpe Jct., the stations on the branch are: Bridge End, mileage 6.6; North Lancaster, 10.4; Glen Gordon, 14.1; Williamstown, 17.7; Glenbrook, 21.6; Cornwall, 29.00.

**Manitoba Division.**—The C.P.R. subway at Main St., Winnipeg, is reported to be completed, and ready for the filling in of the roadway and raising of the grade. The filling in is to be done by the C.P.R., and the other work necessary is to be done by the city.

**Alberta Division.**—The point on the old Alberta Ry. and Irrigation Co.'s line, known as Montana Jct., has been finally done away with and the buildings moved. A local paper says: "The junction was built in 1890, when the old turkey trail from Lethbridge to the boundary was completed by the A.R. & I. Co. Just one mile from the station this line joined the narrow gauge from Dunmore Jct., which had been built in 1885. Some years later, when the C.P.R. bought this line, they widened the gauge to standard. From the junction to the station the road had three rails, the narrow gauge using one of the C.P.R. rails and one of its own between the other two. This spring the C.P.R. doubletracked the line from the old junction to the station, so that now the line from Coutts and the one from Medicine Hat do not meet, but run parallel into the city."

**British Columbia Division.**—Work is reported to have been restarted on the Porcupine fill in the Boundary country. The work is the filling of a high piece of trestle work on which a start was made in the fall of 1914. W. P. Tierney, Vancouver, is the contractor. (July, pg. 258.)

**Transmission Lines Crossing Railways.**—The Board of Railway Commissioners has notified the owners of electric power transmission lines to file on or before Aug. 7, reasons, if any, why there should not go into effect on that date an order reading as follows: "All the insulators at wire crossings, which are operated at a potential of 10,000 volts or over, are to be renewed or tested, and reported upon on or before Nov. 1, 1915, and until further notice at least once annually thereafter."

## Kettle Valley Railway Construction.

The Kettle Valley Ry. is now operating 274.8 miles of line, from the C.P.R. Crowsnest branch at Midway, B. C., to a junction with the C.P.R. Nicola branch at Merritt, B.C., thus giving a double route westerly from Calgary. A section of this line from Coldwater Junction to Merritt, 23 miles, will eventually be a branch line, as the main line will run down the Coquihalla Valley to Hope, effecting a junction there with the C.P.R., by bridge across the Fraser River. The line now being operated is not the line originally planned, by the act and its amendments. Early in 1914 an arrangement was made by which the section from Osprey Lake to the Hope Mountains via Aspen Grove, 65.5 miles, was abandoned temporarily, in favor of a line from Osprey Lake to a junction with the Vancouver, Victoria and Eastern Ry. at Princeton, and the joint use of that company's line from Princeton to the Hope Mountains, 40 miles. As originally located the line from Midway to Merritt was 267.8 miles long, but as now constructed it is 274.8 miles. Previously an arrangement was made with the V., V. and E. Ry. by which it would use jointly with the K. V. Ry. the Coquihalla line from Coldwater Jct. to Hope, 53 miles.

In Canadian Railway and Marine World for Feb., 1914, pg. 80, a statement was given as to the conception of the company, the various agreements under which the line was being built, the contracts let, and the progress made to that date, together with a plan of the line as originally laid out. Subsequently details were given of the several agreements with the V., V. and E. Ry., and of the progress made on the several contracts. Since the line has been opened from Midway to Merritt, an official statement has been issued covering the whole work. From this the following particulars have been extracted:—

**Surveys and Construction.**—Location started in 1910, a number of parties being sent out in the early spring. In July of that year the first grading was done at the Merritt end, where a connection is now made with the C.P.R., by Macdonell, Gzowski & Co. This company had a contract for the work from Merritt south to Otter Summit, 30 miles, which was finished in 1911. At the same time work was being carried out on the Midway section, where Rice and Co. had a contract for 35 miles west from that point. This also was finished the next year. Surveys were going on simultaneously, the surveyors having considerable difficulty in fixing the final location lines. The Kettle Valley Ry. runs across mountain chains instead of paralleling them, as is usually the case with railways, and thus it has to cross three ranges, the Kettle-Okanagan, the Okanagan-Similkameen and the Hope. A third grading contract was given in 1911, this going to Rice and Co., for the 40 miles from mile 35 west of Midway to mile 75, at Hydraulic Summit. This grading was finished in 1912, and in 1913 the bridges were completed. The same firm got the contract for the section from Penticton to Osprey Lake and finished it in 1912. During that year, also, the section from Hydraulic Summit west to Penticton, a distance of 58 1/2 miles, was completed by Grant, Smith and Co. Twohy Bros. graded the 13 miles from Coldwater Jct. to Coquihalla Summit, and McArthur Bros. the 40 miles from the latter point to Hope, finishing it in 1914, except for a number of the bridges. In 1913 Guthrie, McDougall and Co. got a contract for grading the line from Osprey Lake to Princeton, 31 miles, and work on this was begun and finished in 1914.

**Track laying.**—The first steel was laid in 1910, by Macdonell, Gzowski and Co., for 10 miles south from Merritt. In 1911 Rice and Co. laid steel for 35 miles west from Midway and another 20 miles was laid on the Merritt end by the contractors there. In 1912 Penticton saw its first steel, seven miles being laid west to Trout Creek Canyon by Kettle Valley workmen. Another 11 miles of steel was added on the Rice contract stretch from mile 35, west of Midway, to mile 46. The year 1913 saw the finishing of laying of steel from mile 46, west of Midway to mile 75, Hydraulic Summit, by the railway itself, K.V.R. workmen that same year also laying seven miles of steel from Hydraulic Summit towards Penticton. In addition, the K.V.R. finished steel laying from Trout Creek to mile 40 west of Penticton, being to Osprey Lake, and also laid rails for 11 miles from Coldwater Junction to Coquihalla Summit. Last year steel was finished by the K.V.R. between Penticton and Hydraulic Summit, 51 miles being laid. Two additional miles of rails was also put down by the railway on the Towhy Bros. contract at Coquihalla and three miles on the McArthur Bros.' section over the Coquihalla Summit. Another two miles was laid at the Hope end, from the C.P.R. tracks to the river bridge there. This year steel has been finished from Osprey Lake to Princeton; another eight miles has been laid at the Hope end of the cut off, and two miles more at the upper end, leaving 25 miles to be laid to finish the cut off line. This work will undoubtedly be finished this year.

**Bridge work.**—There are many large bridges on the line, the largest being that which is across the Fraser at Hope, where the line crosses from the cut off to the connection with the C.P.R. at Hope. This structure is 960 ft. long, having 4 steel spans of 240 ft. each. A highway for pedestrians and vehicles is provided above the railway track deck of the bridge. The bridge was finished this year. The highest bridge on the K.V.R. is at Trout Creek Canyon, a few miles out of Penticton. It is 245 ft. above the water. The steel work on the bridge, which was built in 1913, is 250 ft. long and the approaches 450, making a total length of 700 ft. Two or three of the bridges now under way in the Hope cut off section are worthy of more than passing interest. There is one over Ladner Creek which is 230 ft. high and 600 ft. long. Another bridge, over Slide Creek is 400 ft. long having a single span of 320 ft. Canyon Creek, east of Princeton is bridged by a wooden trestle, which is 180 ft. high.

A. McCulloch is Chief Engineer in charge of the work.

**Railways and Weed Destruction in Saskatchewan.**—The railway companies are co-operating with the Saskatchewan Agricultural Department in weed extermination. Each railway is furnishing a gasoline track motor car and a man to operate it, and the department is sending out a man skilled in the destruction of weeds. Work was started on the C.P.R. June 15, and it was estimated it would take three months to cover the line. On June 17 work was started on the Canadian Northern Ry., which will be covered by Aug. 31, and work was started on the Grand Trunk Pacific Ry., July 19, one month being allotted to cover its lines. The work being done not only covers the eradication of weeds on the railway right of way, but the instruction of the people in every town, village, and settlement point along the line as to the best means to be adopted to destroy weeds, with practical demonstrations.

## Railway Development.

### Projected Lines, Surveys, Construction, Betterments, Etc.

**Athabasca and Fort Vermillion Ry.**—A. C. Galbraith, with a staff of engineers, is reported to have arrived at Athabasca Landing, Alberta, June 21, to start a survey for this projected railway to Fort Vermillion. He started work at once on making a survey for a site for a bridge to cross the river, and as soon as a suitable location is secured, will, it is stated, start on a reconnaissance survey to Fort Vermillion. The party includes F. P. Wilson and F. D. Rice, who represent D. A. Thomas, Cardiff, Wales, who is investigating the project in connection with his Pacific, Peace River and Athabasca Ry. project. (July, pg. 255.)

**The Dominion Atlantic Ry.'s locomotive house** at Kentville, N. S., was destroyed by fire, July 7, the machine shop being saved. It is reported that the locomotive house will be rebuilt at once. (June, pg. 222.)

**Edmonton, Dunvegan and British Columbia Ry.**—Grading on the section from Smoky River to the Spirit River was reported to be 45% completed, June 30. The remainder of the work is classed as heavy, but it is expected to have it completed by Oct. 1. The grading contractor is A. T. Wright.

The Board of Railway Commissioners has approved of location plans for the line through tp. 76, ranges 21, 22 and 23, west 5th meridian, mileage 269.85 to 286.65, and through tp. 78, ranges 3 and 6, and tp. 77, ranges 4 and 5, west 6th meridian, mileage 331.77 to 357. We are officially advised that the revised location in tps. 77 and 78, ranges 1-6, west sixth meridian, 27 miles, is a minor revision, rendered necessary owing to the fact that original location was made from the preliminary line, and the new location varied more than one mile from it.

The grading outfit of G. H. Webster, Calgary, arrived at Spirit River early in July. The contract covers the grading of about 60 miles in the Grand Prairie Settlement, and it is expected to have it completed this season. J. D. McArthur, President, is reported to have said it is hoped to have tracklaying on the line from the Smoky River completed to the Spirit River by Christmas, when it will be gone on with on the Grand Prairie branch. It is hoped to have the line ready for traffic by the summer of 1916. The construction generally is average, but there is some heavy work to be done in the vicinity of the Saddle Mountains. (July, pg. 255.)

**Halifax and Southwestern Ry.**—Tenders are said to be under consideration for building of a passenger station at Yarmouth, N.S. J. Bain, is General Superintendent, Bridge-water, N.S. (Nov., 1912, pg. 557.)

**Intercolonial Ry.**—We are officially advised that the management is not at present considering the renewal of the superstructure of the bridge across the St. John River at Fredericton, N. B., as stated in a press report. (July, pg. 255.)

**Kettle Valley Lines.**—According to press reports, about 25 miles of tracklaying is yet required to complete the line from Otter Summit to Hope, B. C., which it is hoped will be fully completed this year. There are two bridge structures of some importance on the Otter Summit-Hope section, viz.: that over Ladner Creek, 600 ft. long, and 230 ft. above high water mark, and that at Slide Creek, 400 ft. long. The most important bridge, however, is that across the Fraser River at Hope, which consists of four steel spans of 240 ft. each on concrete piers and abutments.

Snow sheds are to be built on the line in the Coquitlam Valley, for which purpose

orders are said to have been placed for 13,000,000 ft. of lumber. (July, pg. 255.)

**Lake Huron and Northern Ontario Ry.**—At the annual meeting of shareholders called to be held at Sault Ste. Marie, Ont., July 30, in addition to the business of electing directors and passing accounts, the shareholders were to be asked to approve of all the acts done, and agreements entered into by the directors since the last annual meeting.

A press report states that a contract has been let by the National Engineering Co., Cleveland, Ohio, for the building of the line from Sault Ste. Marie to a junction with the National Transcontinental Ry., between Cochrane and Hearst, Ont., about 300 miles. The company owns a line from Bruce Mines to Rock Lake, 17 miles, and the contract, it is said, calls for a line in extension of this along the Mississauga River, through the forest reserve, into the Sudbury district, crossing the C. P. R. and the Canadian Northern transcontinental lines, and terminating by a junction with the N. T. R. The line would run through a new country, and the construction will involve the building of 14 steel bridges, one of which, it is stated, would be 750 ft. long. It is said that the National Engineering Co. is endeavoring to finance the building of the line, and of course there will not be any construction work undertaken until this has been arranged. The President of the Lake Huron and Northern Ry. advises us that the report referred to is premature. (April, pg. 176.)

**Toronto Union Station.**—Press reports state that arrangements have been made with the Bank of Montreal for advances of \$4,000,000 on the guarantee of the C.P.R. and the G.T.R. for the purpose of financing the construction of the new Union Station on Front St., Toronto. There are at the time of writing no signs of activity at the site.

### Progress of the Rogers Pass Tunnel Construction, Canadian Pacific Railway.

The following table shows the progress made during June, also the totals to June 30, for which we are indebted to J. G. Sullivan, M. Can. Soc. C.E., Chief Engineer, C.P.R. The figures give the number of feet. There were a number of corrections, which accounts for the difference in totals:

EAST END—	Progress.	Total.
Pioneer tunnel .....	897	10,128
Main heading .....	562	6,012
Main tunnel .....	787	4,556
WEST END—		
Pioneer tunnel .....	961	8,231
Main heading .....	529	6,601
Main tunnel .....	867	3,032

**Liquors on Canadian Northern Dining Cars.**—The C.N.R. management at Winnipeg has denied the report that liquors will not be sold on its dining cars. The statement says: "Owing to the present license laws in Manitoba, we are unable to sell liquors on our main line, the Alberta Express and the Capital Cities Express, as they leave after 7 p.m. and arrive at an early hour in the morning; therefore, demand for liquor is a negligible quantity. Liquors, etc., will be carried on the dining cars as in the past for the accommodation of the travelling public, subject to the liquor laws of each province. Commencing July 1, it is illegal to sell any liquor in Saskatchewan."

### Dominion Government Railway to Hudson Bay.

A contract is reported to have been let to R. McDonald, Winnipeg, for the substructure of the bridge across the Nelson River, at Manitou Rapids. The superstructure will be of steel, of the cantilever type, and will be fabricated and erected by the Canadian Bridge Co.

J. D. McArthur, the general contractor, is reported to have stated recently that the grading gangs have reached to within 50 miles of Port Nelson and that the whole of the grading will be completed this year. The track laying will not be completed until the spring of 1916.

Chief Engineer Porter is reported to have said in Winnipeg, July 13, that the construction of the terminals at Pas, Man., would not be started until the spring of 1916. The plans are under consideration by the Railways Department. The contracts, when let, will call for the completion of the work in time for the opening of the line right through in 1917.

The question of operating part of the line by electricity is said to be under consideration and it is reported that the water falls of the Nelson and Grass Rivers are being examined with a view of determining how far they are available for the development of power to be used on the line.

Timber and other materials for the terminal work at Port Nelson are being forwarded by steamship from Halifax, N.S., and one cargo of special timber has been despatched from Vancouver, B.C., a 10,000 mile voyage. (June, pg. 225.)

### Qu'Appelle, Long Lake and Saskatchewan Railroad Land Grants.

The Saskatchewan Legislature has ordered that an address be presented to the Lieutenant Governor asking that a resolution passed June 24 respecting various contracts made between the Dominion Government and the Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co. be forwarded to the Secretary of State for transmission to the Governor General in Council. The resolution stated that, in the Legislature's opinion, a serious drawback to municipal progress and a gross injustice to the people of the province would be removed if the Dominion Government would at once take the necessary steps towards winding up the contract with the company and the releasing of the lands in question so that they might be liable for a just portion of taxation.

The preamble of the resolution states that under the contracts of 1884, 1887 and 1889 it was provided, among other things, that 6,400 acres of land a mile be made to the company; that the company should receive for 20 years from 1889, \$80,000 a year, and that until a final settlement between the Government and the company, one third of the land be retained by the Government. The land grant carried is 1,625,244 acres, of which one third has been retained under the contract. All the land retained is exempted from taxation, but under a contract of 1907 the Saskatoon and Western Land Co., to which company the railway company's lands had been transferred, it was agreed that the retained lands might be sold on condition that \$5 an acre of the price obtained be paid to the Government, the lands thus sold becoming taxable. A large area of the lands still remains unsold, and as the 20 years from 1889 has expired the province desires that the accounts be adjusted and the contract wound up so that the lands may be taxed by the various municipalities.

# Mainly About Railway People Throughout Canada.

**W. E. Foster**, Solicitor, G. T. R., Montreal, has been appointed a K. C.

**Sir William Van Horne** is in residence at his summer home, Covenhoven, St. Andrews, N. B.

**J. R. McDonald**, City Ticket Agent, Canadian Northern Ry., Port Arthur, Ont., died suddenly at his work there, July 4.

**A. C. Lewis**, Secretary, Toronto Harbor Commission, is going to the front in the Canadian Overseas Expeditionary Force.

**Geo. Kidd**, General Manager, British Columbia Electric Ry., was the chief speaker at the American Club's luncheon in Vancouver, July 12.

**A. E. Cox**, General Storekeeper, Canadian Northern Ry., Winnipeg, has been elected a member of the Railway Storekeepers' Association's Executive Committee.

**Sir Thomas Shaughnessy**, Lady, and Miss Shaughnessy were in St. Andrews, N. B., at the end of June, when they opened their summer home, Fort Tipperary, for the season.

**Lieut. W. N. Malcolm**, of the Royal Engineers, who was wounded at the Dardanelles, and died at Malta, in June, was, until the commencement of the war, engaged on location surveys with the C.P.R.

**H. Whitehead**, chief ticket agent, C. P. R., Windsor St. station, Montreal, committed suicide by shooting in the station, July 7. He left a letter giving financial embarrassment as the cause of the act.

**J. K. L. Ross**, director, C. P. R., Montreal, is the sole beneficiary of the estate of his mother, Mrs. James Ross, who died in February, without a will. The estate is valued at \$289,639.

**Thomas C. Ashworth**, of the Canadian Overseas Railway Construction Corps, was reported in the casualty list cabled from England on July 6 as seriously wounded in the neck (self inflicted).

**C. Bermingham**, formerly Vice President, Canadian Locomotive Co., Kingston, Ont., and Mrs. Bermingham have given an automobile for Queen's University Stationary Hospital Corps.

**H. Kemp**, employed in the Audit Department, G.T.R., Montreal, was drowned in the Back River, there, July 4, whilst attempting to rescue two boys who got out of their depth, and were eventually rescued.

**S. H. Sykes**, Assistant Chief Engineer, Canadian Northern Pacific Ry., Vancouver, B.C., was presented with a case of silver tableware by the staff there recently, on the occasion of his marriage.

**W. E. Duperow**, Assistant General Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, has been absent from business for a few weeks on account of illness, which the latest report received states may necessitate an operation.

**Lt. Col. J. J. Creelman**, son of A. R. Creelman, K.C., director C.P.R., who suffered from shock caused by the incessant cannonading in the St. Julien battle, was reported on July 6 as recuperating rapidly at Shorncliffe, Eng.

**W. M. Guy**, whose appointment as General Traffic Manager, London and Port Stanley Ry., London, Ont., was announced in our last issue, resigned after three days on duty, for personal reasons, and has returned to Pere Marquette Rd. service.

**J. Edgar LePage**, whose appointment as Division Freight Agent, National Transcontinental Ry., Quebec, Que., was announced in our last issue, was born in 1882,

and entered railway service in 1902, since when he has been, to 1912, in Transportation Department, Intercolonial Ry.; 1912 to 1915 in Traffic Department, same road.

**Thomas Cantley**, heretofore Vice President and General Manager, Nova Scotia Steel and Coal Co., has been elected President of the company, vice R. E. Harris, who has been appointed a judge of the Supreme Court of Nova Scotia. He will also continue to act as General Manager.

**Duncan Ross**, who died suddenly at Victoria, B. C., June 30, was one of the contractors on the Grand Trunk Pacific Ry. construction, having built a section of six miles including a tunnel near Hazelton, B. C., a ten mile section in the South Bulkeley Valley, and a third near Fraser Lake.

**P. E. Ryan**, Secretary, National Transcontinental Railway Commission since its establishment in Sept. 1904, has resigned,

**R. G. Edwards**, Assistant Superintendent, District 2, Eastern Division, Canadian Pacific Railway.

on account of the work being practically completed and the operation of the railway taken over by Canadian Government Railways.

**Major D. R. McCuaig**, 13th Canadian Battalion, who has been awarded the Distinguished Service Order for conspicuous gallantry and ability between Apr. 22 and 24, near Ypres, is a son of C. J. McCuaig, Montreal, President, Sherbrooke Ry. and Power Co.

**T. R. McCarthy**, who died at Montreal, June 30, after a long illness, had carried on a general steamship and freight brokerage and shipping business for 18 years, and acted as agent for the Northern Shipowners' Association, Christiania, Norway, and also as shipping agent for the Asbestos and Asbestic Co., Asbestos, Que.

In announcing the appointment of an acting Manager of the Temiscouata Ry., the President, J. H. Walsh, issued a circular as follows,—“On June 9, **G. G. Grundy**, General Manager of the company, passed away at the

early age of 38, the greater part of his life having been spent in the service of the company. He rendered invaluable services, and his death is to be greatly deplored.”

**Capt. C. L. Conacher**, formerly Traffic Manager, Cambrian Railways, Wales, who visited Canada last year, and who has been serving as a railway transport officer on the War Office staff since October last, has been transferred to the administrative staff of the Ministry of Munitions in London. He will retain his military rank and serve under Sir Percy Girouard, Controller General of the Department.

**Miss Helen G. McNicoll**, daughter of D. McNicoll, director, and formerly Vice President, C. P. R., died at Swanage, England, suddenly, June 27. She had resided in England for several years, where she maintained a studio. Many of her paintings have been exhibited in the Royal Academy. At the outbreak of war in Aug. 1914, she was in Germany, and experienced considerable difficulty in returning to England.

**J. Harvey Hall**, who died at Toronto, July 5, from toxic poisoning following a slight operation, was born at Bolton, Ont., in 1857, and for some time was a conductor on the Toronto, Grey and Bruce Ry. In later years he was President of the local branch of the Order of Railway Conductors, and acted as the parliamentary representative in Canada of the order, spending considerable time in Ottawa.

**Charles A. Stewart**, whose appointment as acting Manager, Temiscouata Ry., Riviere du Loup, Que., was announced in our last issue, was born at Bathurst, N.B., June 19, 1885, and entered Temiscouata Ry. service May 22, 1904, since when he has been, to Mar. 3, 1908, clerk in General Manager's office; Mar. 3, 1908 to Oct. 1, 1909, chief clerk to General Manager; Oct. 1, 1909 to July 1, 1915, Accountant.

**Captain F. A. Wanklyn**, of the Royal Field Artillery, and a flight commander of the Royal Flying Corps, who has been given the military cross, is the eldest son of F. L. Wanklyn, General Executive Assistant, C. P. R., Montreal, and grandson of R. B. Angus, Director, C.P.R., and is 27 years old. His brother, Andrew Wanklyn, B.A., B.C.L., who is 25 years of age, is a lieutenant in the McGill Overseas Corps.

**R. Falshaw Morkill**, Signal Engineer, G.T.R., Montreal, who went to Europe with the 1st Canadian Expeditionary Force as a lieutenant in the engineering corps, has, in recognition of work which he did at the front in France under heavy shell fire, been promoted to a captaincy in the Royal Engineers, and has been posted to the 34th (Norfolk) Divisional Royal Engineers as captain of the 209th company. He expects to return to the front early in August.

**W. McNab**, Principal Assistant Engineer, G. T. R., Montreal, has retired from the board of direction of the American Railway Engineering Association, after 11 years of continuous service. On his retirement, resolutions of appreciation for his services in various positions, including that of President, were passed, and engrossed and bound in book form for presentation. He has been elected an honorary member of the governing board.

**John Macrae**, who has been appointed Locomotive Foreman, C. P. R., North Bend, B. C., was born at Springburn, Glasgow, Scotland, Jan. 30, 1879, and entered C. P. R. service, Feb. 19, 1904, since when he has been, to May 1907, fitter; May 1907 to July 1908, Roundhouse Foreman; July 1908 to

**James H. Night Foreman:** Dec. 1, 1909 to June 10, 1914, Locomotive Foreman, all at Revelstoke, B. C.; July 1, 1914 to June 15, 1915, Shop Foreman, Kamloops, B. C.

**George Bury,** Vice President, C.P.R., arrived in Winnipeg from Montreal, July 6, to make a complete inspection of the company's western line. From Winnipeg west he was accompanied by Grant Hall, Vice President and General Manager, Western Lines; J. G. Sullivan, Chief Engineer, Western Lines, and by the various general superintendents and superintendents over their several jurisdictions. Mr. Bury is expected to return to Montreal early in August.

**A. H. Willet,** whose appointment as Assistant Division Engineer, National Transcontinental Ry., Cochrane, Ont., was announced in our last issue, was educated in Scotland and England, and entered railway service in Canada in 1904, since when he has been, to 1905, on location and construction on the C. P. R. in Manitoba and Alberta; 1905 to 1906, Resident Engineer on Construction, District F, National Transcontinental Ry., Kenora, Ont.; 1909 to 1914, Assistant District Engineer, District D., N. T. R., Cochrane, Ont.

**H. A. Laird,** whose appointment as Division Freight Agent, National Transcontinental Ry., Cochrane, Ont., was announced in our last issue, was born at Brantford, Ont., and entered railway service in 1899, since when he has been, to 1907, in the export and import department, G.T.R., at Montreal and Portland, Me.; 1907 to 1910, Travelling Freight Agent, G.T.R., Montreal; 1910 to May 1914, chief clerk to General Freight Agent, G.T.R., Montreal; May 1914 to June 1, 1915, City Freight Agent, G.T.R., Montreal.

**Ross Garfield Edwards,** whose appointment as Assistant Superintendent, District 2, Eastern Division, C. P. R., Montreal, was announced in our last issue, was born at Maitland, Ont., Oct. 10, 1883, and entered C. P. R. service Dec. 24, 1900, since when he has been, to May 31, 1901, caller; June 1, 1901 to July 1902, checker, July 1902 to Apr. 14, 1904, yard office clerk; Apr. 15, 1904 to Oct. 21, 1906, chief clerk; Oct. 22, 1906 to Apr. 5, 1907, yard man and yard foreman; Apr. 6, 1907 to Feb. 11, 1909, Yardmaster; Feb. 11, 1909 to May 31, 1915, General Yardmaster, all at Smiths Falls, Ont.

**Jos. Bellingham,** whose resignation of the position of Superintendent of Motive Power, Grand Trunk Pacific Ry., was announced in Canadian Railway and Marine World recently, has returned to his former position of General Inspector, American Locomotive Co., and is living in Schenectady, N.Y. The American Locomotive Co. is very busy making shells and cartridge cases for the allies, and expects to be able through all its plants to turn out about 15,000 shells a day. Mr. Bellingham visits all the plants, including Montreal, and reports direct to the Vice President. He has a staff of inspectors at each point.

**Joseph Emile Gibault, A. M. Can. Soc. C. E.,** whose appointment as Resident Engineer, District 2, National Transcontinental Ry., Cochrane, Ont., was announced in our last issue, was born at St. Jerome, Terrebonne County, Que., Nov. 16, 1887. He graduated in science from the Mont St. Louis Institute, Montreal, in 1906, in civil engineering from Laval University in 1910, with the degree of B. A. Sc. He was from May to July 1910, draughtsman, with the Riter Conley Manufacturing Co., Pittsburg, Pa.; Aug. to Dec. 1910, instrument man, District C, National Transcontinental Ry.; Jan. to Mar. 1911, Resident Engineer, District E., N. T. R.; Apr. 1911 to Apr. 1913, Resident Engineer, N. T. R., Armstrong, Ont.; May 1913 to Feb. 1915, Resident Engineer, N. T. R., Cochrane,

**A. R. Macgowan,** whose appointment as Division Engineer, Intercolonial Ry. and Prince Edward Island Ry., Moncton, N.B., was announced in our last issue, was born at Moncton, N.B., Jan. 16, 1883, and entered railway service in Jan., 1899, since when he has been, to June, 1902, clerk in Accountant and Treasurer's office, Intercolonial Ry., Moncton, N.B.; June, 1902, to Mar., 1905, rod man and transit man, I.R.C., Moncton, N.B.; Mar., 1905, to Jan., 1906, contractors' engineer, North Maine Seaport Ry., Bangor, Me.; Jan. to Nov., 1906, Resident Engineer, Somerset Ry., Moosehead, Me.; Nov., 1906, to May, 1915, Assistant Engineer, Intercolonial Ry., Moncton, N.B.

**Arthur S. Piers,** whose appointment as Manager, Real Estate Department, C.P.R., Montreal, was announced in our last issue, was born at Montreal, May 23, 1885, and entered C.P.R. service Jan. 3, 1903, since when he has been, to Sept. 1, 1903, office boy, Freight Traffic Manager's office; Sept. 1, 1903, to July 20, 1904, secretary to Freight Traffic Manager; July 20 to Nov. 1, 1904, secretary to General Freight Agent; Nov. 1,

**J. E. Gibault,**  
Resident Engineer, District 2, National  
Transcontinental Railway.

1904, to Mar. 1, 1907, secretary to Vice President; Mar. 1, 1907, to May 1, 1910, assistant chief clerk to Vice President; May 1 to Aug. 1, 1910, assistant to Right of Way Purchaser; Aug. 1, 1910, to Feb. 1, 1915, Assistant Real Estate Agent; Feb. 1 to June 15, 1915, Real Estate Agent.

**Aaron M. Harvey,** whose appointment as Signal Supervisor, Canadian Government Railways, Moncton, N. B., was announced in our last issue, was born at Champlain, Ill., Sept. 26, 1870, and entered railway service Nov. 1898, since when he has been, to Sept. 1900, fitter, Cleveland, Cincinnati, Chicago and St. Louis Ry., Galion, Ohio; Sept. to Dec. 1900, repair man, Toledo, St. Louis and Western Rd., Frankfort, Ind.; Jan. to July 1901, repair man, Chicago and Eastern Illinois Rd., Danville, Ill.; July 1901 to July 1902, foreman, Toledo, St. Louis and Western Rd., Frankfort, Ind.; July 1902 to July 1907, foreman, Chicago and Eastern Illinois Rd., Danville, Ill.; June 1907 to Dec. 1909, general electric maintainer, same road, Danville, Ill.;

Jan. 1910 to July 1915, General Construction Foreman, Railway Signal Co. of Canada, Lachine, Que.

**Archibald D. Watt,** who has been appointed District Locomotive Foreman, G.T. Pacific Ry., Prince Rupert, B.C., was born at St. Louis Station, Que., Mar. 5, 1874, and entered railway service July 3, 1890, since when he has been, to July 20, 1892, wiper, G.T.R., Montreal; July 20, 1892, to Aug. 16, 1897, fireman, G.T.R., Montreal; Aug. 30, 1897, to Sept. 12, 1902, locomotive driver, G.T.R., Montreal; Oct. 1, 1902, to Nov. 1, 1905, machinist, G.T.R., Point St. Charles Shops, Montreal; Nov. 10, 1905, to Nov. 20, 1906, Locomotive Foreman, Central Vermont Ry., St. Albans, Vt.; Dec. 1, 1906, to Dec. 15, 1907, Locomotive Foreman, Turcot, Que.; Jan. 1 to Dec. 31, 1908, Locomotive Foreman, G.T. Pacific Ry., Melville, Watrous, Sask., and Wainwright, Alta.; Jan. 1, 1909, to Mar. 10, 1910, Mechanical Foreman on construction work west of Edmonton, G.T.P.R.; Mar. 10, 1910, to Feb. 11, 1911, Locomotive Foreman, G.T.P.R., Prince Rupert, B.C.; Feb. 11, 1911, to June 30, 1915, General Foreman, G.T.P.R., Prince Rupert, B.C.

The question of a public memorial to the late **Walter Moberley**, civil engineer, is being discussed in Vancouver. During his lifetime two portraits were placed in public institutions, one in the Vancouver Museum, and a second in the Conservative Association's rooms, whilst one of the public schools in South Vancouver was named the Moberley School. A meeting was held in Vancouver June 29, under the chairmanship of G. R. Gordon, President of the Vancouver Pioneer's Society. It was stated that there was at the credit of the fund which was subscribed during his illness \$400, which could be utilized for the purposes of a permanent public memorial. F. C. Wade, K.C., G. R. G. Conway, M. Can. Soc. C. E., W. Burdes, A. K. Robertson and N. Robinson were appointed a committee to communicate with Sir Thos. G. Shaughnessy as to the placing of a memorial on the C.P.R. at Loggan, to represent Mr. Moberley's work on that line. Suggestions were also made as to a public memorial in Vancouver.

**J. F. Chapman,** Manager, Thousand Islands Ry. and Oshawa Ry., died at Gananoque, Ont., July 19, from heart disease, after an illness of a year, the latter half of which he had been practically confined to his home. The funeral took place at Gananoque, July 21. He was born at Frankford, Ont., Aug. 25, 1863. Having learnt telegraphy, he was appointed first agent of the northern extension of the Central Ontario Ry. at Frankford, and as the line was opened up, he was moved to other stations, being officially located at Coe Hill Mines, the northern terminus. On the closing down of the mines, he entered Bay of Quinte Ry. service, being from June, 1886, to Aug., 1890, chief clerk to General Freight and Passenger Agent, Deseronto, Ont.; Aug., 1890, to Jan., 1895, Superintendent Thousand Islands Ry., Gananoque, Ont.; Jan., 1895, to Jan., 1904, Assistant General Freight and Passenger Agent, Bay of Quinte Ry., Thousand Islands Ry., Oshawa Ry., and Deseronto Navigation Co., Deseronto, Ont.; Jan., 1904, to Jan., 1912, General Freight and Passenger Agent, same lines; Jan. 1912, until his death, Manager, Thousand Islands Ry. and Oshawa Ry.

**Compensation for Carrying Mails.**—Washington, D. C., press dispatch, July 18:—Claims against the Government aggregating \$10,880,865 were filed at the Court of Claims today by the seven New England railways, which allege that they have lost this sum in the past six years through carrying the mails under the present system of weights.

## The Interstate Commerce Commission Cannot Modify Baggage Rules

The following article is reproduced from Greater New York, which is published by the Merchants' Association of New York:—

Attention was called in some detail in Greater New York recently to the baggage regulations imposed by the railways in order to comply with the provisions of the Cummins amendment to the Interstate Commerce Act. In view of the great inconvenience inflicted upon the travelling public by the amendment, and the absence of any real public demand for the application of such a law to baggage and express shipments, the Traffic Bureau asked the Interstate Commerce Commission whether the commission by specific orders could not give the statute an interpretation under which a passenger would not be required to declare the actual value of baggage, except where the actual value was in excess of \$100 for weight of 150 lbs. or less, or 66 2-3 cts. per lb. where the weight was in excess of 150 lbs., and the passenger desired to insure with the carrier for the increased value. In response to this inquiry the Traffic Bureau is in receipt of the following advice:

"Referring again to the correspondence which has passed relative to the declarations of value in connection with checking of baggage under carriers' revised tariffs, I have to say that this matter has been fully considered by the commission, and the commission has directed me to say that the Cummins amendment is but an amendment to the act, which in common with all other portions of the act must be read in connection with other provisions thereof, and that where the carriers' tariffs provide for the declaration of value as a condition of shipment of forwarding the value declared should be the true value."

We are unable to see how a different ruling in this regard could be applied to the forwarding of baggage and to the forwarding of express packages. The Cummins amendment seems to have wiped out all released rates and all provisions therefor. As many of our members are perhaps unaware of the provisions of sec. 10 of the Act to Regulate Commerce, which must be construed in connection with the Cummins amendment, we quote therefrom an abstract of the portions of the section which relate to the duties of a shipper: "Any person, corporation, or company . . . who shall deliver property for transportation to any common carrier . . . who shall knowingly and wilfully, directly or indirectly, himself or by employe, agent, officer, or otherwise, by false billing, false classification, false weighing, false representation of the contents of the package or the substance of the property, false report of weight, false statement, or by any other device or means . . . obtain or attempt to obtain transportation for such property at less than the regular rate then established and in force on the line of transportation; or who shall knowingly and wilfully, directly or indirectly . . . by false statement or representation as to cost, value, nature, or extent of injury . . . knowing same to be false, fictitious, or fraudulent . . . obtain or attempt to obtain any allowance, refund, or payment for damage or otherwise in connection with or growing out of the transportation of or agreement to transport such property . . . whereby the compensation of such carrier for such transportation, either before or after payment, shall in fact be made less than the regular rates then established and in force on the line of transportation, shall be deemed guilty of fraud, which is hereby declared to be a misdemeanor, and

shall, upon conviction . . . be subject for each offense to a fine of not exceeding \$5,000 or imprisonment in the penitentiary for a term of not exceeding two years, or both, in the discretion of the court."

Inasmuch as the Interstate Commerce Commission in its administrative functions must be guided by the law, and as it cannot make administrative rulings at variance with the law, the only recourse apparently is the repeal or modification of the Cummins amendment. A good many controverted questions have arisen and more will probably arise under the amendment. By the time Congress assembles the desirability and necessity for some modification of its provisions will undoubtedly become apparent.

## National Transcontinental Railway Operation.

The most important feature of the operation of the National Transcontinental Ry. by the Dominion Government as part of the Canadian Government Railways, has been the starting of a tri-weekly through passenger service between Toronto and Winnipeg. The first train left Toronto Tuesday, July 13, at 10.45 p.m., for Winnipeg, arriving there on Thursday, July 15, about two hours late, the schedule time for arrival being 3.50 p.m. The first eastbound train left Winnipeg Sunday, July 18, at 5.15 p.m., and arrived in Toronto July 19 at 12.05 p.m. Westbound trains leave Toronto, Tuesdays, Thursdays and Saturdays. Eastbound trains leave Winnipeg, Sundays, Tuesdays and Thursdays.

The service is given by a combination of the G.T.R., the Ontario Government railway (the Timiskaming and Northern Ontario) and the National Transcontinental Ry. The total distance covered by the service is 1,257 miles, distributed as follows: G.T.R., Toronto to North Bay, 227 miles; Timiskaming and Northern Ontario Ry., North Bay to Cochrane, 253 miles; National Transcontinental Ry., Cochrane to Winnipeg, 777 miles. The points on the N.T.R. west of Cochrane at which the train stops, including flag stops, are: Jacksonboro, 512 miles; Fauquier, 530; MacPherson, 550; Mattice, 591; Hearst, 609 (junction with Algoma Central and Hudson Bay Ry.); Kabina, 631; Wilgar, 694; Grant, 734; KowKash, 777; Willett, 842; Armstrong, 866; McDougall's Mill, 987; Lake Superior Jct., 999; Graham, 1,005; Pyrites, 1,012; Quibell, 1,081; Redditt, 1,129; Minaki, 1,143; Dugald, 1,244; Winnipeg, 1,257, all these mileages being calculated from Toronto. The distance from Toronto to Winnipeg, on the C.P.R. via Sudbury, is 1,231.17 miles, and by the Canadian Northern Ry., now nearly ready for operation, it will be 1,229 miles.

The trains being operated in the new service consist of colonist sleeping cars, electric lighted first class coaches, tourist sleeping cars, dining car and standard sleeping cars. The rolling stock is being supplied for the present by the Canadian Government Railways and the Grand Trunk Pacific Railways, and Pullman sleepers are being used until the Government can provide its own.

The new service, which is named the National, is operated in conjunction with the Intercolonial Ry. Ocean Limited from Halifax to Montreal, the G.T.R. International Limited from Montreal to Toronto, and at the Fort Garry Station, Winnipeg, with the G.T. Pacific Ry. to Prince Rupert.

On the line in Quebec and Ontario, not previously operated over, except by contractors' trains, suitable services are being operated, new schedules having been put in operation July 11. Two trains a week each

way are being operated between Québec and Cochrane, 573.16 miles; and a two train a week service from Cochrane to Graham, 524.42 miles, in addition to the National Limited.

The lease of the G.T. Pacific Ry.'s Lake Superior branch from Lake Superior Jct. to Fort William, with its terminals, was signed in Ottawa, July 2. The rental is said to have been fixed at \$600,000 a year for 99 years. (July, pg. 256.)

## Grand Trunk Pacific Railway Construction.

The Saskatchewan Legislature has passed an act extending the time for the building of a number of branch lines, for which the province has guaranteed the bonds of the G.T. Pacific Ry., and of the G.T.P. Saskatchewan Ry., and also extending the time within which these companies may build terminals at Regina, Saskatoon and Moose Jaw, and certain railway bridges, for which the province is guaranteeing the bonds of the companies. While the act specially grants extensions in each case to Dec. 31, 1916, the Lieutenant-Governor in Council is given power to grant further extensions, not exceeding 12 months, if required.

The Board of Railway Commissioners has approved a revised location of the Biggar-Calgary branch, in s.e. ¼ sec. 23, and n.e. ¼ sec. 14, range 3, west third meridian, and amended location for Y turning out from branch at Loverne, Sask.

The company has deposited with the Minister of Public Works, Ottawa, description of site and plan of wharf and ware house proposed to be built in Burrard Inlet Vancouver harbor, in front of Block 1, subdivision of District Lot 196, Vancouver District, and is asking approval of the same. (July, pg. 256.)

**A. E. Doucet's Services Recognized.**—The Quebec Board of Trade, at its annual meeting recently, unanimously passed the following resolution in reference to A. E. Doucet, M. Can. Soc. C.E., who was District Engineer at Quebec during the location and construction of the National Transcontinental Ry.: "The board, in view of the completion of the National Transcontinental Ry., the great new highway from Quebec to Prince Rupert on the Pacific Ocean, takes this opportunity of expressing to A. E. Doucet, R.M.C., the chief engineer in charge of construction in the Province of Quebec, its high appreciation of the great services he has rendered to the City of Quebec and to the province, in having discovered and located the route by the valley of the St. and seaport, and that copies of this resolution be sent to Mr. Doucet, and also to the Prime Minister, the Minister of Railways, Maurice, which shortens the distance between tide water and Winnipeg by no less than 214 miles, secures an almost air line, and makes this great railway tributary to the City of Quebec as its summer terminus and the Postmaster General.

**The Canadian Overseas Railway Construction Corps**, which sailed from Montreal on the s.s. Herschell, June 14, and arrived at Plymouth, Eng., June 23, as previously announced in Canadian Railway and Marine World, is quartered in the Aldershot district with two companies of the Royal Engineers.

**The Grand Trunk Pacific Ry.** started on July 22 to burn fuel oil on its locomotives between Jasper and Prince Rupert, B.C., 719 miles. A fully illustrated description of these locomotives and of the oil storage tanks, etc., was published in the Canadian Railway and Marine World for May.

## The Western Passenger Rate Question.

The Interstate Commerce Commission, by Examiner Thurtell, opened an inquiry at Chicago, Ill., July 6, into the application of 15 Western railways for authority to increase passenger rates. The companies expect to be able to show by the evidence that the net operating income of the lines involved during the past seven years has been materially less than in the preceding seven. During the same period there has been an increase in the volume of business done, and in the amount of money invested in the undertaking. This results in a higher operating rate and naturally a lesser rate of return than has been maintained heretofore. The expenses of the companies have also been increased through the higher cost of labor and increased taxes. It is claimed, and evidence is being put in to show, that notwithstanding the economies effected, the increased volume of business has not been sufficient to meet the increased cost of operation, and that the present return upon the capital devoted to passenger service is less than 3%. The hearing will occupy some time, and it is not expected that there will be any finding for some months.

**The Public Service Corporation of Quebec** has been incorporated under the Quebec Companies' Act, with an authorized capital of \$3,000,000, to sell electric power in the City of Quebec, and surrounding area. The provisional directors include H. Murray, J. C. Smith, T. McDougall of the Shawinigan Water and Power Co., and M. L. Hersey, Montreal. It is reported that one of the objects of the company is to take over the Dorchester Electric Co.'s plant and franchise, which were sold by auction, June 30, in liquidation proceedings instituted by the Royal Trust Co. The purchaser was C. H. Brauchaud, Montreal, President of a committee of shareholders, the purchase price being \$100,000. It is said that the Shawinigan Water and Power Co. holds a majority of the Dorchester Electric bonds, and that the reorganization is to take place under its auspices. The S. W. and P. Co. has offered to its shareholders \$1,237,500 of new common stock, at par on the basis of one share of new stock to every 10 of the outstanding registered holdings at the close of business July 10, the right to subscribe expiring Aug. 30. The S. W. and P. Co. is building an electric railway at Three Rivers, Que., under the Three Rivers Traction Co.'s charter.

**A Canadian Northern Pacific Ry. Contract Suit.**—Proceedings were started in a British Columbia court, July 15, by Palmer Brothers and Henning, contractors, against the Northern Construction Co., the Cowan Construction Co., Mackenzie, Mann and Co., the Canadian Northern Pacific Ry., the National Trust Co., and the British Empire Trust Co., in an action to recover \$393,197 for work done. The two trust companies are made parties to the action as trustees for the bondholders, and it is sought to have the claim dealt with as a mechanic's lien and to have a declaration made that it takes precedence of the mortgage. The contractors carried out three subcontracts covering 53 miles of line, all of which appears to have been heavy work as the amount of the contracts worked out at: mileage 49 to 74.6, \$743,714; mileage 27 to 35, \$463,714, and mileage 405 to 424.50, \$1,008,276. There remained a balance outstanding of \$393,197 which it is now sought to recover.

**Shrinkage allowance in drop forging dies** usually amounts to 3-16 in. to the foot, but the practice varies.

## Reinforcing Wooden Frame Freight Cars on Intercolonial Railway.

By G. E. Smart, General Master Car Builder, Moncton, N. B.

Material is being arranged for reinforcing the first 500 freight cars. Three sample cars have been fitted up at Moncton shops with metal plates pressed so that the upper part can be bolted to the side of the centre sill and extend back 2 ft. behind the body bolster and notched out so that the buffing and pulling strains are distributed to the body bolster as well as to the centre sills. The lower portion forms the draught arm and is reinforced with angle irons on the outside and pressed steel plates rivetted on the inside to form the lugs for the draught gear. The draught arms are made 2 ins. longer than the present wood draught timber which permits more room between the cars and will provide more clearance between the end ladder or any other part of the end of the cars than the Board of Railway Commissioners or the Interstate Commerce Commission call for. All parts of this draught arm can be manufactured from plates, angles and material of standard sizes and shapes that can be manufactured in Canada.

The manner of application is as follows: The old wood draught timber and body bolster are removed, and serviceable ma-

Steel Reinforcing Member for Wooden Frame Freight Cars, Intercolonial Ry.

terial, such as couplers, springs, followers and bolts are utilized on the new metal draught arm to reduce the cost, as it is intended that all cars in the 17,000, 18,000, 19,000, 20,000 and 21,000 series will be equipped with the standard double springs 6½ x 8, using the 24 in. twin spring, and cars in the 60,000 and 80,000 series of numbers will be equipped with the double class G springs 8 x 8 and the large double pockets. It also has been arranged that the same draught timber bolts will be utilized in bolting the arms to the centre sills and in addition 11¼ in. bolts and two 1 in. bolts through the end sills for each draught arm, making a total of 48 bolts per car, or 72 bolts as against 24 formerly, and the additional strength from the plates notched out the full depth of the bolster and also the front end angle so as to butt up against the sill.

It is also intended to dispense with the wooden deadwood between cars and substitute a cast steel one in place of same, which will permit the two centre truss rods to pass through without lengthening the rods. At through the end sills of the deadwood at through the end sills of the dead wood at each end and by allowing them to pass through this steel deadwood block it will strengthen the end sill and stiffen up the draught gear by the weight of the car pulling on the point where the draught gear is pulling out against the end sill.—Can. Gov. Ry.'s Employees' Magazine.

## Great Northern Railway Lines in Canada.

**Vancouver Terminals.**—Under the original order the company was to complete the extension of its station on the False Creek property, Vancouver, at the corner of Prior St. and Park Lane by March, 1916. The company failed to file plans for the building and there were negotiations for a two years' extension on the part of the company, while the city proposed appealing to the Board of Railway Commissioners for an order compelling the immediate filing of plans. Ultimately the matter came before the Board upon an application of the company for a change of location of the station. The city did not offer any serious objection to the change, which would bring it alongside the proposed Canadian Northern Ry. station, so long as steps were being taken to go ahead with the building. In the evidence given it was stated that the company had about 800,000 cubic yards of filling yet to do on its portion of the flats which were being reclaimed. The order of the Board approves of the new location; directs the submission of preliminary sketches of the layout of the station and tracks at once; the filing of complete plans to follow in order; the letting of contracts for the building within six months from the date of order, and the completion of the whole work by June 1, 1917. The filling

work is to be expedited in order that these directions may be carried out

**The Canadian Society of Civil Engineers** has arranged for an excursion to the Pacific Coast, to leave Montreal about Sept. 15, going by special train over the Grand Trunk, Timiskaming and Northern Ontario, National Transcontinental and Grand Trunk Pacific Railways to Prince Rupert, B. C., thence by steamship to Victoria, where three days will be spent. One or more days will be spent in Vancouver, and the return trip will be made over the C. P. R. from there. Short stops will be made at Winnipeg and Edmonton on the westbound journey, and at Calgary on the return journey. At Victoria there will be a garden party at Government House, motor drives, a dinner and one or two meetings.

**Wentworth St. Incline Ry., Hamilton.**—Plans for the extension of the Wentworth St. Incline Ry. in Hamilton, Ont., under the G. T. R. tracks, and to the level of the Toronto, Hamilton and Buffalo Ry. tracks, were before the Board of Control recently. It was recommended that the City approve of the plans, and take steps in conjunction with G. F. Webb, owner of the incline railway, to have the same approved by the Ontario Railway and Municipal Board, and the Board of Railway Commissioners, leaving it to the latter to apportion the cost of the improvement. (April, pg. 148.)

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, Telegraph, and Railway and  
Canal Contractors' Interests.  
Official Organ of the various Canadian  
Transportation Associations.  
Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,  
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A.Can.Soc.C.E.,  
Managing Director and Editor-in-Chief.  
AUBREY ACTON BURROWS - Secretary and  
Business Manager.

United States Business Representative, A. FENTON WALKER  
143 Liberty Street, New York, N.Y.

European Business Representative - J. MEREDITH MCKIM  
18 Regent St., London, S.W., Eng.

Authorized by the Postmaster General for  
Canada, for transmission as second class mat-  
ter.

Entered as second class matter, July 25, 1913,  
at the Postoffice at Buffalo, N.Y., under the  
Act of Congress of March 3, 1879.

SUBSCRIPTION PRICE, including postage  
anywhere, \$2 a year.

SINGLE COPIES, 20 cents each, including  
postage.

The best and safest way to remit is by express  
money order. Where one cannot be obtained, a  
post office money order, or bank draft, payable  
at par in Toronto, may be sent. Cheques or  
drafts not payable at par in Toronto cannot be  
accepted. Remittances should be made payable  
to Canadian Railway and Marine World.

## The Late Sir Sandford Fleming.

Sir Sandford Fleming, K.C.M.G., died at his summer home at Halifax, N.S., July 22, after a short illness. He was born at Kirkcaldy, Fifeshire, Scotland, Jan. 7, 1827, and was educated in Scotland, where he studied surveying and engineering. He came to Canada in 1845, and later joined the engineering staff of the Northern Ry., Toronto, of which he was appointed Chief Engineer in 1857. He subsequently engaged in private practice as a member of the firm of Fleming, Ridout and Schreiber. In 1863 he was chosen by the people of the Red River settlement, now incorporated in the Province of Manitoba, to proceed to England to urge the Imperial authorities to open railway communication between Red River and eastern Canada. On his return, he was appointed by the Governments of Canada, Nova Scotia and New Brunswick, in conjunction with the British Government, to conduct a survey for the first link of a railway to extend from the Atlantic to the Pacific, on British territory. Of a section of this railway, the Intercolonial, he was Chief Engineer during location and construction. In the meantime, in 1871, he was appointed Engineer in Chief to carry on the surveys for the Canadian Pacific Railway. In 1872 he headed an expedition which proceeded through the Rocky Mountains by the Yellowhead Pass. While engaged on the Intercolonial Ry., and in the exploring operations for the Canadian Pacific Railway, between Ottawa and British Columbia, he carried on, at his own expense, an examination of Newfoundland, to ascertain the possibility of establishing a railway service across the island. After the engineer engaged by him reported satisfactorily, he was thanked by the House of Assembly, and charged by the local government to conduct a railway survey from St. John's to St. George's Bay. The outcome of that survey is the road now built and operated by the Reid Newfoundland Co. In 1880 he retired from the Dominion Government service, at which date the transcontinental surveys had established the practicability of the proposed railway to the Pacific and the means of overcoming the formidable barriers. Construction was then being proceeded with at both ends, and between Lake Superior and Manitoba, in all over 2,000 miles, some 600 miles of which was practically completed.

After his retirement from Government service, he devoted himself to special branches of science and literature, and in lending his assistance to the Government in an advisory capacity in various departments of public service. In 1883, when in England on a visit, he was asked by cable to assist in the establishment of the Canadian Pacific Ry. by its present route through the Rocky Mountains, and he immediately returned to Canada for that purpose, and made the first through journey from ocean to ocean, in advance of the rails, his experiences being embodied in a book entitled "From Old to New Westminster." He gave considerable time and study to the question of universal time, his efforts having contributed in no small degree to the adoption of an initial meridian common to all nations. He also studied and made a specialty of an all British cable service, of which the Pacific cable is the first section. In 1879 he submitted to the Canadian Government a scheme for spanning the Pacific Ocean by electric cable, which, in connection with the overland telegraph would complete the electric girdle of the globe, and bring Great Britain, Canada, Australia, New Zealand, India and South Africa into unbroken telegraph touch of each other without passing over foreign soil, and since that

date he has consistently advocated the establishment of such a work. He contributed a number of papers to various scientific and political societies, and wrote several books dealing with his unique experiences in railway location and construction in Canada, which stand as authorities on all points, geographical, geological and engineering. In recognition of his services he was created a Companion of the Order of St. Michael and St. George in 1877, and a Knight Commander of the same order in 1897, and at different times has been presented to the present and the two previous monarchs. He was elected an honorary member of the Canadian Society of Civil Engineers in 1908, and was also a member of the Institute of Civil Engineers, England, and of the American Society of Civil Engineers, a Fellow and Past President of the Royal Canadian Society, Canadian Landmarks Association, Royal Conservation Commission, director Hudson's Bay Co., director C.P.R., Honorary President Canada Cement Co., Fellow of the Geological Society of the Victoria Institute, Royal Historical Society, Royal Geographical Society, and numerous other business, philosophical and social organizations. He has been variously spoken of as one of the most public spirited Britons the Empire ever produced, and as one who could look back upon a life of great and varied usefulness. The funeral, which took place at Ottawa, July 24, was largely attended by representatives of organizations with which he had been connected and by the general public.

**The Pennsylvania Rd. test department,** which was opened in 1874 in a small way, has since made as many as 120,000 tests in one year, at a cost of about 0.6% of the material purchased by the railway.

**Locomotives overhauled for the first time** are said to be in better condition than when first received, as any weak points that have been developed are often changed at that time.

**The Canadian Ticket Agents Association's** 29th annual gathering will be held at Denver, Col., October 18 to 21, both inclusive, the date having been changed so as not to conflict with the Travelling Passenger Agents Association's meeting in Boston.

**The Canadian Northern Ry.** has again operated in Alberta this year, at its own expense, under the Provincial Agriculture Department's auspices, a special agricultural demonstration train. Reduced rates are given from all stations within twenty-five miles of the points at which the train stops for lecture purposes.

**The Marine Department** has issued a notice to all mariners advising as to the necessity of keeping a sharp lookout and reporting any suspicious craft which they may sight. Small fishing and coasting vessels are particularly urged to report any such craft to the nearest customs officer for transmission by telegraph on the east coast to the Captain in charge at the Halifax dock yard and on the west coast to the Superintendent of the Esquimalt dock yard. Definite facts only are to be reported, and not hearsay evidence.

## SITUATION VACANT.

Situation for experienced electrician as Foreman and Assistant Superintendent of Light, Power, Telephone and Railway lines; construction, installation, maintenance in each department. State experience, references, salary expected, and when services available. Secretary, Public Utilities Commission, City of Port Arthur.

## Transportation Appointments Throughout Canada.

The information under this head, which is derived entirely from official sources, is given with the greatest care, so as to ensure absolute accuracy. Anyone who may have any error in our announcements will confer a favor by advising us.

**Canadian Government Railways.**—B. A. BOURQUE has been appointed Assistant to the Comptroller and Treasurer. Office, Moncton, N.B.

F. W. WHELPLEY is reported to have been appointed Assistant to the Treasurer. Office, Moncton, N.B.

**Canadian Northern Ry.**—E. D. TOYE, Division Storekeeper, Ontario Grand Division, has had his office moved from Toronto to Trenton.

A. W. MARTIN has been appointed City Ticket Agent, Port Arthur, Ont., vice J. R. McDonald, deceased.

C. D. FRENCH is reported to have been appointed storekeeper, Humboldt, Sask., vice S. K. Moorcroft, promoted.

**Canadian Pacific Ry.**—A. C. DOUGLAS, Purchasing Agent, Vancouver, has been transferred to Montreal temporarily to discharge the duties of Assistant General Purchasing Agent, while E. Fitzgerald is assigned to British War Office Service for the purchase of supplies.

L. A. CLEARY has been appointed General Foreman with supervision over the back shop and roundhouse, McAdam, N. B., vice W. Wells, transferred.

W. H. FLETCHER has been appointed District Master Mechanic, District 1, Lake Superior Division, C.P.R., vice L. G. Roblin, resigned to enter Canadian Government Railways service. Office, North Bay, Ont.

J. WEEGAR, heretofore Travelling Freight Agent, Eastern Manitoba, Winnipeg, has been appointed District Freight Agent, Fort William, Ont., vice G. Hiam, who has volunteered for active service in Europe.

W. A. LOWE has been appointed Travelling Freight Agent, Manitoba Division, with territory covering main line and branches, Neebing to Ninga, Banting, Douglas, Moorepark and Harrowby inclusive, vice J. J. Weegar, promoted. Office, Winnipeg.

J. F. EARL has been appointed Roadmaster, Emerson and La Riviere Subdivisions, Winnipeg, Man., vice J. F. Larson, appointed section foreman, Winnipeg-Terminals.

A. DESHARNAIS has been appointed Roadmaster, Coutts, Cardston and Stirling subdivisions, not A. Deharnais as stated in our July issue. His office is at Lethbridge, Alta., not Langton as stated in our July issue.

JOHN McRAE, heretofore Shop Foreman, Kamloops, B.C., has been appointed Locomotive Foreman, North Bend, B.C., vice C. Brown, who has left the service. The position of Shop Foreman at Kamloops, we are advised, will not be filled at present.

**Central Vermont Ry.**—The handling of freight claims has been transferred from the Freight Department, and fire, damage and injury claims from the Legal Department, to the Auditing Department.

S. S. RUSSELL, heretofore Special Agent, has been appointed Claims Agent, and all correspondence in regard to loss, damage and overcharge claims, claims for fire, damage and injury are addressed to him. Office, St. Albans, Vt.

**Dominion Atlantic Ry.**—D. J. MURPHY, Sr., Roadmaster, will have charge of bridges and buildings, vice H. Bailey, whose services were secured during the erection of a number of large steel bridges, which is now completed, and who has left the service. Office, Kentville, N.S.

**Edmonton, Dunvegan and British Columbia Ry.**—Following are the officials of this

company,—President, J. D. McArthur, Winnipeg; Secretary-Treasurer, J. K. McLennan, Edmonton, Alta.; Assistant Secretary-Treasurer, D. W. Campbell, Winnipeg; General Manager and Chief Engineer, W. R. Smith; Traffic Manager and Purchasing Agent, A. Campbell; Superintendent, R. M. Halpenny; Master Mechanic, R. Weit, and Accountant, D. A. Pennicuik, Edmonton, Alta.

**Grand Trunk Pacific Ry.**—G. E. DECKER has been appointed Car Foreman, Repair Yard, Transcona, Man., vice J. Reeves, assigned to inspector.

H. G. PEPPER, formerly Manager, Majestic Hotel, New York, has been appointed Manager, The Fort Garry, G.T.P.R., Winnipeg.

H. R. SIMPSON, heretofore Road Foreman, Jasper, Alta., has been appointed General Locomotive Foreman, with jurisdiction from west switch at Watrous to Winnipeg, including intervening branch lines, reporting to H. McCall, Superintendent.

J. ABBOTT, heretofore Chief Dispatcher, Regina, Sask., has been appointed Chief Dispatcher, Melville, Sask., vice M. D. Thompson, assigned to other duties, and his former position has been abolished.

W. G. McCONACHIE, heretofore Road Foreman, Edmonton, Alta., has been appointed General Locomotive Foreman, with jurisdiction from west junction switch, Edmonton, to the west switch at Watrous, including intervening branch lines, reporting to N. B. Walton, Superintendent.

G. H. LAYCOCK, heretofore Locomotive Foreman, Endako, B.C., has been appointed Locomotive Foreman, Jasper, Alta., vice D. W. Hay, transferred.

J. A. MILLER has been appointed Locomotive Foreman, Endako, B.C., vice G. H. Laycock, transferred.

A. H. MAHAN, heretofore Locomotive Foreman, Prince George, B.C., has been appointed General Locomotive Foreman, with jurisdiction from Prince George to west switch, Edmonton, including intervening branch lines, reporting to J. P. Kirkpatrick, Superintendent.

D. W. HAY, heretofore Locomotive Foreman, Jasper, Alta., has been appointed Locomotive Foreman, Prince George, B.C., vice A. H. Mahan, promoted.

A. WATT, heretofore General Foreman, Prince Rupert, B.C., has been appointed General Locomotive Foreman with jurisdiction over territory from Prince Rupert to west switch, Prince George, B.C., reporting to J. H. Todd, Superintendent.

W. G. CONNOLLY, heretofore in the city ticket office, Vancouver, B.C., has been appointed City Passenger and Ticket Agent there, as reported in our last issue.

The following station agents have been appointed,—Elie, Man., A. Fullum; Landis, Sask., A. Lerner; Lebert, Sask., F. X. Landry; Battleford, Sask., R. L. Harrop; Edgerton, Alta., F. H. Keefe; Trichu, Alta., H. B. Briggs; Beiseker, Alta., H. E. Frank.

**Grand Trunk Ry.**—W. H. ARCHER has been appointed Locomotive Foreman, Palmerston, Ont., vice J. A. Walton, transferred.

The following station agents have been appointed,—Admaston, Ont., (passenger), A. A. McIntyre; Suspension Bridge, N.Y., (passenger), C. P. Brohmann; outside agency, Windsor Hotel, Montreal, A. M. Robert.

G. H. BROWN, heretofore Soliciting Freight Agent, Chicago, Ill., has been appointed Commercial Agent, Omaha, Neb., vice J. Waugh, transferred.

J. WAUGH, heretofore Commercial Agent, Omaha, Neb., has been appointed Commercial Agent, San Francisco, Cal., vice F. H. Lord, resigned.

**Inverness Railway & Coal Co.**—J. McGILLIVRAY, heretofore General Manager, has been appointed Receiver and Manager by a Nova Scotia court, on the application for the trustees for the bondholders, the interest on the bonds being in default.

**Lehigh Valley Rd.**—G. H. LEE, heretofore General Passenger Agent, District 3, Chicago, Rock Island and Pacific Ry., St. Louis, Mo., has been appointed General Passenger Agent, L.V.R., vice G. W. Hay, resigned. He reports to the General Traffic Manager. Office, New York.

**London and Port Stanley Ry.**—W. GUY, whose appointment as Traffic Manager, was announced in our last issue, has resigned for personal reasons, and has returned to Pere Marquette Rd. service.

J. J. CALLAGHAN, Superintendent of Transportation, Montreal and Southern Counties Ry., Montreal, has been appointed Manager of Operation, L. & P. S.R., with office at London, Ont.

F. T. LEVERSUCH, heretofore Freight and Ticket Agent, Michigan Central Ry., Windsor, Ont., has been appointed Traffic Manager, L. & P.S.R. Office, London, Ont.

**Michigan Central Rd.**—T. EVANS, heretofore Local Freight Agent, London, Ont., has been appointed General Agent there, representing both freight and passenger departments.

**National Transcontinental Ry.**—The Dominion Government having assumed the operation of the National Transcontinental Ry. and the Lake Superior Branch of the Grand Trunk Pacific Ry. between Fort William, Ont., and Winnipeg, Man., the following officers of the G.T.P.R., will, until otherwise announced, also represent, in their respective capacities, the Canadian Government Railways, with jurisdiction over the line between Fort William and Winnipeg,—A. E. Rosevear, General Freight Agent; F. R. Porter, Assistant General Freight Agent; F. G. Adams, Division Freight Agent; W. E. Duperow, Assistant General Passenger Agent; W. J. Quinlan, District Passenger Agent; T. E. P. Pringle, City Passenger Agent, and E. McDonald, District Baggage Agent, all with offices at Winnipeg.

C. E. Brooks, acting Superintendent of Motive Power, G. T. Pacific Ry., Transcona, Man., has issued a notice, as follows,—“Commencing July 1 the Dominion Government has taken over the operation of the Transcona roundhouse and roundhouses, shops, and work pertaining to this department, between Winnipeg and Westfort, Ont. The supervision of all employees engaged on this section of the road will be in the hands of the G.T.P.R. officials until such time as the Dominion Government appoints its own staff, or takes over the present staff.”

**Wabash Rd.**—L. J. FERRITOR, formerly Superintendent, Chicago and Alton Rd., has been appointed personal representative of E. F. Kearney, President, Wabash Rd., in charge of affairs in Canada. Office, Buffalo, N.Y.

S. E. COTTER, heretofore General Superintendent, St. Louis, Mo., has been appointed General Manager for the Receivers, in charge of operation and maintenance. Office, St. Louis, Mo.

R. H. HOWARD has been appointed Chief Engineer Maintenance of Way, in charge of the Maintenance of Way and Signal Departments, and Superintendents and Signal Engineers will report to him. Office, St. Louis, Mo.

The best results in locomotive operation will, it is claimed, be obtained when there are enough travelling engineers to make it possible for them to ride at least once a month on every locomotive under their surveillance.

## Canadian Northern Railway Construction, Betterments, Etc.

**Canadian Northern Ry.**—The question of the link in Port Arthur, Ont., to connect the C.N. Ontario Ry. from eastern points, with the C.N.R. to Winnipeg and the west, was under discussion between representatives of the company and the City Council July 9.

M. H. MacLeod, General Manager, is reported to have stated that there are a number of gangs working on the lines west of Winnipeg improving the roadbed and in general fixing up work. There is a little construction work being done. Twelve cars of steel have been delivered in the Saskatoon yards for the Elrose line, on which it is expected to lay 35 miles of track this year.

A number of cargoes of steel rails are reported to be due at Port Arthur for transfer to western points.

The Saskatchewan Legislature has passed an act extending the time until Dec. 31, 1916, and authorizing the Lieutenant Governor to grant further extensions as required, "but for no longer period than one year," for the building of all the branch lines agreed to be built under guarantee of bonds by the province.

Replying to questions in the Saskatchewan Legislature recently, the Minister of Railways said the Government was pressing on the company the necessity of completing its Radville-Moose Jaw line near the latter city, and hoped that the work would be completed so as to allow farmers to make use of the terminal elevator there this season.

The Board of Railway Commissioners has authorized the opening for traffic of the line from Melfort, southerly to St. Brieux, Sask., 22 miles.

M. H. MacLeod, General Manager, arrived in Edmonton, July 14, on the return to Winnipeg after a trip of inspection of the whole line. He is reported to have during his trip made an inspection of the country between Battleford, Sask., and Oliver, Alberta, with a view of deciding on a general location for the balance of which is at present called the Oliver-St. Paul line. Considerable progress is reported to have been made with the grading on the 40 mile section for which D. F. McArthur has the contract. It is reported that the remainder of the distance to St. Paul will be put under contract this year.

The line to the Grand Prairie country branches off from the transcontinental line at Onoway, and the railhead is at present at Sangudo on the Pembina River, 65 miles from Edmonton. A bi-weekly service is being given. Grading is completed from the Pembina to the McLeod River, and it is expected to lay the steel on this section during this year. The location of the extension from the McLeod River crosses the Athabasca River at Chaissons Crossing, and then runs west by north to the Little and Big Smoky Rivers, and on to the Grand Prairie country.

It is reported that grading is being proceeded with on the line from Calgary to MacLeod, in Southern Alberta, and that it is expected the line will be ready for track-laying by the end of the year.

**Canadian Northern Pacific Ry.**—Sir William Mackenzie, President, is reported to have said in an interview in Toronto, June 30, that satisfactory work is being made with the work of providing the necessary station and terminal facilities on the line in British Columbia, and that it is expected that by the autumn conditions will allow of the inauguration of a train service of a permanent character. The line, he is reported to have added, has cost on the average more than twice the amount of the

bonds guaranteed by British Columbia. In the building of railways it is necessary to organize subsidiary companies in order to more expeditiously carry on certain portions of the work. On completion of the contracts the various properties are handed over to the parent company. All the terminals and bridges on the line are owned by the C.N.P. Ry. A part of the company's terminal work has already been provided, but the major portion of the guaranteed terminal funds remain intact, and will not be used until circumstances for more rapid construction are favorable and the need of the facilities is more acute.

It was reported June 30, that with the exception of strips, aggregating 75 miles, on which some ballasting had to be done, the line was practically completed. The unfinished sections include 35 miles between Lytton and Kamloops, and 40 miles between mileage 110 and Albreda Summit.

Work is reported to be in progress on the station buildings at Langley, Matsqui, Rosedale and Lytton, and preparations are being made for starting work on the locomotive houses at Boston Bar and Kamloops. These are the first two divisional points east of Port Mann, the other divisional points on the line are at Blue River and Lucerne, the latter being five miles west of the Yellowhead Pass. R. W. Graham is reported to be in charge of the building work. (July, pg. 259.)

## British War Office Purchases in Canada.

Since early in April a specially organized division of the C.P.R. General Purchasing Department has been handling British War Office purchases in Canada for practically all lines of goods required except explosives, shells and parts thereof, forage, and fodder. Since the return of Sir Thos. G. Shaughnessy, President of the C.P.R., from England recently, the purchasing operations have been extended considerably, and he has placed in charge of them E. Fitzgerald, Assistant General Purchasing Agent, C.P.R., who has established himself in room 114, on the lower floor of the Windsor St. station, Montreal, where he has a large space. He has manned his staff exclusively from the C.P.R. General Purchasing Department, one of the best organized on the whole American continent; and an organization has been perfected which would not have been possible otherwise. Practically all purchases are being made direct from the manufacturer or producer, and the best prices possible are therefore being obtained without the intervention of middlemen. The purchasing is to be carried on entirely independent of the C.P.R. All orders are given on War Office Service, and payments are made through the Bank of Montreal.

**Calgary Municipal Ry.'s Record.**—Calgary, Alta., press dispatch, July 6: "The municipal street railway system completed six years of service yesterday. It commenced business six years ago with one mile of track and two cars. The system has grown in that time to 71 miles of track and 90 cars, representing the investment of \$2,500,000. It has increased the employees from 12 to 275. The system has set aside profits for contingencies averaging \$55,000 a year."

**Toronto Suburban Ry.**—It is said that the Hydro Electric Power Commission of Ontario, in addition to negotiating for the purchase of the Chatham, Wallaceburg & Lake Erie Ry., as referred to on another page, is also trying to secure the Toronto Suburban Railway's nearly completed line from Toronto to Guelph, another Mackenzie-Mann enterprise, and to include the same in the Ontario hydro electric railway system.

## Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,504,300	\$1,163,800	\$340,500	x \$83,800
Aug.	1,367,700	1,123,000	244,700	x 163,900
Sept.	2,109,900	1,519,000	590,700	65,800
Oct.	1,895,300	1,332,100	563,200	x440,900
Nov.	1,670,200	1,123,100	547,100	x177,000
Dec.	1,329,100	908,000	423,100	200,900
Jan.	950,800	773,000	177,800	x175,100
Feb.	1,105,100	823,700	281,400	42,800
Mar.	1,379,000	956,000	423,000	62,600
Apr.	1,429,000	940,000	489,000	74,800
May	1,193,900	871,000	322,900	x158,700
	\$16,024,300	\$11,530,900	\$4,493,400	x\$1,395,000

Decr. \$4,573,400 \$3,337,100 \$1,236,300 .....  
x Decrease.

Approximate earnings for June, \$1,201,300, against \$1,655,300 for June, 1914, and for two weeks ended July 14, \$537,900, against \$737,000 for same period 1914.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$10,481,971.72	\$6,703,525.89	\$3,778,445.83	\$383,347.35
Aug.	8,917,764.38	6,554,606.68	2,363,157.70	597,981.54
Sept.	10,754,139.67	6,387,091.28	4,367,048.39	45,530.30
Oct.	9,282,923.49	5,361,600.13	3,921,323.36	2,281,529.43
Nov.	8,057,358.89	5,413,286.72	2,644,072.17	2,244,173.89
Dec.	7,443,962.43	5,244,438.62	2,199,523.81	2,027,297.90
Jan.	6,109,026.94	4,968,793.64	1,140,233.30	140,059.24
Feb.	6,735,678.49	4,756,663.87	1,979,014.62	507,438.16
Mar.	7,852,989.67	4,879,974.94	2,973,014.73	x126,224.14
Apr.	7,455,859.54	4,768,104.33	2,687,755.21	657,109.81
May	7,261,495.63	4,818,493.44	2,443,002.19	x520,009.52

\$91,353,175.85 \$60,256,579.54 \$30,896,596.31 x\$8,193,706.47  
Dec. \$28,407,226.92 \$20,213,520.45 \$8,193,706.47 .....

xDecrease.  
Approximate earnings during June, \$6,990,000, against \$9,561,000 for June, 1914. During June the mileage was increased to 12,921.

Approximate earnings for two weeks ended July 14, \$3,301,000, against \$4,628,000 for same period 1914.

## Grand Trunk Railway Earnings, Etc.

The following figures show the earnings for the G.T.R. (including the Canada Atlantic Ry.), the G.T.W.R. and the D.G.H. & M.R. for May:

Grand Trunk Railway.	
Earnings	\$3,234,900
Expenses	2,183,900
Net earnings	\$1,051,000
Grand Trunk Western Railway.	
Earnings	\$576,400
Expenses	570,400
Net earnings	\$6,000
Detroit, Grand Haven and Milwaukee Ry.	
Earnings	\$204,000
Expenses	239,700
Deficit	\$35,700

Approximate earnings for June, \$4,403,613, against \$4,543,686 for June, 1914, and for two weeks ended July 14, \$1,979,907, against \$2,120,878 for same period 1914.

## TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to June 30:

	1915	1914	Incr.	Decr.
G.T.R.	\$18,507,573	\$20,349,529	.....	\$1,841,956
G.T.W.R.	3,470,230	3,453,633	\$25,597	.....
D.G.H.&M.R.	1,203,805	1,177,702	26,103	.....
Totals	\$23,181,608	\$24,980,864	.....	1,799,256

## Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section and Lake Superior Branch, 1,104 miles, for June, were \$270,241, against \$427,103 for June, 1914. Aggregate earnings from Jan. 1 to June 30, \$1,701,938, against \$2,482,511 for same period 1914.

An arrangement is reported to have been completed under which practically the whole of the product of the U. S. fisheries in Alaska waters will be sent over the Grand Trunk Pacific Ry. from Prince Rupert, B.C.

## Railway Finance, Meetings, Etc.

**Grand Trunk Western Ry.**—The Michigan Railway Commission has authorized this company, which is the G.T.R. organization east of the St. Clair River, to issue bonds for \$5,000,000 to cover expenditures amounting to \$5,000,000 for betterments already made and rolling stock purchased.

**Pere Marquette Rd.**—The junior bondholders are reported to have put in a claim for the Lake Erie and Detroit River Ry., which is the Canadian portion of the company's system, on the ground that it is not included in the mortgaged property. It is expected that the courts will, at an early date, order a sale of the property.

**Inverness Ry. & Coal Co.**—At Halifax, July 6, on the application of the National Trust Co. of Toronto, trustee for the holders of \$3,000,000 I. R. & C. Co.'s bonds, interest of which is in default, J. McGillivray, General Manager of the company, was appointed by the court as Receiver and Manager, with authority to receive amounts owing to the company and to carry on the work for the present.

**Pere Marquette Rd.**—A decree for the sale of the Pere Marquette Rd. was signed by Judge Tuttle at Detroit, Mich., July 22, and the date for the sale fixed as Nov. 15. The reserve price is stated to be \$41,000,000, and a combination of underlying bond and consolidated mortgage holders will, it is said, buy in the road. The actual price to be paid in is \$12,000,000, the amount owing to the court.

**White Pass and Yukon Route.**—Gross earnings from Jan. 1 to May 31, \$139,062 against \$176,254 for same period 1914.

## Grand Trunk Railway Betterments, Construction, Etc.

**Alexander, Ont.**—The G.T.R. station and restaurant at Alexandria, Ont., were destroyed by fire July 14, by sparks from a locomotive. The buildings were of frame and were erected over 30 years ago. The erection of a new station, which has been talked of for some time, will now be taken in hand immediately.

**Brantford, Ont.**—H. E. Whittenburger, General Superintendent, had an interview recently with representatives of the city council respecting sidings and other matters, including the betterment of the freight service at Paris.

**Port Huron, Mich.**—The G.T.R. freight sheds along the St. Clair River, Port Huron, Mich., were destroyed by fire, July 6. The total loss, including 22 freight cars, and freight in store and transit is placed at \$300,000. (July, pg. 257.)

## The Canadian Autobus Company and Its Montreal Franchise.

The city legal department advised the Montreal Board of Control July 9, "that the city cannot, in virtue of the powers it possesses, guarantee the Canadian Autobus Co.'s obligations. The opinion went on to state that to give the guarantee "it would be necessary to obtain the authorization of the Legislature," and that after deciding to give the guarantee "this decision could only become operative when it had been ratified by the Legislature." The department further reminds the Board "that the case concerning the annulment of the bylaw and of the contract between the city and the company is at present before the Supreme Court."

## The Jitney Situation in Canada.

There are signs all over Canada that the popularity of the jitney is waning, and that even with moderate regulations, jitneys cannot be profitably operated. Outside the larger cities where there are electric railways, there have been few attempts to operate jitneys, and these have been mainly to meet temporary conditions.

The jitney has practically disappeared from Montreal, one of the city papers stating July 9: "Search as you may one cannot be found." The management of the Montreal Jitney Association refused to make any statement on the matter, but the newspaper referred to stated that the cause for its disappearance was that the car owners, after a few days running on a route, "discovered" that they owned the car, and that as soon as a party of tourists came along they were ready to take them anywhere, and the schedule on the routes went all to pieces. An attempt was made to patch up a truce, but the new arrangement only lasted for a day or two, and now everything is apparently at an end.

The jitney situation in Toronto is constantly changing so far as the men engaged in the business are concerned. One statement made is that few men are making anything out of it, and that a considerable number are losing. The wear and tear on cars is reported to be heavy, and owners of single cars get out of the business as soon as they find that there is not "large" money in it. The total number of jitneys in the business is about the same, but they are running on a larger number of routes, and there is not the congestion of traffic on Yonge St. and other central routes that prevailed in June. The city bylaw as to the traffic was finally passed, with the section fixing the license fee at \$1 per seat a year. The Toronto Jitney Association has taken out a bond of \$10,000 for insurance against accident, in place of the \$1,000 for each car called for by the regulations. Under the bond the insurance company will pay up to \$1,500 for each person in an accident, but not more than \$10,000 for any one accident.

The Hamilton, Ont., City Council has finally passed a jitney bylaw. Under it the cars are described as "licensed omnibuses"; the license fee is fixed at \$2 a year for each seat, exclusive of the driver's seat; the cars must not be used in the owner's private business, or as taxicabs; and must be kept clean, dry and in good order; must be provided with safety appliances; they shall not be operated on Sundays, and while they are being operated the drivers must not smoke. Other regulations set out the procedure for the granting of licenses; a restriction of area within which the cars may not be stopped, etc. Counsel for the jitney owners is reported to have informed the police commissioners recently that the owners are having a mighty hard time of it. They are not making money hand over fist as many people believe, but on an average not more than \$7 a day is taken by each car. Out of this amount the driver must be paid and also the expense of operation and upkeep of the car. Some of the jitney owners say that the city should not ask more than 8% of the receipts, the same as the Hamilton St. Ry. pays, and puts forward as one reason for a percentage of receipts instead of an annual fee, that the jitney service at its best will only be an eight months one.

The Galt, Ont., Town Council passed a by-law, July 5, fixing a license fee of \$20 a year for carrying on the business of using autos for hire, with a charge of \$5 extra for a second or any further cars so used.

There has been a considerable diminution of the number of breaches of the traffic

bylaw in Winnipeg, owing to the vigilance of the police. One case in particular has attracted some attention. Two men were brought up charged with refusing to pay taxicab rates, the driver alleging that they had taken the car by the hour and that it was no longer a jitney. The magistrate refused to consider this claim, on the ground that the driver was licensed to run a jitney, and could not run it as a taxi, when he saw a chance of getting a higher rate from his customers.

One of the reasons which has prevented the rapid development of the jitney business in Saskatchewan has been the fact that the Legislature has increased the fees for autos from a registration fee of \$10 and an annual fee of \$3 for all types of car, to a registration fee of \$10 and an annual payment of \$10 for cars under 30 h.p., and a registration fee of \$15, and an annual payment of \$15 for cars over 30 h.p. There are about 10 cars in operation in Regina at a 5c. fare, but it is not thought that the competition with the municipally owned electric railway can be maintained for long at this fare. The Saskatoon City Council has framed a bylaw as to jitney traffic, which is waiting final action. The regulations are framed on the bylaws in operation elsewhere, but contains several special sections having for their object the protection of the interests of the municipal railway. These sections provide that jitneys shall not pick up traffic nearer than two blocks from the terminal points of the railway, and that no jitney shall run alongside the street car line on unpaved streets for more than one block. The owner of the first jitney in Saskatoon has gone out of business, and E. G. White, the man who is now running it, is reported to have said: "If the bylaw goes through in its present shape it will be absolutely out of the question for any jitney to attempt to make expenses." The Saskatoon Phoenix, in commenting on the bylaw, July 12, said: "The jitney as a commercial proposition is a failure in the west. Even now at rates which are equivalent to double that of the street car service, in the sense that for the same fare only one half of the distance is covered, the jitney is not profitable in the business sense of the word. . . . The jitney will doubtless disappear. . . . as the cars get worn out, for allowance for depreciation, wear and tear, does not figure in the jitney owner's bookkeeping. He gets wages out of his car and that is all; he is consuming his capital. . . . The amount which the jitney takes out of the street car revenue is a mere bagatelle."

The insurance companies in Vancouver have cancelled the joint car bond issued under the jitney bylaw, and the car owners now have to take out individual bonds. A number of drivers have been fined nominal sums for various breaches of the bylaws, and a warning was given that regulations would be rigidly enforced and the maximum penalties inflicted.

In Victoria, B.C., there is no civic regulation of the jitney traffic, the only regulation being the rules of the Victoria Jitney Association, which controls the business. The city council has been urged to adopt regulations, but has always refused, the third attempt to draw up a bylaw having been defeated June 29.

**London Train Service.**—It is announced that owing to the electrification of the London and Port Stanley Ry., operating between London and Port Stanley, Ont., the train service hitherto operated by the Michigan Central Rd. and Pere Marquette Rd.

# Electric Railway Department

## The Electric Railway Situation on North Yonge Street, Toronto.

Canadian Railway and Marine World for July contained full particulars of the Toronto and York Radial Ry.'s franchise expiring on Yonge St., south of Farnham Ave., Toronto, and of the city's action in removing the company's rails, overhead work, etc., from the street between Farnham Ave. and the southerly terminus at Shaftesbury Ave., although the Toronto Ry. Co. claimed to have bought that section of the line from its subsidiary company, the T. & Y. R. R. The Toronto Ry. then applied to the Ontario Railway and Municipal Board, the chairman of which, D. M. McIntyre, K.C., gave its decision July 5, as follows:

"This is an application by the Toronto Ry. Co., in which the City of Toronto is respondent. As originally launched, the application sought authority for that company to operate the track formerly owned by the Toronto & York Radial Ry. Co. on Yonge St., in the City of Toronto, extending approximately from Farnham Ave. to the C.P.R.—that track having been purchased as alleged by the applicant under an agreement of the sale dated June 25, 1915. The instrument of sale was not produced, but as counsel for the alleged vendor and purchaser respectively affirmed its existence, there seems to be no room for doubt on the point.

"At the hearing it appeared that the track in question had been torn up by the city after the application was launched, and its scope was extended to claim an order restraining the respondent, its servants, workmen and agents from interfering with the applicant in the operation of the said track, and a mandatory order requiring the respondent to replace all tracks torn up by it on the said road in a safe operating condition, and an order restraining the respondent, its servants, workmen, and agents from interfering with or preventing the applicant from replacing the said tracks if the respondent shall not immediately replace the same, and an order declaring that the applicant may replace the said tracks without prejudice to its remedy at law, and damages against the respondent for violation of its agreement.

"The facts out of which the application has arisen are not the subject of substantial controversy. At the time of the making of the contract between the city and the company in 1891, which was confirmed by legislation at the session of 1892, the Metropolitan St. Ry. Co., now the Toronto and York Radial Ry. Co., had an exclusive right to operate surface street railways over the portion of Yonge St. over which the track in question extends. This right was fixed to expire on June 25, 1915, and the agreement of the applicant with the city vested in the former the exclusive right to operate surface street railways over the portion of Yonge St., so far as the city could legally grant the same. This is construed by the applicant's counsel, and rightly the Board thinks, to confer now upon the applicant the exclusive right in possession and enjoyment to operate a surface street railway on that portion of Yonge St. As stated above, on June 25, 1915, and immediately before the expiry of the Toronto and York Radial Ry. Co.'s franchise in respect of that portion of Yonge St. the applicant purchased from the former company its track and overhead work on that portion of Yonge St., and this track the applicant claims the right to operate as a railway, in situ and,

in view of its removal by the city, the right to relay and thereafter operate it for the remainder of its franchise term.

"A preliminary objection was taken on behalf of the city to the Board's jurisdiction to entertain the application, and in a proper case to grant the relief sought. In view, however, of the ample powers conferred by the act constituting the Board (R.S.O. 1914, c. 186), and the Ontario Railway Act (R.S.O. 1914, c. 185)—and in particular sec. 21 of the former, and sec. 260 of the latter—the Board is of the opinion that its jurisdiction is clear and unmistakable.

"Upon the expiry of the Metropolitan Co.'s franchise, its rights to maintain its tracks and operate its cars upon that portion of Yonge St. ceased. The transaction of sale no doubt vested in the applicant the ownership of the rails and other material, the property of the vendor company, affixed to the street, but not without more, in the opinion of the Board, as a part of its railway, clothed with all the rights and immunities of its system throughout the city. The portion of Yonge St. referred to must be regarded as the proposed site of an extension of the applicant's railway. Now, where the applicant proposes to extend its railway within the area defined by its charter, its power to do so is conditioned on the observance of certain pre-requisites fixed in part by agreement between the parties, and in part by statute. For instance, clause 12 of the award, conditions, tender and bylaw, forming part of the agreement between the city and applicant declares that 'the location of the railway on any street shall not be made by the purchaser (the company), or confirmed by the city council until plans thereof showing the proposed position of the rails, the style of rail to be used, and the other works in each such street, have been submitted to and approved in writing by the City Engineer.' Again clause 15 of the award, conditions, tender and bylaw provides that 'no new lines shall be opened for traffic until the purchaser (the company) has obtained a certificate in writing from the City Engineer that the same has been constructed to his satisfaction.'

"It is true that in this case the railway is, or was when the application was launched, already constructed. But it was constructed under an agreement between the Metropolitan Co. and the city, or its predecessor, the County of York, and what is now sought to be done is to have it naturalized, and its existence in situ legalized and confirmed under an agreement between the applicant and the city. How this can be done without a compliance with the terms of the agreement, under which alone the applicant's railway can be lawfully located in this street, the Board is unable to conceive. Admittedly there has been no such compliance. Now that the track is as a structure non-existent, by reason of the action of the city, the obligation of the applicant to comply with these conditions precedent is certainly not relaxed.

"Again, clause 12 above cited, provides that 'the gauge of the system (4 ft. 11 in.) is to be maintained on main lines and extensions thereof and branch lines and extensions thereof.' It appears that the gauge of the track in question on Yonge St. is different from this defined gauge of the applicant's system and extensions thereof. The applicant's purpose is in effect to adopt this

track as an extension of its system, and this to be done legally must be done in conformity with this provision of the agreement, unless the city chooses to waive it.

"Under sec. 105 of 'The Ontario Railway Act,' the Board may, in the case of proved inadequacy of a railway company's tracks, order the company to make additions thereto, but it is expressly declared that such additions shall be subject to all the provisions of the agreement between the company and the corporation of the municipality. The provisions of the agreement are thus given legislative sanction and authority. The case Mitchell & Dresch v. Sandwich, Windsor & Amherstburg Ry. Co., 32 O.L.B. 594, illustrates how imperative is the obligation on a railway company seeking to extend its tracks, to observe every legal pre-requisite to its action. In that case, the defendant company, proposing an extension of its railway in the city of Windsor, with the approval of the municipal council, failed to observe a statutory requirement in that it had not procured the consent of this Board to the proposed extension, and the Appellate Division held that the defendant was properly enjoined from proceeding with the construction of the extension until such consent was procured. For these reasons the application is dismissed, without costs.

"The Board is in receipt of letters from persons alleging themselves to be residents or ratepayers in northern Toronto, who complain of the inconvenience they suffer by reason of the removal of this track, and the consequent interruption of the car service. To such complaints the Board's only answer is that as, upon this application the city took its stand upon its strict legal rights, the Board is obliged to determine the issues involved solely upon that basis. If the city authorities have caused discomfort and loss to citizens, by destroying needlessly and in haste property which might, under some interim arrangement, have continued to serve the transportation requirements of a portion of the community, the citizens must carry their complaint to the city authorities."

The result of the city's action in removing the tracks, etc., is that the gap between the north end of the Toronto Ry.'s Yonge St. line where the C.P.R.'s Leaside-West Toronto branch crosses that street, and the T. & Y. R. R.'s southern terminus is now about 1,220 ft. Until a few months ago, when the building of the Yonge St. subway was commenced in connection with the C.P.R. track elevation, the T. & Y. R. R. tracks ran down to the north side of the C.P.R. tracks and it had a station on the west side of Yonge St. so that passengers had only a few feet to walk to transfer from the city to the interurban cars. Then the T. & Y. R. R.'s southern terminus was moved further up Yonge St. to Shaftesbury Ave. and now it has been moved still further north to Farnham Ave., the result being that a considerable impetus has been given to the jitney service.

**Toronto Civic Railway Car Shop.**—The Works Commissioner, who was instructed by the Board of Control to prepare an estimate for a car building shop, has reported that in his opinion it would be unwise to establish one, and that it would be more economical to have cars required built by car builders catering to a Dominion wide business.

## Lavatory Accommodation on Rural Electric Railways in Ontario.

The Board of Railway Commissioners issued a circular recently to suburban and interurban electric railways enclosing a copy of a report by its Mechanical Expert, Jas. Ogilvie, re lavatory arrangements on cars, and asked the companies to furnish the Board with their views on the installation of lavatory equipment in each car as compared with supplying station buildings at convenient distances apart, each one to be equipped for both men and women. Mr. Ogilvie's report is as follows:—

"In connection with Mr. Gillett's report attached in which he refers to lack of lavatory accommodation on Chatham, Wallaceburg & Lake Erie Electric Ry., I deferred reporting on this matter until such time as I had an opportunity of visiting some of the electric railways under the Board's jurisdiction to see if accommodation of this kind was provided, and if it was really necessary for the benefit of the public.

"The London & Lake Erie Ry. and Transportation Co. runs between London, St. Thomas and Lake Erie, and has 16 large motor cars, each car being equipped with one lavatory room. The Windsor, Essex & Lake Shore Rapid Ry., which runs out of Windsor, has 7 large motor cars and 3 trailers, the mileage being about 36 miles. It has provided lavatory accommodation on all its cars with the exception of the trailers. The Chatham, Wallaceburg & Lake Erie Ry. has 5 large motor cars and 2 open trailers. It has one run out of Chatham 18 miles long and the other 14 miles. It has no lavatory accommodation on these cars. The Oshawa Ry. has 7 large motor cars, but no lavatory accommodation is provided as the longest run is about 4½ miles, and from the centre of the city. The Brantford & Hamilton Electric Ry. has 3 large motor cars, and no lavatory accommodation. The mileage is about 25 miles. The Hamilton & Dundas St. Ry. has 3 large motor cars, and no accommodation for a run of 7 miles. The Hamilton Radial Ry. has 4 cars, a 21½ miles run, and no lavatory accommodation. The Niagara, St. Catharines & Toronto Ry. has 26 large motor cars, and no lavatory accommodation provided in any of them.

"From interviews which I had with the managers and other officers of the various railway companies which I visited, they are very much opposed to the idea of providing lavatory accommodation, owing to the fact that their systems run through and in and out of cities and through quite a number of villages. Some of them stated they had already tried it in some of their cars and had taken them out on account of its being a nuisance and source of annoyance. The Ontario Railway and Municipal Board has taken this matter up with the Hamilton, Grimsby & Beamsville Ry. management, and has asked it to provide the accommodation above referred to, but I understand from the management that the people along the route have very decided objections to the installing of lavatories in the cars, owing to the fact that the railway in a great many instances runs along in front of their residences and is located close to the sidewalk. In an interview which I had with officials of the Ontario Railway and Municipal Board, I was advised that the Hamilton, Grimsby & Beamsville Ry. management has appealed against the Ontario Board's order, claiming that that Board has no jurisdiction, and that the responsibility for such orders would rest entirely with the Dominion Board of Railway Commissioners.

"Some of the Montreal and Southern Counties Ry. cars have been equipped with

lavatory accommodation, but are not in general use. While there is no doubt that the accommodation above referred to might be beneficial, I am afraid it would also prove a considerable nuisance, if it was made compulsory for all cars to be equipped with accommodation of this nature. If on the other hand it is deemed necessary, I would recommend that the matter be taken up with the management of the various electric roads under the Board's jurisdiction, and that they be asked to file a statement showing the number of cars on the various runs with lavatory accommodation, if any, also to file their objections, if any, to providing this accommodation on all their suburban cars, or runs of 15 miles or over."

### Dominion Power & Transmission Co.'s Reply.

The following reply was sent to the Board by E. P. Coleman, General Manager, Dominion Power & Transmission Co.: "I beg to submit our views in this matter as applied to each and all of the interurban electric railways under our control and management regardless of jurisdiction:

"HAMILTON & DUNDAS ST. RY. (Provincial jurisdiction).—This railway has an extreme distance between terminals of 6.98 miles, of which 4.34 is on city streets. It is obvious that the use of car lavatories on this line would be uncalled for and unnecessary, as the stations at each end are provided with conveniences.

"HAMILTON RADIAL ELECTRIC RY. (Dominion jurisdiction).—This railway has an extreme distance between terminals of 21.46 miles, of which 8 miles is on the highways. The heaviest traffic is confined to the section between the Hamilton terminal and Burlington, 10.87 miles, and is more in the nature of street railway than of interurban railway traffic. This portion of the line crosses Burlington Beach and, with the exception of 3.25 miles, is on city streets and highways which are so thickly settled that it would be impossible to use conveniences on the cars without creating a public nuisance. The section from Burlington to Oakville, which is nearly all on private right of way, is only 10.59 miles in length, with a schedule running time of half an hour. The traffic is, and will be for a long time, extremely light on this section. Ample conveniences are provided at Hamilton and Oakville and provision is being made at Burlington.

"HAMILTON, GRIMSBY & BEAMSVILLE ELECTRIC RY. (Jurisdiction in question).—This railway has an extreme distance between terminals of 22.6 miles, practically all on or along the public highway and for a large portion of the way in front of residences and over city and village streets. Many objections to the use of car lavatories have been made by residents along the line, and there is no doubt that their use would create a nuisance. Accommodations are provided at Hamilton, Bartonville, Grimsby and Beamsville.

"BRANTFORD & HAMILTON ELECTRIC RY. (Dominion jurisdiction).—This railway has an extreme distance between terminals of 22.91 miles, of which all but 1.24 miles is on private right of way. Hourly trains are run on schedule time of one hour east and 65 minutes west and we have no complaints of lack of accommodation of this nature, as well equipped lavatories are provided at Hamilton and Brantford.

"IN GENERAL.—As all cars are habitually interchanged between these railways, the installation of lavatories on any of them would compel their use on all, and while

we are willing and anxious to provide all necessary or desirable accommodation for the comfort and convenience of our patrons we are firmly of the opinion that accommodation of this nature is unnecessary and unwise, principally for the following reasons, viz:—

"Electric railway traffic is generally of a different nature to that obtaining on steam railways, as it is mainly confined to local patrons who are never far from their own homes or the convenience of their hotels or offices, and the short time spent on electric cars comes more in the category of the cab ride or the walk between office and home than in the case of the traveller who settles down for a journey of some distance on the larger railway lines.

"An electric car is usually smaller than the standard steam railway car, is more likely to be crowded, on account of the fact that single car units are used, and the problem of ventilation under the best of conditions is a serious one. Lavatories, when installed, are necessarily placed in a conspicuous position near the centre of the car, and among the passengers, and our observation has convinced us that it is impossible to prevent a disagreeable odor throughout the car from their use.

"The conspicuous location of the lavatories above referred to has a tendency to discourage ladies and the better class of passengers from taking advantage of the accommodation and their use will be generally confined to the rougher class of men, particularly those partially under the influence of intoxicating liquor, who will neglect the terminal accommodations and use those on the cars, many times in a manner which will be offensive to other passengers. That this is a serious objection to car lavatories is proved by the great difficulty that we have in keeping our terminal lavatories in a decent condition, even with an attendant always on duty.

"Electric cars are not confined to a private right of way, but must of necessity occupy thickly settled streets for a very considerable portion of the time and, with the best of care, a vehicle of this description, when provided with a lavatory, will at times become a carrier of the best imaginable type for the distribution of disease germs.

"As electric railway terminals and yards are, from the nature of the traffic, invariably located in the most congested and busiest portions of the communities which they serve, the cleaning of cars and disposal of the sweepings and waste water is always a serious problem, and it will be readily perceived that the cleaning of lavatories in these yards without danger to public health is practically impossible. Under the best of conditions, and even if proper sewer connections can be arranged, constant cleaning of accommodations of this description will inevitably create a condition of the station surroundings which will in time become a public nuisance.

"The use of car lavatories is not a common practice even on electric railways of large mileage, and the fact that some lines have thoughtlessly adopted their use, apparently from a desire to become as much like a steam railway as possible, should not be accepted as a convincing argument in favor of forcing them upon electric lines of the nature and extent of those operated by this company and generally throughout the Dominion. It is our opinion that the safest and best method to adopt in the interest of public health and safety, as well as for the convenience of the patrons of electric railways as a whole, is to establish proper stationary lavatories at the terminals and at convenient points along the line for the use of patrons who may be constrained by necessity, and at which cars may be held or stopover checks issued."

Steel Motor Cars, London and Port Stanley Railway.

Canadian Railway and Marine World for July contained a complete description of the L. & P.S.R. rolling stock, the steel motor cars being illustrated by an elevation and floor plan. An illustration of one of the completed cars is given herewith. They are 61 ft. 1¾ ins. long, over buffers, and are exceptionally wide, viz., 9½ ft. over posts. This makes possible seats 40 ins. long, with aisle 26 ins. wide. The car is divided into baggage, smoking and general passenger compartments. In the main compartment there are two lavatories, one for men and one for women, with metal tile walls, and tile floor set in cement. The bottom fram-

mahogany being finished in a rather light tone, and great care having been exercised in selecting soft harmonizing colors for ceiling and stained glass. Nothing in the way of incidental equipment, such as buzzers, air sanders, fire extinguishers, etc., has been omitted, and a large switch cabinet extends from floor to ceiling, with slate back, containing all electrical switches. The roof is a compromise arch design. They were built by the Jewett Car Co., Newark, Ohio, and electrically equipped by the Preston Car & Coach Co.

Berlin and Waterloo Street Railway Annual Statement.

Following is the statement for the calendar year 1914 of this line, which is

Debenture interest .....	\$8,723.27
Interest on loans .....	780.22

Steel Motor Cars, London and Port Stanley Railway.

ing is made up of structural sills with pressed steel cross bridging, plate bolsters with pressed steel fillers being used. Side posts are of channel and tees of light section, with angle iron corner posts. The posts in bulkhead and partitions are also of channels, with channel header across between side plates. The entire outside and bulkheads are composed of steel plates. Carlines are pressed steel, and the roof is of large steel plates laid across the full width of the car. The cars are fitted with extra heavy steel pilots, and M.C.B. draw bars. The interior finish is mahogany inlaid, with inside and outside Gothic sash with cathedral glass, and storm sash fitted to all body windows. The ceiling is of agasote, and the wooden floor is covered with linoleum. The car is lighted by semi-indirect system with pendant fixtures, light wiring being in concealed conduit, as is also heater wiring, heaters being of the cross seat electric type. There is a vestibule on the rear end only, with triple steps covered with steel trap doors. The lavatories are very completely equipped with flush hoppers, wash stand with liquid soap holder, towel rack, etc., all fixtures being nickel plated. The interior of the cars present a tasteful appearance, the

Rolling Stock for Three Rivers Traction Company.

The Three Rivers Traction Co., Three Rivers, Que., has ordered from the Ottawa Car Manufacturing Co. six semi-convertible single truck electric railway cars, the principal particulars of which are as follows:

Car bodies: Semi-convertible type for one-man operation. Construction, wood, with underframe reinforced with steel plates. Roof, arched type, with automatic ventilators. Interior finish, wood throughout. Seats, standard rattan upholstered. Trimmings, polished bronze. Heaters, electric. Electric lighting and bell systems, standard. General dimensions as follows: Length of body over end cross sills. 21 feet Length of car over vestibules ..... 31 feet Length of front vestibule ..... 6 feet Length of rear vestibule ..... 4 feet Length of car over bunters ..... 32 feet Width over posts ..... 8½ feet Height from rail to top of roof .... 11ft. 5 ins. Seating capacity ..... 34 per car Trucks: 12 ft. wheel base, with chilled iron wheels and standard hot rolled steel axles. Motor equipments: Westinghouse 101-

11.2 two motors per car, with one controller, circuit breaker and other accessories.

All brakes Westinghouse schedule S.M.E. complete, with motor driven compressor and other accessories. Cars will also be equipped with life guards and standard track sanders.

The Three Rivers Traction Co. has also ordered from the Ottawa Car Manufacturing Co. one snow sweeper, which, with the cars, fully equipped, will be ready for delivery by the end of August.

### Retirement of British Columbia Electric Railway's Chief Engineer.

G. R. G. Conway, M. Can. Soc. C. E., for over four years Chief Engineer of the British Columbia Electric Ry., retired from that position June 30, with the intention of practising as a consulting engineer with office in Toronto. He will continue his association with the B. C. E. R. as Consulting Engineer. He was the guest of the company's staff at dinner, at Vancouver, June 28, Geo. Kidd, General Manager, being in the chair. In proposing Mr. Conway's health, the chairman read a cable from the company's head office in London, Eng., in which the directors expressed regret at Mr. Conway's "withdrawal from the duties which he has carried out with such conspicuous success, and to the great advantage of the company." In addition to Mr. Kidd and Mr. Conway, the speakers of the evening were: F. R. Glover, General Executive Assistant; A. T. Goward, Local Manager, Victoria; V. Laursen, Solicitor; W. G. Murrin, General Superintendent; G. Porter, Assistant Chief Engineer; G. M. Tripp, Superintendent, Victoria; W. H. Fraser, Electrical Superintendent, and A. Hill, of the engineering staff.

On the following day Mr. Conway was presented by the company's employes with a rose bowl, of solid silver, gold lined, and mounted upon an oak base, suitably inscribed.

### The Galt, Preston and Hespeler Street Railway's Rights in Berlin.

At the Berlin, Ont., City Council's meeting July 19, a letter was read from Martin N. Todd, President Galt, Preston and Hespeler St. Ry., respecting the action of the council in fixing a franchise price of \$75 a month for the use of the city streets. The company is at present paying \$150 a month to the Light Commission for the use of the tracks and power, which is considered \$75 more than the actual value of the privilege. Mr. Todd informed the council that if the recent action is insisted on the company will use a branch line running to Waterloo exclusively, and erect a station on Queen St. south for the convenience of city passengers. Mr. Todd reminded the council that the city will in the near future be connected with Port Dover when the new Lake Erie & Northern line is electrified, toward which Berlin has not been asked to contribute, but from which it will receive the same benefit as other towns which have voted considerable sums as bonus. The communication was referred to the railway committee to endeavor to arrive at an amicable arrangement.

The Toronto City Council passed a resolution recently instructing the Commissioner of Works to report on the probable cost of inaugurating a rail-less trolley system in conjunction with the civic railway, with a view to providing a one-fare service to the down town districts, with a transfer to any part of the civic railway. The Works Committee reported against the proposal.

## St. John Railway Rights re Track Construction.

Judgment has been rendered in the case of the St. John Ry. against the City of St. John, N.B., for damages for an interruption of its railway and service, for preventing the company from relaying its tracks, for a declaration as to its rights where tracks have been taken up by the city in changing street grades, and for an injunction restraining the city from interrupting or interfering with the railway. During the course of the original action, the parties agreed on a special case, and the following four questions were submitted to the Supreme Court of Appeal.

(a) When city removes rails under sec. 11 of 50 Vic. ch. 33, can it require a grooved rail to be used instead of a T rail

(b) When city lays a pavement of either bitulithic tar or water bound macadam or granite, can it require the company to provide a foundation for its rails of concrete or other unyielding material?

(c) Can the city require the company to provide a foundation for its tracks which will keep the rails at the grade determined by the city?

(d) Can the city require the company from time to time to restore its tracks to grades which have been established by the city at the time of the laying of the tracks, or to grades which from time to time may be established by the city?

Following is a summary of the judgment.—The answers to these questions depend on the construction given to secs. 7, 8, 9, and 11 of ch. 33 of the acts of 1887, concerning the Peoples St. Ry. Co., which was acquired by the St. John Ry. Co. The company was originally incorporated to operate by horse cars, but power was subsequently obtained to operate by electricity. Sec. 7 empowers the company to operate over such streets as may be agreed upon between the company and the city. Sec. 8 provides that the tracks shall be laid so as not to interfere with ordinary traffic, the rails to be of such pattern as the city council may approve, and laid level with the street surface to the satisfaction of the City Engineer, or other authorized person. Sec. 9 provides that the tracks shall from time to time conform to the grades of the various streets and highways through which they run, and the grades shall not be changed without consent of the city. Sec. 11 provides that the city or municipality through which the tracks pass shall have the right to take up or open the streets traversed, for altering the grades or any other purpose, the removal of rails to be done so as to cause as little interference as possible with the operations of the railway, and that the city shall not be liable to make compensation to the company for anything done under the authority of the act.

Regarding sec. 8, the words are very plain and clear. When the company built its line, the rails were of a pattern approved by the council, and were T rail, which pattern has since been used by the company. Dealing with the first question (a), sec. 11 gives the city the right to take up the streets traversed by rails for altering the grade or other purposes, but if the city removes the rails it is not obliged to replace them, that must be done by the company. Regarding an order to change from T to grooved rail, if the company desires to extend its lines and lay a new track, it has to get the city's approval of the pattern of rail to be used, and the city can prescribe any pattern of rail it deems best, and it may be that if rails are worn out and it becomes necessary to lay new rails, the city could prescribe a different pattern from those previously used.

In this case, however, it is not necessary to decide that point. This is not the laying of new rails. The city for its own purpose has removed the rails, and when that has been accomplished, the company can replace the rails so removed, and the city cannot compel the company to throw aside the rails so removed and replace them with others of a different pattern. The only difference between the city removing rails and a private corporation doing so, is that in the latter case the private corporation must replace the rails, and in the former case, the company must do it.

The answer to the first question is no. Regarding the second question (c), the company is obliged to have a proper foundation for its rails, and the act does not authorize the city to stipulate what that foundation shall be. The onus is on the company to have a sufficient foundation, and the rails must, at all events in the first instance, be laid to the satisfaction of the City Engineer, and laid level with the street surface. It is sufficient that the foundation be suitable and sufficient to keep the rails at the prescribed level. The answer to the second question is no. The third and fourth questions seem to be answered by the act itself. The company must keep its rails at the grade determined by the city, and to do so must provide a foundation sufficient for that purpose. The city has the right to alter the grades of streets, and when the grades are so altered, the company must restore its tracks to a level with the new grade, and supply foundation suitable to keep them so. No order was made as to costs.

### Negotiations for the Purchase of Chatham, Wallaceburg and Lake Erie Railway.

The Hydro Electric Power Commission of Ontario is said to be negotiating to secure the C.W. & L.E.R., to be used as part of the proposed hydro electric railway system for Ontario to be operated under the commission. The C.W. & L.E.R. runs from Wallaceburg, Ont., to Erie Beach, on Lake Erie, 32.85 miles, with a short branch from Paincourt Jct. to Paincourt, a total mileage of 40.77. It has freight interchange with the Michigan Central at Charing Cross, Canadian Pacific at Chatham, Pere Marquette at Wallaceburg, and Wabash and Grand Trunk at Chatham. Some two or three years ago the C.W. & L.E.R. passed into the control of Mackenzie, Mann & Co. interests. The principal officials are President, D. A. Gordon, Wallaceburg, Ont.; Vice President, A. J. Mitchell, Comptroller, Mackenzie, Mann & Co., Ltd., Toronto; General Manager, W. Norris, Chatham. It is said if the negotiations are successful the line will be made the nucleus of a hydro radial railway system in that part of the province, and that it will be extended through Petrolia to Sarnia.

The Ontario West Shore Ry. Fiasco.—The Kincardine, Ont., Town Council passed a resolution, July 5, further extending the powers of the special committee appointed to act in conjunction with committees of the municipalities interested in this derelict railway. The council has now authorized the committee to secure expert advice in reference to the suit to recover money alleged to have been paid out illegally, and also authorize it to engage new counsel in the event of the counsel at present engaged declining to act.

## The Lake Erie and Northern Railway Takes Over Part of the Grand Valley Railway.

The negotiations which have been in progress for some time between the Lake Erie and Northern Ry., represented by its General Manager, Martin N. Todd, and the City of Brantford, with reference to a portion of the Grand Valley Ry. section of the lines operated as the Brantford Municipal Ry., and the electrification of the L.E. & N.R., have been brought to a successful termination. As a result, the L.E. & N.R. acquires for \$30,000 the portion of the Grand Valley Ry. from Paris to Galt, about 13 miles, and the G.V.R. transformer station in Galt. The City of Brantford retains the rails, overhead work, etc., which will be removed from Blue Lake siding, about 4 miles from the Paris end of the section, as the cement works at Blue Lake have been closed permanently. This arrangement gives the L.E. & N.R. practically what it wanted in Paris, and relieves the City of Brantford from the necessity of spending about \$65,000 to repair the Paris-Galt line, and its future maintenance. It also enables the L.E. & N.R. to get rid of two level crossings over the Grand Valley at Paris and Galt. The L.E. & N.R. will use about half a mile of the Grand Valley track at the Galt end, to connect with the Galt, Preston & Hespeler St. Ry., and will scrap the rest of the line to Paris, but later on it may operate over a short distance of the Paris end of the Galt-Paris section of the Grand Valley, into the industrial section of Paris, for freight purposes only. It will handle passenger business from its own station in Paris, that being the stipulation by the City of Brantford, which does not want the L.E. & N.R. to compete with it for passenger business on the lower level in Paris.

The important feature of the arrangement is the fact that the entire L.E. & N.R. line from Port Dover to Galt, 53 miles, is to be electrified, and that a new electric car terminal will be established at the foot of the embankment near Lorne Bridge, Brantford. The electrification work on the line between Galt and Brantford, about 22 miles, has been started. Contracts for the electrical material for this section were placed in May, with the option of extending them to also include the Brantford-Port Dover section. It is expected to have the Galt-Brantford section electrified and ready for traffic in October. The grading, track laying, and other work on the Brantford-Port Dover section, about 30 miles, is being pushed forward, and it is hoped to have the electrification of it completed by December. The overhead equipment will be of catenary construction, aluminum messenger wire with steel centre having been ordered from the Northern Aluminum Co. Steel trolley wire will be hung at 15 ft. spacings, with feeders every 50 ft. This system is a new one in Canada, but it has been used by the Pacific Electric Co. in California, and by other United States companies, with, it is said, satisfactory results.

The L.E. & N.R. has ordered 4 motor and 2 trailer cars, and 2 combination passenger and baggage cars from the Preston Car and Coach Co. The bodies will be 48½ ft. long, with steam railway car type of vestibule at each end, standard buffing device, M.C.B. couplers, Canadian Westinghouse motor equipment, multiple unit control, 1,500 volts, seating accommodation for 70 passengers, steel underframes and steel frames covered with wood inside and outside. The various cars will be of the same size and type as, and will be very similar in appearance to those on the Galt, Preston and Hespeler St. Ry. Two 60-ton electric freight locomotives

and the electric car equipment have been ordered from the Canadian Westinghouse Co. A contract for the sub station equipment has been given the Canadian General Electric Co. The sub station at Galt will be a portable one for the present, and there will be sub stations at Brantford and Simcoe, each equipped with 500 k.w. outfits.

Power will probably be taken from the Hydro-Electric Power Commission of Ontario, through its local subsidiaries. The Galt, Preston & Hespeler St. Ry. is said to have been the first electric railway in Ontario to use this power.

The section of the Grand Valley Ry. between Paris and Galt will not be taken over by the L.E. & N.R. until its electrification is completed, but it will be operated by the Brantford Municipal Ry. Commission in the meantime. The L.E. & N.R. intends giving an hourly service between Galt and Brantford, and a two hour service between Brantford and Port Dover.

The L.E. & N.R. is leased to the C.P.R. for 99 years. It is expected that the Galt, Preston & Hespeler St. Ry., which also operates the Preston & Berlin St. Ry., and is owned by the C.P.R., will be amalgamated with the L.E. & N.R. under the latter name. M. N. Todd is President of the Galt, Preston & Hespeler St. Ry., and General Manager of the L.E. & N.R., and will doubtless continue in charge of the amalgamated lines. A Galt paper points out that while the lines referred to have the benefit of close affiliation with the C.P.R., they have the advantage of being locally operated, which is a great convenience to the communities in the districts served.

The Brantford Municipal Ry. will, in future, consist of the old Brantford St. Ry., and the Brantford-Paris section of the old Grand Valley Ry., the latter being about 8 miles. The entire transaction by the city in acquiring the Brantford St. Ry. and the Grand Valley Ry. involved \$300,326, of which \$137,000 was provided in cash, the balance representing original bonds \$125,000, mortgages \$2,400, and installments to accrue on pavement account about \$36,000. The city has provided money for the betterment of the city lines and the line to Paris, the construction of the East Ward and Eagle Place loops and for new cars, etc. Plans had been made for bringing the Paris-Galt section up to standard at a cost of about \$65,000. The city, by the present arrangement, is relieved from this expenditure, and will receive \$30,000 for the Paris-Galt section. The business done on the line is reported to be sufficient to cover operating expenses and interest on debt, but not to provide for depreciation or sinking fund. For the latter purpose \$4,000 a year is required.

**Toronto Ry. Wages.**—The negotiations between the company and the men regarding the continuance of the agreement regarding wages have resulted in the agreement which has been in force for the past three years being renewed for a further two years. The men originally demanded an all round increase of half a cent an hour, which was refused by the company. It was then suggested that the old agreement be renewed, the only difference being as to whether it was to be for two or three years. The rates paid are as follows: Motormen, conductors and motor truck repairers, first year 23½c an hour, second year 25½c, third year 27½c, for Sundays 4c extra; shed men 24c, foremen 27c. Regarding uniforms, first year men pay cost, second year men half cost, third year men supplied free.

## Serious Electric Railway Wreck at Queenston.

While an excursion party from Toronto was returning from Niagara Falls, to take the boat at Queenston, for Toronto, July 7, one of the cars on the Niagara Falls Park and River Ry. left the track while descending the Queenston Heights hill and collided with a tree, wrecking the car, killing 13 of the passengers and injuring several others. Later, two of the injured passengers died, making 15 deaths. A coroner's inquest was opened at Queenston, July 19, representatives of the various parties interested, including the Ontario Government, the Ontario Railway and Municipal Board and the City of Toronto, as well as relatives of the deceased and injured, being present. The motor man in charge of the car, is reported to have stated that for some time prior to it leaving the track, he felt that he had lost control, owing to the rails being wet and greasy. The car had seats for 84 passengers and the conductor is said to have collected 157 tickets, which did not include children in arms.

Replying to a number of allegations against the construction and equipment of the car E. G. Connitt, President, International Ry., Buffalo, N. Y., which controls the Niagara Falls Park and River Ry., issued the following statement, July 9: "Mr. Clark, representative of the Ontario Railway and Municipal Board, examined the track and car yesterday and as I understand it, found no fault with the track or the equipment, nor did he find any defects that would have caused the accident. As near as I have been able to learn and as stated by the motorman, the car got beyond control due to the slippery rails on account of the weather conditions. Showing there was no defect in the car, it had previously stopped at the foot of the heavy grade from Brock's monument to the junction, in order to throw a switch. This shows the brakes were in good working order. The company had furnished plenty of cars to handle the people from Brock's monument to the dock but on account of the rain they were disposed to overload the first car. The sand box was full of heavy sand. The car certainly was in first class condition, having come out of the shops on July 6."

**The Halifax Power Co.,** by S. M. Brookfield, President, informed the Halifax, N.S., City Council, July 8, that "it has the right to supply light and power in the city, so that if the city acquires the power company's property or joins it in the development of the undertaking, the street lighting could be done, it is claimed, and 50% more light supplied for the price now paid. The private light and small power users could also be supplied at a saving of at least 25%." The letter concluded by stating that the company's representatives would wait on the council upon an early day and lay before it a proposition for the development of the company's water powers on the Indian and Northern Rivers, the city taking a half interest.

**Winnipeg Electric Ry. Fares.**—The company agreed, July 15, to sell 5 combination tickets from any part of the city to Kildonan Park, for 25 cts., and 7 children's tickets for the same amount, and the Manitoba Public Utilities Commission is making the necessary order. The Commissioner declined to make an order for reduced fares to St. Paul, on the ground that it was not advisable under present financial conditions to reduce fares. B. S. McKenzie was appointed to make a special investigation to see if a quicker service could not be given on the St. Paul's line, and platforms provided.

## Electric Railway Projects, Construction, Betterments, Etc.

**Berlin, Ont.**—A press report states: "W. D. Euler, Berlin, is interested in the construction of an electric railway to connect Berlin, Bridgeport, Bloomingdale, New Germany and Guelph." This district is already pretty well supplied with electric railways, including the Guelph Radial Ry., the Berlin and Waterloo St. Ry., the Berlin and Northern Ry., and the Berlin, Waterloo, Wellesley and Lake Huron Ry. (which includes the Galt, Preston and Hespeler Ry. and the Preston and Berlin Ry.), while the Toronto Suburban Ry. is extending its lines into the district. A number of the local municipalities are moving in the direction of having a line built in connection with the projected lines under the plans of the Hydro Electric Power Commission of Ontario. Under these circumstances it is not likely that there is anything in the report.

**Brandon Municipal Ry.**—We are officially advised that the City Council has under construction the following lines in the city: Victoria Ave., from Franklin St. to Percy St., 350 ft.; Percy St., from Victoria Ave. to Princess St., 1,800 ft., including turnout; Princess St., from Percy St. to Franklin St., 350 ft.; Princess St., from 22nd St. to 24th St., 650 ft.; Victoria Ave., 18th St. to Athletic Grounds, 250 ft.; 18th St., from Victoria St. to College, 1,725 ft.; College St., from 18th St. to 15th St., 1,625 ft., including special work. Total, 6,700 ft. For the construction at present in hand there have been purchased four curves, one right hand cross over, one left hand branch out, from the United States, and miscellaneous overhead and other material from the Boyd Electric Co., Brandon, Man. T. Boden, Brandon, Man., is Superintendent. (Feb., 1914, pg. 87.)

**British Columbia Electric Ry.**—We are officially advised that the new car barn at Mount Pleasant, Vancouver, is practically completed, and is being used. (June, pg. 224.)

**Calgary Municipal Ry.**—We are officially advised that the only permanent construction to be done this year will be some special work on street intersections, the material for which is on hand. It is proposed to construct immediately 1.5 miles of temporary track to a point outside the city limits so as to give connection with the military camp on the Sarcee reserve, where 6,000 soldiers are undergoing training. The material for this work is on hand. T. H. McAulay, Calgary, Alberta, is Superintendent. (July, pg. 277.)

**The Cape Breton Electric Co.** is enlarging its high tension room in its Sydney power station, to provide for another outgoing transmission line, which is in process of construction, and runs from that station to the new pumping station being built by the City of Sydney at Middle Lake, about six miles from Sydney. This sub-station will contain for the present 2 kva transformers, stepping down 22,000 three phase to 2,200 three phase, for operating the pump at present under order for the city. The pumping station and the company's sub-station, which is contained therein, is being built for double this capacity. The company has a 10 year contract with the city for supplying power to operate the station. Orders have been placed for all equipment for this work. (May, pg. 190.)

**Edmonton Radial Ry.**—The residents of the Glen Park district applied to the Edmonton, Alberta, City Council in May to have a line built, and the council has recently authorized a committee to negotiate an arrangement with the Edmonton Interurban Ry. for the use of its tracks to Glen Park, pending

further consideration of plans to build a more direct city line. (May, pg. 190.)

**Hydro Electric Power Commission of Ontario's Electric Railways.**—The Brampton Town Council has passed a resolution favoring the building of an electric railway through the town under the Commission, and has joined the Ontario Hydro Electric Radial Railway Association.

The Trent Valley district of the H.E. Ry. Association, meeting at Campbellford, Ont., June 10, passed a resolution asking the H.E.P.C. of Ontario to investigate and report upon several routes for proposed radial railways in the Trent River valley, where there is at present practically no railway accommodation. (July, pg. 277.)

**London and Lake Erie Ry. and Transportation Co.**—The St. Thomas, Ont., City Council has approved of the laying of the necessary switches so that the company can connect its tracks with the Michigan Central Rd., and to the changes proposed to be made for switching purposes. (Mar., pg. 108.)

**Montreal and Southern Counties Ry.**—It is expected that the extension from St. Cesaire to Granby, Que., 16 miles, will be completed as far as Abbotsford early in the autumn. The contract is being carried out by the Grant Campbell Co.

The construction of the sub power station at Granby is being proceeded with, so as to be in readiness for the completion of the line. (July, pg. 277.)

**Morrisburg and Ottawa Electric Ry.**—An unconfirmed press report states that work will be resumed at an early date upon the construction of this projected railway, three miles south of Billings Bridge, near Ottawa, and that it will proceed southerly to Morrisburg. (June, pg. 227.)

**Oshawa Ry.**—In the event of the town council deciding to do any further street paving, of which about half a mile is being considered, the company will do its proportion of the work. D. A. Valteau, Oshawa, Ont., is Superintendent.

**Ottawa Electric Ry.**—The pavement renewal work on Bank St., Ottawa, was completed June 30, and the Somerset and Britannia cars, which had been run on temporary routes, returned to their regular routes, July 1. The work was done by the Ottawa Construction Co. (July, pg. 277.)

**Quebec Ry., Light and Power Co.**—We are officially advised that the company is installing a double track right hand curve at the corner of Palace and St. John Sts., Quebec, on its City Division. (April, 1914, pg. 184.)

**St. John Ry.**—Under a decision of the Supreme Court of New Brunswick, which was reported to the St. John city council, July 7, the company must now supply a rigid base under all its rails. Up to the present the city has laid a concrete base of from 5 to 7 ins. in thickness, which work, under the decision, will have to be done in future by the company. Commissioner Potts states that work on the Douglas Ave. line will be started very shortly, and that he would see that the company puts in a satisfactory base.

The city commissioners on July 7 inspected the company's lines, and it is reported found defective rails on several streets. (July, pg. 277.)

**Toronto Civic Car Lines.**—We are officially advised that the City of Toronto is building 0.75 mile of double track on Bloor St., from Dundas St. to Quebec Ave.; and 0.63 mile of double track on Lansdowne Ave., from St. Clair Ave. to the C.P.R.

The building of car barns on Danforth Ave. is also under consideration.

The approval of the Ontario Railway and Municipal Board for the building of the line on Bloor St. was given July 7, and on the same day the Board of Control directed the preparation by the Works Commissioner of a report on the cost of establishing a car construction and repair shop for the civic car lines. (April, pg. 145.)

**Toronto Civic Ry.**—The City Council has awarded a contract for the supply of oak ties for the construction of the Lansdowne Ave. line, to the Robert Laidlaw Co., at \$30.25 per 1,000 ft. b.m., equivalent to 84.7c. a tie. They are to be 6 by 8 ins. by 7 ft.

**Transcona, Man.**—The Transcona Town Council on July 9 asked H. W. Adcock, Winnipeg, to put up a satisfactory bond at once that he would carry out his proposal for the building of an electric railway from Transcona to Winnipeg. In the event of failure to put up the bond the negotiations will be dropped. (July, pg. 277.)

## The Montreal Tramways Company's Franchise Question.

The question of the granting of a new, comprehensive and extended franchise to the Montreal Tramways Co., in return for the old one held by the old Montreal St. Ry., which expires in 1922, and the subsidiary ones held by it and the allied companies in the districts added to the city since the original franchise was granted, has been brought into the courts. Several propositions had been submitted to the Board of Control, notably one by Controller Hebert, which was placed before the Board June 18. The plan proposed to grant a new franchise for 30 years upon the surrender of all existing franchises; that the city appoint two directors on the M.T. Co. board; the city percentage of earnings to remain as at present, with a minimum payment; gross earnings of subways to be built by the city to be divided between the city and the company; new lines and routes to be arranged on the advice of a city planning expert; the removal of all old cars and the building of new cars; the adoption of all new devices and inventions for the betterment of the service; and a 5 cent fare. The proposal was discussed at several meetings of the Board of Control, and a special meeting was called for June 30 for the purpose of approving of the plan and sending it on to the City Council for consideration. Meanwhile, a statement was made that there was a letter in existence, dated June 16, in which Controller Hebert submitted conditions upon which he would support the plan, viz., a receipt in full of a certain account which he owed; the payment of \$100,000 in cash before the vote was taken in the Board of Control, and a further payment of a similar sum in cash within 24 hours of a favorable report made by the controllers to the council. On the morning of June 30, R. Tourangeau, a citizen, made an affidavit in which Controller Hebert's letter was set out, upon which an interim injunction was granted, operative to July 6, restraining the Board of Control from taking any action on the matter. Although the interim injunction had been obtained, it does not appear that it was actually served upon the Board prior to the time of the meeting. When a vote was called for by the Mayor on Controller Hebert's motion to send forward his plan for approval by the Council, Controllers McDonald and Amey protested and refused to vote, but Controllers Hebert and Cote voted in favor and the Mayor declared the motion carried. On receipt of the order of court at a subsequent stage, the Mayor stated that no action would be taken upon the

motion pending developments. On July 2, R. Tourangeau obtained a further injunction restraining not only the Board of Control, but the City Council and the Secretary of the Board of Control from taking any action in the matter until after July 6, and calling upon the Mayor and Controllers Cote and Hebert to show cause why they should not be committed for contempt of court. Pending further action by the courts all the papers were stored in the safe at the city hall. The injunction case was finally adjudicated upon July 14, when Justice Pauvoton made an order directing the Mayor and Controllers Cote and Hebert to appear before the court on July 16, to show cause why they should not be adjudged guilty of contempt of court.

An interlocutory injunction was granted at Montreal, July 20, to restrain the Board of Control and the City Council from further dealing with the Montreal Tramways Co.'s franchise renewal question until such time as the court shall have been afforded an opportunity to enter upon deliberations as to the merits of the allegations and counter allegations arising from the board adopting the proposal of a 30 years franchise.

A number of affidavits have been filed in connection with the matter, bringing in the proposed franchise to the Canadian Automobile Co., and the recent Drolet St. land deal, in all of which allegations are made respecting dealings between Controllers Hebert and McDonald respecting votes at the Board of Control. (July, pg. 275.)

### Proposed Absorption of Halifax Electric Tramway Company.

The hearing by the Nova Scotia Public Utilities Commission of the application of the Nova Scotia Tramways and Power Co. to take advantage of the powers contained in its act of incorporation, was concluded at Halifax, July 9. The company in its petition asks that the capital of the company be increased to \$10,000,000; that \$5,000,000 first mortgage 30-year bonds be issued at 5%, \$3,000,000 to be presently issued, and the balance of the future requirements only to be issued against 80% of expenditures on capital account when the earnings of the company for the fiscal year preceding any proposed issue have been at least one and three quarters times the net charges on the bonds already issued and on those proposed to be issued, and when such issue is approved by the Public Utilities Commissioners. The petition also asks the board to approve of \$3,000,000 par value of said bonds, 32,500 shares of preferred stock and 62,500 shares of ordinary or common stock, to the order of the Nova Scotia Light and Power Co. The petition is followed by schedules giving a description of the Halifax Electric Tramway Co.'s property and plant, of the power sites, lands and privileges on the Gaspereau River, a description of the equipment of the cost of development of the Gaspereau made by J. G. White and Co. of New York, which is placed at \$1,534,960. The net earnings under the proposed arrangement are estimated to be sufficient to pay between 5 and 6% on a total indebtedness of \$12,500,000.

H. A. Lovatt, K.C., the principal counsel for the petitioners, made a lengthy statement in opening the proceedings. The money which would be received would be devoted to the following purposes:—\$800,000 to the retirement of mortgages outstanding on the Halifax Electric Tramways Co.; \$1,227,780 to construction of works; to provide for taking over of the various properties, and the balance for contingencies and working capital. The J. G. White Co.'s report showed that within 55 miles of Hal-

ifax, on the property owned by the company there was a lake area which would give a storage of 2,000,000,000 cubic feet of water, which would produce about four times the electric power at present available in Halifax. The estimated cost of the works necessary for the development of this power was put at \$1,534,000. The report of P. Sothman, formerly Chief Engineer of the Hydro Electric Power Commission of Ontario, confirmed the White report.

The Halifax City Council and the Municipal Association were represented, and several expert witnesses were examined. The commission simply heard the evidence, which when transcribed will be sent to the city council and to the Municipal Association, on behalf of which arguments will be submitted in writing for the consideration of the Commission before judgment is given.

### Calgary Municipal Railway Investigation.

Charges made against the management of the Calgary, Alberta, Municipal Ry., and particularly against the Superintendent, T. H. McCauley, at the instance of Alderman Frost, are being investigated by Justice Simmons. The inquiry was opened July 8. No formal charges were made, and the judge has been occupied in taking evidence. During the first four days of the hearing 45 documents were referred to and put in evidence, and a number of witnesses were examined. It was stated, July 10, that Alderman Frost had 70 additional witnesses to call, which would show that the inquiry would be a protracted one. From the evidence given it appears that there has been some friction between the Superintendent and the employees. It appears that the men are not connected with a union, but that there is an association, which has a grievance committee, at the meetings, of both of which the Superintendent is frequently, if not always present. The association meets in two distinct sections—the day men and the night men meeting separately. The two sections apparently do not work in harmony, as evidence has already been given showing that what one section does is frequently not approved by the other, and that one president, who resides at the meetings of both sections, resigned because of the differences. The evidence so far given does not make any direct charges, although there are suggestions of charges, but they all appear to have to do with the internal relationship of the chief operating officer and the employees.

### Cars for the Toronto Civic Railway.

The Toronto City Council invited alternative tenders recently for 4 double end single truck cars complete, and for equipment for 4 cars for the Toronto Civic Ry.'s Lansdowne Ave. line extension. For 4 cars complete there were two tenders, one at \$5,525 a car and one at \$5,200. The Works Commissioner reported that he estimated it would cost approximately \$4,750 to purchase and assemble each car, a saving of \$450 on each car as against buying them complete, and it was therefore decided to accept the following tenders:

Preston Car & Coach Co., 4 double end single truck car bodies, \$2,386 each.

Canadian Westinghouse Co., 8 ventilated motors, \$593 each; 8 circuit breakers, \$23 each, and 4 lightning arresters, \$4 each.

Canadian General Electric Co., 8 K-10 controllers, \$126.75 each; 4 choke coil cores, \$1 each; 4 sets of resistors for two motor equipment, \$32 each.

Northern Electric Co., no. 6 rubber covered double braid car cable copper wire,

\$44.40 per thousand feet. No. 4 rubber covered double braid car cable copper wire, \$60.30 per thousand feet. 1-0 rubber covered double braid car cable copper wire, \$132.80 per thousand feet.

Dawson & Co., Ltd., 4 coal burning forced ventilation car heaters, \$166.50 each. 4 21-E trucks, \$285 each.

Allen General Supplies, Ltd., 8 gears and pinions, \$48.45 each; 8 controller checks, \$9 each.

Dominion Wheel & Foundries, Ltd., 8 cold rolled steel axles, \$31.25 each.

Coleman Fare Box Co., Ltd., 8 stationary fare boxes, new type, \$50.10 each.

### Opening of the Electrified London and Port Stanley Railway.

The newly electrified London and Port Stanley Ry., a detailed description of which was given in Canadian Railway and Marine World for July, was opened for traffic July 1, when some 2,500 passengers were carried from London, and over 1,000 from St. Thomas to Port Stanley, in addition to local traffic along the line. No freight was carried during the day. The power machinery is reported to have worked very well, but some slight defects developed which required adjustment. To enable these adjustments to be made, steam was used for the operation of the line for a few days after July 1, and the electrical operation of the line was reported to be working reasonably satisfactorily July 8. Freight carrying was started July 2, and it was reported July 8, that it was increasing and was being handled expeditiously.

The work of electrifying the line was done under the direction of F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario, the assistant engineers of the Commission employed being E. G. Hewson, electrical work; H. L. Bucke, track work; A. E. Davison, pole work; and E. Brandon, substations. D. M. Morrison was resident engineer in charge of the whole work, with office at St. Thomas.

The official opening of the line took place July 22, when a large number of guests attended on the invitation of the London City Council, Board of Trade and Public Utilities Commission. They were taken over the line from London to Port Stanley and return in the afternoon, and were then entertained at dinner in London.

**Bridge Repair Work in Vancouver.**—The ratepayers of Vancouver, B.C., defeated seven money by-laws, June 29, among them being one for the expenditure of \$65,000 for repairing and altering the Connaught Bridge, which was burned recently, and another for \$150,000 for the purchase of land to complete the Georgia-Harris Viaduct, which was formally opened for traffic July 1. The city council on July 2 authorized the making of temporary repairs at a cost of \$10,000. The work to be done includes an 18 ft. roadway and a 5 ft. sidewalk, no provision being made for electric railway tracks.

**Proposed Sale of the Detroit United Ry.**—The Detroit Street Railway Commission has been advised by the Detroit United Ry., that the draft of the proposed agreement whereby the city purchases the company's property within the one fare zone, is acceptable to the officials. On the acceptance of the contract by the commission, the company will obtain the necessary consent of the trustees for the bondholders to appear in the Chancery Court, to fix the price to be paid, presuming that the contract is accepted by the ratepayers. The commission has accepted the contract, and has given the company until Aug. 2, to obtain the ratification by stockholders, etc.

## Mainly About Electric Railway People.

Noonan Coryell has been appointed Master Mechanic, Moncton Tramways, Electricity and Gas Co., Moncton, N.B., vice A. R. McCharles, who has left the service.

H. A. MacLean has been appointed Accountant Moose Jaw Electric Ry., vice Captain C. E. McGee, who was killed in action May 24, as mentioned in our July issue.

Capt. N. C. Pilcher, General Manager, Sherbrooke Ry. & Power Co., Sherbrooke, Que., is in the 5th Mounted Rifles and is going to the front with the Canadian Overseas Expeditionary Forces.

F. T. Leversuch, heretofore Freight and Ticket Agent, Michigan Central Rd., Windsor, Ont., has been appointed Traffic Manager, London & Port Stanley Ry., London, Ont.

J. J. Callaghan, heretofore Superintendent of Transportation, Montreal & Southern Counties Ry., Montreal, has been appointed Manager of Operation, London & Port Stanley Ry., London, Ont.

W. O. LeBer, heretofore dispatcher, Montreal & Southern Counties Ry., Montreal, has been appointed acting Superintendent of Transportation, vice J. J. Callaghan, who has been appointed Manager of Operation, London & Port Stanley Ry.

C. E. A. Carr, railway supplies, etc., Toronto, formerly General Manager, Quebec Railway, Light, Heat and Power Co., received a cablegram from the British War Office, July 23, that his son, Private C. Clifton Carr, of the 3rd Battalion, Canadian Overseas Expeditionary Force, previously reported missing, but from whom he subsequently received a letter, had been officially reported as having died of wounds while a prisoner of war at Cassel, Germany. A dispatch states that the wounds consisted of a shattered thigh.

## Electric Railway Notes.

The Calgary Municipal Ry. is reported to have carried over 60,000 passengers on July 1.

The London & Port Stanley Ry. has received the Board of Railway Commissioners' approval of its standard passenger tariff on the basis of 2½¢. a mile.

The Public Utilities Commission in Port Arthur, Ont., has removed to new and larger offices in the Whalen Building, all its business now being transacted on the ground floor.

Owing to the increased cost of the Hydro Electric Power Commission of Ontario's power in St. Thomas, the cost of power for operating the St. Thomas St. Ry. increased from \$441 in May to \$647 in June.

The Sandwich, Windsor and Amherstburg Ry. has ordered two single truck city cars, with bodies 21 ft. long mounted on 21E trucks, 8 ft. wheel base, from Preston Car and Coach Co.

In a recruiting campaign inaugurated in Toronto during July, one of the Toronto Ry. cars was utilized. It was decorated with bunting, and bore a destination sign of Berlin and signs of various sorts to induce men to enlist.

The British Columbia Electric Ry. Co. entertained 150 delegates of the National Electric Light Association at Vancouver recently. The party left for San Francisco after the annual convention, and visited Vancouver in the course of a trip.

The Sandwich, Windsor & Amherstburg Ry. has ordered 2 single truck car bodies from Preston Car & Coach Co.; 2 trucks,

21E single, from G. C. Kuhlman Car Co.; and 4 no. 323 railway motors from Canadian Westinghouse Co.

Thirty of the Vancouver employees of the British Columbia Electric Ry. have been awarded "First Aid" certificates by the St. John's Ambulance Association local branch. The class was conducted during the winter by Dr. S. Paulin and Dr. W. Keith, who were, June 25, each presented with gold sleeve links by members of the class in recognition of their services.

The question of the best method of issuing transfers to passengers on the municipal railway is agitating the Calgary, Alberta, Commissioners. Several of them advocate the issue of transfers as passengers are getting on the cars, while Superintendent McCauley prefers the plan of issuing them as passengers leave. A report on experiences of both plans is being prepared.

The London & Port Stanley Ry. has received 5 steel motor cars, one baggage and express car 61¼ ft. long, one freight car and three trailer cars from the Preston Car & Coach Co. The interior finish of the trailer cars is of mahogany, with a seating capacity of 68. The cars are equipped with G.E. air brakes, G.E. multiple unit control, Tomlinson M.C.B. couplers form 12 draw bars. The trucks were made by the National Steel Car Co.

The Edmonton, Alberta, City Council recently gave Superintendent Larmouth a free hand in the management of the Edmonton Radial Ry. for a certain time. At the June meeting of the council a petition by certain residents on Namayo Ave. asked that Mr. Larmouth's decision not to stop at a certain corner be overruled, and the council requested the commissioners to discuss the matter with the Superintendent and see what could be done to meet the request.

The London St. Ry. is having two of its older type cars remodelled into p.a.y.e. cars by Preston Car and Coach Co., making them as nearly like the new cars added to the system recently as possible. The work involves the strengthening of the frames and new vestibules both front and rear. The company has 23 of these cars but it will not be decided until the testing of the two now being changed, whether the remainder will be so altered or not.

## Contracts for Toronto Civic Railway Equipment, Etc.

The Toronto City Council has awarded contracts for the Toronto Civic Ry.'s Danforth Ave. machine shop equipment tendered for recently. The contracts were divided among several firms. Following is the equipment ordered: Double back geared gap lathe, belt driven, with a swing of 44 ins. in the gap, 28 ins. over the shears, 20 ins. over the carriage and 14 ins. over the face plate, with a bed about 14 ft. long to admit 8½ ft. between centres. Wheel press, 150 tons capacity, to be used with 33 in. wheels and axles, with 5½ in. wheel seats. Double back geared shaper, to plane not less than 24 in. face. Double back geared radial drill, 3½ ft. clear arm, belt driven. Double back geared upright drill to drill up to 1½ in. holes, belt driven. 3,000 lb. portable crane. Double emery stand, for 12 x 2 in. wheels. Vise. 16 in. hack saw. 35 h.p. constant speed induction motor, 550 volts a.c., 3 phase, 25 cycles, 720 r.p.m.

The City Council has awarded the contract for the sweeper for the St. Clair Ave. line, for which tenders were invited recently, to the C. E. A. Carr Co., Toronto, agents for a United States manufacturer.

## Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry., and allied companies.

	May 1915	May 1914	July 1, 1914 to July 1, 1915	July 1, 1913 to July 1, 1914
Gross earnings	\$512,568	\$678,314	\$6,808,470	\$4,128,904
Expenses	488,854	505,640	5,499,897	5,931,407
Net earnings	23,714	172,674	1,308,573	2,197,497

### Cape Breton Electric Co.

	May 1915	May 1914	May 31, 1915	May 31, 1914
Gross earnings	\$26,611.66	\$29,485.78	\$127,765.12	\$137,624.78
Expenses	16,410.80	16,095.03	80,255.15	83,483.38
Net earnings	10,200.86	13,390.75	47,509.97	54,141.40

**Detroit United Ry.**—The City Council of Detroit, Mich., has approved of an agreement with the D. U. R. directors for the purchase of the line, at a price to be fixed by the judges of Wayne County, Mich., to be paid by the city assuming mortgages to the full extent of its borrowing powers, that is, 2% of the total value of the taxable property within the city limits, and by a sinking fund to be provided out of the line's earnings. It is estimated that the lines represent a value of \$25,000,000, and that the 2% on the city property will represent \$16,000,000. The D. U. R. directors issued a letter to shareholders, July 14, advising the acceptance of the agreement. They will meet Aug. 2, to consider the question.

**Saskatoon Municipal Ry.**—Receipts for June, \$8,843.71 against \$13,303.66 for June 1914. Operating expenses \$9,931.33 and \$10,874 respectively.

**Toronto Civic Ry.** The City Works Commissioner states that the receipts for the current year from the various lines operated by the city have increased over the same period last year by about 25%, chiefly due to passengers using the cars more in the middle of the day.

**Toronto Ry., Toronto and York Radial Ry.** and allied companies.

	May 1915	May 1914	May 31, 1915	May 31, 1914
Gross earnings	\$705,262	\$871,793	\$4,022,505	\$4,163,988
Expenses	420,459	449,627	2,152,304	2,169,106
Net earnings	374,803	422,166	1,870,201	1,994,882

The receipts of the Toronto Ry. from Jan. 1, and the percentages paid to the city, for 1915, compared with those for 1914, are as follows:

	1915	City percentage	1914	City percentage
Jan. ....	\$ 471,226	67.486	\$ 501,844	75.277
Feb. ....	440,314	67.047	461,274	72.060
Mar. ....	488,468	93.141	530,751	102.159
Apr. ....	467,702	93.540	501,435	100.287
May ....	468,953	93.790	534,465	106.893
June ..	450,582	90.116	525,038	105.106
	\$2,787,245	\$508,120	\$3,054,802	\$561,773

### Winnipeg Electric Ry.

	May 1915	May 1914	May 31, 1915	May 31, 1914
Gross earnings	\$263,302	\$337,664	\$1,496,707	\$1,756,536
Expenses	176,552	189,643	959,808	1,026,132
Net earnings	86,750	148,021	536,999	730,407

**The Winnipeg, Selkirk and Lake Winnipeg Ry. Co.** is a subsidiary of the Winnipeg Electric Ry. Co., and operates a line from Winnipeg to Selkirk, Man., 22.13 miles, with the Stony Mountain branch, from Middlechurch to Stonewall, 24 miles. It had outstanding, June 30, 1914, \$111,500 in stocks, and \$400,000 in bonds. The bonds were issued in 1908, redeemable in 30 years from their date, and bear 5% interest.

Under an order issued by the Manitoba Public Utilities Commission, July 10, the Company is authorized to issue bonds for \$1,400,000. It is said that the present outstanding bonds will be amalgamated with the new issue, and that the balance will be used to repay to the Winnipeg Electric Ry. Co., the \$980,000 advanced for construction of the Stony Mountain branch and other purposes. The order provides that it is subject to the shareholders' approval; that the new bonds shall not be sold at less than 85% of face value, and that the company account to the Commission for the disposition of the proceeds.

# Marine Department

## The Question of Tonnage for Export Trade.

One of the most serious problems which the Dominion Government has under consideration, and which is one of the matters that Premier Borden will take up with the Admiralty and the home authorities, is that of the shortage of ocean tonnage and the tying up of the Canadian export movement. The impending harvest in Canada, and the necessity of moving the immense crop which at present is expected, brings the problem more forcibly to the front, and makes its solution a matter of pressing importance. The general export business of the country has been hampered seriously for the past 10 months, owing to the shortage of ocean tonnage both on the Pacific and the Atlantic, though exporters have shown an inclination to take the situation philosophically and to resign themselves to the inevitable loss of business. In

Canada, but South Africa, Australia, New Zealand and all the British possessions, also suffer. While German shipping has been driven from the seas, there is a very large German tonnage locked up in United States ports, which before the war was plying on the trade routes of the world. Neutral shipping is also to some extent seriously hampered. A number of prize vessels have, it is stated, been placed at the disposal of shippers in Great Britain, but these are not many. In response to the urgent demand for ocean tonnage many of the steamships formerly engaged on the Great Lakes have taken to the Atlantic.

At best, the movement of the 1915 grain crop under present conditions of scarcity of tonnage must be slow. There is a capacity of 168,000,000 bush. in Canadian elevators which, to a great extent, will take care of the storage of the crop, but there is only a capacity of 29,250,000 bush. in the elevators in the eastern inspection division, including Montreal, with a capacity of 7,400,000 bush.,

the available tramps pressed into the service. These latter are already reaping a rich harvest, and ocean freight rates are up all around.

The increased insurance rates, on account of war risks, are comparatively light as contrasted with the boost in the freight rates following decreased supply and increased demand for shipping. If the ocean freight rates go still higher it is not improbable that joint action will be taken by the Imperial and Canadian Governments to requisition all the available freighters for the handling of food exports from Canada at fixed freight rates, with the Governments assuming all risks of loss. Sir Robert Borden will spend at least part of his time while in England in discussing the question with the Admiralty and the British Board of Trade. In the meantime transportation and business interests are endeavoring to co-operate in looking for a solution of the problem.—Ottawa correspondence Toronto Globe.

Car Ferry Steamship Prince Edward Island, for service between Cape Tormentine, N.B., and Carleton Point, P.E.I.

the movement of the new crop this autumn the railway systems, the shipping interests, the financial concerns, and, in fact, the whole Dominion, are vitally interested. The total yield of wheat in Canada last year was 158,000,000 bush., and this year, with an estimated increase in the acreage of 25%, and with generally good prospects for an increased yield per acre, it is estimated that the crop will not fall far short of 250,000,000 bush. In the United States it is estimated that there will be 100,000,000 bush. more than last year. It will therefore be seen that a very considerable increased tonnage will be required to carry the exports of the two countries.

Much of Canada's shipping is now engaged on the King's business, having been taken over by the Admiralty for purposes of transport, etc. A tremendous amount of tonnage formerly available for ocean freightage is carrying troops to the various theatres of war, to the Dardanelles, to France, and from Canada to England. Other ships are engaged in the carriage of ammunition, army stores, horses, hay and fodder, etc., so that a comparative few are available for the ordinary export business of the Dominions. In this respect not only

so that unless export is freer than it is at present the crop will have to be moved very gradually from the west. This in itself, however, is not regarded as an un-mixed evil, since a gradual movement, from the financial viewpoint, is perhaps better than a rush during a month or so.

The cry for ships has been incessant for some months past, and both the export and import business have been seriously hampered by lack of ocean shipping facilities. There are hundreds of ocean steamships which were formerly available, but which are now being used exclusively for war purposes, some of them being kept as prison ships in England. When the crop movement starts it will take several hundred vessels to handle Canada's wheat exports alone, with a similar increased demand from the United States. It is not improbable that there will be serious congestion of wheat at the ocean terminals by the end of September, and in consequence the rail movement to the east will be held up. That may bring about a glut of wheat on the western markets and a consequent big drop in price, unless the Government succeeds in its present efforts to have some of the ships now on war service released, and all

## Car Ferry Steamship for Prince Edward Island Service.

The car ferry steamship Prince Edward Island, for service between Cape Tormentine, N.B., and Carleton Point, P.E.I., arrived at Halifax, N.S., July 4, having sailed from Newcastle, Eng., June 24. The voyage across, under Capt. W. Manning, was accomplished in complete safety and without incident or accident.

Her dimensions are, length overall 305 ft., breadth 53 ft. 10 ins.; draught 18 ft. On this draught she will carry a full complement of 10 freight cars, or 6 passenger cars, about 150 tons of coal and general stores. One of her features is the provision of a forward propeller, which it is considered will be of considerable use on account of the manoeuvring necessary through ice at the landing points. The accompanying illustrations show the vessel complete, prior to leaving England, the bow, and also the car deck. Complete descriptions of the vessel, with plans and profile, were given in Canadian Railway and Marine World for Sept., 1913, pg. 444, and Nov., 1914, pg. 518.

## Grounding of the s.s. Romney.

A formal investigation was held at Quebec, June 29, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. J. A. Murray, harbor master, Quebec, and Capt. F. Nash, Montreal, as nautical assessors, into the causes of the grounding of the British s.s. Romney on Green Island reef, in the St. Lawrence River, June 24.

The master, Thomas Moss, stated that the Romney is a single screw, steel built vessel, of 2,316 tons net, with triple expansion engines, capable of a speed of 11 knots, carrying a crew of 56 all told, and is provided with all the necessary navigation instruments, including four compasses, one

Jules Lamarre stated that he had been a Quebec branch pilot for some 12 years, having had but one accident previously, which was not made the subject of an investigation, as it was trivial. He had piloted the Celtic King down the day before and landed at Father Point on June 23, and attempted to rest, but owing to pains in his legs could not obtain any sleep. The same evening he took charge of the s.s. Romney, and steered the usual courses to Bic, and after passing that point shaped a course s 67 w, which in ordinary circumstances would lead him between Red Island lightship and Green Island. He saw a light half a point on his starboard bow, but could not distinguish its character, owing to the smoke from the ship obliterating its brilliancy, the wind being aft, or a little on the port quarter. The lookout reported breakers ahead, the helm was put hard astarboard, engines ordered full speed astern, and the ship grounded. Prior to this, he assumed that the light in sight was the lightship, but did not make sure by means of the glasses, that such was the case.

Upon being recalled, in answer to a question from the court if it was not the case that he was asleep, or sleepy from the time he saw the light, he replied that such was the case, and that he had pains in his head, reiterating that he had no rest the day before.

The lookout man averred that he reported

respect to the pilot, Jules Lamarre, the court cannot,—in view of his evidence, and admission that he might have been drowsy or sleepy at the time, due to lack of sleep the day before, occasioned by pains in his legs,—exercise any leniency. Though many years a pilot, he evidently has not yet realized the extent of the responsibility he assumed when taking charge of a ship. We claim that it was his duty to inform the master of his temporary physical disability. Had he done so, it is not probable that the master would have left the bridge. We assume, and rightly so, that the statement that the smoke obscured the light is but an excuse, and not a valid one. We know that there are intermissions in the emission of smoke from the funnel, and during those intervals the light must have been visible sufficiently to show the difference between the light exhibited on Green Island and the one on the lightship, or on Red Island, each one of which is of a different type. Accepting the evidence adduced that the lightship and Red Island lights were not visible, owing to mist, the difference in the exhibition of those lights and their character is great enough to observe in a moment, especially in the almost normal climate conditions which existed that night, lights being seen at a distance of four miles. We cannot conceive for a moment how such a mistake could be made by any one, unless under aberration, momentary or otherwise, or whilst under a sleepy spell, the pilot having admitted being in the latter state. Leniency is out of the question, and there-

Bow of Car Ferry s.s. Prince Edward Island, just before launching.

of which is of Lord Kelvin's make, upon which there is very little deviation. From the time he left Liverpool he encountered more or less misty, thick weather. During the 10 days crossing until Sydney was reached, he had scarcely any rest, all hands having been kept on the alert while the vessel was in the war zone. After leaving Sydney, where he had gone to bunker, he encountered misty weather. He first sighted Cape Gaspé, then Cape Chatte, and finally made Father Point. He was on the bridge constantly during this time, and after having boarded the pilot, and passing Bic Island, he left the bridge about 11.30 p.m., after having given verbal orders to be called if the weather became thick or misty. He did not retire to his room until 12.30, the weather being then overcast, with fresh wind from a northeasterly direction. He had informed the pilot that on the course s 67 w there was but one degree of deviation, which was not worth considering. He was awakened by the ship striking, and rushed up on deck, and found that orders for the engines to be put full speed astern had been given by the pilot, but notwithstanding this the ship remained fast. The tide was then ebbing, and soundings were immediately taken, and a call for assistance was sent by wireless, and the s.s. Lady Evelyn arrived and made efforts to pull the vessel off without success, until that night, when the ship was floated at high water, and proceeded to Quebec.

Car deck on Car Ferry Steamship, Prince Edward Island.

two small lights indistinct on the starboard bow, then another nearer ahead on the starboard side, then two lights which he assumed were lanterns, on the shore. The quartermaster said the ship steered well, and he showed such remarkable memory for details that the court did not attach much importance to his statement.

The court finds that Capt. Moss has given satisfactory reasons and explanations for his absence from the bridge prior to and up to the moment of the accident, and therefore exonerates him from blame. With

fore, for his lack of attention to duty, which has caused a loss of thousands of dollars, we suspend Jules Lamarre's pilot's license for six months, from June 29 to Dec. 29, and further order him to pay \$100 towards the costs of the investigation. With regard to second officer Cooper, we find that he showed a marked indifference in the navigation of the ship. His orders were to call the master if it became thick or hazy. If the character of the light could not be discerned owing to smoke obscuring it, we are of opinion that it was his right and duty to

advise the master, further, when such a condition existed, and he should have shown sufficient interest to refer to the chart or sailing directions, as, had he done so, he could have pointed out to the pilot that he was piloting the ship into danger. It is in such a time as this that the officer on duty should assure himself that the pilot is right, besides increasing his knowledge of the conditions existing in the waters he is called upon to navigate. We repeat that second officer Cooper has shown an extraordinary and most lamentable indifference in the accomplishment of his duties, and while we will not deal with his certificate, we severely reprimand him, and caution him to be more careful in the future and exercise that intelligence and caution which every master expects from those he entrusts with navigational duties. This court points out that in dealing apparently in a lenient manner with the second officer, it recognizes the peculiar situation created by the war, which has reduced the number of officers available to a minimum, therefore causing untold delay to vessels carrying out their schedule.

### Suggested Customs Officer in New York for Canadian Shipment via Panama Canal.

A proposal is under consideration by the Dominion Government, at the instance of eastern members of the Canadian Manufacturers Association, to appoint a customs officer in New York, so that Canadian manufactures may be shipped to the Pacific coast via New York and the Panama Canal. When a deputation waited on the Premier at Ottawa recently, it was pointed out that in certain manufactures Canadian eastern makers, by having to ship to the Pacific coast by the all rail route, could not compete with U. S. eastern manufacturers who could send by the Panama Canal route at much cheaper rates. The Premier was understood to say that if certain products were to move to the Pacific coast via New York, which at present had no movement, it would follow that manufacturers would be sending other products by that route which now move by the all rail route, and this would be to the detriment of Canadian railways. He promised that the point would, however, receive careful consideration. S. R. Parsons, Chairman of the Transportation Committee of the Canadian Manufacturers Association, has since stated that the matter is becoming somewhat involved in that Canadian railways have in some instances been making low commodity rates in order to meet, as far as possible, the competition via New York, and it is understood that they are giving further consideration to the matter. On the other hand, owing to the scarcity of steamships, freight rates via New York to Pacific coast points have advanced considerably.

**Cruiser Sterns on Merchant Vessels.**—A correspondent of a New York shipping paper objects to the use of the words cruiser stern, which have been applied to the design of a stern which is being applied to certain vessels in Europe, and which it is said is likely to be copied on this continent. The paper states that cases where the real cruiser stern is applied to merchant vessels are very rare; the only correct ones so built up to the present are the C.P.R. steamships Empress of Russia, Empress of Asia, Metagama, Missanabie and Princess Irene, and the Allan Line steamships Alsatian and Calgarian. The C. P.R. s.s. Princess Margaret, a sister vessel of the Princess Irene, should be added to the list.

## Shipping Letters From the Head of the Lakes.

F. and W. Jones, brokers, Fort William, Ont., have issued weekly letters as follows:

**July 3.**—Coal receipts this week show an increase over last week—seven cargoes arriving—5 bituminous and 2 anthracite—only one cargo was carried in U. S. bottom. Four cargoes are reported en route, 3 for the Canadian Northern dock, 1 anthracite and 2 bituminous, and 1 vessel with both anthracite and bituminous will discharge part at the Canadian Pacific and part at the Canadian Northern. Car shipments to the west have also picked up considerably during the past week, dealers are now commencing to replenish their stocks throughout the west and it is expected that commercial coal will move somewhat more freely. The railways, however, are shipping only sufficient service coal to fill their actual requirements. This condition is likely to continue until cars are needed in the west to move the grain crop. Two cargoes of bituminous coal have been unloaded at Jackfish during the week, about 6,000 tons each. One cargo of ore (about 2,500 tons) was shipped this week to Cleveland. Stocks on the dock are estimated at about 6,000 tons, but no further charters are reported.

Lake movement of grain has continued steadily on about the same parity as the previous week, 928,486 bush. having been shipped east in 7 vessels, only 1 of which was U. S. bottom. This cargo was composed of flax and billed to Cleveland. Grain arrivals from the west are steadily declining and it is generally conceded that very little of the old crop is now left in the west to come forward. Total elevator stocks at the head of the lakes now stand at 4,754,865 bush., a decrease from the previous week of 447,121. It will thus be seen that with the lake movements steadily in excess of western arrivals the available stocks must soon be greatly depleted and the prospects of grain charters will lessen from week to week until new crop movement commences. The heavy rain storms referred to in our last week's letter and which was general over the western provinces, have continued in a modified form, accompanied by warmer temperature and more sun. There are no reports which would denote serious damage to the crops, at the same time it cannot be expected but that the continuous rainfall must have at least retarded advancement. The total result will probably be a greater percentage of lower grade grain and a setback in harvesting of possibly two weeks. From reliable sources it is computed that it will be some 2 weeks before the "ear" is developed, after which it will take about 4 weeks to ripen, thus bringing commencement of harvest up to second or third week in August. The grain movement should, therefore, be commencing well in advance of Sept. 1. It is still maintained that a full crop will be harvested equal to any previously known in Canada, even if it does not reach a bumper crop. The heavy floods which have been reported in the west are mainly confined to the city areas. Stocks on hand at date, receipts and shipments during the week are:

	Stocks.	Receipts.	Shipments.
Wheat .....	2,399,718	319,482	616,615
Oats .....	994,596	115,498	71,912
Barley .....	86,756	15,950	101,295
Flax .....	1,273,801	20,160	155,165

**July 10.**—Coal receipts this week show a slight increase over last week—9 cargoes arriving, 6 bituminous and 2 anthracite, and one part bituminous and part anthracite—4 cargoes were in U. S. bottoms and 5 in Canadian. One cargo of a U. S. steamship was discharged at two docks, part at the Canadian Pacific and part at the Canadian Northern. On Tuesday and Wednesday the Canadian Pacific worked on three steam-

ships. All vessels received good dispatch and in only one case was a steamship held over 12 hours waiting turn. Two cargoes are reported en route, both bituminous—one for the Canadian Northern, the other for Fort William coal dock. Shipments to the west were on the same parity as last week, there is no change in the western coal situation and there is nothing to indicate any immediate business activity.

No ore was shipped out this week. Considerable ore is on the dock ready for shipment and a cargo will probably go east next week. Contracts have been closed recently for the delivery of about 45,000 tons of steel rails. The first shipment is expected the latter part of next week.

There has been a marked decrease in lake shipment of grain from these points during the past week; 633,274 bush. have been moved in five Canadian steamships and four passenger vessels; three of the former were billed to Buffalo. Receipts from the west have been round the same parity for the past several weeks with sufficient weakening to show end of stocks in sight. The elevator stocks also show a decrease, the total of grain in all elevators being 4,665,857 bush. The rain storms mentioned in our last letter have abated and the floods are subsiding. Weather reports throughout the west are universally favorable, warmer temperature being general. Grain is reported as filling out rapidly and in healthy condition. It is remarkable that the heavy storms have done little damage, the only noticeable effect being a setback in the time of harvesting. The prospective figures are still from 200,000,000 to 250,000,000 bush. of all grains. Stocks on hand, receipts and shipments during the week are as follows:

	Stocks.	Receipts.	Shipments.
Wheat .....	2,429,777	354,267	324,208
Oats .....	941,014	148,528	206,855
Barley .....	103,951	17,203	8
Flax .....	1,191,115	20,516	103,203

**July 16.**—Coal receipts fell off again this week—five cargoes arriving—all bituminous and all in Canadian bottoms. Four cargoes are reported chartered or en route, three anthracite and one bituminous. Two of these are in U. S. bottoms. Shipments to the west still remain light and the coal situation is unchanged. One cargo of about 2,500 tons of ore was shipped this week. There is still considerable ore to come down from the mines but no further charters are reported.

Grain shipments took a big jump this week, 10 cargoes (aggregating 1,243,801 bush.) going east. All were in Canadian bottoms, one cargo of about 100,000 bush. of wheat was to Buffalo. Receipts also show an increase of about 181,822 bush. over last week, but owing to the heavier shipments stocks have decreased, the total of grain in all elevators being 4,044,390 bush. Crop reports for the past week covering the three prairie provinces are very satisfactory, the weather for the most part has been warm and bright with sufficient rain to keep up the supply of moisture. A number of samples have been sent in from Southern Manitoba districts and examined by experts who state they are well satisfied with the appearance and predict better than an average crop. The Department of Agriculture reports conditions in both Saskatchewan and Alberta as excellent, in Southern Alberta some early sown wheat is as high as 42 to 44 ins., showing every indication of a good yield. It is expected that cutting of fall wheat will commence early in August. Stocks on hand, receipts and shipments during the week:

	Stocks.	Receipts.	Shipments.
Wheat .....	2,168,304	442,578	703,990
Oats .....	607,321	148,003	481,571
Barley .....	67,817	18,296	15,175
Flax .....	1,200,678	12,739	3,176

### Canadian Vessel Statistics for 1914.

The total number of vessels on the Dominion register at Dec. 31, 1914, was 8,772, measuring 932,422 tons, being an increase of 227 vessels and 35,457 tons over 1913. The number of steamships on the register was 4,054, with a gross tonnage of 744,783, which, at an assumed average value of \$30 a ton, shows the value of the net registered tonnage to be \$24,972,660. The number of new vessels built and registered in the Dominion in 1914 was 327, measuring 43,346 tons, which at an assumed value for new tonnage of \$45 a ton, gives the value of \$1,950,570. During the year 212 vessels were removed from the register. It is estimated that 45,163 persons were employed on vessels registered in the Dominion during the year.

The number and tonnage of vessels, according to provinces, are as follows:

	Sailing ships and Steamships.	Steamships.	Gross tonnage of Steamships.	Net tonnage of sailing ships and Steamships.
Ontario .....	2,100	1,492	337,668	314,660
Quebec .....	1,663	590	177,958	259,143
British Columbia .....	1,591	1,173	131,550	147,192
Nova Scotia .....	2,098	416	47,580	135,052
New Brunswick .....	1,052	253	33,106	55,522
Prince Edward Island .....	149	26	4,760	10,029
Manitoba .....	103	90	8,785	7,999
Yukon .....	11	10	2,716	2,295
Saskatchewan .....	5	4	660	529
	8,772	4,054	744,783	932,421

Ports of registry are distributed as follows: Ontario, 38; Nova Scotia, 21; New Brunswick, 7; Quebec, 6; British Columbia, 4; and Manitoba, Saskatchewan and Yukon, one each. No provision is made for the registry of vessels in Alberta. The new vessels built during the year, according to provinces, are as follows:

	Number.	Net tonnage.
Ontario .....	78	23,167
Quebec .....	51	6,753
British Columbia .....	97	5,867
Nova Scotia .....	56	3,303
Manitoba .....	11	2,899
New Brunswick .....	31	1,319
Prince Edward Island .....	2	35
Yukon .....	1	3
Saskatchewan .....	..	..
	327	43,346

Of the 212 vessels which were removed from the register during the year, 86 were broken up, reported out of existence, condemned, dismantled, abandoned, etc.; 27 were sold to foreigners; 17 were burnt; 17 were wrecked; 14 foundered; 12 stranded; 11 were lost; 8 were abandoned at sea; 7 were transferred to Newfoundland; 7 were transferred to Barbadoes; 2 were transferred to Great Britain; 2 were reported missing; 1 was lost in a collision, and the registry of 1 was closed on the ground that it was no longer required. In a list of the tonnage of each of the maritime countries of the world, Canada takes tenth place, but her tonnage is included with that of Great Britain, which is shown as 13,320,493, more than the aggregate tonnage of the next seven countries. A comparison of the building of new tonnage in Canada during the past 40 years gives some interesting results, which in view of the suggestions made recently by shipbuilders in the Dominion regarding Government subsidies for the trade, may serve some purpose. In 1874, 481 vessels were built, having a total tonnage of 183,010, an average tonnage of 380, while in 1914, 327 vessels were built, with a total tonnage of 43,346, an average of 133 tons. In 1874 the chief vessel building was done in the Maritime Provinces, with Nova Scotia leading, whereas in re-

cent years Ontario has taken the lead in the amount of new tonnage, the amount for 1914 being the highest, but it is little more than a quarter of the tonnage built by Nova Scotia in 1874. The total number of vessels on the Canadian register in 1874 was 6,930, with a tonnage of 1,158,363, compared with 8,772 vessels and 932,422 tons

### Dominion Government s.s. Grenville for Buoy Work in St. Lawrence River.

The s.s. Grenville, a buoy tending steamboat for the Dominion Government, placed in service recently on the St. Lawrence River, with the station at Prescott, Ont., is illustrated herewith. This vessel was described in detail in Canadian Railway and Marine World for Dec., 1914, shortly after launching. The following are the principal dimensions:

Length between perpendiculars .....	155 ft.
Length overall .....	164½ ft.
Breadth moulded .....	30 ft.
Depth moulded .....	13 ft.
Draught, loaded with 183 tons .....	9½ ft.
Coal bunker capacity .....	100 tons
Complement, officers and men .....	24

The vessel is of steel construction throughout, built under the government

Dominion Government Buoy Tending Steamship Grenville.

survey, to be classed as 100 A1 at Lloyd's. She has six main transverse watertight bulkheads—a watertight bulkhead at the bow and stern with bulkheads adjoining forming trimming tanks. She is engined with a 14 x 22½ x 38 x 24 in. 900 i.h.p. reciprocating engine, with two Scotch boilers. She was built by the Polson Iron Works, Toronto.

### Vessels for Hudson Bay.

St. John's, Nfld., press dispatch, July 18.—In order that the proper kind of lumber for the construction of piers and docks may be available at Port Nelson, where the Canadian Government is building a railway and steamship terminal on the shores of Hudson Bay, it has been found necessary to send a steamship around the greater part of North America. The Durlay Chine, which left Vancouver, B. C., June 30, will cover approximately 10,000 miles to land her cargo of Douglas fir at Port Nelson, which is only about 1,200 miles distant from Vancouver in an air line. Her route lies down the Pacific coast, through the Panama Canal, up the Atlantic coast to Newfoundland, and thence into Hudson Bay. In preparation for this season's work at Port Nelson, a fleet of vessels is fitting out at St. John's. Most of these

are sailing vessels, equipped for service in stormy and ice frequented water. Some of them will be used directly by the Canadian Government for the transport of men, construction material and food supplies. Others are engaged by the fur companies for the collection of last winter's accumulation of peltries along the Labrador and Hudson Bay coasts.

### Toronto Harbor Improvement Works.

The Canadian Stewart Co., general contractors for the various works in progress in the Toronto harbor, by the Dominion Government and the Toronto Harbor Commissioners, announced July 19, that work on certain of the sub contracts had been stopped temporarily pending their rearrangement. Local reports state that complaints have been made regarding the manner in which some of the work done under sub contracts has been done, and that a number of inspectors acting under the Dominion Government have been dismissed. The Canadian Stewart Co. is reported to have stated that about 20% of the sub contracts have been completed, and that the complaints made refer to about 2% of the com-

pleted portion. If the sub contractors failed to make this good, the general contractors will do so.

One of the Toronto Harbor Commissioners, is reported to have said that Government work in connection with the harbor development scheme had not been accomplished to the Government engineer's satisfaction and the result is that the inspectors had been instructed to cease work until a readjustment can be made. The imperfections were found before they were irreparable, and would be made good by the contractors.

Press reports state that the Government has appointed E. L. Cousins, Engineer, Toronto Harbor Commissioners; Engineer Sweeney, of the Public Works Department at Winnipeg; and Roger Miller, Toronto, to go over the entire work and submit an estimate of the cost of reconstruction. In the meantime the Canadian Stewart Co. is holding the subcontractors' plants.

The C.P.R.'s New York Passenger and Ticket Office has been removed from 450 Broadway to 1231 Broadway, corner of 30th Street, which is more central than the old office. The downtown office is being maintained at 1 Broadway and the freight office as usual in the Woolworth Building.

### Atlantic and Pacific Ocean Marine.

The Cairn Line, which operates a number of steamships between England and Canada, has paid an interim dividend of 10% against 2½% last year.

It is announced that the British Admiralty has placed a large order for British Columbia lumber, and that vessels have been arranged for its transportation.

The Osaka Shosen Kaisha s.s. Chicago Maru, bound from Hong Kong, China, to Victoria, B.C., which struck a rock near Shanghai recently, proceeded to Kobe for repairs.

It is announced that the Danish steamships calling at Vancouver will increase their sailings from six to 11 in August, on account of increased lumber and shingle exports from British Columbia.

The s.s. Cheltonian, which stranded near Cape Ray, Nfld., May 23, and which was docked at Halifax, N.S., for examination, will, it is said, be repaired in New York, the amount involved approximating \$100,000.

The British s.s. Anglo-Californian, bound from Montreal to Europe, with horses and war supplies, was shelled by a German submarine early in July, and the captain and 11 of the crew were killed. The vessel was eventually taken into Queenstown, Ireland.

It is reported that the Scottish Co-operative Wholesale Society sent representatives to the Pacific coast recently to make arrangements for the shipping of Canadian grain to Great Britain by the Panama Canal route.

The s.s. Durley Chine sailed from Vancouver, B.C., June 30, with Douglas fir for the Dominion Government dock and terminal work at Port Nelson, Hudson Bay. She will travel by way of the Panama Canal and Newfoundland.

The British s.s. Carisbrook, which was sunk by Germans, off Kinnaird Head, Scotland, recently, while bound from Montreal to Leith, Scotland, with war supplies, was owned in Glasgow, and was insured for £23,500. She was built in 1907 and was 2,352 tons gross.

The s.s. Morwenna, which was owned by the St. Lawrence Shipping Co., Montreal, and which was sunk by Germans in June, when bound in ballast from Cardiff, Wales, to Sydney, N.S., was insured for £30,000. She was built in 1904, and was 1,414 tons gross.

A dispatch from Denmark states that the Hamburg-American Line has made a declar-

ation of bankruptcy, and a similar declaration by the Norddeutscher Lloyd is expected shortly. Both of these companies have suffered severely from the war, all of their vessels having been tied up in neutral harbors, chiefly in the United States.

The shareholders of the Suez Canal Company, which is under British control, are being asked to bring to an end the term of service of the only German director on the board, who is also a director of the North German Lloyd.

The British s.s. Romney, which was stranded on Green Island reef in the St. Lawrence River, June 24, while bound from Liverpool to Montreal, is being repaired by the Davie Shipbuilding Co., Levis, Que. She is owned by F. Bolton and Co., London, Eng., and was built in 1903. She is 2,806 tons gross and insured on a value of £13,000.

The Osaka Shosen Kaisha s.s. Seattle Maru, which arrived at Victoria, B.C., early in July, had a cargo of silk valued at \$500,000. The company has launched recently another vessel named Hawaii Maru, of 100,000 gross tons, and a speed of 17 knots an hour. She will be operated between Hong Kong, China, and Puget Sound ports.

The C.P.R. and Allan Line are reported to have taken a considerable amount of business lately on a time charter basis, and are said to be looking out for other vessels of large size and good speed for their various requirements. It is stated that the rate of freight current for this time business is 15c. 6d. a ton dead weight for six months or longer.

Navigators are warned that obstructions have been placed in Queenstown harbor, Ireland. For safety of navigation, two trawlers are moored midway between Corkbeg and Spike Island. Pilotage is compulsory for all vessels without exception between the examination anchorage and the outer man-of-war anchorage and vice versa, and all vessels must pass between the trawlers passing directly up and down the harbor. No vessels must pass each other when approaching or passing the trawlers.

The Atlantic Transport Line s.s. Minnehaha, which was reported to be on fire at sea, when en route from New York to London, put back to Halifax, N.S., July 9. The fire was confined to one of the holds, and was believed to be the result of an explosion. It was soon extinguished, without great damage having been done, but owing to the quantity of explosive material aboard, it was not deemed safe to allow the vessel to go up to the usual landing piers.

The report of Lord Mersey, appointed by the British Government to enquire into the sinking of the Cunard Line s.s. Lusitania by the Germans, whereby a large number of lives were lost, exonerates the company and the officers of the vessel from any blame, and places it solely on those who plotted and those who committed the crime. There was possibly a tendency to attach some blame to the captain, owing to the exercise of his judgment in carrying out certain Admiralty orders, but Lord Mersey states that the Admiralty advice was not intended to deprive the captain of the right to use his judgment, and his omission to follow the advice strictly cannot fairly be attributed either to negligence or incompetence.

### Maritime Provinces and Newfoundland.

The St. John, N.B., schooner William B. Herrick, bound to Newport, Eng., was towed into Berehaven early in July, with her rudder broken.

The s.s. Bellaventure, under charter to the Dominion Government, sailed from Halifax, N.S., early in July for Port Nelson, Hudson Bay, with supplies and materials, and also a number of dock laborers.

The Dominion Government s.s. Sheba, which arrived at Halifax from Sydney, N.S., July 11, with coal for the Dominion Coal Co., left later in the month for Florida to load lumber for Port Nelson, Hudson Bay.

The Russian Government is reported to have purchased the ice breaking steamship Bruce from the Reid Newfoundland Co. for service at Archangel. This is the second of the company's vessels which have been acquired for the service named.

The Department of Naval Service is negotiating for the services of a strong wrecking tug for service on the Atlantic coast. It must be not less than 100 ft. long, equipped with powerful winches, salvage and fire pumps and derrick of not less than 15 tons capacity.

The Eastern Steamship Co.'s s.s. Calvin Austin, while outward bound from St. John, N. B., to Boston, Mass., July 16, collided with the lighthouse tender Azalea, in St. John harbor. The reports state that she was practically undamaged, but that the Azalea had several feet of rail torn off and her steering gear damaged.

The car ferry Prince Edward Island, which is to be operated between Cape Tormentine, N.B., and Carleton Point, P.E.I.,

(1) Foreign name Niagara. (2) formerly a steamer.

The Intercolonial Ry. was given a series of test runs at Halifax, N.S., July 13. Trips were made in Bedford Basin and out to sea for about 20 miles, attaining a speed of 14.12 knots an hour.

The Dominion Government s.s. Minto and the auxiliary schooner Burleigh are announced to sail from Halifax, N.S., Aug. 1, for Hudson Strait. The schooner will proceed to Mansell Island, where a wireless telegraph station is to be established. The s.s. Minto will continue the work of attending the buoys and lights which she established in the strait last year.

It is announced that the Prince Edward Island Government has entered into an agreement with W. Macdonald, Sydney, N.S., for the operation of the s.s. Senlac on a regular route between Prince Edward Island and Newfoundland until December. The route is said to cover the following places, Summerside and Charlottetown, P.E.I., Sydney, N.S., and St. John's, Nfld., and if required, also Souris, P.E.I., and North Sydney, N.S.

The Dominion Coal Co.'s s.s. Cabot, while bound from Charlottetown, P.E.I., for Sydney, N.S., was sunk by the bursting of her water ballast tank. The captain and crew took to the boats and after 12 hours were landed at Hastings, N.S. The s.s. Cabot was built at Grangemouth, England, in 1907, and was screw driven by engine of 63 n.h.p. Her dimensions were, length 155.1 ft., breadth 25.1 ft., depth 9.7 ft.; tonnage 465 gross, 162 register.

The Canada Atlantic and Plant Steamship Co. is announced to have withdrawn its steamship service between Charlottetown, P.E.I., and Boston, Mass., owing to small bookings. The steamships Evangeline and Halifax were utilized on this service. Jas. Carragher, agent for the company at Charlottetown, is reported to have stated that he had received instructions to cancel all sailings of the company's vessels from the Island eastward, for the remainder of the season. It is suggested locally that the Government be asked to offer some inducement to the company to continue the service, at least to the end of the year. Efforts are also being made to get the local board of trade to take the matter up.

### Province of Quebec Marine.

Canada Steamship Lines s.s. Tadousac stranded in shallow water near Ste. Irene at the end of June, and was refloated the same day with trifling damage.

Canada Steamship Lines s.s. Quebec, while on her way to Quebec, July 6, grounded near Three Rivers during a gale, but was refloated the following day without damage.

### Ontario and the Great Lakes.

The Dredging and Drainage Co. of Ontario, Ltd., has changed its name to the Dredging and Dock Co., Ltd.

The U. S. Government has placed a horizontal striped gas buoy to mark the point where the wrecked s.s. Charles S. Price lies, in 60 ft. of water near Fort Gratiot light station, Michigan.

Canada Steamship Lines, Ltd., has placed an extra boat on its Toronto-Niagara route for its Sunday service, on account of increased traffic. Five round trips are now made each Sunday.

Canada Steamship Lines, Ltd., has secured supplementary letters patent amending the powers in its original letters patent by substituting a new clause respecting mortgages, bonds and debentures.

The C.P.R. has added verandah cafes to its steamships Assiniboia and Keewatin, and new smoke rooms to its steamships Alberta and Manitoba, and has also installed reading lights in every berth.

Mathews Steamship Co.'s s.s. Easton transported a cargo of 2,000 tons of iron ore from Marquette, Mich., to the Atlantic coast, recently, which is said to be the first cargo ever shipped direct to the coast from Marquette.

F. E. Hall and Co.'s s.s. Carleton was docked at Buffalo, N.Y., early in July for general repair and overhaul, after striking bottom in the St. Lawrence. It is stated that on completion of the repairs the vessel will sail for England.

The Algoma Central Steamship Line's s.s. Paliki is undergoing repair at Port Arthur, after sustaining bottom damage through grounding some time ago. She was expected to be ready for service early in August.

The s.s. Florence, owned by Sir John Eaton, Toronto, has been overhauled and painted grey, and has been taken to Quebec, where it is stated she will be used by the Government for patrol duty on the river and along the sea coast.

A new edition of Sailing Directions for Canadian Shores of Lake Huron and Georgian Bay has been issued by the Hydrographic Survey, Naval Service Department, and will be supplied to mariners free on application.

The Atlantic Steamship Co.'s s.s. International, which left the builders' yards at Detroit, Mich., July 6, arrived at Quebec, July 13, on her maiden voyage, with coal for the Nova Scotia Steel and Coal Co., and then loaded pulp wood at Gaspé for the return trip to Erie, Pa.

The Marine Department has placed a fixed white light on the steel frame work of the back range lighthouse tower, on the east side of Sydenham River at Owen Sound, until the original lighthouse which was destroyed by fire in June, has been replaced.

A press report states that the Dominion Government has awarded the contract for the transportation of the 1,000,000 bush. of wheat which it has purchased on behalf of the New Zealand Government, from the head of the lakes to Montreal, to the C.P.R.

Lake carriers, were asked by the Government to tender for this service, and it is stated that the tender of the C.P.R. was the lowest.

The s.s. Matoa, formerly owned by Pittsburgh Steamship Co., which was wrecked during the 1913 storm on the Great Lakes and subsequently purchased and repaired by the Reid Wrecking Co., Sarnia, was cut in two recently for passage through the canals, and has been sent to the coast for service on the Atlantic.

A lighthouse and fog bell have been established on a pier in 18 ft. of water in the Detroit River at the head of the Livingstone Channel, about 200 ft. south of the intersection point of the east edge of the Livingstone channel and the west edge of the Ballard Reef channel. The light, which is alternating white and red for 10 and 5 seconds respectively, is 42 ft. above water level, and is visible at 8 miles from all points of approach. The fog bell, which is operated by machinery, gives one stroke every 5 seconds. The gas buoy 79D at the junction of the two channels has been removed.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tide water, for June, as follows: Superior, 601.95; Michigan and Huron, 579.78; Erie, 571.86; Ontario, 245.12. Compared with the average June levels for the last ten years, Superior was 0.32 ft. below; Michigan and Huron, 1.20 ft. below; Erie, 1.11 ft. below, and Ontario, 1.92 ft. below. It was anticipated that during July, Superior would be 0.2 ft. higher, Michigan and Huron 0.1 ft. higher, and Erie and Ontario 0.1 ft. lower.

Mariners are cautioned in regard to approaching the works in progress in the neighborhood of Port Weller, where the Welland Ship Canal will debouch into Lake Ontario. The artificial harbor of Port Weller is situated about 2½ miles east of the Port Dalhousie entrance to the existing Welland Canal, and will consist of a basin protected by earth work and riprap breakwaters, terminating in crib work running about 1¼ miles due north into the lake. Cribbs are being sunk in connection with the outer works, and it may at times prove impossible to maintain efficient lights on them, though every effort will be made to keep the outer extremity marked by fixed white lantern lights.

### Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during June.

### British Columbia and Pacific Coast.

The lights shown from the gas buoys at Roberts Bank, Vancouver rock, Hodgson reefs and Browning entrance, Vancouver, have been made white instead of red, in contravention of the general rule to show red lights from starboard buoys, in order that their range of visibility may be as great as possible. Notwithstanding the color of the lights, these buoys remain starboard or red buoys and must be so treated.

With reference to the recent statement that the Robert Dollar Steamship Co. was arranging to transfer two of its vessels from the U.S. to the Canadian register, Robert Dollar is reported to have stated, July 8, on his return to San Francisco from Vancouver, B.C., that he went to the latter place with the intention of making the transfer of the steamships M. S. Dollar and Robert Dollar, but found out when there that a sale would be more profitable. He stated that the s.s. M. S. Dollar had been sold to Birkhall and Co., Shanghai, China, and that negotiations were then progressing for the sale of the s.s. Robert Dollar. He is reported to have stated that he had come to the conclusion that the new U.S. regulations made it impossible for the profitable operation of U.S. vessels in any other than the coasting trade.

### Vessel Losses During the War.

A record of merchant vessels of all classes destroyed from Aug. 1, 1914, to June 30, 1915, compiled by the Journal of Commerce, Liverpool, shows a total of 511, with a gross tonnage of 915,547 (approximate). Naturally the greatest proportion of the total loss has fallen on Great Britain. This amounts to 170 steamships of 577,986 gross tons, and 157 trawlers, smacks and sailing vessels, of 31,948 tons, a total of 327 vessels of 609,931 tons. Other vessels owned by the allied nations destroyed during the same period are: France, 24 vessels of 42,233 tons; Russia, 17 vessels of 16,024 tons, and Italy, 2 vessels of 3,826 tons. Of the enemies' vessels 34 German vessels of approximately 102,062 tons, 4 Austrian vessels of 5,691 tons, and 9 Turkish vessels have been destroyed. These figures are only of vessels actually destroyed, and do not include the numbers and tonnage of vessels which have been interned in neutral countries, of which the greater number are German. Taking the last figures available of the total merchant tonnage of the various countries of the world, the loss of tonnage by Great Britain shows approximately 4½%, and of Germany approximately 3%.

**Ships for transportation of war supplies.**—A memorandum issued in Ottawa, July 6, by Senator Loughheed, acting Minister of Militia, respecting orders for war materials placed in Canada by the allied Governments, contained the following paragraph: "In February last representations were placed before the Admiralty as to the inadequacy of transportation facilities across the Atlantic, as that condition prevented our producers and manufacturers from availing themselves of opportunities which might otherwise be open. As a result of these efforts 18 ships were detailed by the Admiralty for the purpose of transporting across the Atlantic supplies purchased in Canada for the British and allied Governments."

The Marine Department has issued lists of all lights and fog signals on the Atlantic coast of the Dominion, including the Gulf of St. Lawrence and the St. Lawrence River to Montreal, and also on the Pacific coast, corrected to Apr. 1.

### Car Ferry on Lake Ontario for Niagara, St. Catharines and Toronto Railway.

The N., St. C. and T. R., a subsidiary of the Canadian Northern Ry., applied to the Board of Railway Commissioners, July 16, for an order providing for the transfer of traffic between the Toronto Harbor Commissioners' dock at the mouth of the Don River, as diverted, and the Canadian Northern yards at Chery St. A. Lewis, Secretary of the Toronto Harbor Commission, stated that the actual agreement for the lease of the dock to the N. St. C. & T. R. had not been drawn up, but the parties had agreed to terms, the dock to be leased for five years, the commission reserving the right to take over the dock when three years of the lease have expired, in which case the commission would provide another dock. The N. St. C. & T. R.'s intention is to operate a car ferry steamship between its terminus at Port Dalhousie and Toronto, the switching of the cars between the dock at Toronto and the Canadian Northern's Cherry St. yards and vice versa to be done by the G.T.R. G. Ruel, Chief Solicitor, Canadian Northern Ry., who made the application to the Board, on behalf of the N. St. C. & T. R., stated that negotiations were under way for the purchase of a car ferry, with capacity for 16 or 17 freight cars, and that the service would be carried on until the completion of the N. St. C. & T. R., which it is proposed to extend to Toronto sometime in the future.

The Board ordered that plans of the dock and the connecting railway lines be filed, and that the G.T.R. and C.P.R. agree on a tariff for the switching.

### Mail Subsidies and Steamship Subventions Voted.

The following amounts for steamship services were voted at the Dominion Parliament's recent session:

Atlantic Ocean.	
Between Annapolis and London or Hull, Eng., or both .....	\$ 5,000 00
Between Canadian Atlantic ports and Australia and New Zealand .....	140,000 00
Ocean and mail service between Canada and Great Britain .....	1,000,000 00
Between Canada and Cuba .....	25,000 00
Between Canada and Newfoundland.	70,000 00
Between Canada and the West Indies or South America or both....	340,666 66
Between Canada and South Africa....	146,000 00
Between Halifax, St. John's, Nfld., and Liverpool .....	20,000 00
Between Montreal, Quebec, and Manchester, Eng., during summer, and between St. John, Halifax, and Manchester during winter .....	35,000 00
Winter between St. John, Dublin, and Belfast .....	7,500 00
Winter between St. John and Glasgow .....	15,000 00
Winter between St. John, Halifax, and London .....	15,000 00
Between St. John, Halifax, and London .....	25,000 00

Pacific Ocean.	
Between Canada and Australia or New Zealand or both, on Pacific Ocean .....	180,509 00
Between Canada, China, and Japan.	253,333 34
Between Prince Rupert, B.C., and Queen Charlotte Islands .....	16,000 00
Between Victoria and San Francisco	3,000 00
Between Victoria, Vancouver, way ports, and Skagway .....	12,500 00
Between Victoria and west coast, Vancouver Island .....	5,000 00
Between Vancouver and northern ports of British Columbia .....	16,800 00

Local Services.	
Between Baddeck and Iona .....	5,825 00
Between Charlottetown, Victoria, and Holiday's Wharf .....	2,500 00
Between Froude's Point and Lockport .....	600 00
Between Gaspé Basin and Dalhousie or Campbellton .....	20,000 00
Between Grand Manan and the mainland .....	10,000 00
Between Halifax and Canso .....	5,000 00
Between Halifax and Newfoundland, via Cape Breton ports .....	10,000 00

Between Halifax, Mahone Bay, Tan-cook Island, and La Have River ports .....	4,000 00
Between Halifax and Spry Bay and Cape Breton .....	4,000 00
Between Halifax, South Cape Breton, and Bras d'Or Lake .....	4,000 00
Between Halifax and West Coast Cape Breton, calling at way ports.	4,000 00
Between Halifax and Sherbrooke....	2,000 00
Between Kenora and Fort Frances....	8,000 00
Between mainland and Magdalen Islands .....	18,000 00
Between Mulgrave and Canso .....	6,500 00
Between Mulgrave and Guysboro, calling at intermediate ports .....	5,500 00
Between Newcastle, Neguac, and Escuminac, calling at all intermediate points on Miramichi River and Miramichi Bay .....	2,500 00
Between Pelee Island and mainland.	8,000 00
Between Petit de Grat and Intercolonial Ry. terminus at Mulgrave....	7,000 00
On Petitcodiac River, between Moncton and way ports, and a port or ports on west coast of Cumberland County .....	2,500 00
Between Pictou and Montague, calling at Murray Harbor and Georgetown .....	6,000 00
Schooner between Pictou, New Glasgow, Antigonish County ports, and Mulgrave .....	1,000 00
Between Pictou, Mulgrave, and Cheticamp .....	7,500 00
Between Port Mulgrave, St. Peter's, Irish Cove, and Marble Mountain, and other ports on Bras d'Or Lakes	6,500 00
Between Prince Edward Island and Cape Breton and Newfoundland....	16,500 00
From opening to closing of navigation in 1915, between Prince Edward Island and mainland .....	12,500 00
Between Quebec and Harrington, calling at ports and places along northern shore of the River St. Lawrence .....	28,000 00
Between Quebec and Gaspé Basin and intermediate ports .....	8,500 00
Quebec and ports on north shore of Isle of Orleans .....	4,500 00
Between Rivière du Loup, Tadoussac, and other north shore ports....	6,000 00
Winter service between St. Catharines Bay and Tadoussac .....	3,500 00
Winter steam service between Rivière du Loup, Tadoussac, and other St. Lawrence ports .....	8,000 00
Between St. John and ports in Cumberland Basin .....	3,000 00
Between St. John, N.B., and St. Andrews, N.B., and intermediate points .....	4,000 00
Between St. John and Bridgetown....	2,500 00
Between St. John and Digby .....	20,000 00
Between St. John, Digby, Annapolis, and Granville, viz. along west coast of Annapolis Basin .....	2,000 00
Between St. John, N.B., and ports on Bay of Fundy and Minas Basin, and Margaretsville .....	8,000 00
Between St. John, Westport, and Yarmouth, and other way ports....	8,500 00
Between St. Stephen, N.B., St. Croix River points, Deer Island, Campobello, and the inner islands, Passamaquoddy Bay, and L'Etete or Back Bay .....	6,000 00
Between Sydney and Bay St. Lawrence, calling at way ports .....	6,000 00
Between Sydney and Whycocomagh.	3,000 00
From Sydney, N.S., around east coast of Cape Breton to Hastings and return to Sydney, via Bras d'Or Lakes .....	5,500 00
Expenses in connection with supervision of subsidized steamship services .....	3,000 00
	<b>\$2,641,234 00</b>

**All vessels must be marked with names.**—Further precautions are being taken against the presence in Canadian waters of suspicious craft of any kind. A notice sent out by the Customs Department states that "complaint having been made that schooners and other small craft are sailing Canadian waters without being marked with their names and port of registry, as required by law, attention is directed to the section of the Merchant Shipping Act which provides that the name of every British ship shall be marked on each of her bows and the name of her port of registry must be marked on her stern." Customs officers are instructed not to grant clearance to or allow to ply within the limits of any port any vessel not so marked.

## Transportation Conventions in 1915-16.

Aug. 17.—International Railroad Master Blacksmiths' Association, Philadelphia, Pa.  
 Aug. 19, 20.—American Association of Railroad Superintendents, San Francisco, Cal.  
 Sept. 14-16.—Roadmasters' and Maintenance of Way Association, Chicago, Ill.  
 Sept. 14-16.—Master Car and Locomotive Painters' Association of the United States and Canada, Detroit, Mich.  
 Sept. 14-17.—Railway Signal Association, Salt Lake City, Utah.  
 October.—American Association of Dining Car Superintendents.  
 Oct. 4, 5.—American Association of Traveling Passenger Agents, Boston, Mass.  
 Oct. 4-8.—American Electric Railway Association, San Francisco, Cal.

## Among the Express Companies.

The Canadian Ex. Co. has announced that it will carry free to relatives the effects of soldiers who have died whilst on active service.

F. H. Hill has been appointed agent, Dominion Ex. Co., Kelowna, B.C., vice E. C. MacIntyre, who has rejoined his regiment in England for war service.

The Dominion Ex. Co. is operating over the Kettle Valley Ry. from Midway to Merritt, B.C., by way of Penticton. An office has been opened at Penticton.

The Canadian Northern Ex. Co. has commenced its service on Canadian Northern Ry. lines between St. Albert and Peace River Jct., and between Camrose and Edmonton, Alta.

The Dominion Ex. Co. has notified its agents that according to an intimation from British railway companies, the latter will not now accept shipments on which charges have not been fully prepaid. This is made necessary owing to the depletion of staffs due to employees being on active service.

H. Hynes, J. Todd and W. Ellis, employees of the Canadian Ex. Co. at Toronto, were arrested, July 20, on charges of theft of \$2,141, alleged to have been stolen in different sums during 1914 and 1915. The system is stated to have been difficult of detection owing to the way in which shortages have been covered and books falsified. Action was taken at the instance of a bonding company.

The Canadian Ex. Co. on June 16 placed its service in force over the Grand Trunk Pacific Ry. Moose Jaw Northwesterly line between Regina and Gilroy, Sask. A tri-weekly service is given, and offices have been opened at Adams, Archydale, Burdick, Burt, Central Butte, Eastview, Eskbank, Forgray, Gilroy, Keystown, Lake Valley, Lawson, Mawer, Moose Jaw, North Regina, Fattie, Rowletia, Sidmar and Stony Beach.

The Canadian Ex. Co. announces arrangements, effective July 13, for a through express service between eastern and western Canada, on through passenger trains, operating over the Canadian Government Railways (Intercolonial, Prince Edward Island, and National Transcontinental Rys.), G.T.R., Timiskaming and Northern Ontario Ry., and G. T. Pacific Ry. Through express cars will be operated between

Toronto and Winnipeg without transfer, in charge of messengers. The company has arranged with the Canadian Government Railways for the handling of express matter over the N.T.R., and services have been established between points where passenger trains are in operation, viz., Fort William and Winnipeg, Cochrane and Winnipeg, Quebec and Fitzpatrick, Que., and Quebec and Monk, Que. The jurisdiction of the company's superintendents has been extended as follows: F. Norman, Winnipeg to Fort William, office Winnipeg; E. Allen, east of Superior Jct. to the Ontario-Quebec boundary, office Toronto; N. J. Ross, east of Ontario-Quebec boundary to, but not including Edmundston, N.B., office, Montreal; H. C. Creighton, Edmundston to Moncton, N.B., office St. John, N.B.

## Telegraph, Telephone and Cable Matters.

The Dominion Government has had built at Vancouver, a small motor boat for telegraph service along the coast.

T. E. Dudley, agent, Great North Western Telegraph Co., St. Catharines, Ont., has been retired on a pension, after 51 years of continuous service.

The C.P.R., the Great North Western Telegraph Co. and the Bell Telephone Co. have been ordered by the Board of Railway Commissioners to remove their poles from streets in Hamilton, Ont., on which a conduit system has been built.

The Great North Western Telegraph Co. has opened offices at Sarcee Camp, Alta., Beaver, Man., Barriefield Camp and Royal Muskoka Hotel, Ont., Abenakis Springs Hotel, Capucins, Hotel Manoir Richelieu, Lake St. Joseph Hotel, Little Metis and Pointe au Pic, Que., and has closed its office at Neepawa, Man.

The Western Union Telegraph Co.'s earnings for the first six months of 1915 were \$24,019,260, an increase of \$1,532,682; maintenance and depreciation \$3,878,138, an increase of \$365,567; expenses \$15,481,607, a decrease of \$704,949; balance \$4,659,515, an increase of \$1,891,064; surplus after charges \$3,990,915, an increase of \$1,891,089.

The wireless telegraph station at Sayville, Long Island, N.Y., owned and operated by the Atlantic Communication Co., which was said to be under German control, was taken over by the U.S. Government, July 8, "in the interest of American neutrality and to avoid contravention of the Hague convention forbidding the establishment of a wireless station on neutral soil during a war." The company has protested against the Government action.

The Marconi International Marine Communication Co.'s report for 1914, presented at the annual meeting in London, Eng., July 7, stated that during the last five months of the year, the business suffered considerable disorganization and some loss, owing to the war entailing a great increase of work and strain on those responsible for the conduct of the business, but notwithstanding this substantial progress was shown. The revenues showed considerable increase over those of 1913. The company owns and operates on the high seas 995 public telegraph stations against 788 in 1913, and during this year up to June 19 the number was increased to 970.

The Dominion Telegraph Co.'s 46th annual report for the year ended June 30, shows total assets of \$1,309,612.25 and current liabilities of \$1,017,650.37. The company's property is leased to the Western Union Telegraph Co. for 99 years from July 1, 1879, on a guarantee of interest at 6% per annum, which has been paid regularly quarterly in advance since the commence-

ment of the lease. The report says "Your directors deeply deplore the demise on Feb. 25, after a protracted illness, of their old and faithful friend and colleague, Thos. Swinyard, who was connected with the company for 40 years, first as General Manager, then as Managing Director and Vice President, and for the last 32 years as President, and acting upon their feelings of regret and esteem, promptly conveyed to the family of the deceased an official expression of their sorrow and regret, and their sincere condolences, which they felt would be fully shared in and approved of by the stockholders of the company."

## Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

**American Locomotive Co.**—W. Spencer Robertson has been appointed Secretary, vice C. R. Denny, resigned.

**Taylor & Arnold, Limited**, railway material and supplies, Montreal, announce the appointment as Vice President, of Herbert Ewan, who resigned his position as Sales Manager, Canadian Steel Foundries, Ltd.,

**Canadian Car & Foundry Co., Ltd.**, Montreal, has opened an office at 11 Waterloo Place, Trafalgar House, London, Eng., in charge of Geo. Condon, formerly of Montreal. Two of the company's engineers, E. R. Viberg and G. G. Elster, are also located in London.

**M. Beatty & Sons, Ltd.**, Welland, Ont., manufacturers of contractors' machinery, etc., announce that the control and management of the company has been changed. H. L. Beatty has been elected President, and A. O. Beatty, heretofore Consulting Engineer, has been elected Vice President and General Manager. H. T. Dunbar, of Buffalo, N. Y., has been elected a director. V. R. Browning, heretofore President, B. F. Miles, Director, and R. A. Greene, General Manager, who have had charge of the business for the past three years, have severed their connection with the company.

**Wireless Telegraph Equipment on Vessels.**—Canadian Railway and Marine World for February, 1914, contained a list of vessels which had been equipped with wireless telegraph installations by the Marconi Wireless Telegraph Co. of Canada, prior to Dec. 31, 1913, in preparation for the coming into force on Jan. 1, 1914, of the regulations respecting such equipment. We have been advised that the following vessels were equipped between Jan. 1 and Aug. 1, 1914: Chippewa, Kingston, Macassa, Cayuga, Majestic, Corona, Toronto, Chicora and Cascapedia, owned by Canada Steamship Lines, Ltd.; Yarmouth and St. George, owned by the C.P.R.; Garden City and Dalhousie City, owned by the Niagara, St. Catharines and Toronto Navigation Co.; Adventure, owned by Harvey and Co., St. John's, Nfld.; Sable I., owned by Farquhar and Co.; Venture, owned by the Union Steamship Co., and Deliverance, owned by the Southern Salvage Co. Other wireless installations have been made since the war began, but information in regard to them is not available.

**Drop forging dies** usually have a draught of 7 degrees on the sides or vertical walls to permit the easy removal of the forgings.

## Car Closets

FLUSH OR DRY

DUNER CO. 101 S. CLINTON ST.  
CHICAGO

## Why Fabrikoid Was Used On This Car

The Master Car Builder could have specified No. 1 leather for this car; he could have specified a "coated split" leather; or he could have specified a thick pulpy "split" with no natural grain. However, he ordered

because it is fully guaranteed; coated splits are never guaranteed, while No. 1 leather not only dries out and cracks in the heated car, but is expensive.

DU PONT FABRIKOID is sanitary, comfortable, attractive, weather-proof, water-proof, and non-peeling; besides, it is guaranteed superior to coated splits, and is inexpensive. Write for samples and convince yourself.

## The Wonderful Single Service Chilled Iron Wheel

The Chilled Iron Wheel was Standard in the year of 1850.

The Chilled Iron Wheel is Standard To-day.

The Chilled Iron Wheel has been the Standard for rail borne traffic for 65 years.

This is because of certain inherent properties which are only to be found in chilled iron. The advantages of chilled iron wheels over other types are as follows:

First: The Chilled Iron Wheel has a hard tread or wearing surface which will carry the heaviest concentrated load without excessive deformation over irregular tracks at high speeds.

Second: Chilled Iron Wheels yield the maximum of service per unit of metal worn away.

Third: Chilled Iron Wheels have the greatest coefficient of friction when in contact with the brake shoe.

Fourth: The character of the tread surface is such that the life of the brake shoe is prolonged.

Fifth: Chilled Iron Wheels are least destructive to the rail and the intensity of internal stresses in the rail depend on the character of the metal in the wheel, which transmits the heavy concentrated loads through a small surface of metal.

Sixth: Chilled Iron Wheels produce the least amount of rail abrasion.

THE WONDERFUL SINGLE SERVICE CHILLED IRON WHEEL—25,000,000 now running.

## Association of Manufacturers of Chilled Car Wheels 1214 McCormick Building, Chicago

Representing forty-eight wheel foundries located through the United States and Canada. Capacity 20,000 chilled iron wheels per day.

## F. M. Section Man's Special

For operating all hand and push cars and eliminating the drudgery of working cars by hand.

This little outfit is the product of skill and experience of the Sheffield Car Co., who for over 15 years have manufactured the famous Fairbanks-Morse (Sheffield) Hand, Push and Motor Cars, standard on all the larger Railways.

Every Railwayman appreciates the advantage of a motor car for improving the efficiency of his division.

Here is an opportunity for every Road Master or Section Foreman not already equipped with a motor car to buy an engine and transform his hand or push car into a motor car at small expense.

### THE F. M. SECTION MAN'S SPECIAL

is an extremely practical outfit backed up by the strongest kind of a guarantee.

**MONTREAL**

## Fire Tube Marine Superheater--Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler horse power from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

**NOTICE.**

The General Railway Signal Company of the  
United States of America, the owner of the ex-  
clusive rights to Canadian patents Nos. 92323,  
No. 93127, No. 96256, and No. 97758, issued to  
Young and Townsend, and covering methods of  
signalling electrified railways, wishes to call the  
attention of all possible users of the devices  
and systems covered by such patents to the  
fact that it is prepared to sell and furnish, at  
short notice, all such devices and to install such  
systems upon any railway in the Dominion of  
Canada.

All inquiries regarding the above should be  
addressed to The General Railway Signal Com-  
pany of Canada, Limited, Lachine, Province of  
Quebec, Canada.

# FIVE FAIRMONT MONEY-SAVERS

Throughout Canada hundreds of FAIRMONT Engines and Motor Cars are giving the best of satisfaction. For years you have imported them, and this year's business is the biggest yet. FAIRMONTs work every day in the year, and haul loads impossible for other cars.

Quantity prices to railroad companies.  
Easy payments to railroad men.

# It's The Pendulum That Forces The Oil

It is entirely automatic and self contained. No outside influences—air, steam or manual operation—are necessary in the operation of the new

## DETROIT AUTOMATIC FLANGE LUBRICATOR (PENDULUM TYPE)

It's all in the pendulum. Any lateral movement of the locomotive, no matter how slight, causes the sensitive pendulum to oscillate. This oscillation rotates, rocker like, the pendulum shaft which produces alternating strokes of the two plungers in the pumping unit.

In every sense of the word, it is a force feed flange oiling system and not dependent upon outside influences for operation, other than train movement.

Its use means a positive, simple, durable and efficient flange lubricator that results in increased locomotive mileage between shoppings.

Write for booklet FO-81 that gives you complete facts.

Showing a 4-feed Detroit Automatic Pendulum Pump Flange Lubricator Installation.

Montreal, Que.

## PAGE FLAT SHEET REINFORCEMENT

### LIES FLAT—COSTS LEAST TO LAY

The modern reinforcement. Fifty per cent. stronger—700 per cent. more bond-contact—than rounds or squares. No internal strains in "forming." Lies flat without weighting. Saves 25 per cent. to 50 per cent. laying-cost.

#### WIDELY USED

PAGE FABRIC used in the J. R. Booth Plant at Ottawa; Anglo-Canadian Leather Plant at Huntsville; Chamblay Dam at Montreal; Harris Abbatoir at Toronto; C. P. R. Yards at Brantford, and in many miles of street paving at Oakville, Windsor, Walkerville, Aylmer, and Sandwich.

#### TWO SIZES

PAGE FABRIC supplied in 3 in. x 6 in. mesh for structural uses, and 6 in. x 12 in. mesh for roadway and bridge-floor work. FLAT SHEETS maximum 4 feet wide by car-length. Also in ROLLS, 4 feet wide, any length. SPECIAL MESHES to order.

FREE SAMPLES and new illustrated booklet No. 5 (with tables) on request. WRITE for them TO-DAY.

Trains 73 and 78 Meeting at Grassie, Ontario.

Traffic on the T. H. & B. Railway has been greatly facilitated by the G. R. S. Absolute Permissive Block Signal System recently installed on their road.

Here is what the signals are actually accomplishing.

- (1) Under proper observance of the indications, the signals provide for opposing, as well as following movements, a definite space interval which reduces the likelihood of collisions to a minimum.
- (2) Misplaced switches, broken rails, or any breaks in the continuity of the track cause the display of a stop indication at the signal governing entrance to the block, thus greatly reducing the likelihood of derailments.
- (3) The signals increase the traffic capacity of the line, as one train can follow another as soon as the first train passes the signal in advance, which is accomplished in considerably less time than the prescribed time interval of the telegraph block.
- (4) The signals afford maximum protection at meeting and passing points, serving as a check on dispatchers' orders, also as a reminder to trainmen at scheduled meeting and passing points.
- (5) The signals more than double the safety factor in connection with flagging, as an approaching train would, in most cases, meet a caution or stop indication before the flagman could go out far enough to insure adequate protection.

Realizing that the A. P. Block will move your trains with minimum delay and with safety, why not consider the system for your single track lines?

## No. 4 Type Coleman Fare Box

Our new number 4 type stationary fare box will appeal to electric railway officials for all P. A. Y. E. operating conditions.

Being but five inches square it occupies a minimum amount of space on the car platform and is especially suitable where platform space is limited and also for one man operation.

It is suspended by two brackets to the car railing and the cash box telescopes into the outside casing.

There is only one working part to the box so that there is nothing to get out of order and this feature also insures low maintenance.

Should a glass become broken or should it be desired to clean the glasses this can be accomplished in a few minutes by a very simple means.

When you are considering purchasing fare boxes investigate this number 4 fare box carefully, it will save you money both in first cost and subsequent maintenance.

## Scientific Treatment of Boiler Waters Dearborn Service to Railroads

In these times when "Economy" is the slogan in every industry, and particularly in railroad operation, Dearborn Service should make a strong appeal to the Motive Power People.

In treating boiler waters by the Dearborn Method there is no outlay of capital required for installation of equipment, nor expense involved in putting the goods into use, while the cost of the treatment per thousand gallons of water is less than by any other method. We furnish expert testing engineers to advise as to the proper handling of the treatment to get the best results economically.

Scale formation, foaming, corrosion, and pitting are prevented, fuel and lubricating oil expense lessened, greater mileage between boiler washings made possible, as well as ability to haul greater tonnage, and the life of flues and fire boxes extended 50 to 200 per cent.

Most railways have had water supplies to contend with. We would like an opportunity to show you the efficiency of Dearborn Service in overcoming such difficulties on your line.

# Why Stop Your Trains?

Consider the Cost of Stopping Trains  
in comparison to the Maintenance and  
Operation of Mechanical Interlocking.

Trains per day	Cost per year acct. stopping trains	Total cost per year interest deterioration maintenance and operation	Net saving per year	Cost of Interlocking Plant Complete	Time required to pay for installation from saving	Saving capitalized at four per cent
17	\$ 2800.00	\$2800.00		\$8000.00		
20	3285.00	2800.00	\$ 485.00	8000.00	16.5 years	\$12125.00
25	4105.00	2800.00	1305.00	8000.00	6.13 "	32625.00
30	4930.00	2800.00	2130.00	8000.00	3.8 "	53250.00
40	6570.00	2800.00	3770.00	8000.00	2.12 "	94250.00
50	8210.00	2800.00	5410.00	8000.00	1.48 "	135250.00
60	9855.00	2800.00	7055.00	8000.00	1.13 "	176375.00
70	11495.00	2800.00	8695.00	8000.00	11 mos.	217375.00
80	13140.00	2800.00	10340.00	8000.00	9.3 "	258500.00
90	14780.00	2800.00	11980.00	8000.00	8 "	299500.00
100	16425.00	2800.00	13625.00	8000.00	7 "	340625.00

The above figures are conservative and are taken from a reliable source ( See R. S. A. Journal Vol. 1, page 286.) When you can effect a yearly saving by installing G. R. S. Mechanical Interlocking and at the same time reduce your crossing delays, add signal protection to your traffic movements — when you can do all this at a saving of

money — then why stop your trains?

Is this not a convincing reason why you should install G. R. S. Mechanical Interlocking at the majority of your crossings, junctions and yards?

Each day's delay in installing G. R. S. Mechanical Interlocking means a loss to your road.

# The Cow with 3 Skins

She's not a freak. We meet her in upholstery every day. The outer side of the cow-hide furnishes the article commercially known as "grain leather," while the remaining "splits" are made up in poor imitation of it.

## The Truth About Leather

Since whole hides are too thick for upholstery and the under, fleshy portion must be split away from the grain side to make it thin enough, why should the two or three sheets into which the wastage is split be called leather? Although artificially coated and embossed to look like leather, they are weak, spongy, and soon crack, peel and rot.

Du Pont Fabrikoid is frankly a substitute for leather, guaranteed superior to coated splits. Its base is cotton fabric, twice as strong as the fleshy split. It is coated much heavier and embossed in the same way.

REG. U. S. PAT. OFF.

Is the **ECONOMICAL MATERIAL** for car seating and curtains. It gives cars a richly finished appearance, but costs less than anything else you could use, when life and service are considered.

Du Pont Fabrikoid is **WATERPROOF**. It is sanitary—it

can be cleaned with soap and water. It is tough and durable and gives long service. It gains public good-will—a powerful asset in these times.

Its use is a real economy.

Made in many weights, widths, patterns and colors.

Write for samples and prices.

# Meeting One Financial Obstacle to Adequate Signal Protection

There is little doubt that there would be a tremendously greater amount of mileage protected by automatic block if first cost were the only difficulty to be encountered. The great difficulty, however, in the universal use of fixed automatic block signals is found in the continuous cost of maintenance.

The advantage in this respect of

## Simmen Automatic Block Cab Signals

is shown by the fact that none of the four roads which are operating the Simmen System have found it necessary to provide any special organization or additional labor for inspection purposes.

The reason for this is that the track and overhead installation of the Simmen System is so simple (involving no apparatus along the track except standard telephone overhead construction and simple signal rails) that the regular track and line maintenance labor is ample to care for these elements.

All operating electrical apparatus is either in the cab or in the dispatcher's office.

The cab apparatus is easily inspected when the car is in for regular inspection.

The apparatus in the dispatcher's office is readily inspected and cared for by the dispatcher, with the occasional assistance of a lineman.

This enormous comparative saving in maintenance costs is proved by the experience of the four roads on which the **Simmen System** is now, and has for some time been, standardized.

The importance of this fact in any signal installation is obvious.

## Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

**MONTREAL LOCOMOTIVE WORKS, LIMITED,**

## Berry Brothers' Varnishes

### Are the Result of Years of Experience

The man who has always lived in one small community talks only of those things pertaining to that community; is not the type of man the government would select to be admiral of a fleet or general in the army, or minister to some foreign court. The man who has been everywhere and seen life in its innumerable phases is as broad as his experience.

All the experience of those who make, sell and use varnishes have been embodied in the progress of BERRY BROTHERS' VARNISHES. These varnishes are the result of world-wide and time-tested experience, and therefore meet needs better.

*Let us send you some interesting literature on varnish problems*

## 450 Railroad Shops in the United States and Canada Use Thermit

*Let us send you this pamphlet.*

This comprises practically all the shops of importance in North America, and it can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only three or four locomotives to the largest system in the world having many thousand locomotives.

If by any chance your shop is not using Thermit, you should investigate the process and see how effectively and economically it will handle the many repairs on locomotive frames and other sections.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods" and has proven itself a profitable investment.

Let us mail you our new pamphlet, No. 2144, which contains full information on Thermit in Railroad Shops.

All Thermit materials and appliances are manufactured in the United States and Canada

# The Light of Day on the Right of Way

## HEADLIGHTS

Commercial Acetylene furnishes a strong, penetrating light without being blinding. Nothing to get out of order. Economical to maintain. Small gas cylinder supplies several weeks' lighting.

## CAR LIGHTING

Commercial Acetylene furnishes an ideal system for all kinds of passenger cars. It combines efficiency and economy. Standard cylinder supplies from one to two months' lighting of the average car.

## SIGNALS

Commercial Acetylene furnishes an absolutely reliable light. Failures eliminated and cost of maintenance reduced. Cylinder placed at foot of pole supplies several months' lighting without attention.

# The Parmelee Pipe Wrench "The Toothless Wonder"

## PRICE LIST C

Length Handle	Set No.	Pipe Handled	Set Complete	Extra Handle	Extra Girths
10 in.	1	3/8, 1/2, 1 in.	\$5.00	\$2.25	3/8, 1/2, 1 in. \$ .75
20 in.	2	1, 1 1/2, 2 in.	7.50	2.50	1, 1 1/2, 2 in. 1.00
25 in.	3	1 1/2, 2, 2 1/2, 3 in.	7.50	3.00	1 1/2, 2, 2 1/2, 3 in. 1.25

Prices on larger sizes furnished upon application.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

## Fire Tube Marine Superheater--Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler horse power from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

# Canadian Railway and Marine World

September, 1915.

## North Toronto Grade Separation, Canadian Pacific Railway.

By B. Ripley, M. Can. Soc. C.E., Engineer North Toronto Grade Separation, Canadian Pacific Railway.

The North Toronto viaduct, construction on which was started in a small way during the autumn of 1912, is nearing completion. The general scheme, which is shown in fig. 1, comprises the elevating of four lines of track between Summerhill Ave. on the east and Dufferin St. on the west, with additional passenger facilities at Yonge St. [The new station was described in Canadian Railway and Marine World for August.—Editor.] During Sept., 1912, a trestle was erected between Poplar Plains Road and Summerhill Ave., and the filling in to make up the embankment was commenced from the trestle. This permitted the work on the subway at Avenue Road to be proceeded with. Fig. 3 shows this subway as completed. During its construction the street traffic was diverted on the property acquired for the purpose just east of the street, which facilitated the handling of the work very considerably, and the traffic was not resumed on Avenue

The work at the Howland Ave. subway was started Aug. 12, 1913, the traffic having been diverted over the tracks at Albany Ave. by means of a temporary wooden bridge erected at that point for the purpose.

The work at Bathurst St. subway was started Aug. 23, 1913. In carrying out the work at this point, it was necessary to remove a portion of the tracks of both the Toronto Ry. and Toronto Suburban Ry. After a portion of the excavation had been taken out, a large pocket of gravel containing water was struck, the water making the work a great deal more difficult. This difficulty was also experienced in alterations to water mains, sewers and the laying of the underground electric wires. The foundations were taken slightly deeper in this case than in any other, in order to eliminate the possibility of disturbance by the installation of other underground utilities, at a later date. The street traffic was handled by means of

work to be done at this point, and the city offered no objections at that time, but many difficulties have arisen to delay the work. During the autumn of 1912 the city applied to the Board to have the south approach made level instead of having the 5% approach which had previously been agreed on. The Board ordered in effect that the city could have this on condition that it pay the extra expense incurred by the C. P. R., giving it a certain period in which to decide as to what it wanted. The level approach idea fell through; the C. P. R. had plans prepared for the carrying out of the work, but it was so late in the autumn of 1912 that the work was held over until the following spring. Meanwhile the city applied to the Board for an order compelling the C. P. R. to build the subway at this point, with an increase in the headroom of 4 ft., making an 18 ft. subway, with a 2½% approach. The Board ordered that the city

Fig. 2.—West Abutment Wall of Yonge Street Subway.

Road itself until the whole work, including the paving and sidewalks, was completed. During this period, the Toronto Ry. operated a stub line service from the C. P. R. tracks to the end of the Avenue Road line at St. Clair Ave. [This subway was described in detail in Canadian Railway and Marine World for Sept., 1913.—Editor.]

Other work was not started until early in the summer of 1913, owing to an appeal by the City to the Governor in Council, to change the railway profile west of Avenue Road. Work on Davenport Road subway was, however, started on July 7, 1913. Conditions at this point were somewhat complex, because the subway which was built, and which is known as the Davenport Road subway, really takes both Davenport and Poplar Plains Roads. The general plan, fig. 1, shows the layout at the intersection of these two streets. The alterations necessary to the underground public utilities occasioned thereby involved a large amount of work, the greater portion of which had to be undertaken before the subway could be constructed. The finished subway, viewed from the north, is shown in fig. 5.

The work at Spadina Road was commenced July 19, 1913, the traffic having previously been diverted by a temporary wooden bridge over the tracks at Huron St., at which point also the traffic from Davenport and Poplar Plains Roads was largely handled

the opening up of a new street between Albany Ave. and Bathurst St., and the erection of a temporary wooden bridge over the C. P. R. tracks at Albany Ave.

The work at the Christie St. subway was started Sept. 16, 1913. The traffic was handled by means of a plank roadway and a temporary wooden bridge over the C. P. R. tracks on the west side of the street. The work at this point is almost completed, the bulk of the paving of roadway and sidewalks being finished.

Work was begun at Shaw St. Oct. 6, 1913, prior to which a temporary street had been opened up between Shaw St. and Ossington Ave. over the Toronto Power Co.'s property. This made it possible to divert the traffic from Shaw St. to Ossington Ave. during construction.

The work at Ossington Ave. was commenced June 15, 1914. A 6 ft. circular sewer, laid bare by the excavation, was lowered to comply with the depression of the roadway.

Work was started at Dovercourt Road subway May 5, 1914. Alterations to the sewer were also made necessary by the depression of the street.

At the Yonge St. subway, although the running of trains on the level was abandoned on May 26, 1914, and all the railway traffic run on a trestle overhead, as shown in fig. 4, the work at this point has not progressed very far. The Board of Railway Commissioners for Canada approved, in 1912, of the

Fig. 3.—Avenue Road Subway as Completed.

could have this conditional on the additional cost over and above that of a 14 ft. headroom subway being borne by the city. Before anything further was done the city decided to widen the street at this point from 66 to 86 ft., the widening to be done on the west side. The C. P. R. prepared its plans accordingly, and before the work was again got under way, the city decided to make another change, and to have the street widened on the east instead of the west side. The Board of course issued orders accordingly. This made it necessary to take a strip off the front of the C. P. R. property, which it had purchased for a station site. Some difficulties arose over the settlement to be made between the city and the C. P. R. in this connection, and before the work was again got under way the bylaw in reference to the widening of Yonge St. was rescinded, and of course it was impossible to do any work. A new bylaw, however, has been passed expropriating sufficient property to widen the street on the east side throughout the length of the subway, and the work is now being proceeded with.

Fig. 4 shows a temporary trestle and span at this point. The vehicular traffic is carried underneath the steel span, but the pedestrian traffic is carried on the east side of the street underneath the trestle near the small shanty shown in that figure. Fig. 2 shows the south half of the west abutment, which has already been constructed, and it is ex-

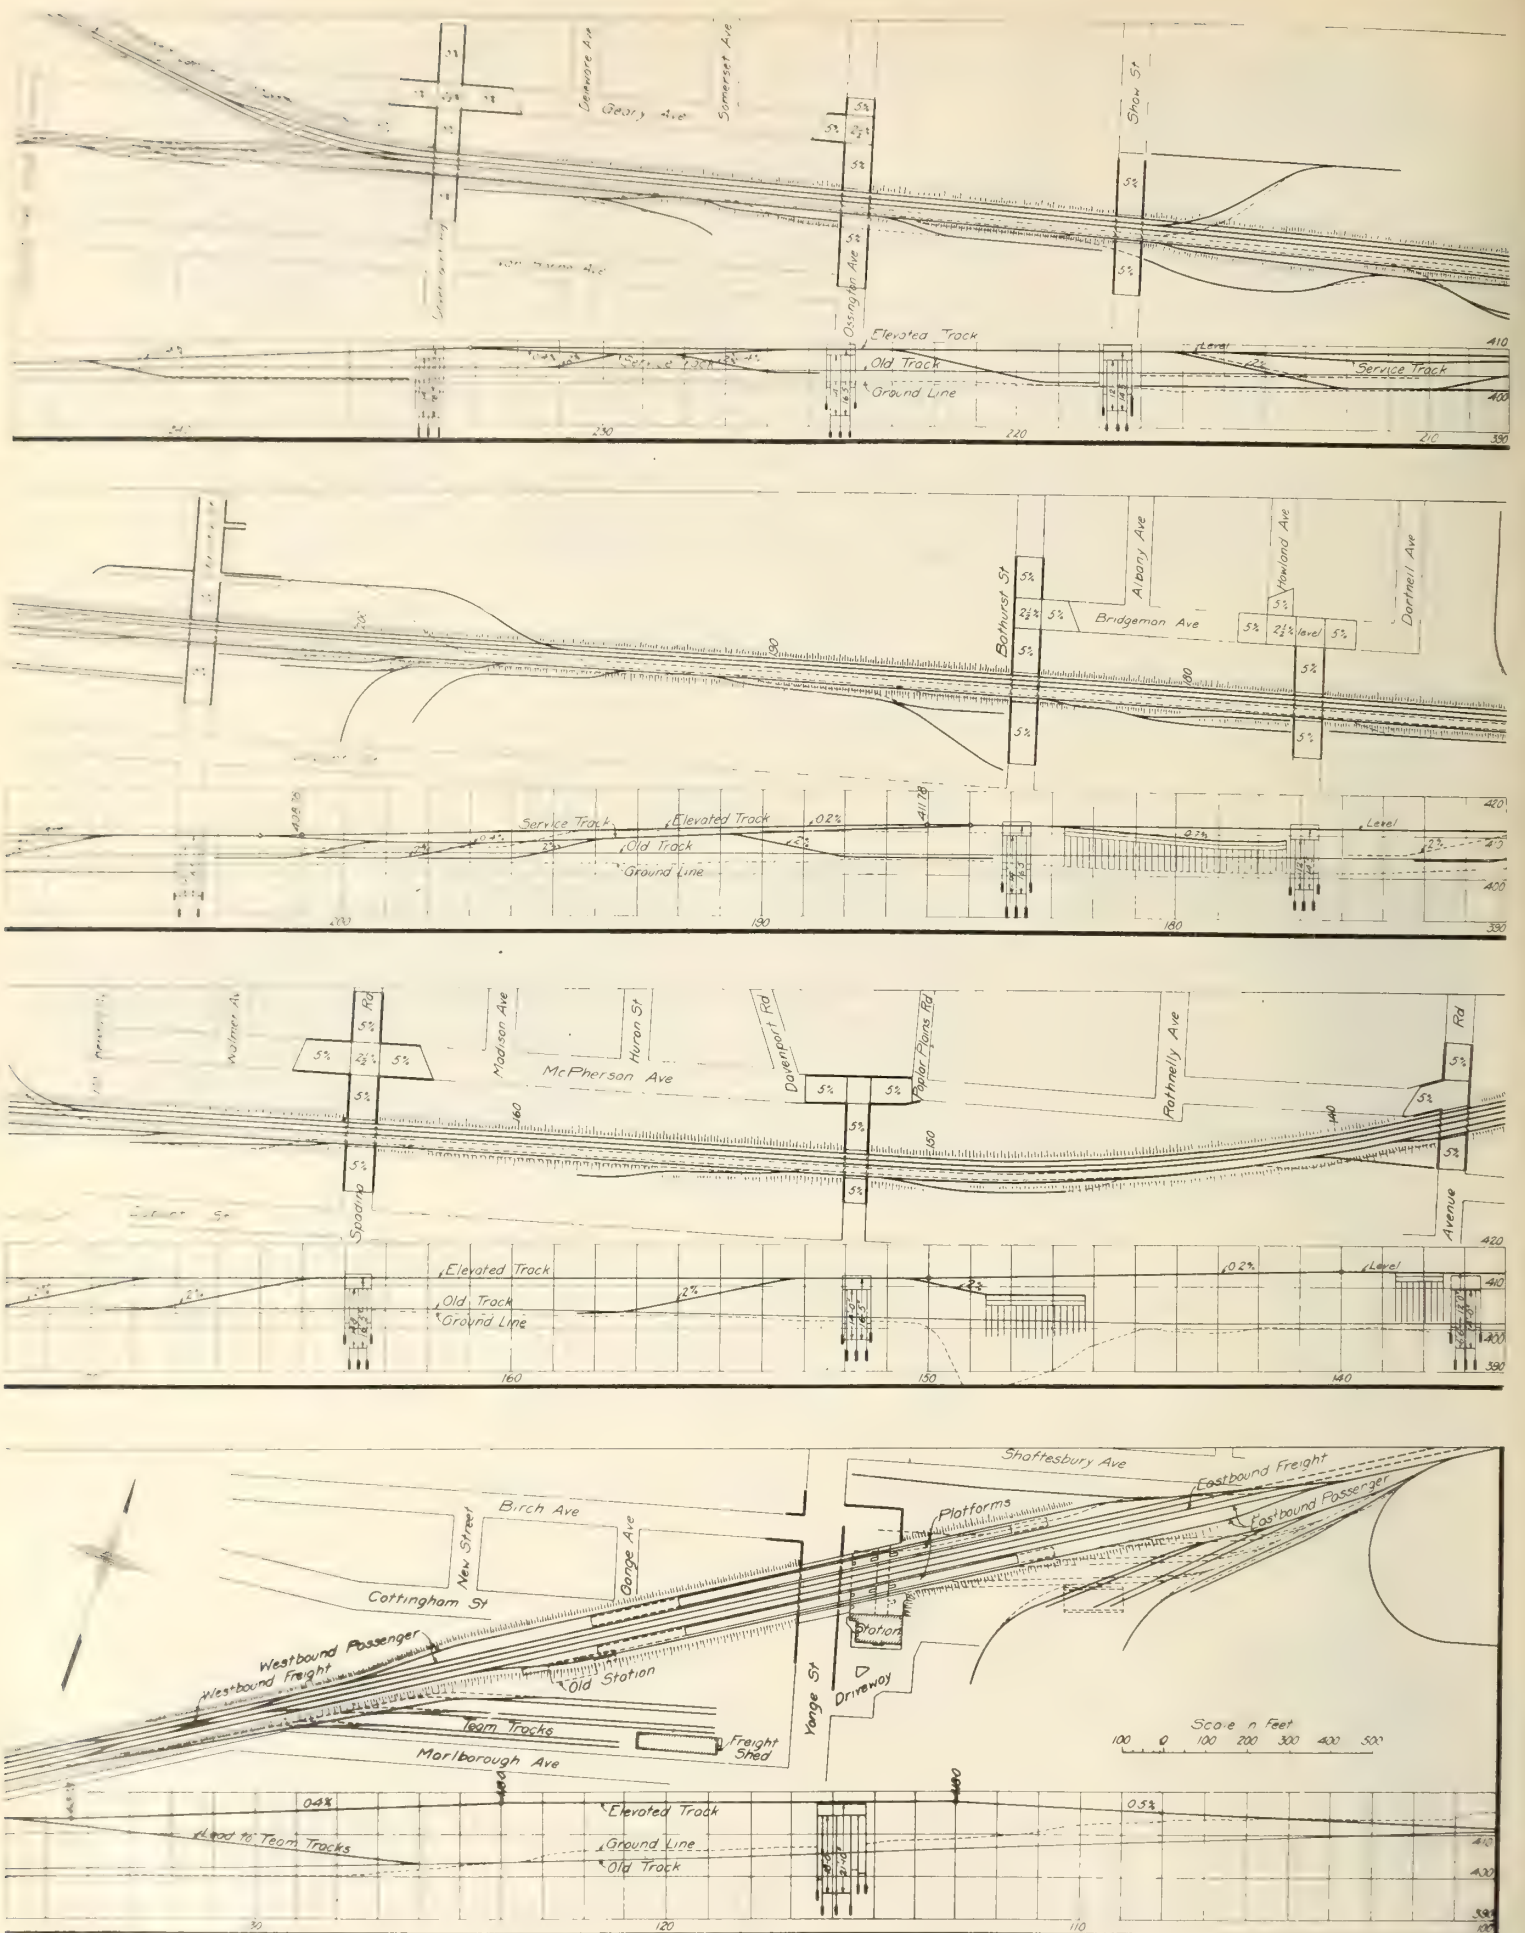

Fig. 1.—Plan and Profile of Track Elevation Across North Toronto.

pected that unless unforeseen conditions arise, the work at this point, which involves heavy expenditures, will be completed, including the paving of the street, before the next freeze up. The depression of the street at this point is  $9\frac{1}{2}$  ft., making it necessary to make some very extensive alterations to the underground utilities, which consist of water mains, sewers, power and telephone conduits, and gas mains. To the east of the street and underneath the C. P. R. tracks will be located a driveway to the station and baggage rooms, the latter being located under the tracks. The driveway will be 28 ft. wide, and the baggage rooms will be about 140 x 60 ft. The new station has been located, as is shown in fig. 1, just east of Yonge St., and south of the tracks.

In building up the embankment between the subways, the earth work, about 280,000 cu. yds. of which is already placed, was hauled from Leaside Jct. To the west of Avenue Road, instead of building expensive trestle work, the tracks were pumped up, or lifted in 6 in. lifts, without interfering with the traffic. At the streets where subways were to be built, timber work corresponding to the deck of a standard railway trestle, was placed underneath the tracks on ties, in such a way that when a 6 in. lift

own half of the viaduct, but between Yonge St. and Avenue Road, the portion which includes the passenger facilities will be owned

solely by the C. P. R. but the Canadian Northern Railway will enjoy the facilities by paying a rental.

## Birthdays of Transportation Men in September.

Many happy returns of the day to:—

G. W. Alexander, Local Treasurer, G.T.R., Western Lines, Detroit, Mich., born at Lightcliff, Yorks., Eng., Sept. 10, 1859.

H. Bailey, ex-Bridge and Building Master, Dominion Atlantic Ry., now of Huntsville, Ont., born there, Sept. 2, 1879.

W. B. Bamford, Division Freight Agent, Atlantic Division, C.P.R., St. John, N.B., born at Belleville, Ont., Sept. 10, 1863.

G. T. Bell, Passenger Traffic Manager, G.T.R. and G.T.P.R., Montreal, born there, Sept. 7, 1861.

W. H. Bigger, K.C., Vice President and General Counsel, G.T.R., and G.T.P.R., Montreal, born at The Carrying Place, near Trenton, Ont., Sept. 19, 1852.

E. J. Blais, Foreman Tinsmith, Grand Trunk Pacific Ry., Transcona, Man., born Sept. 26, 1876.

E. R. Bremner, ex-Division Freight Agent, Ottawa Division, G.T.R., Ottawa, born at Toronto, Sept. 9, 1875.

sion, C.P.R., Calgary, born at Hull, Eng., Sept. 24, 1869.

J. E. Hutcheson, General Manager, Montreal Tramways Co., Montreal, born at Brockville, Ont., Sept. 15, 1858.

C. B. King, Manager, London St. Ry., London, Ont., born at Galena, Ind., Sept. 12, 1871.

S. King, ex-Superintendent, Canadian Car and Foundry Co., Montreal; Director, National Steel Car Co., Ltd., Hamilton, Ont., now of London, Ont., born at Thetford, Norfolk, Eng., Sept. 12, 1853.

R. E. Larmour, Assistant General Freight Agent, C.P.R., Vancouver, born at Brantford, Ont., Sept. 26, 1868.

H. D. Lumsden, M. Can. Soc. C. E., Engineering Department, C.P.R., Toronto, born at Belhaire, Scotland, Sept. 7, 1844.

G. S. Lytle, Car Service Agent, Manitoba Division, C.P.R., Winnipeg, born at Dennison, Ia., Sept. 23, 1878.

C. D. MacKintosh, Superintendent, District

Fig. 4.—Yonge Street Subway Site in Early Stages of Work.

Fig. 5.—Davenport Road Subway as Completed.

was made on the earth work, a 6 in. lift could be made with the deck of the trestle already placed underneath the tracks, by placing ordinary 6 in. sawn railway ties underneath the caps to form cribwork. As the lifting proceeded the cribwork was formed so as to permit driving piles. After the final height or elevation of the tracks had been attained, pile bents were driven, the cribwork was removed, and steam shovel excavation commenced. It was necessary, of course, to drive the piling below the foundation levels, and in some cases on account of the great density of the material encountered, it was necessary to replace the pile bents as many as two and three times, by driving fresh piles.

The substructure of the subway at Avenue Road was built by Jennings and Ross, Toronto, and the superstructure by Canadian Bridge Co. The substructures of subways at Davenport Road, Spadina Road, Howland Ave. and Bathurst St. were built by Wells and Gray, Toronto, and the superstructures by Dominion Bridge Co. The substructures of subways at Christie, Shaw, Ossington Ave. and Dovercourt Road were built by McFarlane, Pratt, Hanley, Ltd., Toronto, and the superstructures erected by Dominion Bridge Co. Wells and Gray have the contract for the substructure of Yonge St. subway, and the superstructure has been awarded to Dominion Bridge Co. The superstructure of Yonge St. involves 2,500,000 lbs. of steel. This is by far the largest amount of steel in any of the subways along the viaduct. It is the C. P. R.'s intention to double track its line between Summerhill Ave. and Leaside Jct., and it is understood that the Canadian Northern Ry. will run into North Toronto over the C. P. R. tracks. To the west of Avenue Road the C. N. R. will

M. H. Brown, Division Freight Agent, Ontario Division, C.P.R., Toronto, born at Victoria Square, Ont., Sept. 2, 1866.

W. B. Bulling, ex-Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, born there, Sept. 16, 1858.

W. E. Burke, Assistant Manager, Canada Steamship Lines, Ltd., Montreal, born at Belleville, Ont., Sept. 23, 1881.

A. D. Cartwright, Secretary, Board of Railway Commissioners, Ottawa, born at Kingston, Ont., Sept. 20, 1864.

A. S. Dawson, M. Can. Soc. C.E., Chief Engineer, Department of Natural Resources, C.P.R., Calgary, Alta., born at Picton, N.S., Sept. 6, 1871.

W. E. Duperow, Assistant General Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, born at Stratford, Ont., Sept. 4, 1872.

W. H. Estano, Traffic Auditor, Intercolonial Ry., Moncton, N.B., born at Halifax, N.S., Sept. 29, 1874.

C. B. Foster, Assistant Passenger Traffic Manager, Eastern Lines, C.P.R., Montreal, born at Kingston, N.B., Sept. 30, 1871.

J. P. Ferguson, representing Galena Signal Oil Co., Ottawa, Ont., born at Drummondville, Que., Sept. 12, 1856.

R. S. Gosset, Auditor of Disbursements, Canadian Northern Ry., Toronto, born there, Sept. 28, 1879.

John Gray, General Agent, G.T.R., Toronto, born at River Beaudette, Que., Sept. 28, 1863.

D. W. Hatch, Travelling Agent, Atchison, Topeka and Santa Fe Ry., Montreal, born at Bedford, Que., Sept. 1, 1841.

W. R. Howard, Chief Dispatcher and Trainmaster, District 1, Atlantic Division, C.P.R., Brownville Jct., Me., born at St. Andrews, N.B., Sept. 14, 1871.

E. Humphreys, Fuel Agent, Alberta Divi-

1, Alberta Division, C.P.R., Medicine Hat, born at Auckland, New Zealand, Sept. 24, 1882.

H. A. Young, Ontario Storage and Cartage Co., Ltd., Toronto, born at Brooklyn, N.Y., Sept. 1, 1864.

**Eastern Canadian Passenger Association.**—The monthly meeting of the association was held at Quebec August 3, instead of Montreal, as customary.

The railway mail clerks in the Winnipeg district have offered to the Dominion Government a machine gun, with eight men to operate it.

# Railway Mechanical Methods and Devices.

## Work Swivel on Lathe in Grand Trunk Railway Stratford Shops.

The swivel stand for swinging work end for end in the lathe, is in use in the G. T. R. shops at Stratford, Ont. A plate with ribs on the underside to guide it along the lathe ways, carries a screw jack base, through which there passes a screw jack. The top of the screw jack carries a V plate, which

Work Swivel on Lathe.

can be raised up under the work to be turned. The customary practice is to screw the swivel up under the work while the latter is still between the centres, then unscrew the tailstock spindle and swing the work. From the lathe carriage there is a link connection, which may be fastened to the swivel base when it is desired to move the latter along the ways, the wheel of the latter making the moving very easy.

## Cleaning Canadian Pacific Railway Car Trucks at Glen Yards, Montreal.

Instead of cleaning passenger car trucks in the common manner with a pail and broom, J. C. Kenny, Car Foreman, Glen Yard, C. P. R., Montreal, has devised the arrangement shown in the accompanying illustrations for accomplishing the task in

Passenger Car Truck Cleaning Outfit.

a fraction of the usual time. A steel cylinder, mounted on a truck for transportation through the yard, contains oil and water, the oil on account of its lower specific gravity floating on the water and occupying the upper portion of the cylinder. The tank is piped as shown, water entering at the bottom, a by pass leading up the outside of the tank and across the top, where a connection is made in the top of the tank for drawing off the oil. In this latter connection there is a

$\frac{3}{4}$  in. union, with a brass washer between, pierced with a  $\frac{1}{8}$  in. hole, through which the oil is drawn off from the tank. The water pressure on the bottom of the tank, acting in conjunction with the injector action of the water across the top of the tank, causes a steady flow of oil to leave the tank, water replacing the oil drawn off. This flow of oil mixes with the stream of water, which is directed on the truck to be cleaned, a special nozzle being employed. It is claimed for

the outfit that as much work can be performed in a day with it by one man as by 4 men working on the old bucket and broom method.

## Air Hose Connection Box in Grand Trunk Railway Car Repair Yards at Stratford.

Nearly all the more important car repair yards of the different railway systems have air piped throughout the main trackage area for the use of the car repairers, operating

Passenger Car Truck Cleaning Outfit.

their tools, etc. This is usually done by running a pipe along the surface of the ground, with taps at intervals, with air hose connections at these points, usually at car length intervals. The G. T. R. car repair tracks at Stratford, Ont. have an air main along the full length of the main track. At each of the connections there is a special cast iron box with cover, as shown herewith, of sufficient size to cover valve and hose connection, making it to all practical pur-

cover has a slight flange around the edge to keep it in place. This arrangement is of great value in the winter when the connections become covered with snow and ice, as with this arrangement it is always possible to get at the air supply at any point in the yard. From the safety first standpoint it is also a very desirable feature, as the loose hose attached to the air main is a fruitful source of accident to trainmen when shunting cars, whereas the compact box does not

Air Hose Connection Box for Repair Yards.

poses impervious to the weather. The present as great a danger. Other G. T. R. yards are also equipped with the same box.

## Air Pump Lifting Yoke on Canadian Northern Railway.

The Canadian Northern Ry. mechanical department has adopted as standard the lifting yoke shown in the accompanying illustration. It consists of a  $\frac{1}{2}$  x 2 in. piece of

Air Pump Lifting Yoke.

bar iron, bent to a U shape, with right angle feet for attaching to the cylinder head by the latter's bolts. By this simple little device, one of the most awkward jobs encountered on locomotive house practice has been overcome, as it always proved an awkward task slinging the air pump up and down for a locomotive with the limited facilities to be had at such places. With this simple device it is now possible to raise or lower the pump with small loss of time for rigging up.

### Triple Valve Bushing Roller in Pere Marquette Railroad Shops.

A speedy method for removing the burr that forms in the end of the triple valve bushing after the valve has been in service for any length of time, has been developed in the Pere Marquette Rd. shops, St. Thomas, Ont. The usual method is to place the bush-

ing of the tool is the adjunct that increases the capacity of the tool. The lower end of this cylinder is square inside to fit over the squared shoulders of the tool. The upper part of the cylinder slips over the spindle of the drill. Near the top on each side are two grub screws, which when the sleeve is slipped over the spindle and the tool inserted, are screwed in to the drift pin hole through the spindle. By this simple means the main

Ont., have a method of handling this, which for repair work leaves little to be desired. The G. T. R. standard car has a standard roof slope, and in consequence the carlines have a corresponding slope. This fact is made use of in the manner shown herewith, where the carlines will be noticed ready for grooving in batches. A wooden jig of the form shown has been made, which fits on the cross planer table, leaving the tapered

Triple Valve Bushing Roller.

ing in the lathe and take a light cut, thereby removing the burr, or else to scrape out the burr if the latter is not too high. This latter method is often too slow, as the comparatively soft brass of the bushing forms a considerable ridge, several thousandths of an inch high, after continued use. This ridge, it might be observed, causes the valve to knock at the end of its stroke, impairing its efficiency.

The method employed in these shops is similar to that used in rolling tubes into the tube sheets, a roller of very similar form being used. The roller inserted is shown in the accompanying illustration. It consists of a body slightly smaller than that of the valve around the periphery of which are drilled a number of holes, which break through slightly on the outer face. In these holes are inserted hardened steel tapered rollers, which fit loosely. In the hollow core is a tapered block, the taper of which corresponds to that of the steel rollers. The upper end of this tapered block is reduced and threaded on the end, passing through the top of the body, on the top of which is a hand nut for drawing up the tapered block. The tool is revolved in the valve by a long handle, the inner block being gradually drawn up, forcing out the rollers as the ridge is gradually reduced. Very rapid work is possible with this tool, and it is highly thought of by the men who use it.

### Drilling Side Rod Holes in Michigan Central Railroad Shops at St. Thomas.

A rigid tool for drilling side rod holes, in use in the Michigan Central Rd. shops, St. Thomas, Ont., is illustrated herewith. It consists primarily of a plain hollow mill, with added attachments that increase the strength of the tool much beyond the usual capacity of such a tool. The cutting portion of the tool consists of a four edged mill of soft steel, with a tapered shank for fitting in the drill press spindle. The four cutting faces of the tool are equipped with high speed steel cutters, each attached by two small cap screws as shown. Between the shank and the body of the mill the tool is squared as shown. The cylinder on the left

torsional strain of the tool is removed from the tang of the tool shank to the four grub screws, which being located at a greater distance from the centre of the spindle than the edges of the tool tang, are better able to carry the heavy strain of the tool. Heavy cuts are possible with this tool without fear

Tool for Drilling Side Rod Holes.

of the tang being twisted off, as is frequently the case with ordinary tools not equipped with an auxiliary drive.

### Planing Carline Grooves in Grand Trunk Railway Shops, London.

Instead of shaping up the roof stringer grooves in the top faces of the freight car carlines in the circular saw, or by chiselling them out, the G. T. R. car shops, London,

Planing Carline Grooves.

face of the carline parallel with the floor, and the car lines parallel with the travel of the table. The cutter head can then be run across the carlines, cutting out the grooves to the desired size in one or more passes. An added feature of this arrangement is that only one carline need be marked off, as

Machine for Cutting off Tube Ends.

opposed to marking off each one in the old method.

### Cutting Off Tube Ends in Michigan Central Railroad Shops at St. Thomas.

A handy tool for cutting off the bad ends of tubes preparatory to safe ending, in use in the Michigan Central Rd. shops, St.

One, is illustrated herewith. It is mounted on a wooden beam for a frame, the main section being that shown. The tube to be cut is placed on rollers, a pair of which is shown in the foreground; a similar pair is located at the opposite end of the machine. Mounted in journals as shown, is a shaft, with a pulley at the far end, and a revolving disc cutter at the near end, the latter located directly over the rollers. The rollers shown are mounted on a vertically

guided cross head, which can be operated by the lever to the right of the cutter. When the tube is inserted the lever is pressed over, raising the rollers and tube, bringing the latter into contact with the revolving cutter, which rapidly severs the tube end. The action of the latter has a tendency to push the tube off the rollers to the left. This is prevented by the vertical arm shown, which is attached to the front face of the roller crosshead.

## Economic Comparison of Railway Ties of Different Materials.

The American Railway Engineering Association's Committee on Ties report at the last annual meeting contained the following on economic comparison of railway ties of different materials. Except in isolated cases ultimate economy in labor and material results from the use of properly treated ties as compared with untreated ties. The economy of any tie of known price and life

the end of the life of the tie. Required, the total cost:

$$I = CR$$

$$A = \frac{CR}{(1+R)^n - 1}$$

$$\text{Total annual cost} = 1 + A = \frac{CR(1+R)^n}{(1+R)^n - 1} \quad (2)$$

is not such a formidable formula if it is divided up into factors which can be taken from compound interest tables. For the use of our tie department and engineers, I have had three diagrams made up showing the value of  $1+A$ , from which the annual cost per tie can be taken for ties costing from 40c to \$1.50 and varying in life from 2 to 25 years. These diagrams could be made much easier if they only showed the value of  $A$ , that is, the amount required to be subscribed annually to form a sinking fund which would purchase a tie. To this would be added directly the interest on the first cost of the tie. This would have a slight advantage over the present form in a case where the cost of the present tie will differ from the estimated cost of the new tie. The same result, however, can be obtained by taking from the diagram the annual cost, using the estimated value of the new tie, deducting from this the interest per annum at the given rate on this difference. For example, if we estimate that it will cost 80c to renew a tie which cost in place 75c and will

may be determined by the following formulae:

Given C, the first cost of the tie in place; C<sub>1</sub> amount at compound interest which will produce interest equalling the first cost of the tie during the life of the tie; R, the rate of interest; n, life of tie in years; and I, the interest on the first cost. Required the total capitalization of the tie:

$$C(1+R)^n = \frac{C(1+R)^n}{(1+R)^n - 1} \quad (1)$$

Given C, the first cost of the tie in place; R, the rate of interest; I, the interest on first cost; and A, the amount of compound interest which will provide for renewal at

the end of the life of the tie. Required, the total cost:

$$C = \frac{C(1+R)^n}{(1+R)^n - 1} \quad (3)$$

As printed in the report, two typographical errors occurred, of which J. G. Sullivan, M. Can. Soc. C. E., Chief Engineer, C. P. R., Winnipeg, has sent Canadian Railway and Marine World the necessary corrections, which have been made above. Mr. Sullivan also wrote us as follows:—

"While formula 2 for getting the total annual cost appears a little complicated, it

last 8 years, money figured at 5%, we take from the diagram the annual cost of an 80c tie lasting 8 years, which is 12.4c and deduct from this the interest at 5% on the difference in the actual cost and the estimated cost of the renewal, 5c, which is 0.25c, making the annual cost 12.15c instead of 12.4c."

Other diagrams relating to this article appear on page 335.

The C.P.R. has been awarded a gold medal for its pavilion and contents at the Panama-Pacific Exposition, San Francisco, Cal. The chief feature of the exhibit was a large model of the irrigation dam at Basano, Alta.

**Locomotive Men's Wages on the G.T.R.**—A new agreement was signed August 7, providing for an amended set of operating rules, and a revision of the wage schedule, with some increases for locomotive drivers and firemen on the G.T.R. The matter has been under negotiation for some weeks.

## Orders by Board of Railway Commissioners for Canada.

Notice is hereby given that the Canadian Railway and Marine World is published in each issue of the Board of Railway Commissioners for Canada, and that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

Orders of the Board are immediately followed by the Board's decision on which the hearing was held, and the date on which the orders were drawn.

General order 137, May 31. Re equipment of C.P.R. with locking gear for damage to cars. This order is given in full in the issue of Sept. 1, 1915.

General order 138, July 7. Prescribing the joint tariff for joint through the U.S.; also tariff for joint through the U.S.; also tariff for joint through the U.S.

General order 139, July 29. Ordering that railway companies subject to the jurisdiction of the Board shall charge and collect toll not exceeding 75c for cleansing and, or, disinfecting any car in which live stock has been carried when work is done by railway companies; and that any be lawfully in addition to charges, as published in tariffs of companies, for transportation of live stock unloaded from said cars, and disallowing any tariffs showing toll, or tolls, for cleansing, etc., live stock cars in excess of toll of 75c a car; and rescinding order 23927, July 2.

23942, July 3.—Authorizing Edmonton, Dunbar and British Columbia Ry. to build across 5 highways between mileage 385 and 410, Alberta.

23943, July 5.—Approving Edmonton, Dunbar and British Columbia Ry. revised location through Tp. 78, R. 3-6, and Tp. 77, R. 4-5, w. 6 m., mileage 331.77 to 357, Alberta.

23944, July 5.—Ordering G.T.R. to build interchange track with Campbellford, Lake Ontario and Western Ry. (C.P.R.) at Cobourg, Ont., at C.L.O. & W. R.'s expense; to be completed within 30 days.

23945, July 5.—Authorizing City of Toronto to build footbridge over G.T.R. at Innis Ave., and rescinding order 19295, May 14, 1913.

23946, July 6.—Extending to Aug. 15, time within which City of Lachine, Que., shall complete pedestrian subway under G.T.R., at intersection of 6th and 7th Avenues.

23947, July 6.—Authorizing G.T.R. to build sidings for Toronto-Hamilton Highway Commission at Watford, Ont.

23948, July 6.—Recommending to Governor in Council for sanction, lease between Gleggery and Stormont Ry. and C.P.R., June 1.

23949, July 6.—Approving location of Gleggery and Stormont Ry. (C.P.R.) station and grounds at Williamstown, Ont.

23950, July 7.—Authorizing G.T.R. to build siding from its station, southwesterly across William St., across and along Ontario St., to West St., Kingston, Ont.

23951, July 7.—Authorizing G.T.R. to build extension of siding for J. Lloyd & Son, Stratford, Ont.

23952, July 7.—Approving plan and specifications of Dereham Tp., Ont., showing work to be done on drain under G.T.R.

23953, July 5.—Ordering C.P.R. and G.T.R. to file supplements to tariffs, C.R.C. nos. E. 2900 and E. 3036, respectively, showing rate of 3½c. per 100 lbs. on bricks in carloads of minimum weights set out in tariffs, from Milton, Terra Cotta, Cheltenham, and sidings between Milton and Campbellville, Ont., to apply for unloading on railway at Toronto and to points to which Toronto rate applies.

23954, July 8.—Authorizing G.T.R. to build siding for Canada Forge Co., Crowland Tp., Ont.

23955, June 22.—Approving Canadian Northern Ry. standard wire stock pen for shipment

23956, July 9.—Ordering Canadian Northern Ry. to appoint station agent at Richard, Sask., by Sept. 1.

23957, July 10.—Authorizing Saskatchewan Highway Commissioners to build highway crossing over Canadian Northern Ry. in w. ½ Sec. 7-45-16, w. 2 m.

23958, 23959, July 10.—Authorizing C.P.R. to use bridges 25.86, over Haney Creek, North Bay Subdivision, and 7.0, Kipawa Branch, Ont.

23960, July 7.—Approving agreement between Bell Telephone Co. and Hamilton Rural Telephone Co., June 19.

23961, July 13.—Authorizing G.T.R. to build highway crossing over its line at Burke St., Penetanguishene, Ont.

23962, 23963, July 13, 12.—Authorizing C.P.R. to use bridges 22.5, 62.8, 80.5 and 10.8, Sirdar Subdivision, Sask.

23964, July 9.—Approving agreement between Bell Telephone Co. and St. Marys, Medina and Kirkton Telephone Co., June 29.

23965, July 12.—Ordering G.T.R., within 60 days, to install improved type of automatic bell at crossing of Robert St., Penetanguishene,

Ont.; 20% of cost to be paid out of railway grade crossing fund.

23966, June 30.—Extending for two months from date, time within which C.P.R. shall complete certain sidings in Bala, Ont.

23967, July 14.—Extending for period of 60 days from date time within which C.P.R. shall install bell at Hurontario St., Toronto Tp., Ont.

23968, July 14.—Ordering G.T.R. to build farm crossing for W. Couture, Lot 15, Tilbury North Tp., Ont.

23969, July 14.—Authorizing J. J. W. Bell, Regina, Sask., to lay water pipe under Canadian Northern Ry.

23970, July 13.—Authorizing Ottawa Electric Co. to place its wires across C.P.R. where it intersects Prince of Wales Bridge at north side of Lemieux Island, Ont.

23971, July 8.—Ordering G.T. Pacific Ry. to build crossing under its line, at east end of trestle on n. w. ¼ Sec. 16-53-5, w. 5 m., Alberta, work to be done by July 20.

23972, July 19.—Approving revised location of G.T. Pacific Branch Lines Co.'s Moose Jaw Northwest Branch from n. e. ¼ Sec. 19-22-7, to n. e. ¼ Sec. 25-22-8, w. 2 m., mileage 73.8 to 77.7, Moose Jaw District, Sask.

23973, 23974, July 14.—Authorizing Lake Erie & Northern Ry. to build across Henry and George Sts., Brantford, Ont.

23975, July 17.—Ordering that, as soon as Whitton, Que., Council diverts road across C. P.R. near mileage 12, Megantic Subdivision road to right of way fences on each side of railway, and builds C.P.R. spur near present crossing to diverted road; work to be completed within 30 days after building of road.

23976, July 16.—Authorizing C.P.R. to take up Beaver Construction Co.'s spur at Edrans, Man.

23977, July 19.—Authorizing C.P.R. to operate Red River Bridge, Bergen cut off, near Winnipeg.

23978, July 15.—Authorizing Campbellford Lake Ontario & Western Ry. (C.P.R.) to build diversion of road allowance between Cons. 5 and 6, Hichinbrooke Tp., Ont., mileage 30.67 from Glen Tay.

23979, July 15.—Dismissing complaint of E. W. Hogan, Banning, Ont., against removal of Canadian Northern Ry. station agent.

23980, July 19.—Approving C. N. Quebec Ry. through Arundel Tp., mileage 0 to 4.5, and revised location through Arundel, Ponsby and Amherst Tps., mileage 0 to 9.57.

23981, July 15.—Rescinding order 15965, Feb. 12, 1912, in so far as it exempts C.P.R. from erecting fences, gates and cattle guards on both sides of its line between Romford and Baby Lake, Sudbury Subdivision, Ont.

23982, July 17.—Approving revised location of G.T. Pacific Branch Lines Co.'s Cutknife Branch, across Sec. 29-43-18, w. 3 m., Sask.

23983, July 15.—Extending to June 15, 1916, time within which City of Fort William, Ont., shall install interlocking plant at crossing of Victoria Ave. and Vickers St.

23984, July 15.—Authorizing Rev. R. Hewton and others, Montreal, to use farm crossing over G.T.R. and C.P.R. on Lot 34, Pointe Claire Parish, Que., they to maintain crossing, gates to be kept closed, when crossing is not in use, by the man in charge of the cemetery, who shall also see that funerals do not cross tracks when train is in sight.

23985, July 19.—Authorizing G.T. Pacific Ry. to extend transfer track at Frobisher, Sask., about 200 ft. northeasterly, switches to be wire locked with distant signal.

23986, July 20.—Approving G.T.R. plans of station and freight sheds at Thorold, Ont.

23987, July 15.—Authorizing C.P.R. to build spur for Winnipeg Oil Co., Winnipeg.

23988, July 22.—Ordering Canadian Northern Ry. and G.T.R. to arrange that passenger trains moving between Union Station and Rosedale, Toronto, shall not be required to register at Don Station; conductors to hand to switchman, when passing, a register card showing destination of train, locomotive number, and time of arrival; operators to register trains and preserve register cards; said arrangement not to supersede or interfere with any time table rights of the companies.

23989, July 17.—Extending for one year from Dec. 31, 1914, order 12723, Dec. 6, 1910, re C.N. Ontario Ry. crossing of Hurdman's Road, Nepeau Tp., on condition that no locomotive or cars be allowed to pass over crossing without gates being lowered.

23990, July 16.—Ordering Dominion Atlantic Ry. within 30 days from date to arrange a system to provide that shippers of apples, in carloads, whose warehouses are located within 100 yds. of agency station, will receive bills of lading for actual number of barrels loaded in each car; permission being given to include in such system such reasonable provision as to notice and as to time of loading as will prevent undue expense in checking.

23991, July 17.—Ordering that Bell Telephone Co. charge Rev. H. Desroches, of Quebec, for his

initial long distance wall set, its residence rate of \$25, instead of its business rate of \$40 a year, complainant to be given credit for any amount paid since Jan., 1915, in excess of \$25 rate.

23992, July 22.—Authorizing C.P.R. to build industrial siding for J. McCreary & Son, Larchwood, Ont.

23993, July 22.—Authorizing Saskatchewan highway commissioners to build highway crossing over G.T. Pacific Branch Lines Co.'s Moose Jaw northwesterly branch, on blind line between secs. 16 and 21-21-4, w. 3 m.

23994, July 22.—Approving Canadian Northern Ry. revised location through secs. 36 and 25-22-1, w. 5 m., mileage 6.77 to 8.87, Alta.; and authorizing it to cross and divert Blackfoot Trail on n.w. quarter sec. 36, and to cross Blackfoot Trail on s. w. quarter sec. 36-22-1, w. 5 m.

23995, July 22.—Authorizing Vancouver, Victoria and Eastern Ry. and Nav. Co. (G.N.R.) to build industrial tracks on Front St., New Westminster, B.C.

23996, July 22.—Approving agreement between Bell Telephone Co. and Rochester Tp., Ont., July 9, 1915, and rescinding order 17138, July 31, 1912.

23997, July 22.—Approving G.T. Pacific Ry. release of responsibility special contract, in connection with transportation of perishable freight in cold or stormy weather.

23998, July 28.—Authorizing C.N. Ontario Ry. to take portions of Lots 40 and 44, Cartierville, and of Lots 41 and 42, St. Laurent Parish, Que., in connection with crossing of Montreal Park & Island Ry. and St. Laurent Road.

23999, July 19.—Ordering Canadian Northern Ry. to extend loading track at Barwick, Ont., 400 ft.; and authorizing it to build across highway by Aug. 31; and rescinding order 22718, Oct. 16, 1914.

24000, July 27.—Ordering that improved type automatic bell be installed at crossing of Eglinton Ave., York Tp., Ont., by C.P.R. and G.T.R., between their respective tracks; 20% of cost to be paid out of railway grade crossing fund; \$250 by York Tp., Ont.; and remainder equally by C.P.R. and G.T.R., each company bearing cost of wiring bell into its own system, and of maintaining installation of its own line, maintenance of bell to be at joint expense of the two companies.

24001, July 27.—Dismissing application of Fredericton Board of Trade, New Brunswick, for order remedying new arbitrary and discriminatory rates on freight and passenger traffic to and from Fredericton, on C.P.R. and Intercolonial Ry.

24002, July 27.—Authorizing Canadian Northern Ry. to remove its agent at Neepawa Jct., Man.

24003, July 20.—Authorizing Hydro Electric Power Commission of Ontario to erect its wires across Michigan Central Rd. at Lot 5, Con. 8, Howard Tp.

24004, July 20.—Ordering Michigan Central Rd. within 60 days to install improved automatic bell at crossing of Park St., St. Thomas, Ont., 20% of cost to be paid out of railway crossing fund.

24005, July 26.—Authorizing Erie & Ontario Ry. (T.H. & B.R.) to exchange its station buildings at Diltz and at Vaughan, Ont.

24006, July 20.—Authorizing Hydro Electric Power Commission of Ontario to erect its wires across Michigan Central Rd. at Lot 35, Southwold Tp.

24007, July 20.—Approving agreement between Bell Telephone Co. and Haldimand Rural Telephone Co. and rescinding order 7703, Aug. 5, 1909.

24008, July 22.—Approving amended location of G.T. Pacific Ry. station site at Lake Kathryn, mileage 223.4, Prince Rupert East, B.C.; and rescinding order 16278, Apr. 9, 1912.

24009, July 21.—Ordering Canadian Northern Ry. to put into effect certain train service on its Elrose Subdivision, Sask., between Elrose Jct. and Macrorie, and rescinding order 23858, May 27.

24010, July 26.—Authorizing Saskatchewan Highway Commissioners to build highway over Canadian Northern Ry. on s.w. ¼ Sec. 20-27-8, w. 3 m., Sask.

24011, July 23.—Authorizing Hamilton St. Ry., G.T.R. and T.H. & B. Ry. to use half interlocking plant at Gikison St., Hamilton, Ont.

24012, July 26.—Authorizing G.T.R. to build certain sidings near Thorold Station, Ont.

24013, July 26.—Authorizing G.T. Pacific Branch Lines Co. to build across and divert highway in w. ½ Sec. 6, Tp. 42, R. 26, w. 2 m., mileage 62 Prince Albert Branch, Sask.

24014, July 19.—Ordering Michigan Central Rd. within 60 days to install improved automatic bell at crossing of centre side road, Buxton, Ont., 20% of cost to be paid out of railway grade crossing fund.

24015, July 26.—Ordering C.P.R. to appoint station agent at Rockhaven, Sask., by Sept. 1.

24016, July 26.—Ordering C.P.R. within 60 days to install improved automatic bell at crossing of highway near St. Philippe station, Que., 20% of cost to be paid out of railway grade crossing fund.

24017. July 23.—Approving C.P.R. and Canadian Northern Ry. crossing at Methven Jct., Man., and interlocking plant installed there.

24018. July 23.—Approving crossing of Canadian Northern Ry. by C.P.R. in Lot 56, Portage la Prairie, Man., and interlocking plant there.

24019. July 28.—Ordering Toronto, Hamilton & Buffalo Ry. to make cattle pass for A. Mittelehfeldt, Wellandport, Ont., by Aug. 31.

24020. July 27.—Approving G.T. Pacific Ry. plan showing clearance between roundhouse doors.

24021. July 29.—Amending order 23985, July 19, re G.T. Pacific Ry. transfer track at Froebisher, Sask.

24022. July 19.—Ordering G.T.R. to move farm crossing northeast of station at St. Hilaire East, Que., to point opposite Ste. Anne St., at expense of St. Hilaire Village, to be completed by Aug. 20.

24023. July 29.—Authorizing Ottawa Electric Co. to erect its wires across C.P.R. on Second Ave., McKellar, Ont.

24024. July 23.—Approving Lake Erie & Northern Ry. revised location at Waterford, Ont., and approving yards and station there.

24025. July 28.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur at Dunnville, Ont., to connect with G.T.R. branch, serving Dominion Cannery, Ltd.

24026. July 20.—Authorizing C.P.R. to use bridge 41.2 on its Boundary Subdivision, B.C.

24027. July 31.—Approving C.P.R. Supplement 22 to C.R.C. no. E-2900, and G.T.R. Supplement 26 to C.R.C. no. E-3036, both effective Aug. 5, increasing rates on building brick in carloads, minimum weights set out in tariffs, from Cooksville, West Mimico, and Weston to Toronto, and from Port Credit to Toronto, respectively, from 2½c. to 3c. per 100 lbs.

24028. July 29.—Authorizing St. Paul, Man., rural municipality to build highway crossing over C.P.R. on Willis Ave., north of Middlechurch station.

24029. July 28.—Ordering G.T.R. to install gates at crossing at intersection of Barton St. and Ferguson Ave., to be operated by day and night watchmen appointed by City of Hamilton, Ont.; half-interlocker to be rearranged to form part of combined system; 20% of cost of installation to be paid out railway grade crossing fund, \$480 by city, and \$720 by G.T.R.; Hamilton St. Ry. to pay entire cost of plant, which takes care of street railway operation; remainder of cost to be paid:—40% by city and 60% by G.T.R.; 50% of operation to be paid by Hamilton St. Ry. and remainder, 40% by city and 60% by G.T.R.

24030, 24031. July 28, 19.—Relieving Toronto, Hamilton & Buffalo Ry. and G.T.R. from maintaining watchmen to operate interlocking plants at crossings in Dunnville, and near Diltz, Moulton Tp., on Sundays and between 8.15 p.m. and 6.45 a.m. on week days.

24032. July 30.—Dismissing application of City of Hamilton, Ont., for order directing Toronto, Hamilton & Buffalo Ry. to provide watchmen and gates at intersection of T.H. & R.R. northerly spur with Barton St.

24033. July 30.—Authorizing Canadian Northern Ry. to build across and divert trail in Sec. 8-43-12, w. 3 m., Sask.

24034. July 30.—Ordering that express companies amend form of taking consignees' receipt for goods delivered, by omitting such words as "in good order," or "in apparent good order," so that receipt required be similar to that given shipper, with liberty reserved to consignees, in case of apparent loss or damage, to qualify receipt in accordance with facts.

24035. Aug. 3.—Approving C.P.R. plan X-2-391, showing changed mode of operating gates at crossing of Royce Ave., Toronto.

24036. Aug. 3.—Relieving G.T. Pacific Branch Lines Co. from erecting fences, gates and cattle guards on certain portions of its Tofield-Calgary Branch, between mileage 0 and 201, Alta.

24037. Aug. 3.—Authorizing G.T.R. to operate jointly with C.P.R. over siding on Pardee Ave., Toronto serving premises of Canada Metal Co.

24038. Aug. 3.—Amending order 23974, July 14, re Lake Erie & Northern Ry. crossing of George St., Brantford, Ont., by changing George St. to George Ave.

24039. Aug. 3.—Ordering Canadian Northern Ry. to accept l.c.l. freight from G.T.R. over connection between the two lines at Lyn, Ont., and forward it to destination without further delay.

24040. Aug. 3.—Ordering C.P.R. to amend distributing tariff from Winnipeg, St. Boniface, Paddington and North Transcona, Man., so as to apply same rates to Two Creeks as to Elkhorn, Man.

24041. Aug. 3.—Relieving G.T.R. from providing further protection at crossing immediately north of Howick station, Que.

24042. Aug. 4.—Authorizing G.T. Pacific Ry. to remove regular agent at Gregg, Man.

24043. July 31.—Approving plans and specifications showing work to be done on Mennie drain, under Michigan Central Rd. and Pere

Marquette Rd., in Lots 5, 6, 7, 8 and 9, Con. A, Dunwich Tp., Ont.

24044. Aug. 3.—Ordering C.N. Quebec Ry. to build retaining wall to prevent water from drain across old gravel pit spur on W. Mayrand's property on Lot 22, Deschambault Parish, from going on G. Gignac's property.

24045. Aug. 4.—Ordering C.P.R. to install gates at crossing of Symington Ave., Toronto, Ont., to be operated by day and night watchmen; 20% of cost to be paid out of railway grade crossing fund; remainder and cost of operation to be divided equally between city and C.P.R.

24046. Aug. 4.—Rescinding order 22950, Dec. 4, 1914, re diversion of Rue la Verandrye, St. Boniface, Man., by Canadian Northern Ry.

24047. July 26.—Approving agreement between Bell Telephone Co. and North Colchester Tp., Ont., July 9.

24048. Aug. 4.—Ordering Great Northern Ry. within 30 days to fence right of way, on west side, on S. P. Pond's property, Nelson, B.C., mileage 187 to 188; also mileage 185.2 to 188.75, and 189.50 to 191.45; no barbed wire to be used.

24049. Aug. 4.—Authorizing Alberta Public Works Department to build highway crossing over C.P.R. in s. ½ Sec. 32-6-19, w. 4 m.

24050. Aug. 5.—Ordering that gates at Royce Ave., Toronto, be operated by watchmen appointed by C.P.R. and G.T.R.; in case of disagreement, then by the Board as and for the companies; watchmen to act in each instance for and on behalf of company, the passing of whose trains or locomotives requires operation of gates; in case of any accident at crossing, owing to running of train or locomotive, the company operating such shall alone be liable for any negligence of watchman in charge of gates, and shall indemnify and save harmless the other company from all loss, charges, or damages in respect thereof.

24051. Aug. 4.—Ordering Canadian Northern Express Co. forthwith to maintain express collection and delivery service formerly furnished at Athens, Ont., pending formal hearing by Board.

24052. Aug. 5.—Approving Halifax & South Western Ry. Standard Tariff of Parlor Car Tolls, C.R.C. no. S-1.

24053. Aug. 3.—Ordering C.N. Quebec Ry. to place pipe or open box culvert under its railway at ditch on S. Germain's property, Portneuf, Que.

24054. Aug. 9.—Authorizing Montreal & Southern Counties Ry. to operate temporarily, for construction purposes only, over C.P.R., on Lot 34, St. Paul d'Abbotsford Parish, Que.; crossing to be protected by a flagman.

24055. Aug. 6.—Amending order 24029, July 28, re G.T.R. and Hamilton St. Ry. crossings at intersection of Barton St. and Ferguson Ave., Hamilton, Ont.

24056. Aug. 9.—Ordering G.T.R. to build siding for not less than five cars, and to build flag station, with small freight shed attached, at Ratho, Ont.; work to be completed by Sept. 15.

24057. Aug. 6.—Authorizing Toronto Ry. to appeal to the Supreme Court of Canada from Board's order directing it to bear portion of cost of subway at Avenue Road, Toronto.

24058. Aug. 6.—Ordering C.P.R. to bond a further 700 ft. of its track north of Port Burwell Road, Port Burwell, Ont., at mileage 32.7, and to widen the road to 20 ft. for 100 ft. each way from the crossing; municipality to pay \$100, and C.P.R. the remainder.

24059. Aug. 6.—Authorizing G.T.R. to rebuild bridge 180 over Blanche River, District 3, Montreal Division, Plessisville, Que.

24060. Aug. 9.—Authorizing Saskatchewan Highway Commissioners to build highway crossing over Canadian Northern Ry., between n.w. ¼, Sec. 3, and s.w. ¼, Sec. 10, Tp. 34, R. 3, w. 2 m.

24061. Aug. 9.—Ordering G. T. Pacific Ry. Co. to fence its right of way through Latta Brothers' property, North Bulkeley, B.C., by Sept. 1.

24062. Aug. 3.—Prohibiting C.P.R., G.T.R., and Canadian Northern Ry. from blowing steam whistles of any locomotive when approaching highway crossings within limits of the City of Toronto.

24063. Aug. 11.—Extending, to Sept. 15, time within which C.P.R. may install bell at highway crossing, mileage 6.94, Ketepec station, St. John, N.B.

24064. Aug. 11.—Authorizing C.P.R. to remove regular agent at Magaguadavic station, N.B., a caretaker to be appointed.

24065. Aug. 11.—Approving location of Canadian Northern Ry. third class station at Fisher Branch, Man.

24066. Aug. 11.—Authorizing Saskatchewan Highway Commissioners to build a highway crossing over Canadian Northern Ry. in n.w. ¼, Sec. 33, Tp. 14, R. 25, w. 2 m., at C.N.R.'s expense.

24067. Aug. 11.—Authorizing G.T.R. to build spur for Coasts and Lakes Contracting Corporation, Bertie Tp., Ont., to be completed within 3 months.

24068. Aug. 11.—Authorizing G.T.R. to build siding for Dominion Sugar Co., Waterloo Tp.,

Ont., to be completed within three months.

24069. Aug. 11.—Authorizing G. T. Pacific Branch Lines Co. to build across highway between Secs. 9 and 10, Tp. 45, R. 23, w. 3 m., mileage 47.3.

24070. Aug. 11.—Authorizing Kettle Valley Ry. to cross C. N. Pacific Ry. at Hope, B.C., for construction purposes only, until October 31; all trains to be flagged over crossing by a flagman appointed by C.N.P.R. at expense of K.V.R.

24071. Aug. 12.—Authorizing Toronto Suburban Ry. to cross C.P.R. near Guelph, Ont., temporarily, for construction purposes only, between 6.30 a.m. and 6.30 p.m., pending installation of interlocking plant required by Oct. 15, trains to be flagged by day watchman, appointed by C.P.R. at expense of T.S.R.

24072. Aug. 12.—Authorizing Thorah Tp., Ont., to build highway crossing over C. N. Ontario Ry., between Cons. 2 and 3, C.N.O.R. to bear cost.

24073 to 24075. Aug. 12, 11.—Approving Bell Telephone Co.'s agreements with Campbell's Bay Rural Telephone Co., June 29, Zorra Telephone Co., July 22, and North Huron Telephone Co., July 22.

24076. Aug. 12.—Authorizing C.P.R. to build, at grade, its Virden-McAuley branch across Railway Ave. South, McAuley, Man., mileage 36.04.

24077. Aug. 12.—Authorizing C. N. Ontario Ry. to build across Arthur St., Port Arthur, Ont.

24078. Aug. 12.—Relieving C.P.R. from providing further protection at crossing of highway half a mile west of Adamsville station, Que.

24079, 24080. Aug. 13.—Authorizing G. T. Pacific Ry. forthwith to proceed with building of interchange track with C.P.R. at the Globe elevator site, Calgary, Alta.; Department of Trade and Commerce will pay G.T.P.R. \$14,000 towards cost; and also to commence forthwith and complete the branch to connect with Board of Grain Commissioners' elevator at Moose Jaw, Sask.

24081. Aug. 13.—Dismissing application of Tilbury North Tp., Ont., for order compelling Bell Telephone Co. to restore telephone office at Stoney Point.

24082. Aug. 13.—Ordering Canadian Northern Ry. to build farm crossing for S. Kilborn, Ochre River, Man.; work to be completed by Sept. 1.

24083. Aug. 13.—Authorizing Montreal Tramways Co. to build second track across C. N. Quebec Ry. on boulevard which the City of Maisonneuve is building on Pie IX, Avenue.

24084. Aug. 12.—Extending, to Oct. 15, time within which the C.P.R. may complete extensions to siding of Provincial Reformatory, Guelph Tp., Ont.

24085. Aug. 19.—Approving G. T. Pacific Branch Lines Co.'s plan, dated Aug. 14, showing connection with C.P.R. near the Globe elevator, Calgary, Alta.

24086. Aug. 16.—Authorizing the G. T. R. to build additional track across Queen St. South, Berlin, Ont.

24087. Aug. 14.—Rescinding order 22119, July 2, 1914, re location of Toronto Terminals railway between York St. and Don River, Toronto.

24088. Aug. 5.—Extending, to Sept. 1, time within which G. T. R. was directed to build interchange track with Campbellford, Lake Ontario & Western Ry. (C.P.R.) at Cobourg, Ont.

24089. Aug. 17.—Authorizing C.P.R. to build spur for Hull Iron & Steel Foundries, Ltd., Hull, Que.; work to be completed in three months.

24090. Aug. 13.—Approving C.P.R. plans, 25679-A, July 5, 25679-5, July 16, and 24707, Aug. 2, showing subway at Yonge St., Toronto.

24091. Aug. 12.—Authorizing C.P.R. to build spur across road allowances between Secs. 28 and 21, and across Winnipeg Electric Ry. (transmission line), on s. w. ¼, Sec. 28, and n. e., n. w., and s. e. ¼, Secs. 21, Tp. 14, R. 10, e.p.m., work to be completed within three months.

24092. Aug. 16.—Amending order 24000, July 27, re C.P.R. and G.T.R. bells to be installed at crossing of Eglinton Ave., York Tp., Ont.

24093. Aug. 17.—Authorizing G. T. R. to build extension of spur for Borden Milk Co., Norwich Tp., Ont.; to be completed within three months.

24094. Aug. 13.—Relieving G. T. Pacific Branch Lines Co. from erecting fences, gates, and cattle guards on its Prince Albert Branch from mileage 0 to 64, at different points in Saskatchewan.

24095. Aug. 16.—Relieving Canadian Northern Ry. from erecting fences along its right of way west of Tollerton, Alta., at five points; order to cease when vicinity becomes settled or improved.

24096. Aug. 14.—Relieving Nelson & Fort Sheppard Ry. (C.N.R.) from erecting fences, gates, and cattle guards from International boundary, south of Waneta, to Nelson, B.C.; order to cease when vicinity becomes settled or improved.

24097, 24098. Aug. 16.—Approving Bell Telephone Co.'s agreements with Molesworth Independent Telephone Co., Aug. 3, and South Plantagenet Rural Telephone Co., July 2.

24099. Aug. 13.—Approving proposed location of C.P.R. station at Marchwell, Sask.

24100. Aug. 17.—Relieving C.P.R. from erect-

the cattle guards along certain sections of the St. Lawrence Subdivision, in order to cease when vicinity becomes settled or improved.

Aug. 12. Approving plans, profiles, and specifications of the Water main No. 7, and detail plans of concrete culvert to be built between Bell Telephone Co. and Plummer Addition, Ont.

## The New Canadian Pacific Railway Station at Quebec.

The foundation stone of the new station which the C. P. R. is building at Quebec as a main station, was laid by the Mayor of the city, Aug. 12. The C. P. R. was represented by F. L. Wanklyn, General Executive Assistant, and other officials, the Lieutenant Governor and the Premier representing the province.

The plans show a building designed in a modern adaptation of the chateaux of the Loire, France, which is calculated to add to the architectural features of the city. The building, which is being erected at the corner of St. Paul and Henderson streets, will have as a frontage a large open paved plaza, approximately 300 x 200 ft., flanked on either side by broad sidewalks leading to the main entrance. Between the sidewalks and the building will be large spaces which will be planted with Lombardy poplars and blue spruce and other shrubs. The main building will be of Argenteuil granite, Deschambault limestone, and Citadel brick, with high sloping roof of copper. The main entrance, which will be from St. Paul St., will be 25 ft. wide. Above it will be a window about 10 ft. in height, of metal sash, divided into seven sections. At the crown of the arch will appear the arms of seven of the historic names of Quebec, viz., Montmagny, who was the first Governor of Canada, from 1636 to 1647; DeTracy, Viceroy of Canada, 1665; Beauharnois, Governor of Canada, 1726 to 1747; Montcalm, one of the French Generals defending Quebec when the English conquered Canada in 1759; Wolfe, the general who led the English to victory on the Plains of Abraham in 1759, and died on the battlefield; Frontenac, Governor of Canada, 1672; Talon, first Intendant of New France, 1665 to 1672. The main facade of the building will be dominated by a central tower with turrets at the angles, at the bases of which will be cartouches, bearing in one case the fleur de lys of France, and at the other the Tudor rose, the thistle and the shamrock of the United Kingdom of Great Britain and Ireland. High upon the roof will be an ornamental clock with a dial 8 ft. in diameter, over which will appear the city's arms.

The building will be L shaped, the central block 175 ft. long, and wing 200 ft. long.

At the entrance will be a lobby approximately 45 x 65 ft. and 60 ft. high, to be entirely of tapestry brick with ornamental work in faience tile. The room will be lighted from the St. Paul St. side and also from the roof, the spaces in the roof being filled with ceiling lights. The central ceiling light will contain a cartoon in leaded glass showing the Dominion of Canada, with the thousands of miles of the C. P. R. dominating the industrial and prairie sections marked in distinct colorings. The ceiling of the dome will be constructed entirely of faience tile with ornamental patterns arabesque in blue, red and gold. The main cornice of the big lobby will also be in faience tile, and will carry a series of cartouches symbolic of the C. P. R., viz., its hotel system, railways and steamships. The main floor will be divided into ticket offices, baggage room, parcel room, Customs offices, transfer, telegraph and news stand. From the vestibule a marble staircase will lead to the offices on the first floor which will be

24102. Aug. 18.—Authorizing London Railway Commission to take, in connection with London & Port Stanley Ry., for erection of repair shop and car barns, the fee simple in Lot 1, on south side of Philip St., and Lot 1, on north side of Trafalgar St., London, Ont.

24103. Aug. 19.—Approving agreement between Bell Telephone Co. and Plummer Addition Tp., Ont., Aug. 6.

occupied by the C. P. R., and space will also be provided for the accommodation of the National Transcontinental Railway. The main concourse will be 65 ft. by 125 ft. and 40 ft. high, constructed of tapestry brick with faience insertings in color. All of the ornamental work in this room will carry the characteristic ornaments of the French Chateaux and Dolphin and Tridents interspersed with the Tudor rose. Opening off the concourse will be the station agent's room and the usual conveniences. Train gates will separate the concourse from the train shed which will be on the same low principle as Windsor St. station in Montreal. There will be 11 tracks and the platforms will be well lighted. In the concourse near the train gates will be installed train indicators electrically illuminated.

The power house will be situated on the St. Paul St. side of the building. It will contain the necessary equipment to supply main station and the freight shed across the tracks towards the river.

The building was designed by M. H. E. Prindel, architect, Montreal, and the construction is being supervised by D. H. Mapes, Engineer of Building Construction, C. P. R., and T. E. Vidette for the contractors, the Downing Cook Co. This description is abridged from the Quebec Chronicle.

## National Transcontinental Railway Operation.

The operation of the National Transcontinental Railway by the Dominion Government is raising some questions affecting its connection with the Intercolonial Ry. The first of these is at Moncton, where for several miles the two lines run side by side westerly. It is reported that in order to facilitate traffic, and to reduce cost of maintenance it is proposed to build about a mile of line to connect the two tracks, and to run all the traffic over one of the lines.

The second matter affects St. John, N. B., and was discussed with the Minister of Railways on the occasion of his recent visit there. The Minister is reported to have said that the Department's engineers were studying the problem of better transportation connection with St. John, in connection with the operation of the N. T. R., and the engineers seemed to favor an entrance to the city by the western side of the harbor. When the matter had been further considered, F. P. Gutelius, General Manager, would discuss the matter with the Board of Trade and the City Council. (Aug., pg. 307.)

**Rogers Pass Tunnel Contractors' Suit.**—In the original hearing of the action brought by McIlwee Brothers, against Foley, Welch and Stewart, general contractors for the construction of the five mile tunnel on the C. P. R. at Rogers Pass, B. C., for \$527,000, the court awarded just over \$30,000 damages. The plaintiffs appealed and judgment was given by the British Columbia Court of Appeal, Aug. 10, under which the plaintiffs become entitled to practically the full amount claimed. It is expected that Foley, Welch and Stewart will carry the case to the Supreme Court of Canada.

## American Association of Passenger Traffic Officers.

At the last annual meeting at San Francisco, the following Canadian railway officials were placed on the various committees:

Official Digest of Fares and Divisions—G. C. Wells, Assistant to Passenger Traffic Manager, C.P.R., Montreal.

Adjustments of disputes relative to division of passenger fares—W. P. Hinton, Assistant Passenger Traffic Manager, G.T.R., Montreal.

Printing of folders and other advertising matter and economical distribution thereof—W. P. Hinton.

Additional charge for checking baggage—W. P. Hinton, W. H. Snell, General Passenger Agent, Eastern Lines, C.P.R., Montreal.

Additional fares for sleeping and parlor car passengers and additional charge for passenger occupying section in sleeper—G. T. Bell, Passenger Traffic Manager, G.T.R., Montreal.

Economies in operation of city ticket offices and in passenger service—C. B. Foster, Assistant Passenger Traffic Manager, C.P.R., Montreal.

Committee on adjustment of disputes relative to division of passenger fares—W. P. Hinton, W. H. Snell.

Standing Territorial Committee, Eastern Canadian Passenger Association—W. P. Hinton, C. E. Benjamin, General Passenger Agent, Trans-Pacific Service, C.P.R., Montreal; F. F. Backus, General Traffic Manager, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont. (since appointed Assistant to President).

Territorial Membership Committee, Eastern Canadian Passenger Association—W. H. Snell, W. P. Hinton.

**Harvesters' Excursion Rates.**—In connection with the annual harvesters' excursion rates to Manitoba, Saskatchewan and Alberta, representations have been made to the railway companies by the Vancouver Board of Trade, asking that these reduced rates be made applicable from British Columbia. H. W. Brodie, General Passenger Agent, C. P. R., Vancouver, replying to the Board, Aug. 8, on behalf of the railway companies interested in the movement of laborers to the Northwest, said that all arrangements were made after consultation with the governments of the three provinces interested. These provinces do not desire excursions run from British Columbia, fearing that there would be an influx of men unsuited to harvest work. The railway companies have suggested that if a shortage of labor be feared, and the prairie provinces will send representatives into British Columbia to select the class of laborers required, the companies will place special rates in effect for their benefit. The statement made during the discussion at the Board's meetings that reduced rates for harvesters were in effect from U. S. points, was incorrect.

**Hudson's Bay Co.'s Report.**—At the annual meeting in London, Eng., August 5, Sir Thomas Skinner, Chairman, who is also a director of the C.P.R., stated that in view of the unfavorable results of the past year, and the uncertainty regarding the duration of the war, which had caused considerable interference with the company's business, the directors had decided not to recommend a dividend on the ordinary stock.

**The Intercolonial Ry. Office Staff** at Moncton, N.B., contributed a percentage of their July salaries for the provision of a machine gun for the Canadian Expeditionary Force.

Freight Cars for the Belgian State Railways Being Built in Canada.

St. John and Quebec Railway Taken Over by the New Brunswick Government.

As previously stated in Canadian Railway and Marine World, the Railway Executive Commission of the British War Office has ordered 1,200 box cars from the Canadian Car and Foundry Co. for the Belgian State Railways. From the viewpoint of this continent they are very novel in design, as the accompanying illustration shows. They will be of a steel frame, wood sheathed type, with a capacity for 15 metric tons. (A metric ton is slightly less than a long ton, or 2,205 lbs.) The underframe construction will resemble that of the steel frame freight car used on this continent, except that there will be no body bolster arrangement, as the cars will be mounted on two single trucks directly from an intermediate sill, which will be the heaviest member of the underframe. This intermediate sill will be a 10x3 51-64x29-64 ship channel directly over the journals. End sills, the full width of the car, will be

transmitted to the wheels through an 11-leaf spring of 3 15-16x15-32 in. steel plate, through brackets and links from the under side of the intermediate sill, and then to the journals. The brake rigging will be of the hand type, braking on one side of the car only. Two curved links suspended under the centre of the car will have on their inner lower faces two blocks, which, when depressed by the brake lever running to the end of the car, will force out the arms, applying the brake shoes to the wheels. The couplings will be on the screw arrangement, as shown at the righthand end of the illustration. The drawbar pull will be transmitted through the car by a central rod, which will have a clear passage between the centre sills. A cushioning action for the draught equipment will be placed on this rod behind the end sill, and will consist of a volute spring. The end posts will be 4x2 47-64x17-64 in.

Under the provisions of the act relating to the St. John and Quebec Ry. passed by the New Brunswick Legislature last session, which came into force upon proclamation June 9, the company was required within 20 days thereafter to make arrangements satisfactory to the Government for the completion of the line. The company failed to make such arrangements, and an order-in-council was passed Aug. 4, and made public, Aug. 18, putting in force the various provisions of section 4 of the act. Under this section, the order-in-council declares:—"That all shares of common stock of the company issued prior to the publication of this order vest in the Crown, to be held in behalf of the province, free from all liens, etc., except that in favor of the Prudential Trust Co., in respect of 17,947 shares, with power to transfer such shares or any of them." The directors and officers of the company

Elevation of 15 Metric Ton Freight Car for Belgian State Railways.

10x3 19-32x19-32 ship channel, and will support the buffers, placed 5 ft. 7 in. centres at 41 15-16 ins. above the rail. The centre sills will be 3x1 15-16x5-16 in. channels, extending from end sill to end sill, flange inward, at 17 1/4 ins. back to back of web. These central sills will be reinforced by similar channel sections on either side, running diagonally from the juncture of the intermediate and end sills to the centre sill, about a third the length from the end, passing alongside the centre sill, to which they will be riveted in the central section, and branching off diagonally to the other corner. The side sills will be 3x3x5-6 in. angles. Following are the principal particulars of the cars:

Capacity	15 metric tons
Gauge	1 ft. 8 1/2 in.
Trucks	Single
Wheels	38 in. rolled steel
Wheel base	13 ft. 1 1/2 ins.
Length over end sill	24 ft. 1 3/4 ins.
Height of car body	8 ft. 9 1/2 ins.
Width inside	8 ft. 4 1/2 ins.
Width over side sills	8 ft. 6 1/2 ins.

The rolled steel wheels will be carried on steel axles. The car weight will be

beams, and the side posts 2 13-32x1 3/4x11-32 in. channels. The side sheathing will be yellow pine or Douglas fir, bottom board 1 5/8 ins. thick, second and third boards 1 3/8 ins. thick, balance 1 in. thick. The end lining will be yellow pine or Douglas fir 1 3-16 ins. thick. The side frames will be braced by diagonals. The roofing will be 13-16, in. white or red pine, or Douglas fir, covered with canvas, and supported on steel channel type carlines. There will be a side door on each side, supported on bottom rollers. A step will be provided at each door. Delivery is to commence at an early date.

**Railway Lands Patented.**—Letters patent were issued during July for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry.	2,069.60
Canadian Northern Ry.	1,608.57
Grand Trunk Pacific Ry.	6.10
Qu'Appelle, Long Lake, and Saskatchewan Rd. and Steamboat Co.	3,835.00
Total	7,518.67

acting heretofore are disseized of their offices, and the following are appointed to act on behalf of the Province, until the holding of the annual meeting:—President, Irving R. Todd, St. Stephen; Secretary, E. Girouard, Moncton; Treasurer, J. D. Palmer, Fredericton; additional directors, W. S. Fisher, St. John, and Richard Leary, Richibucto.

**Steel Rails for Alberta.**—In Canadian Railway and Marine World for August it was stated in a shipping letter from Fort William that a contract had been made for the delivery of about 45,000 tons of steel rails there. We have since ascertained that these are for the J. D. McArthur Co., Limited, contractors, Winnipeg, who have ordered from 40,000 to 50,000 tons 60 lbs., A.S.C.E. section, from the Algoma Steel Corporation for use principally on the Alberta and Great Waterways Railway. At least 35,000 tons will be used north of Edmonton, but some portion of the order may be sent to British Columbia. They will be shipped from Sault Ste. Marie to Fort William by water.

# Canadian Pacific Railway's Annual Report.

Following is the report for the year ended June 30, addressed to the shareholders over the signature of the President, Sir Thos. G. Shaughnessy.

The accounts for the year ended June 30, show the following results:—

Working Expenses	\$98,865,209 78
Wages	65,290,582 49
Net earnings	\$33,574,627 29
Interest on bonds	10,446,509 83
Surplus	\$23,128,117 46
Contribution to Pension Fund	125,000 00

Deduct net earnings of Pacific Coast steamships, commercial freight, and news department, transferred to special income account	1,494,151 49
	\$21,508,965 97

From this there has been charged a half-yearly dividend on preference stock of 2%, paid April 1	\$ 1,605,412 80
And a quarterly dividend on ordinary stock of 1%, each, paid Jan. 2, April 1, and June 30	13,650,000 00
	15,255,412 80
	\$ 6,253,553 17

From this there has been declared a second half-yearly dividend on preference stock, payable Oct. 1	\$ 1,613,638 42
And a fourth quarterly dividend on ordinary stock 1%, payable Oct. 1	4,550,000 00
	6,163,638 42

Leaving net surplus for the year \$ 89,914 75  
In addition to the above dividends on ordinary stock, 3% was paid from special income.

Following are details of special income for the year:—

Following are details of special income for the year:  
Balance June 30, 1914 \$5,046,812 46  
Less dividend paid Oct.

1. 1914	1,950,000 00	\$ 3,096,812 46
Interest on proceeds land sales	64,587 54	
Interest on deposits and loans	1,466,096 67	
Interest from Minneapolis, St. Paul & S. S. Marie Ry. bonds	159,720 00	
Interest from Mineral Range Ry. bonds	50,160 00	
Interest from Toronto, Hamilton & Buffalo Ry. bonds	10,840 00	
Interest from Montreal & Atlantic Ry. bonds and other securities	107,902 09	
Interest from Berlin, Waterloo, Wellesley & Lake Huron Ry. bonds	17,040 00	
Interest from St. John Bridge & Ry. Extension Co. bonds	6,200 00	
Interest from Esquimalt & Nanaimo Ry. bonds	193,280 00	
Interest from Dominion Atlantic Ry. extension debenture stock	56,940 00	
Interest from Dominion Atlantic Ry. second debenture stock	36,986 67	
Interest from Hull Electric Ry. ..	75,000 00	
Dividend on Esquimalt & Nanaimo Ry. stock	125,000 00	
Dividend on St. John Bridge & Ry. Extension Co. stock	70,000 00	
Dividends on Minneapolis, St. Paul & S. S. Marie Ry. common stock	890,645 00	
Dividends on Minneapolis, St. Paul & S. S. Marie Ry. preferred stock	445,326 00	
Dividends on West Kootenay Power & Light Co. common stock	55,000 00	
Dividends on West Kootenay Power & Light Co. preferred stock	3,850 00	
Dividends on Consolidated Mining & Smelting Co. stock	209,520 00	
Dividend on Berlin, Waterloo, Wellesley & Lake Huron Ry. stock	12,500 00	
Earnings from ocean steamships and hotels	4,370,280 41	
Revenue from interest in coal mine properties	544,294 26	
Extraneous mail earnings	364,733 61	
Net earnings of Pacific Coast steamships, commercial telegraph, news department	1,494,151 49	

Space rented in office buildings	139,277 95
	\$14,066,144 15
Less payments to shareholders in dividends: Jan. 2, April 1, and June 30	5,850,000 00
	\$ 8,216,144 15

From this a dividend has been declared payable Oct. 1

The working expenses for the year were 66.04% of the gross earnings, and the net earnings 33.96% compared with 67.32 and 32.68%, respectively, in 1914.

Four per cent. consolidated debenture stock to the amount of £611,797 was created and sold, and the proceeds were applied to the acquisition of the securities of other railway companies whose lines constitute a portion of your system, the interest on which had, with your sanction, been guaranteed by your company. Four per cent. preference stock to the amount of £504,914 was created and sold for the purpose of meeting capital expenditures that had previously been sanctioned by you.

During the year 231,297 acres of agricultural land were sold for \$3,742,115.00, an average of \$16.17 an acre. Included in this were 6,550 acres of irrigated land which brought \$55.22 an acre, so that the average price of the balance was \$15.04 an acre.

All of the company's outstanding first mortgage 5% bonds, amounting at the end of the fiscal year to £2,638,900, were satisfied and retired at or before their maturity, July 1, excepting a few that had not been presented for redemption. An amount sufficient to take up these bonds, as they come in, has been deposited with your bankers, and the trustees have been asked to certify the satisfaction of the debt and to have the mortgage securing them formally cancelled. Outstanding bonds of £233,200, of the Shuswap and Okanagan Ry. Co., whose line is leased to your company for 999 years, were also acquired during the year, and have been deposited with your treasury securities.

As you were informed at a previous meeting, your directors have had under consideration for some time the desirability of transferring to a steamship company your steamships engaged in traffic on the Atlantic and Pacific oceans, so as to more effectually separate your railway and steamship finances and operations. To that end, a company has been organized under the laws of Great Britain, known as The Canadian Pacific Ocean Services, Limited, with an authorized capital of £2,000,000 sterling, having for its purpose, amongst other things, the acquisition and operation of ocean steamships and the interchange of traffic with your railway lines and others. The requisite extension of your company's charter powers has been secured to enable it to hold stock and securities of the Canadian Pacific Ocean Services, Ltd., and to guarantee payment of the principal and interest of such securities as may be issued with your consent. It is proposed that the Canadian Pacific Ocean Services, Ltd., shall purchase and take over your interest in all of the steamships and their appurtenances engaged in ocean traffic, as well as those of the Allan Line Steamship Co., which has been under your control for some time. A moderate estimate of the value of the steamship property involved in the transaction, after making due allowance for depreciation, is \$23,500,000. Your directors recommend that as a consideration for the steamships and their appurtenances to be sold and delivered by your company, and for the capital stock of the Allan Line Steamship Co., carrying with it all that company's steamship and other properties,

you accept as fully paid the capital stock of the Canadian Pacific Ocean Services, Ltd., namely, £1,962,910, being all excepting the shares necessary to qualify the directors of the steamship company, and in addition, 5% first debentures or debenture stock of the Canadian Pacific Ocean Services, Ltd., to the amount of £2,865,860 sterling. The transaction has been completed on this basis, subject to your approval.

Six of the company's older class steamships, namely, the Montrose, Mount Royal, Montezuma, Montcalm, Tyrolia and Ruthenia were taken by the Imperial Government in November last, at a price that has not yet been fixed by the Admiralty, and the steamship Empress of India, after 25 years service on the Pacific Ocean, was sold for £85,000 and converted into a hospital ship. Two large modern steamships that were under construction at Belfast were purchased by the company at a cost of about £700,000, for delivery in July and October of this year. Pressure of other work, however, delayed their completion, and it will be probably some months before they are ready for service.

The appropriations made by your directors for expenditures on capital account during the calendar year were comparatively small, aggregating only \$3,546,600. In this amount are included the estimated expenditure on Roger's Pass tunnel in the Selkirk Mountains, \$1,350,000; passenger and freight terminals at Quebec, \$300,000; and passenger station with approaches, at North Toronto, \$400,000. The balance of the amount is made up of works of minor importance on all sections of the railway.

The Victoria Rolling Stock and Realty Co.'s equipment securities, to which reference was made in the last annual report, were disposed of during the year at a price sufficient to repay the amount advanced by the company.

Uncontrollable conditions caused an abnormal decline in the gross revenue of your railway lines for the year, and, although the working expenses were very substantially reduced, the net earnings were \$8,851,300 less than in the previous year, leaving a margin barely sufficient to meet the customary distribution to shareholders. Against this your special income, from which a portion of the dividend is paid, was \$2,381,461 greater this year than last. Your directors were of opinion that in the circumstances there was no good reason for making any change in the rate of dividend, and acted accordingly.

Vice President McNicoll, after more than 40 years continuous connection with the company and one of its acquired lines, was compelled by failing health to relinquish the arduous duties of his office, and he, therefore, resigned in December last. The resignation was accepted after the directors had expressed in a most pronounced way their high appreciation of Mr. McNicoll's services to the company, and their personal esteem and regard for him. George Bury, Vice President in charge of the company's western lines, was promoted to fill the vacancy caused by Mr. McNicoll's retirement, and he was also elected a member of the board of directors.

The under mentioned directors will retire from office at the approaching annual meeting. They are eligible for re-election:—Sir William C. Van Horne, R. B. Angus, Sir Edmund B. Osler, Sir Herbert S. Holt.

The Canadian Pacific Ry. has not killed a passenger in a train accident during the past two years.

## Railway Development.

### Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta and Great Waterways Ry.**—Grading is reported to have been completed from the end of steel mileage 135, or 21 miles beyond Lac La Biche, Alberta, for 60 miles, to tp. 75, range 8, west of the 4th meridian. The route is said to be nearly all through muskeg for this distance, but there is a fall towards Christiana Lake. The ballasting of the line from Carbondale to Lac La Biche is reported to be practically completed. The ballast is obtained from a pit at mileage 84. It is expected a regular service by means of a gasoline car will be put in operation over the line to Lac La Biche, towards the end of September. (June, pg. 213.)

**Alma and Jonquieres Ry.**—The Department of Public Works is being asked to approve of plans of a bridge across the Little Discharge of Lake St. John, near St. Joseph d'Alma, Que., under the provisions of the Navigable Waters Protection Act, Sec. 7. (May, pg. 170.)

**Athabasca and Vermillion Ry.**—We are officially advised that preliminary survey work for this projected railway is well under way. The railway is projected from Athabasca to Fort Vermillion, about 50 miles above Peace River Chutes on Vermillion Falls. A direct line between these two points is 300 miles, and the present survey is for securing the shortest and best route. F. P. Wilson is engineer in charge, and F. D. Rice is assistant engineer. (Aug. pg. 304.)

**British Columbia to Portland, Ore.**—A press report says that a statement was made, in evidence by General J. M. Ashton, before the Pierce County Board of Equalization at Tacoma, Wash., Aug. 8, to the effect that a Canadian railway company had completed arrangements to build a railway from British Columbia to Tacoma and Portland, with large terminal facilities in Tacoma, that the arrangements were interfered with by the war, but that the negotiations were to be resumed after the conclusion of peace. The options to the Tacoma property required for terminal purposes, General Ashton said, were allowed to expire July 31.

**Fraser River Terminal Co.**—A special committee of the Vancouver Board of Trade has been appointed to consider the project for the establishment of union terminals for passengers and freight for all railways entering Vancouver, B.C. The project is being put forward by the Union Terminal Co. of Seattle, Wash., representatives of which had a meeting with the committee in Vancouver, Aug. 2. (May, pg. 171.)

**Intercolonial Ry.**—The Intercolonial Ry. and the National Transcontinental Ry. run parallel for about 11 miles out of Moncton, N.B. As the latter line is being operated under Government management, it is proposed, according to press reports, to connect the two lines at mileage eleven for convenience of operation and economy in maintenance. The connection will necessitate the construction of about 0.75 mile of new track, involving one cut and one fill. Nothing has been decided as to when the work will be done. The Minister of Railways informed representatives of St. John, N.B. City Council, on his recent visit of inspection that there was no money available for the undertaking of any new works anywhere along the line.

The Main St. subway under the I. R. C., forming part of the track elevator works in Moncton, N.B., has been completed, and was used for pedestrian traffic Aug. 10. (Aug., pg. 304.)

**Kettle Valley Lines.**—We are officially advised that a contract has been let to A. Guthrie & Co., Inc., for building 7,500 lineal feet of snow sheds on the section of the line along the Coquihalla River Valley. About 13,000,000 ft. of lumber will be required for the erection of the sheds. The construction will be of the hillside style, which is for passing the snow over the track on its course to the valley below. The contractors are on the ground, and work has been started. The same contractors, it is reported, will also put in on the section the concrete abutments and one pier for a bridge to consist of two steel spans having a total length of 285 ft. (Aug., pg. 304.)

**Lake Huron and Northern Ontario Ry.**—In Canadian Railway and Marine World for August, reference was made to a press report that this company had given a contract to the National Engineering Co. of Cleveland, Ohio, to build a line from Sault Ste. Marie to a junction with the National Transcontinental Ry., but that the same would not go into effect until finances had been arranged. It was also stated that we were advised that the report was premature. We are now officially advised that no such contract has been made, and as far as the management knows, none will be made.

**Pacific Great Eastern Ry.**—Press reports state that at July 30, track had been laid to a point 14 miles beyond Lillooet, from Squamish, B.C., and that the bridge work between that point and Clinton was being pushed forward rapidly. It is expected to have the track laid to Clinton early in the fall, and to Hundred Mile House by the end of the year. The grading on 438 miles between Squamish and Fort George is reported to be 98 per cent. completed. Nothing is being done at present on the line between North Vancouver and Squamish, 39.7 miles beyond the present track end, 12.7 miles from North Vancouver, on which a train service is being operated. A train service is also being operated from Squamish to Lillooet, 120 miles. (July, pg. 255.)

**Peace River Tramway and Navigation Co.**—We are officially advised that it has been definitely decided not to proceed with the construction of either of the tramways at the Peace River Chutes or the Slave River Falls this year. The right of way for the power tramway will, however, be cut this fall. (July, pg. 255.)

**Reid Newfoundland Co.**—Train services have now been put in operation on the extensions to Heart's Content and Trepassay. (July, 1914, pg. 324.)

**St. John and Quebec Ry.**—Construction on what is called "the missing link" on this railway is being proceeded with in Fredericton, N.B. The work was undertaken after considerable negotiations between the company and the Intercolonial Ry. officers and C.P.R. interests. The estimated cost was \$50,000, and it was expected that the work would have been completed early in August. The work is reported to be proceeding slowly, that it is not now expected it will be finished until Nov., and the cost is reported to have gone up to over \$60,000.

On his recent visit to St. John, N.B., the Minister of Railways is reported to have said the cost of the proposed bridges across the St. John and the Kennebecasis Rivers would be very heavy. The best plan for completing the line might prove to be the extension of the line to Welsford and then on to the city. A Fredericton, N.B., press

report quotes the Premier of New Brunswick as stating that borings for the proposed bridge at The Mistake would be started immediately at Gordon's Bluff. (June, pg. 212.)

**Van Buren Bridge.**—The bridge across the St. John River between St. Leonards, N.B., and Van Buren, Me., together with its railway connections in Canada and Maine, has been taken over for operation by the Bangor and Aroostook Rd., and the jurisdiction of the officials of that company has been extended over it in their respective departments. (July, pg. 257.)

### Traffic Orders by the Board of Railway Commissioners.

**Cleaning and Disinfecting Stock Cars.**  
General order 147. July 29. Re application of Toronto Livestock Exchange, Livestock Shippers' Association of Ontario, and others, for an order disallowing a charge of \$2.50 a car for cleaning and disinfecting single-deck stock or box cars, and \$4 for double-deck stock cars, which the railway companies proposed to collect by tariffs published and filed, the said tariffs having been suspended by the Board pending a hearing. It is ordered that the railway companies collect a toll not exceeding 75c. for cleansing and (or) disinfecting any car in which live stock has been carried when the said work is done by the railway companies; and that the said toll may lawfully be an addition to the charges, as published in the companies' tariffs, for transportation of the live stock unloaded from the said cars. And it is also ordered that any tariffs of the said railway companies showing a toll, or tolls, for cleansing and (or) disinfecting live stock cars in excess of the toll of 75c. a car, be disallowed; and that order 23927, July 2, be rescinded.

### Progress of Rogers Pass Tunnel Construction, Canadian Pacific Railway.

The following table shows the progress made from July 1 to July 29, also the total progress to July 29, for which we are indebted to J. G. Sullivan, M. Can. Soc. C. E., Chief Engineer, C. P. R. The figures give the number of feet.

EAST END.	Progress.	Total.
Pioneer heading .....	612	10,740
Main heading .....	532	6,544
Main tunnel .....	660	5,216
WEST END		
Pioneer heading .....	639	8,870
Main heading .....	868	7,469
Main tunnel .....	722	3,754

**The Canadian Pacific Ry.'s Freight Department,** Ontario Division, has removed its offices from Union Station, Toronto, to the 12th floor of the C.P.R. building at King and Yonge Streets, the officials who have removed being M. H. Brown, Division Freight Agent; L. Mulkern, District Freight Agent; G. D. Robinson, Export and Import Freight Agent; C. W. McMullen, City Freight Agent; J. Jolly, W. Hollyman and D. McColl, Soliciting Freight Agents, also the rate clerk and the tracing clerk.

**The Canadian Ticket Agents' Association** will hold its 29th annual meeting at Denver, Col., Oct. 18 to 21, both inclusive. The business meeting will be held Oct. 18, and in the evening of that day there will be the customary social gatherings. For the following three days there will be a number of sight seeing trips and perhaps a day's excursion into the mountain region.

## Maintenance Labor on Western Lines, Canadian Pacific Railway.

By D. Allen C. Coleman, Assistant General Manager, Western Lines, Canadian Pacific Railway.

The C. P. R. western lines, comprising 7,140 miles of single main track and 973 miles of double main track, have the divisional organization. The district superintendent is responsible for all maintenance of way work, and the resident engineer, bridge and building master, roadmaster and signal supervisor on a district report to him.

European laborers are employed mostly for maintenance of way work, these consisting of Galicians, Scandinavians, Italians and Russians. The remaining portion of our maintenance of way laborers are Canadians, Americans, Scotchmen, Irishmen and Englishmen. The laborers are collected in such cities as Montreal, Winnipeg and Vancouver through private labor agencies. No employee of the company is kept at these private labor agencies to accept shipments of men for employment nor is there a company labor bureau. The custom in busy seasons has been to ask the labor agency to supply a cer-

pass to the nearest town and free transportation in baggage cars for the necessities of life. The following transportation privileges also apply to the maintenance of way employees and his direct dependents:

After 6 months service, pass annually over the district;

After 1 year service, pass annually over the division;

After 3 years service, pass annually over the system;

After 5 years service, pass over foreign lines.

The section foreman is allowed to use old ties for fuel and is provided with a deep well, pipe line connection, or suitable water storage facilities where it is practically impossible to obtain water by drilling or other means. Water for the storage facilities is provided by way freight trains. Permanent employees also have the benefit of the pension rules and regulations as a reward of long

should he be retained in the service after such date. For example, if an employee has been in the service for 40 years and received on an average \$60 a month for the last 10 years, the pension allowance will be 40% of \$60, or \$24 a month. No pension allowance is authorized less than \$20 a month, however.

If a section foreman wishes to purchase a motor engine, the company stands the expense of installation on a reinforced hand car and supplies the foreman with 10 gallons of gasoline a month with which to operate his car. The foremen furnish their own repair parts. Power hand cars are not used on mountainous portions of the line. Section men are furnished a bunkhouse, where they provide their own food in many cases. A good many of the section foremen provide table board for the men on their sections.

It is not the custom to retain all of the section force in the winter as in the summer, but a man who is laid off on account of reduction is given preference when taking on additional men in the spring.

For promotion it is the practice to have each superintendent furnish a list of men

Model of Screw Ice Breaking Railway Ferry Steamship Prince Edward Island.

This vessel, which has been built for the Dominion Government by Sir W. G. Armstrong Whitworth & Co., Ltd., Newcastle-on-Tyne, Eng., will be operated by the Canadian Government Railways across Northumberland Strait between Cape Tormentine, N.B., and Carleton Point, P.E.I., about nine miles. The Government has acquired the New Brunswick & Prince Edward Island Ry. from Sackville to Cape Tormentine, and is building a short branch of the Prince Edward Island Ry. to Carleton Point. It is the intention to widen the P.E.I.R. to standard 4 ft. 8½ ins. gauge from its present 3½ ft. gauge, so that goods may be transported in cars between the mainland and the island without transfer. Complete descriptions of the vessel, with plans and profile, were given in Canadian Railway and Marine World for Sept., 1913, pg. 444, and Nov., 1914, pg. 518, and the issue of Aug., 1915, contained exterior and interior views.

tain number of men for extra gang or track section work. These men are transported free to the point of work in charge of a constable, who remains in charge until the men are turned over to the roadmaster under whose direction they are to work. The men's pay begins when they actually commence to work.

The section foreman is provided with a substantially built house of 6 rooms, generally constructed on a concrete foundation and affording a basement. A rental of \$5 a month is usually charged, which amount is absorbed in the maintenance expense of the dwelling from time to time. Seventy five per cent. of the section foremen are provided with section houses. The section foreman is also allowed the privilege of using any ground on the right of way in the vicinity of his house for garden purposes. At outlying points the foreman is allowed a market

years of faithful service. This system calls for no contributions from the employees themselves. The company considered that voluntarily establishing a system under which a continued income will be assured to those who after years of continuous service are by age or infirmity no longer fitted to perform their duties, and without which they might be left entirely without means of support, would tend to build up amongst them a feeling of permanency in their employment and thus create an enlarged interest in the company's welfare and a desire to remain in and devote their best efforts and attention to the company's service. The pension allowance authorized is granted upon the following basis: For each year of service an allowance of 1% of the average monthly pay received for the 10 years preceding retirement, or preceding the date upon which the company employee attained the age of 65 years,

whom he considers would qualify as foremen. The work and habits of these listed men are carefully watched by maintenance of way officers, and promotions are made from among them, due consideration being given to seniority.

The extra gangs are comfortably housed in boarding cars and supplied with wholesome food, usually furnished by a boarding car contractor at a very reasonable rate per week. Such a contractor has his own traveling inspector, who investigates any complaint that may be made. The company's local officers also give this commissary feature close supervision, as it is realized that good food tends to make more satisfactory labor conditions and consequently helps greatly in prosecuting betterment or construction work.

The bridge and building crews have similar privileges to those of section and

extra gang men. The commissary end of the boarding cars of these crews is frequently undertaken by the foreman of the crew, each man paying his share of the expense or else paying a fixed weekly charge to the foreman for his provisions and other services. Pumpmen are provided with cottages near the pump houses at a nominal rental.

All officers concerned with maintenance of

way work are impressed with the fundamental truth that in order to derive maximum results at a minimum cost, frequent and intelligent supervision is essential over the constantly changing organization of the members of the section crews, many of whom have but a scant knowledge of the English language.—Railway Engineering and Maintenance of Way.

## Edmonton, Dunvegan and British Columbia Railway Freight Tariffs.

Sir Henry L. Drayton, Chief Commissioner, Board of Railway Commissioners, gave the following judgment, Aug. 2, respecting the Edmonton, Dunvegan & British Columbia Ry. freight tariffs:—

"This case was first heard at Edmonton, May 28. The tariffs in question had already been dealt with by an interim judgment of the Board, of Mar. 26, further consideration being required by the judgment which adopted the tariffs then filed, and which were based on the Mountain Scale. Copies of the judgment and notices of the hearing were sent to all parties who appeared to be interested. No objections to the company's proposals were advanced on behalf of anybody at the hearing at Edmonton. That place is, of course, largely interested in the development of the northern country served by this railway, and its Board of Trade wrote this Board as follows,—

"In reference to your communication of May on the above subject, I beg to advise that this matter was submitted to a general meeting of the Edmonton Board of Trade to-day. The meeting was very representative of the commercial interests of Edmonton, and the members had been specially advised by mail that the E.D. & B.C. tariffs would be submitted for consideration. After somewhat exhaustive consideration, it was decided by resolution that this Board of Trade would make no protest at present against the tariffs recently filed by the E.D. & B.C.R. and temporarily approved by the Board of Railway Commissioners. A resolution to this effect was carried unanimously."

"The company operates under a Dominion charter, but is one which is being financed largely by guarantees of the Province of Alberta, which province is of course directly interested in the opening up and colonization of its northern territory. The Provincial Government was notified of the hearing at Edmonton, but took no part, leaving the whole question in the Board's hands. Apart from any objections, the Board was of the view that very special reasons would have to be advanced as to why the Mountain Scale should be used. It was recognized, of course, that with a new line running into a new country and enjoying no through business, that the ordinary Prairie Scale would, in the first instance, be too low, and the Board's Chief Traffic Officer worked out an intermediate scale between the Prairie and the Mountain scales. A copy of the rates worked out on this scale was given to the company's officials to say whether or not they could operate on the reduced scale. In addition to this the company was instructed that in any event special commodity rates must be filed on the articles which the country could produce, such as grain, hay, forest products, dairy and packing house products, cordwood, building material, etc., and the hearing was adjourned to be resumed at Calgary on June 9. The position taken by the company's officials at the later hearing was that it would be impossible to operate under any lower tariff than the Mountain Scale, but that lower rates on grain than suggested by the Board could be given with the company operating generally on the reduced scale.

"The Company has filed special commodity rates applying locally on grain, forest products, dairy and packing house

products, vegetables, live stock, hay, straw, coal, cordwood, and building material. These tariffs are based on the Prairie Scale. They are satisfactory and are as low as can be required. The company has also filed a proper and appropriate distributing tariff on general merchandise, applying from Edmonton, the rates in this case, however, being scaled down from the Mountain Scale. The matter has stood awaiting the company's filing of through grain rates to the head of the Lakes, as promised. The Board is today in receipt of a letter from Mr. McDonald, the Railway's Traffic Expert, in which he advises the Board that rates will be put in effect by the company so as to permit movement from Jarvie to Lake Superior ports at 29c. per 100 lbs., from High Prairie 36c., McLennan 37c., and from Fowler, the terminus, 38c. These rates are higher than the first rates I suggested at the hearing, which was a rate from shipping point to destination of 0.395c. per ton per mile, with 1c. per 100 lbs. added as an extra to cover cost of transferring at Edmonton. On the higher possible basis discussed, the rate from High Prairie, however, would be 39½c. This rate was thought by the Board to be very high, so high indeed that it represented the limit that could be considered. While the rate submitted of 36c. is not as low as the first rate considered, it is 3½c. lower than the other possible combination, and I think may be adopted as satisfactory until traffic conditions are developed so that the actual results may be fully considered.

"The company has received a guarantee from the province of \$20,000 a mile. The province is satisfied that under its supervision this money has actually been expended. The evidence supplied by the company is to the effect that the capital stock of \$250,000 is not watered. Large advances have been made to the company to enable it to carry on its work. The Provincial Treasurer, who has kept closely in touch with the company's operations, advises that the company has received from the J. D. McArthur Co. \$790,000 in connection with advances, or for work representing the unpaid accounts on the grading contract, and that a further sum of \$900,000 has been invested in the road which the railway company obtained through its bankers, all of which Mr. Mitchell is advised is guaranteed by the J. D. McArthur Co. and by Mr. McArthur personally.

"Under all the circumstances, I am of the opinion that the Board should allow the tariffs as filed. It must, however, be clearly understood that the Board's present action is not in any sense final. The conclusions are arrived at in advance of the development of traffic, and it well may be that the rates now in effect, and which the company's officials claim are merely sufficient for the actual operation of the road, may prove to be too high. The rates now allowed cannot be in anyway looked upon as possible of any general application. They are only allowed in view of the fact that the railway is a colonization road; has but little developed traffic and in effect bears to the transcontinental systems the relation of a branch line."

## Railway Rolling Stock Notes.

The National Transcontinental Ry. has ordered a wrecking crane of 100 tons capacity from F. H. Hopkins and Co.

Canadian Explosives, Ltd., has received 3 all wood box cars, 4,000 lbs. capacity, 36 ins. gauge, from Canadian Car and Foundry Co.

The Edmonton, Dunvegan & British Columbia Ry. has ordered 10 stock cars from National Steel Car Co.

The G.T.R. has received 50 steel underframe express refrigerator cars, 41 ft. 0-3-8 in. long, from Canadian Car and Foundry Co.

The Intercolonial Ry. has received 6 steel frame first class passenger cars, 74 ft. long, from Canadian Car and Foundry Co., and one switching locomotive from Canadian Locomotive Co.

The Canadian Locomotive Co. is reported to be making locomotive trucks for the Baldwin Locomotive Works, which has received some large orders for locomotives for some of the allied Governments.

The Grand Trunk Pacific Ry. has received two express refrigerator cars, nos. 6048 and 6049, from Canadian Car and Foundry Co.

The Canadian Northern Ry. has received 5 steel underframe second class passenger cars, 72½ ft. long, from Canadian Car and Foundry Co.

The Intercolonial Ry. has received 1 steam shovel, 2 all steel centre ballast unloaders, 2 Lidgetwood unloaders and 2 rail unloaders, from F. H. Hopkins & Co.; 6 first class cars from the Canadian Car and Foundry Co., and 156 all steel gondola dump cars, from the Eastern Car Co.

The G. T. Pacific Ry., as a result of experiments in the use of oil fuel on locomotives, has equipped its locomotives with the necessary apparatus to enable liquid fuel to be used throughout the Mountain Division. Canadian Railway and Marine World has already published details of the oil storage plants located at various points along the line in this connection.

J. D. McArthur and Co., Winnipeg, have ordered from the Canadian Car and Foundry Co., 50 all wood box cars for the Edmonton, Dunvegan and British Columbia Ry., and 50 for the Alberta and Great Waterways Ry., for delivery in October. Following are the principal particulars:—

Capacity .....	60,000 lbs.
Length over end sills .....	36ft. 9¾ins.
Width over side sills .....	9ft. 0¾ins.
Width inside .....	8ft 6ins.
Length inside .....	36ft.
Height top of rail to top of running board .....	12ft. 5½ins.
Side door opening .....	6ft.
Air brakes .....	Westinghouse KC 812
Bolsters and brake beams .....	Simplex

The Timiskaming and Northern Ontario Ry. has ordered 2 steel first class passenger cars and 2 steel baggage and express cars from the Pullman Co. The passenger cars will be 71 ft. long over the end sills, and the baggage cars 60 ft. long. They will be equipped for electric light, the power being generated from the axle, and in addition there will be a storage battery system for supplying light when the cars are not in motion. Heating will be by a combination vapor and pressure system of steam heat. The cars will have fish belly centre sills in the underframes with combined cast steel bolsters and platforms. The superstructures will be entirely of steel with an exterior finish of steel plates. Six wheel trucks with cast steel frames are to be used, and an anti-telescoping device, and the cars will, in all respects be duplicates of those ordered and placed in service in 1914, and described in Canadian Railway and Marine World for July, 1914, pg. 320.

# Freight Rates on Gravel for Road Making in Western Ontario.

Sir Henry L. Drayton, Chief Commissioner, Board of Railway Commissioners, gave the following judgment recently:

"The issue in this case concerns the movement of gravel to points in the counties of Lambton, Kent, Essex, and Middlesex, from Sarnia, Courtright, Rondeau, and Leamington, as well as movements from other water points. The question was first brought to the attention of the Board at the instance of J. D. Armstrong, M.P., who desired that low commodity rates should be extended by the companies to the movements of gravel, so as to enable the many municipalities affected to proceed with the work of general road improvement at a reasonable expense.

Gravel moves under the Freight Classification as 10th Class, but takes a special mileage rate of 2½c. a 100 lbs. for distances up to 10 miles; 3c. for distances over 10 up to 20 miles; 3½c. for distances over 20 up to 30 miles; 4c. for distances over 30 up to 40 miles; 4½c. for distances over 40 up to 50 miles; 5c. for distances over 50 up to 60 miles; 5½c. for distances over 60 up to 70 miles; 6c. for distances over 70 up to 80 miles; 6½c. for distances over 80 up to 90 miles. For distances over 100 miles the rate, of course, is scaled on; but, owing to the length of haul for the movement contemplated, it is unnecessary to consider the rates for greater distances. The Board required the companies to propose commodity rates as requested by Mr. Armstrong; and under the proposition that the companies then made gravel could move for distances up to 10 miles at 2c.; up to 20 miles, 2½c.; up to 30 miles, 2½c.; up to 40 miles, 2½c.; up to 50 miles, 3c.; up to 60 miles, 3½c.; up to 70 miles, 3½c.; up to 80 miles, 3½c.; and up to 90 miles, 4c. These rates were unsatisfactory to Mr. Armstrong and the different municipalities he represented; and he made application for rates based upon a gross return to the companies of 1c. per ton per mile.

"The application was heard by the Board in Petrolea. At the hearing, Mr. Armstrong, in developing the case, made the great public necessity of improving the highways in the interested counties abundantly clear, as well as the great corresponding benefit that good roads would mean, not only to the farmers in the first instance using them, but also to all kinds of industry, including the railways. The proposed rates were sought to be justified by comparison of rates on other commodities which the railways themselves had granted, and also on the results of railway operation expressed in the per ton mile rate, as shown by governmental statistics. Mr. Armstrong showed that the municipality could buy gravel from the Caldwell Stone & Gravel Co. delivered either at Point Edward or at Sarnia at 35c. a yard; for Courtright delivery, 40c.; for Wallaceburg delivery, 50c.; for Chatham delivery, 75c., and for Windsor delivery 90c. The Wallaceburg price would seem to be entirely out of line with the Windsor price; and, in view of the difference of the rates at both points, Courtright and Sarnia would seem to be the two shipping points that could be the more economically taken advantage of by the municipalities. Cheap gravel is also obtainable at Rondeau and at Leamington. The commodities referred to, and which Mr. Armstrong instanced as having low rates, were manure, coal, cement, and hay. Emphasis was laid on the fact that the rate in the case of all these different commodities on the movements given was less than 1c. a ton per mile. Mr. Armstrong also read into the record statistics of

revenue per ton for the year ended June, 1914, as follows:

Canada Southern Ry. ....	.625c
Intercolonial Ry. ....	.600c
Canadian Pacific Ry. ....	.753c
Grand Trunk Ry. ....	.687c
Grand Trunk Ry. (Canada Atlantic) ....	.598c
Grand Trunk Pacific Ry. ....	.641c
Canadian Northern Ry. (in Quebec) ....	1.227c
Canadian Northern Ry. (outside of Province of Quebec) ....	.749c

"The freight statistics are obtained as a result of calculations covering the total movements of all freight on the railways in question; and as gravel, rated as it is in the 10th Class, belongs to the group of commodities representing the lowest earnings, Mr. Armstrong's argument was that in any event it would not be unreasonable to apply to gravel rates yielding 1c. a ton per mile, that being a higher rate than that which the statistics show to be the average of the whole. Consideration of the usefulness of these ton mile earnings as a basis on which to predicate rates becomes necessary. Of all the companies whose statistics are given, probably the one doing at the present time the most unsatisfactory business is the Canadian Northern, in so far as its eastern lines are concerned. The system is new, is as yet uncompleted, and has not a worked-up or balanced traffic. Nevertheless, its earnings as expressed in return of tonnage per ton per mile are the greatest of those submitted. This apparent anomaly disappears when it is realized that before the ton per mile rate can be any index at all, the tonnage moved must be in the first instance of sufficient volume, and in the second instance the hauls must be of sufficient length to insure proper remuneration.

"The Canadian Pacific is often regarded as a line with a well-balanced traffic and obtaining good returns. Its return, however, of .753c. a ton per mile looks small as compared with the operations of the Canadian Northern in Quebec, resulting in a rate of 1.227c. On its face, the return to the Canadian Pacific is but little over 7-12ths of that enjoyed by the Canadian Northern in Quebec, while the fact is that the lower rate is the result of a really remunerative operation on the one hand against an undeveloped operation on the other. It is fundamental that the rate per ton per mile decreases as the length of the haul increases, with a result that the rate per ton per mile on a long haul of a high grade commodity carrying a high classification, might be lower than the rate per ton per mile on the commodity taking the lowest rating moving but for a short distance. This apparent anomaly is due, of course, to the fact that on a short haul the terminal expenses, which have to be added to the road haul, and which are comparatively constant, very largely increase the rate when expressed by miles. It has been shown, so far as the Canadian Pacific is concerned (and the results of other companies only differ in degree, depending on terminal operations and road haul on the one hand, and volume of traffic on the other), that 35% of the general transportation expenses are terminal expenses. The average revenue as returned to the Government of .753c. is, of necessity, based on the average haul, which has been shown to be 380 miles. Mr. Moule, the Statistician of the Canadian Pacific, in another case showed that while of the transportation expenses 35% were terminal expenses, that an estimate based on the locomotive mileage of the company showed that 15% of all its expenses would be assigned to terminals, with a result that approximately 28% of all the company's expenses were terminal costs, the

company's earnings per ton per mile being, as was shown, practically 7½ mills. These earnings, assigning them in the proper proportion as between terminal service and rail haul as fixed by the expenses, result to the company for road haul in 5.4 mills, and the balance, 2.10 mills, for terminal activity. Based on this 380 mile haul, the company averaged a return of \$2.85 for every ton of freight moved, and of this sum 80c. represents terminal operation. The result, therefore, is that on the characteristic average C.P.R. road haul rate as applied to hauls differing in length from 50 to 400 miles, a haul of 50 miles gives a ton per mile return, based on the terminal return of 80c. and the portion of the earnings attributable to road haul, of 2.14c.; for 100 miles, 1.3c.; for 200 miles, .9c.; for 300 miles, .8c.; for 400 miles, .74c. A rate per ton per mile of 1c. for a haul of only 50 miles in length would not cover the average terminal earning.

"As instancing the high rates on road material, Mr. Armstrong quoted the Grand Trunk rate from Guelph to Petrolea of 8c. per 100, or \$1.60 a ton, for 124 miles. This movement represents a return of 1.29c. a ton per mile. From St. Marys the rate is 6½c., or \$1.30 a ton, for a distance of 74 miles, equivalent to a rate of 1.756c. a ton per mile. As compared with the Canadian Pacific rate for 100-mile movements, 1.3c., including as it does all classes, this rate would seem to be high for a low grade commodity. As stated by Mr. Armstrong, there are specially low manure rates out of Toronto. These rates have been in the past justified on the ground of the necessity of getting rid of the material from the centre and bringing it to farming districts, which otherwise would not be properly cultivated, and the benefit to the railways of the return loads of fruit from orchard districts, which otherwise would not have been enjoyed. The railways have recently made application to have these rates raised, alleging that they are unremunerative. They are blanket commodity rates and are not at all of necessity related to the length of the haul. For example—the special commodity rates from Toronto to Stoney Creek, 46 miles, is 3¼c., and the rate is exactly the same to Beamsville, 60 miles. The rate to a greater distance of 83 miles, the maximum distance covered by the movement, that is to the Falls, is only 3c. As rates, manure rates are out of line and were never rates which appeared to have been properly scaled. It may be observed, though, that a rate of 3¼c. to Stoney Creek gives a per ton mile return of 1.41c., and the rate to Beamsville 1.09c. a ton per mile, yielding in each instance a higher rate than the rates would yield which are now asked for. I should also observe that those interested in the manure movement claim that the rate is really much higher, owing to the fact that the possible minimum loading of 30 tons cannot in most instances be obtained, owing to the condition in which the manure is received; also that the actual return to the company expressed in tons is much greater than the tariff shows.

"The bituminous coal rate relied on by Mr. Armstrong, from Detroit to Petrolea, of 65c. a ton for 76 miles, is a lower rate; but this rate again does not represent the sum of the railway activity or the railway earnings, as the coal in question does not originate at Detroit, and the rate relates back to the original movement from the mines. A like condition applies to the movement of bituminous coal from the

Niagara Frontier to Petrolea of \$1 a gross ton for 176 miles.

"There remains to be considered the hay rates quoted. Hay moves under 10th Class; and the 10th Class rate for a distance of over 15 miles and under 20 miles, is 5c. The rate is not advanced in the next 25 mile group; remaining at 5c. It is quite true that a better loading could be obtained of gravel than of hay, but it may be remarked that for a movement from Sarnia to Petrolea the special mileage rate applicable to gravel and on which gravel hitherto has moved, is only 3½c. A rate of 1c. a ton per mile, assuming the distance from Petrolea to Sarnia to be 20 miles, would require the hay rate which is quoted to be reduced from 5c. to 1c. per 100 lbs.

"The Board cannot order the companies to put in unremunerative rates, nor a rate so low as to be unfairly out of line with rates which are necessary to be maintained in order to permit the continuance of satisfactory operation of railways, due regard being had to proper consideration of the value of the commodities shipped and the service performed. It is, of course, manifest that the 80c. for terminal service, which is the result of the C.P.R. standard figure of 7½ mills, has no more to do with the actual terminal costs of a low grade commodity such as gravel, loaded and unloaded as it is by the shipper, than the rate enjoyed from an average haul of 380 miles has anything to do with the short hauls in question. It is, however, impossible for the Board to say that the rates proposed by the railways on gravel are excessive or unfair. The Board is bound to go this length before interfering with the rates which are in the first instance made by the railway companies. In its consideration of rates, the Board also cannot take into account matters of business policy and company administration. While, therefore, I felt that it was impossible for the Board to make any order, the Board has urged upon the companies the advisability of recognizing a public interest and the benefits which would result to the companies themselves from a proper system of good roads. The Ontario Government has also intervened, and is very desirous of obtaining extremely low rates, with a view to aiding the present campaign for good roads. The companies are insistent that they require more revenue, and that their rate returns as a whole are inadequate and insufficient; and, in the first instance, took the position that while they admitted the need of good roads, that, in view of their present necessities and of their present application for increase in freight rates, no concessions could possibly be made by them, as this would be construed as evidence that an increase in rates generally was not required. The railways have been assured that no such construction will be made by the Board. Sec. 341 of the act specifically provides—'Nothing in this act shall be construed to prevent—(a) the carriage, storage, or handling of traffic, free or at reduced rates, for the Dominion, or for any provincial or municipal Government. . . .'

"I am glad to say that the railways now state that, regarding the question in the light of public policy and the possibility of increased railway business as a result of the added prosperity, and with the understanding that the rates offered are not to be regarded as indicating sufficient rates for similar commercial service, they will carry in the territory in question gravel that the municipalities require at a flat blanket rate of 50c. a ton for any distance up to and including 50 miles; the rate to be a carload rate and cars to be loaded to their full stencilled carrying capacity; the gravel to be consigned to the clerk of the municipi-

ality and to be used for the purpose of road making; and the railway companies to be notified in advance of the number of carloads required, so that special instructions may be issued in each case. It is anticipated that 50 miles will be the maximum haul; but should municipalities at further distances require the gravel the rate will be scaled down in the usual manner for greater distances. It was represented that at this rate, in the more distant districts, there would be no difficulty in proceeding with road construction; and there is no reason why municipalities which are situated nearer the source of supply should experience any greater difficulty. I should point out that under the Freight Classification hay takes a 3c. rate for any distance not exceeding 5 miles. The rate which will now go into force on gravel is but 2½c. for distances not exceeding 50 miles. The hope is expressed that the action of the railways will be considered by the municipalities in the same way that it is being considered by the Board, and that the benefit to the public from road construction will more than repay the railways for the concessions they are making."

### Railway Finance, Meetings, Etc.

**Algoma Central and Hudson Bay Ry.**—The receivers of this company, acting on behalf of the bondholders' committee in London, England, have prepared and submitted a report on the property, and it is announced that a plan of financing the operation of the line is being considered.

**Buffalo and Fort Erie Ferry and Ry. Co.**—Tenders will be received by the Master in Ordinary, Toronto, to Oct. 4, for the purchase of the property and assets of this company, under proceedings in the action of Grobe vs. the company. The property is being offered as a whole, or in five parcels, viz:—Parcel 1, the steam railway including right of way, track, franchises, rolling stock and equipment, including 500 shares of International Ferry Co.'s stock, which operates the ferry steamboat Niagara Frontier between Buffalo, N. Y. and Fort Erie, Ont., and all lands, buildings, etc. of the company, except the land sold to the Canadian Niagara Power Co., and the lands and buildings offered for sale in parcels 2 and 3; parcel 4 consists of 20 shares in the Lake Shore Natural Gas Co., and parcel 5 of the furniture and office fixtures at Buffalo, N. Y.

**Canadian Northern Ry.**—An issue of \$11,500,000 two year collateral notes, dated Sept. 1, bearing interest at 5% per annum, has been sold to W. A. Read and Co., New York, and has been issued to the public at 98%. These notes are secured by the deposit of \$15,333,334 of Canadian Northern Ry. general mortgage 4% bonds due in 1934, principal and interest unconditionally guaranteed by the Dominion Government, and are convertible at par into bonds at 85 on, or before, maturity. At the issued price, the notes give about 5.75% on the investment.

**Glengarry and Stormont Ry.**—There has been deposited with the Secretary of State at Ottawa duplicate original of the agreement between the company and the C.P.R. for the lease by the latter of the G. and S. Ry., from St. Polycarpe, Que., to Cornwall, Ont.

**New York Central Rd.**—There have been filed with the Secretary of State at Ottawa several documents dated Feb. 1 and Feb. 2, being duplicate originals of agreements with the Guaranty Trust Co. of New York, supplemental to lease dated Feb. 15, June 8 and Nov. 23, 1910; Jan. 1 and April 2, 1912; Jan. 15 and Dec. 31, 1913; Mar. 30 and Nov.

18, 1914. The N.Y.C. Rd. is for the purpose of the agreement described as the successor by consolidation of the New York Central and Hudson River Rd., the Lake Shore and Michigan Southern Ry., the Michigan Central Rd., the Cleveland, Cincinnati, Chicago and St. Louis Rd., the Pittsburg and Lake Erie Rd., and the Toledo and Ohio Central Ry. The reason for the filing of these agreements at Ottawa is that the N.Y.C. Rd. owns the Ottawa and New York Ry. and the St. Lawrence and Adirondack Ry., and through the Michigan Central Rd. owns the Canada Southern Ry.

**St. Lawrence and Adirondack Ry.**—The shareholders will be asked at the annual meeting in Montreal, Sept. 1, to sanction the execution of a lease of the company's property and undertaking for 21 years to the New York Central Rd., to sanction by-laws changing the location of the head office from Montreal to Ottawa, and changing the date of the annual meeting from the first Wednesday to the third Tuesday of September.

**Temiscouata Ry.**—Gross earnings for June \$15,801; expenses \$14,532; net earnings \$1,269. The net earnings for June 1914 were \$7,513.

**Toronto, Hamilton and Buffalo Ry.**—A special meeting of shareholders has been called to Hamilton, Ont., for September 8, to authorize the issue of bonds up to \$10,000,000.

**White Pass and Yukon Route.**—Gross earnings from Jan. 1 to July 14, \$581,307 against \$623,287 for same period 1914.

### Grand Trunk Railway Betterments, Construction, Etc.

**Mimico Station.**—The Board of Railway Commissioners ordered, Aug. 4, that the station at Mimico, Ont., is to be removed to its original position on the south side of the tracks.

**London, Ont.**—It is said that an arrangement is nearly concluded for the building of a spur line by the G. T. R., across the C. P. R. to the sugar factory in the western limits of London, Ont.

**Port Huron Freight Sheds.**—We are officially advised that no decision has been reached as to the character of the freight sheds to be built at Port Huron, Mich., to replace those destroyed by fire July 6. (Aug., pg. 312.)
